Although offering circular referred to by petitioner describing himself as survivor's largest stockholder unconnected with management did not state that its application to acquire liquidating carriers had been denied and that the matter was then pending on petition for reconsideration, the commission's action and status of the proceeding were matters of public record, and the circular did contain an admonition that the pending transactions might never be approved and consummated. Even petitioner's counsel acknowledges his belief that the

circular constituted a fair disclosure to prospective investors in survivor's stock. But though petitioner was thus given sufficient notice of possibility of an adverse decision by the commission, he is permitted to intervene because he has a substantial interest in the proceedings and his intervention will not unduly broaden the issues or encumber the proceedings.—Buckingham Transp., Inc.—Control and Merger, 93 M.C.C. 306 (309)*.

See also Seaboard Air Line R. Co. Trackage Rights, §1(19), n. 11.

105. Applications.—[Vols. 14-19].—Control application having been presented by carrier seeking authority to acquire control of another carrier, the commission is required by statute to determine the application on its merits, in absence of dismissal thereof by applicant. Failure of acquired carrier to provide competent witnesses with respect to information about itself does not require the commission to dismiss the application, nor permit it to refuse to decide the matter on its merits.—Black Ball Freight Service v. United States, 223 F. Supp. 191 (197)*.

See also Baggett Transp. Co. v. United States, n. 115, below.

By disposing of Chesapeake & Ohio's application to control Baltimore & Ohio without waiting for completion of hearings on pending merger applications of other eastern railroads, or by refusing to consolidate all pending applications for disposition in one decision, the commission did not abuse its discretion or jeopardize public interest. Whether hearings should be consolidated is a matter committed to discretion of the administrative agency, and the commission's decision adequately explains its reasons for exercise of that discretion. To attempt to consider problems of all railroads in the northeastern quadrant of the United States together, as plaintiffs urge, would be but a return to a policy that after long frustration was found to be unwise (see discussion on pp. 22-23). The commission is satisfied that approval of the C & O-B & O affiliation will be a definite step forward in solving that problem, and it is not the court's function to substitute its judgment for that of the commission.—Broth. of Maint. of Way Employees v. United States, 221 F. Supp. 19 (29-30)*.

Inasmuch as lumber company which formerly owned Feather River Ry. has been dissolved and its assets acquired by its parent corporation, which thus acquired direct control of the railway, the parent company should consider filing appropriate application for authority for the change in its form of control.—Feather River Ry. Co. Abandonment, Acquisition, 320 I.C.C. 417 (420, Note 3)*.

Although application seeking trackage rights, which should have been filed under §5(2), was filed as part of application under §1(18) for authority to construct, acquire, and operate lines of railroad, all information normally required for determination of a trackage rights application under §5(2) is available and appropriate notice has been given in accordance with that section and rules governing applications thereunder; accordingly, that application will be considered on its merits under §5(2).—Cambria & I. R. Co. Construction and Acquisition, 317 I.C.C. 685 (686)*.

See also Okmulgee Northern Ry. Co. Extension case, §1(19), n. 1.

While the commission has power to consolidate proceedings in which issues are similar or closely related, or to postpone a particular decision when public interest so requires, consolidation of Chesapeake & Ohio's application to control Baltimore & Ohio with two pending proceedings for merger of other eastern railroads is not warranted; in contrast to the complete integration of railroads through merger, C & O's proposal involves only acquisition of controlling stock interest, after which B & O will continue to operate as a separate carrier without change of identity or integration of its operations or facilities; before those carriers can effect a merger, another application must be filed, and approval of control will not foreclose the commission's opportunity to consider lawfulness of such merger, nor will it prevent interested parties from objecting thereto when application is presented.—Chesapeake & O. Ry.

Co.—Control—Baltimore & O. R. Co., 317 I.C.C. 261 (265, 266)*.

Moreover, consolidation even for decision purposes would result in delays causing immediate serious injury to B & O and ultimately to the general public, and consolidation of the evidentiary records would entail even longer delays. Possibilities respecting the commission's action in the merger cases and results thereof are too remote and unpredictable to warrant withholding in instant proceeding, particularly in view of present status of those cases and B & O's poor physical and financial condition. Established need for expedited action in the control proceeding overrides any possible benefits which could accrue through consolidation, with resulting delay; public interest requires decision at the present time. However, without prejudging the issue, additional question of whether the merger proceedings should be consolidated will be held in abeyance.—Id., pp. 265-6.

Although additional operating rights were issued to vendor subsequent to filing of purchase application, which rights substantially duplicate those involved in proposed purchase, no effort was made to amend the application to include them, and prescribed publication of the application in the Federal Register made no mention of them. Inclusion of those rights in the transaction would materially broaden the scope of the application without warrant, and they should be canceled concurrently with consummation of the transaction as approved.—Bowser and Campbell—Purchase—Motorway Corp., 97 M.C.C. 192 (201).

In urging that vendor's dormant operating rights be not canceled as a condition on purchase approval but be left with vendor, and agreeing to reduce the purchase price by a specified amount, applicants in effect seek to amend their application to eliminate all the involved rights that are found to be dormant. In so doing they have not broadened the issues, protestants have not been prejudiced, and acceptance of the amendment will not require further publication in the Federal Register. In the circumstances, the application is considered as amended.—Kroblin Refrigerated Xpress, Inc.—Purchase—Davis, 93 M.C.C. 356 (361).

The commission has allowed amendment of a control applicatin to also seek merger authority, subject to publication in the Federal Register and to the right of any interested person to submit objections thereto, where the amendment was accompanied by current data and other appropriate evidence to support approval of a merger; however, instant request is unaccompanied by any additional data relative to results of a merger. Amendment disallowed, without prejudice to subsequent filing of a merger application.—Ashworth Transfer, Inc.—Control—Hawkes Transp. Co., 87 M.C.C. 653 (657)*.

In view of questions raised in §207 proceeding concerning possible unlawful common control of applicant Canadian carriers and carriers subject to the act, and fact that upon receipt of authority from the commission one applicant would be commonly controlled with a certificated carrier within meaning of §5, both applicants are required to file application for approval of any such control, and issuance of certificates to both is withheld pending approval of any common control that may require it under §5(2).—Overland Exp. Extension, 92 M.C.C. 757 (766-7).

Applications of two distinct groups (who now jointly own 71.4 percent of carrier's stock) for authority to acquire control of the same carrier, through purchase by each of up to 50 percent of carrier's outstanding capital stock, present no transactions for commission approval; instead, they contemplate actions which may be taken at an indefinite future date, and fail to indicate what will be required of independent stockholders if, and when, they desire to dispose of their stock. Although for those reasons the applications may be dismissed, there are more compelling reasons for denying them since, while both groups disclaim control or power to control the carrier, as well as any affiliation between themselves or with the independent stockholders, the question remains whether either group, or both groups jointly, already control the carrier.—Capitani—Control—North Boulevard Transp. Co., 97 M.C.C. 479 (482-3).

Liquidating carrier's certificate having become a nullity upon vacation of transfer order for fraudulent misrepresentation and concealment in the proceeding under §212(b), it is no longer a carrier and control-and-merger application no longer represents a transaction subject to §5; dismissed.—Kowalsky's Exp. Service—Control and Merger, 93 M.C.C. 272 (278-9).

Examiner correctly concluded that purchase applicants submitted a false application and at hearing offered false evidence in support thereof, and applicants did not except to such finding but filed affidavits attesting to termination of both the agreement and the temporary authority operations. In absence of objection those affidavits are incorporated in the record and considered as a petition for dismissal of the application; accedence to dismissal will be consistent with public interest.—Calore Exp. Co., Inc.—Purchase—T. W. Waterman Co., Inc., 93 M.C.C. 291 (295, 297).

Although question of whether the application should be denied or dismissed is of only technical importance, the transaction being found inconsistent with public interest, vendor's lack of any lawful carrier status from inception of its operations under color of single-State exemption warrants dismissal for lack of jurisdiction under §5(2).—Nigro Freight Lines, Inc.—Purchase—Coady Trucking Co., 90 M.C.C. 113 (121); similarly, since liquidating carrier's single-State operations were controlled and managed by individual controlling a multistate carrier both before and after filing of its BMC-75 statement, its proviso operations were unlawful from their inception, it lacks carrier status, and its purported rights are not properly the subject of a §5 application. That survivor was not a party to the unlawful proviso operations is immaterial; merger application dismissed.—Hart Motor Exp., Inc.—Control and Merger, 90 M.C.C. 527 (534)*.

While applicants' failure to answer affirmatively the question in application form relating to their control or affiliation was undoubtedly due to their opinion that the facts later disclosed did not create such a status, their failure to give any answer at all to the question concerning a direct or indirect financial relationship and to furnish the relevant details, regardless of their belief that the inquiry was not applicable to their situation, represents a type of equivocation that impedes the commission in its duty to ascertain the true facts respecting transactions presented for its consideration under §5. Such omissions in preparation of an application deserve the strongest censure, and approval of the transaction should not be construed as condoning applicants' failure to furnish the information in question instead of leaving it for development at the hearing.—Thurston Motor Lines, Inc.—Purchase—Union Storage, 90 M.C.C. 595 (600)*.

110. Scope of issues.—[Vols. 12-19].—Purchase proceeding and investigation of unlawful common control of vendee and vendor are not the proper forum for consideration of charges of improper conduct on part of applicants' counsel or of impropriety of participation by another practitioner in effectuation of the unlawful control. Record referred to the commission's vice chairman for consideration and appropriate action as to both practitioners.—Calore Exp. Co., Inc.—Purchase—T. W. Waterman Co., Inc., 93 M.C.C. 291 (295-6, 298).

Affiliation with a railroad: [Vol. 19].—Proviso of §5(2)(b) in respect of proof required of a railroad acquiring control of a motor carrier is inapplicable to acquisition of control of a railroad-subsidiary motor carrier by a new Delaware corporation authorized to merge the parent railroad for purpose of removing difficulties due to railroad's present incorporation in four States.—Boston & Maine Corp. Merger, 320 I.C.C. 290 (293, 294).

Failure of a railroad wholly owned by one of two noncarrier companies which indirectly control vendee to submit evidence prerequisite to making of findings under proviso of §5(2)(b) does not require denial of purchase application, since it is not an operating carrier, but merely owns some 15 miles of roadbed and rights-of-way which it leases to Southern Ry., a railroad subject to Part I, which as exclusive operator of the property owns all rails, crossties, and

rolling stock operated thereover, and all improvements revert to Southern upon termination of the lease. Denied on other grounds.—Piedmont Motor Lines, Inc.—Purchase—Spartan Exp., Inc., 97 M.C.C. 49 (50).

Where acquiring motor carrier is a railroad affiliate, the question of whether the railroad would be able to use the acquired motor operations to public advantage in its rail operations without unduly restraining competition is a necessary preliminary inquiry which must be affirmatively resolved before the transaction can qualify for approval with such restrictions as will assure that the resulting operations will be so used; absent such a finding, consideration of whether or to what extent the restrictions merit relaxation is rendered moot.—Reading Transp. Co.—Control and Merger, 93 M.C.C. 11 (18).

Where a railroad or its affiliate is the applicant for acquisition of motor-carrier properties, it must be found, in addition to finding that the transaction will be consistent with public interest (which includes effect on adequate transportation service to the public), that it will enable the railroad to use the motor service to public advantage in its operations and will not unduly restrain competition.—Northern Pacific Transport Co.—Purchase—Stark, 90 M.C.C. 206 (208).

Purchase by railroad subsidiary of operating rights between Gardiner, Mont., and points in Yellowstone National Park will be in public interest when no other carriers besides vendor and vendee maintain freight-handling facilities at Gardiner; they are the only motor common carriers that can interchange outside the park; vendee does not serve the park through interline or otherwise through any gateway but Gardiner; and denial would necessitate cessation of operations by vendor, thus depriving the public of an established transportation service via the only year-route entrance to the park, whereas approval will enable vendee and its rail parent to continue their historical service to and from points within the park without necessity of interchange at Gardiner.—Id., p. 208.

The railroad would be enabled to afford the public more efficient service, without undue restraint of competition; vendee has been moving traffic into the park for years in interline service, and under arrangements worked out by park officials to prevent congestion of park roads during the tourist season, it has transported l.t.l. shipments into the park under temporary authority for interchange with protestant for delivery at points within the park.—Id., p. 209.

The intent of Congress in the proviso of §5(2)(b) [formerly §213], as set forth in 1 MCC 101 and amplified in 40 MCC 457, was to protect independent motor carrier operations and preserve healthful competition between rail and truck services by providing that acquisition of motor operations by a railroad or its affiliate should enable the railroad to use the motor service to public advantage in its rail operations without undue restraint on existing competition; and an affirmative finding to that effect is necessary before consideration can be given the question of whether there are special circumstances warranting approval of such an acquisition without the usual restrictions imposed where railroads are involved.—Canadian Natl. Transp.—Control—Husband International, 93 M.C.C. 80 (86).

Although the primary purpose of proposed acquisition by Canadian holding company, itself controlled by a railroad owned and subsidized by the Canadian government and conducting or controlling certain railroad operations in United States, of control of Canadian motor carrier operating partly in United States is for the railroad to further expand its control over the motor carrier industry in Canada, which apparently is entirely proper and approved by the Canadian authorities, the fact remains that the railroad would for the first time extend such control to include a motor carrier system authorized to operate a short distance into United States territory. Since the transaction would expose United States motor carriers to competition of a motor carrier system affiliated with a rail system conducting operations subject to

Part I, the former are no less entitled to protection of the statute because the rail and affiliated motor systems also operate in a neighboring country and the proposed motor extension into United States territory would be but a small segment of the operations involved.—Id., pp. 81, 87.

The evidence is entirely inadequate to support the finding required by §5(2)(b); therefore, the parties' contentions relative to need for continuance of all-motor service by acquired carrier need not be considered. Even were the situation otherwise, approval without rail-auxiliary restrictions would still not justified when there is an abundance of motor carriers available to meet shipper needs for service to and from Detroit gateway and testimony shows only a preference of certain shippers for continuance of acquired carrier's single-line service to and from the two Canadian provinces involved. And assuming that restrictive approval were warranted, no purpose would be served thereby, since the railroad and the holding company have indicated clearly that they have no desire or use for such authority. Application denied.—Id., pp. 87, 88.

See also Burlington Truck Lines, Inc.—Purchase—H.B. Green Transp., n. 126, below.

Antitrust act violations: [Vols. 12, 14, 17].—That the commission's jurisdiction arises under §5 and not under the antitrust laws does not mean that it should not consider matters relating to restraint of competition and monopolistic tendencies which are specifically the object of those laws.—Pittston Co.—Control—Brink's Armored, Inc., 87 M.C.C. 637 (650).

Notwithstanding vendee's dominant position in the local bus industry in area involved, proposed purchase, with conditions imposed requiring cancellation or restriction of substantial portions of vendor's rights, would not so increase vendee's competitive strength as to violate the antitrust laws but for the specific exemption therefrom in §5(11). Since vendor is no longer an active carrier, due to seizure of its rights by Internal Revenue Service, there would be no fostering of monopolistic conditions by elimination of a competitor, and vendee already operates, though with closed doors, over the only route where competition is shown to exist. Moreover, in considering the antitrust aspects of such cases, the inherent though limited monopolistic nature of the passenger bus industry—which reflects its public utility characteristics—must be considered. Vendee is the only bidder for vendor's rights which is able to meet the high bidder requirement of Internal Revenue Code and to consummate the transaction and conduct operations thereunder; by continuing an existing service it would clearly serve public interest.—Public Serv. Coordinated Transport—Purchase—Royal Blue, 97 M.C.C. 56 (64).

Bankruptcy involved: [Vols. 13, 14, 16, 17, 19].—In conformance with decree of bankruptcy court, public sale of properties of Georgia & F. R. was held, at which Southern Ry. was the only bidder. Considering that the Georgia and its predecessors, but for a period of about 2 years, have been in receivership continuously since 1915, and that there appears to be no other purchaser for the entire line, the receiver's announced intention to seek total liquidation of the Georgia if proposed sale is not consummated may be taken at face value. Purchase of the properties by a new Southern subsidiary as its designee will therefore serve public interest in continued operation of the line.—Georgia & F. Ry. Co.—Acquisition—Georgia & F. R., 317 I.C.C. 745 (747, 750).

As vendor has been adjudicated a bankrupt since entering into purchase agreement and by order of the court the trustee has been authorized and directed to assume the agreement between applicants, consideration of the transaction is on that basis.—C & H Transp. Co., Inc.—Purchase—Gulf Southwestern Transp., 90 M.C.C. 636 (638).

While denial of control application, because continued operation of acquired carrier would place an undue and possibly insupportable financial burden on acquiring carrier, may result in former's bankruptcy and demise, with adverse effect on its creditors, employees, and stockholders, the commission's responsibility extends to

consideration of all ramifications of the transaction, and possible demise of one carrier, though unfortunate, must give way to possible demise or impairment of service of two carriers, particularly where the second is a major transportation artery in the affected area.—Adley Exp. Co.—Control—McFaddin Exp., Inc., 87 M.C.C. 665 (673)*.

Brokers' licenses: Holding of dual carrier and broker authority in same territory, though generally undesirable, has been sanctioned in case of carriers of special commodities, such as household goods. Vendee's operation as a broker of household-goods transportation would be restricted to Missoula, Mont., and would add to its ability to arrange for economical transportation from an area of low population density; transfer of vendor's brokerage license as an incident of purchase of her household-goods operating rights is therefore approved.—Shamrock Van Lines, Inc.—Purchase—Reely, 93 M.C.C. 455 (461).

Certificate under §1(18): [Vols. 12, 15].—Motion to dismiss merger application for failure of applicants to apply for authority to abandon certain lines as contemplated by the merger plan, denied. Even though abandonment of duplicating lines is one long-range objective of the merger, the proposed abandonments are neither essential to consummation of the merger nor directly in issue in proceeding thereon.—Seaboard Air Line R. Co.—Merger—Atlantic Coast Line, 320 I.C.C. 122 (135)*; and, since authorization to abandon any particular line would be dependent on considerations of public need and other factors not before the commission in merger proceeding, extent that claimed savings could be achieved from future abandonments cannot be determined.—Id., pp. 154-5.

Certificate under §207: [Vols. 12-19].—Under the commission's Organization Minutes, division 1 has responsibility for determining applications under §207, and division 3 can consider only those §207 applications which are "directly related" to §5 applications for purchases, consolidations, etc. Division 3 correctly dismissed plaintiff's §207 application to continue operations performed by acquired carrier purportedly under single-State proviso after it found that, since that carrier had no lawful status as an interstate carrier under the proviso, the transaction was not within the scope of §5(2); without a §5(2) application to decide, division 3 would exceed its responsibility if it decided a §207 application.—Hart v. I.C.C., 226 F. Supp. 635 (643)*.

The statute should not be read to require the commission to decide a §207 application not properly before it. Its position is consistent with long-standing policy, announced in 38 MCC 547, as to consideration in §5 proceedings of related matters of public convenience and necessity, and plaintiff's §207 application, in stating that the authority is requested "to substitute for the registered rights," shows their awareness thereof. The direct relation between the two applications is readily apparent; plaintiffs conceded as much in their petition for reconsideration, and they have presented no reasons why this long-standing commission practice, which appears to be a reasonable implementation of the statute, should be overturned. The commission's action sustained.—Id., p. 644.

The nature and extent of past contract-carrier operations to be converted, whether proposed operations would be those of a common carrier, and whether the public support is sufficient to sustain applicant's burden of proof are the criteria to be considered in deciding conversion applications directly related to §5 applications. Vendor's contract-carrier operations have been continuous, vendee is presently providing similar service as a common carrier in the same territory, proposed service is not unique, and supporting evidence is sufficient. Issuance of certificate in lieu of vendor's permit authorized upon consummation of purchase.—Ruan Transport Corp.—Purchase—Hillside Transit Co., Inc., 90 M.C.C. 523 (525).

See also H. C. Gabler case, n. 48 *Dual operations,* above.

—The principles of the *Elliott* case, 38 MCC 547, formerly applicable in §5 proceedings involving proviso operations are equally applicable in §5 proceedings in-

volving "grandfather" operating rights arising under §206(a)(7); and a certificate of convenience and necessity covering the operations of liquidating single-State carrier may be granted to surviving multiple-State carrier, based on evidence of the former's past operations, in the event proposed §5 transaction is found to be consistent with the public interest.—T.I.M.E. Freight, Inc.—Merger, 97 M.C.C. 310 (323-5, 328).

Since vendee seeks a certificate under §207 covering the same operations it has been performing under the former single-State proviso of §206(a)(1) and more recently under the "grandfather" provisions of §206(a)(7B), because after consummation of purchase it would no longer be a single-State carrier, the §207 application presents a matter not only directly related to but inseparable from the proposed §5 transaction; and if latter application is denied the §207 application must also be denied, as there would then be no transaction to which the §207 matter could be directly related. Therefore, since applicants have not met their burden of proving that proposed purchase would be consistent with public interest, it is unnecessary to decide whether the operations for which certificate is sought became unlawful when vendee instituted intrastate operations in another State, or other questions concerning effect thereof on its "grandfather" filing or the weight to be given evidence relating to its certificate application.—Prichard Transfer, Inc.—Purchase—Weiss, 93 M.C.C. 535 (539-40).

See also Snyder Bros. Motor Freight case, under *Intrastate operating rights,* below.

At hearing, purchase applicants introduced a proposed amendment to vendee's §207 application for interstate authority corresponding to acquired intrastate authority which formed basis of vendor's "grandfather" operations under §206(a)(7), stipulating with protestants that in event of approval of the transaction the involved rights could not be tacked with vendee's existing authority to perform through service between specified areas. In receiving the stipulation in evidence, the hearing examiner forewarned the parties that this did not signify that he would recommend the restrictions or that the commission would adopt them, whereupon one of protestants' attorneys stated his understanding that, should the examiner recommend approval without the restrictions, there would be no prejudice to protestants having the proceedings reopened for further hearing; the examiner then accepted the restrictive amendment and protestants withdrew. Although the examiner recommended approval of the applications without the stipulated restrictions, in recognition of the apparent misunderstanding which prompted protestants to withdraw, and in order to achieve administrative finality, further hearing is denied and the matter determined on the existing record.—Tallant Transfer, Inc.—Purchase—Guest Trucking Co., 93 M.C.C. 712 (715-6).

Since long-continued lawful operations under single-State proviso are an established basis for finding that public convenience and necessity require their continuance, legality of liquidating carrier's past proviso operations is a most important element in support of survivor's certificate application, and contention that applicants were not apprised that the question would be raised at hearing on proposed merger is without substance.—Hart Motor Exp., Inc.—Control and Merger, 90 M.C.C. 527 (531-2)*.

As vendee holds irregular-route authority for nearly all points served by vendor under single-State proviso, purpose of related §207 application seems to be to authorize service over regular routes. As no evidence of past operations or shipper need for service is submitted in support of such a grant, and no justification is presented for unlawful consummation of the purchase, both applications are denied.—Midwest Motor Exp., Inc.—Purchase—Daniel, 90 M.C.C. 590 (593-4).

As vendor has no properties or franchises under its pending §207 extension application that may be acquired under §5, applicants' request that vendee be authorized to acquire vendor's interest in such application is denied; however, if approved purchase is consummated, vendee may seek leave to be substituted as appli-

cant in the extension proceeding.—Little Audrey's Transp. Co., Inc.—Purchase—Refrigerated, 90 M.C.C. 743 (744).

Contracts: [Vols. 12, 14-19].—Applicants agreement with appellee Milne Truck Lines, by which he obtained a 90-day option to purchase certain of its interstate operating rights, was not a "bona fide offer to purchase" within terms of Milne's prior contract with appelle Burch to operate under those rights and which gave Burch the "first option to acquire" them on same basis as a bona fide purchase offer received by Milne which he was willing to accept. An offer to sell is a continuing offer which; when accepted within its terms by optionee, ripens into a mutually binding contract, specifically enforceable; but option does not bind optionee before the time he accepts the offer, and before there is an acceptance there can be no agreement. Option agreement with appellant could not ripen into a "bona fide offer to purchase" because, by its specific terms, it was not effective or operative until cancellation of the Burch agreement; thus it could not have actuated the Burch option. However, the Burch agreement was effectively canceled by Milne; appellant, having exercised his option, is entitled to enforcement.—Plavec v. Burch, 310 F. 2d 337 (338-9)*.

It is seriously doubtful whether a seller in a contract expressly subject to the commission's approval may even question validity thereof or propriety of its consummation. Plaintiff made a contract to sell all his interest in the companies involved, and, whatever rights pending State court litigation may accord him in avoiding its fulfillment, he may not contend before the commission that the contract he made was illegal. Existence of a dispute between the parties as to enforceability of the original contract did not deprive the commission of jurisdiction to approve resulting control, with modifications and conditions imposed, or make such grant of approval erroneous.—Walker v. United States, 208 F. Supp. 388 (394, 395)*.

In approving carrier Central's acquisition of control of a carrier and one noncarrier and acquisition of a second noncarrier by Callan (Central's controlling stockholder) as assignee of its rights under the original contract, and in authorizing in related finance proceeding Central's issuance (upon receipt of the funds from Callan) of a note to plaintiff to complete payment for his stock in the second noncarrier, the commission, by recognizing the assignment and imposition on Callan of all actual liability for Central's obligation to purchase plaintiff's stock, has approved consummation of the original contract; approval given is in no way limited by fact that Central's acquisition of plaintiff's stock is momentary and simultaneous with its ultimate acquisition by Callan.—Id., pp. 393, 396.

However, while the commission's determination, which is sustained by the court, is categorical and binding on the parties and all court adjudicating the controversy growing out of the contracts, neither the commission nor the court has undertaken to determine any other issue concerning the interpretation or enforceability of the contracts; the function of the reviewing court in that regard is no greater than that of the commission; such matters are left for determination by the courts in the normal way.—Id., p. 396.

Conclusion that acquiring carrier's commitment to pay $48,000 over a 5-year period to acquired carrier's stockholders or their estates, nominally for agreement not to compete, must be considered part of the purchase price for their stock does not change terms of the contract between the parties.—Aero Trucking, Inc.—Control—Friedman Transfer, 93 M.C.C. 342 (347).

Control within §5 provisions: [Vols. 12-19].—While vendor and carrier controlled by the brother-in-law of its controlling stockholder may have under unlawful common control following latter's acquisition of its stock, purchase proceeding is not an investigation to determine that question either on commission's own motion or on complaint by protestants as provided by §5(7); question of vendor's control is collateral to issue to be determined, namely, whether vendee's assumption of vendor's operations would be consistent with public interest. It is not claimed that vendee was in any manner connected with

either carrier, and it has conducted lawful operations as lessee of vendor's rights under temporary authority; moreover, approval and consummation of purchase will end all questions as to prior unlawful control. Also, there is no merit to protestants' inferential argument that vendor's operations under that stockholder's control were unlawful and should be discounted.—Helm's Exp., Inc.—Purchase—Keystone Transfer Co., Inc., 90 M.C.C. 679 (684).

While survivor's purchase of its 49-percent stock interest in liquidating carrier was approved about 10 years earlier, with the finding that latter would not thereby be controlled or affiliated with former within meaning of §5(6), the question of present control by survivor was raised for the first time in protestant's exceptions. Even considering possibility that common control may have resulted since the decision in the prior control case, this was a matter as to which the hearing afforded ample opportunity for developing all the facts; since this was not done, there was no error in failure of the prior report in instant case to find that survivor had unlawfully assumed control of liquidating carrier. Moreover, consummation of approved merger will terminate any unlawful control that might possibly exist.—Rio Grande Motor Way, Inc.—Control and Merger, 90 M.C.C. 643 (649)*.

Vendee, following inauguration of its interline arrangement with vendor, assumed virtually the entire burden of building up vendor's dormant irregular-route operations under single-State proviso, and while none of the various facts may alone warrant conclusion that it controlled vendor in common interest with itself in violation of §5(4), and that such control was perpetrated to revitalize vendor's dormant rights in order to support their transfer and issuance of a certificate to vendee, collectively they permit of no other conclusion; and vendee's control so permeated vendor's entire operation as to destroy lawfulness of the regular-route service rendered during the period. As there is no overriding evidence of public need for service under vendor's rights, purchase is denied.—Lombard Bros., Inc.—Purchase—Millis, 90 M.C.C. 604 (611)*.

Dual operation: [Vols. 12-14, 17-19].—In view of provisions of §210, transactions under §5 which result in holding of dual authority by a carrier or by carriers under common control may be approved only if such dual operations can be found consistent with public interest and the national transportation policy; such finding can be made where, by appropriate restrictions on the rights, the opportunity for discriminatory practices, or other objectionable aspects, can be removed or minimized.—McNichol—Purchase—McNichol, 90 M.C.C. 134 (137)*.

Fitness of applicants: [Vols. 17-19].—The statute entrusts the commission with deciding what considerations other than those specified in §5(2)(c) shall be given weight and, as in case of original applications for certificate, the commission has chosen to give weight to an applicant's fitness; integral to a determination of fitness is the applicant's willingness and ability to fulfill its obligations to the commission, which considerations may be demonstrated by past or continuing violations of commission regulations; relevance thereof to a finding of consistency with public interest is self-evident.—Gilbertville Trucking Co. v. United States, 371 U.S. 115 (127-8)*.

While violations of the act are facts to be considered in determining fitness of an applicant-vendee, they are not an absolute bar to approval of a transaction otherwise consistent with public interest. There is no exact formula for making such a determination; each case must be decided on the facts presented, giving consideration to such factors as the nature and extent of the past violations, their effect on regulation, mitigating circumstances, and whether the carrier's past conduct reflects a flagrant and persistent disregard of provisions of the act. Continuance in office of common officers and directors after termination of vendee's authorized temporary control of vendor through management, though not condoned, does not warrant a general finding of unfitness in absence of any evidence that vendee has persistently flouted the law, did

not act in good faith in continuing its relationship with vendor, or that its attitude is contemptuous of the commission's authority.—National Transp. Co.—Purchase—Hartford Transp. Co., 97 M.C.C. 206 (211)*.

See also White's Delivery Service, Transferee, §212(b), n. 10.

While no bar to approval of proposed purchase of operating rights because of lack of fitness of vendee is found, record is conclusive that it deserves censure for the disregard for laws and the commission's regulations which it has shown. A number of unusual circumstances were present (including vendor's loss of equipment and employees after interchange operations with vendee were begun), and some corrective action was taken after conferences with the commission's district personnel, but it is clear that an interchange operation was set up for through movement of traffice by vendee with minimum participation by vendor. Interchange point selected, instead of being in the area where the two carrier's operating rights overlapped, was actually outside vendor's authorized service area; moreover, their leasing arrangements, being a mere paper agreement, must be regarded as a lease of vendor's operating rights in violation of §5(4). However, the commission has taken no enforcement action against vendee for alleged violations; and no finding of violations is reached.—Great Coastal Exp., Inc.—Purchase—Price Transfer, 97 M.C.C. 271 (277, 285-7)*.

Although actions of acquiring carrier and its officers in effecting unauthorized common control of acquired carrier must be deemed willful, their arguments that they had no intended to involve it in acquired carrier's affairs to the extent shown, but that their actions were necessary to protect its interests and that the situation was caused by unexpected delays in final disposition of proceeding in which acquiring carrier sought to control a carrier to which acquired carrier's intrastate rights were leased, together with acquired carrier's insolvency and lack of adequate facilities, personnel, and management to conduct efficient operations, support conclusion that the violation was not so severe as to warrant finding acquiring carrier unfit to continue in control if otherwise consistent with public interest.—Central Freight Lines, Inc.—Control—Inland Motor, 90 M.C.C. 777 (788)*.

Though determination of legality of tacking of vendor's regular- and irregular-route intrastate rights is unnecessary to determination of purchase application in view of disapproval of purchase of the irregular-route rights, vendee is not shown to be unfit to acquire the regular-route rights because of alleged unlawful tacking. Vendor's State certificates are unrestricted on their face and vendee's operations under temporary authority were conducted at least under claim of right.—Ohio Southern Exp., Inc.—Purchase—Vermilion Truck Line, 97 M.C.C. 93 (101-2)*.

Although examiner found in investigation proceeding that vendee in instant purchase proceeding had performed unauthorized transportation and exercised control of two other carriers in lease and interchange arrangements contrary to provisions of §206(a), and the circumstances described in the examiner's report appear serious, decision in instant proceedings need not be deferred pending final decision in the investigation, which is an entirely separate and unrelated proceeding. Moreover, evidence in instant proceeding does not indicate violation of the lease-and-interchange regulations of type found in other cases, and the presumption of lawful conduct must tip the scales in vendee's favor.—Home Transp. Co., Inc.—Purchase—Chattanooga Transfer, 97 M.C.C. 173 (188-9).

The act does not expressly require a finding of fitness to be made in §5 proceedings; rather, a showing of fitness is part of applicants' burden of showing the transaction to be consistent with public interest. Applicants must make a prima facie showing of fitness, but unless some error in that showing or some other fact indicating unfitness is brought out by another party on cross-examination vendee's fitness may be accepted. Ordinarily, to warrant a finding of unfitness on vendee's part, an unauthorized part operation or improper practice must have been willful and fla-

grant; protestants' mere questioning of lawfulness of vendee's past interline arrangements falls far short of showing facts to create a valid doubt.—Security Van Lines, Inc.—Purchase—Community & Johnson, 93 M.C.C. 399 (403).

Unlawful shipments imputed to acquired carrier prior to temporary control authority do not reflect on acquiring carrier, and although latter transported a few questionable shipments in early days of temporary control, they were similar to those transported by acquired carrier, as to which there is some uncertainty, and it does not appear that acquiring carrier continued that type of activity. Nor does finding in investigation proceeding that acquiring carrier had engaged in widespread unauthorized operations necessitate a finding of unfitness, since there was no finding therein, nor is there any affirmative indication, that such unauthorized operations were conducted in willful disregard of its certificate.—Mitchell Bros. Truck Lines—Control—Empire Transport, 93 M.C.C. 38 (43).

Applicants have provided adequate indicia that vendee can take in stride the relatively small extension in the general area of its operations represented by proposed purchase; more detailed proof of fitness based on day-to-day activities has not been required, for in respect of transactions in ordinary course of business an interstate carrier, absent proof to the contrary, is entitled to a presumption of right conduct.—Lang and Givens—Purchase—T.I.M.E., Inc., 90 M.C.C. 195 (199).

Past violations of the act, though properly to be considered in determining fitness of an acquiring party applicant in a §5 proceeding, are not an absolute bar to approval if the transaction otherwise is shown to be consistent with public interest and the applicant appears to be making a sincere effort to comply with all applicable rules and regulations; there is no inflexible formula to be followed in ascertaining an applicant's fitness; each case must be decided on its own particular facts.—Pirkle—Purchase—P & A Refrigerated Exp., Inc., 90 M.C.C. 36 (38).

That vendee was found fit to receive additional authority in other proceedings decided in same year purchase application was filed, though entitled to consideration, in no way alters findings required to be made in instant proceeding; it is evident that vendee has been guilty of numerous violations of the commission's regulations; however, evidence of record shows that it is making a determined and largely successful effort to comply. Therefore, since vendee's past violations are not shown to have either willful or flagrant, and proposed purchase transaction is otherwise consistent with public interest, denial on ground of unfitness is not warranted.—Id., pp. 38, 39.

Allegations as to acquiring carrier's unfitness apparently concern unlawful lease arrangements shortly after it took over acquired carrier's operations under temporary authority, and latter's witness testified that this was being rectified and that inspections required by leasing regulations would be made in future. While any past violations are not condoned and applicants are admonished to comply strictly with the regulations, evidence does not warrant a general finding of unfitness such as would bar approval of control.—Long Transp. Co.—Control—Marine Transit, Inc., 90 M.C.C. 261 (266).

Fitness of a prospective purchaser under §5 is important in resolving whether the transaction would be consistent with public interest. Though fitness of vendee and carrier controlling it was the subject of recent investigation proceedings in which they were found to have violated or to be in noncompliance with various of the commissions safety regulations, and cease and desist orders were entered against them, those violations, while serious in nature, do not warrant disapproval of purchase. In view of the prompt corrective measures taken by both carriers respecting most of the violations, the nature of those remaining, and their excellent records in complying with other safety regulations, a finding of unfitness would be justified only if they should refuse to abide by terms of the cease-and-desist orders.—Trailways of New England, Inc.—Purchase—Interstate, 93 M.C.C. 217 (226-7).

While the commission cannot be absolutely certain at this time that vendee and its parent company will comply with

those orders, the sanctions, including fines and revocation of operating rights, which can be imposed for failure to comply provide an adequate guarantee that they will do so. Moreover, in view of vendee's temporary authority granted prior to institution of the investigations and extended indefinitely by provisions of Administrative Procedure Act, Little benefit would be gained by withholding purchase approval until the cease-and-desist orders are withdrawn. However, the parties will be expected to abide by those orders in conduct of operations under the acquired rights, and, if authority granted is exercised, vendee's acceptance of certificate to be issued will be deemed to constitute agreement that the cease-and-desist order shall apply thereto in same manner as to certificates now held by it.—Id., pp. 227-8.

Vendee is found financially fit and able to consummate proposed purchase of operating rights and properties when its latest balance indicates a good financial condition; it states that anticipated earnings from present operations would have accrued sufficiently over the period required for processing the application to meet the cash requirements, but if not, its stockholders will furnish such funds as may be necessary; and, in addition, an analysis of its income statement for preceding year is convincing that its cash flow for the current year should be ample to pay the purchase price of $327,000 in cash while concurrently meeting its other obligations. However, based on other grounds, the application must be denied.—Mitchell Transport, Inc.—Purchase—John Schutt, Jr., Inc., 97 M.C.C. 10 (17-18).

Although the commission has generally held that possession of adequate resources by stockholders of an acquiring carrier is no substitute for its own financial ability to meet its obligations, exception may be made where the stockholders quarantee its obligations and show a clear ability to do so; however, such assurances by carrier stockholders must not impair their own ability to perform authorized service to the public. While merger survivor would be unable alone to pay off promissory note to be issued to finance proposed stock purchase within its 1-year term, the three system carriers authorized to jointly control it and to guarantee the note are each able to bear its share of such obligation; merger approved.—Continental Tenn. Lines, Inc.—Control—Tennesee Coach, 87 M.C.C. 775 (782).

Survivor's financial condition following proposed merger would not be sufficiently strong to warrant approval when resulting overcapitalization would be unfavorable, ability to service its outstanding debt is also questionable when results of its most recent financial statements are considered, and its debt-equity ratio would be highly undesirable. Letter from bank which is survivor's largest creditor, to effect that it would be willing both to extend terms of notes now owing the bank and to extend additional credit to the company, while helpful, is not an adequate substitute for present financial fitness warranting the proposed expansion. Denied, without prejudice to submission of a revised transaction, with evidence that by providing additional equity capital or liquidating indebtedness, or both, survivor's financial condition would be improved to an extent justifying approval.—Johnson Freight Lines Co., Inc.—Merger, 87 M.C.C. 747 (751, 752)*.

Since purchase approval in prior report rendered some 2 years earlier is affirmed, and no clear evidence of unfitness was adduced on further hearing, to defer approval on reconsideration unless and until pending proceedings in which vendee's fitness is in issue are terminated favorably to it, with possible lenghty extension of temporary authority as to dormant rights during such deferral, would be unwarranted and inconsistent with public interest.—C & H Transp. Co., Inc.—Purchase—Ferguson Trucking, 93 M.C.C. 741 (751)*.

While vendee's violation of §220(a) and the commission's regulations thereunder was terminated by its filing of a contract and schedule of minimum rates covering certain bulk transportation, its prior noncompliance is properly to be considered in connection with the issue of fitness raised by its application to purchase additional contract-carrier rights.—C&R Trucking Co.—Investigation of Control, 93 M.C.C. 669 (672).

Although grant of authority to one of two control applicants and consequent dismissal of prior application of the other to control same carrier renders question of the earlier applicant's unlawful control of that carrier practically moot, the issue must be determined insofar as it might reflect on the general fitness of that applicant and its controlling stockholder.—Watkins Motor Lines, Inc.—Control and Merger, 90 M. C. C. 567 (586).

Examiner correctly found that vendee had assumed control and management of vendor's operation in violation of §5(4), that vendee's temporary authority application under §210a(b) was fraudulent, and that in the §5 proceeding applicants submitted a false application and at hearing offered false evidence in support thereof. Applicant-respondents did not except to those findings, but filed affidavits attesting to termination of both the purchase agreement and the temporary authority operations, and though such affidavits are considered as a petition for dismissal of the application, which is granted as consistent with public interest, such action should not be taken as meaning that the commission does not fully subscribe to the examiner's further finding that applicant-respondents' clearly demonstrated unfitness would warrant denial of the §5 application if it were considered on the merits.—Calore Exp. Co., Inc.—Purchase—T.W. Waterman Co., Inc., 93 M.C.C. 291 (296,297).

Proof of acquiring carrier's fitness is a prime requisite to approval of a transaction under §5. Under a separate agreement, survivor in proposed merger leases its equipment with drivers to liquidating carrier from origin to destination, but on the record as made there is ample reason to doubt that liquidating carrier exercises any control over survivor's equipment and drivers while they are operating in former's territory. While, because of paucity of evidence as to the exact method of handling the alleged interline shipments, it cannot be found that the leasing arrangement was clearly an unlawful lease of liquidating carrier's operating rights in violation of §5(4), cross-examination of applicants' witnesses was piercing enough to rebut any presumption that the purported interline arrangement was lawful. Applicants have failed to bear their burden of proof as to survivor's fitness; denied.—Dealers Transit, Inc.—Control and Merger, 93 M.C.C. 611 (618-20).

The lack of candor and perhaps deliberate evasion indicated by testimony of vendee's executive vice-president and vendor's general manager concerning purported interchange, and vendee's subsequent conviction of seeking to evade regulation by a false and fictitious vehicle-lease arrangement, demonstrate vendee's unfitness to consummate proposed purchase; both parties are long experienced in the motor carrier field, are well acquainted with the law and the commission's regulations, and their unlawful activity was admitted to be willful and knowing. Denied. United States Van Lines, Inc.—Purchase—Bell, 90 M.C.C. 362 (365).

There is no fixed formula to be followed in determining an applicant's fitness; each case must be decided on its own facts, with consideration of such factors as the nature and extent of past violations, effect thereof on regulation, any mitigating circumstances, and whether applicant's past conduct indicates a flagrant and persistent disregard of law.—Cooper's Exp., Inc.—Purchase—Ferguson Motor Transp., 90 M.C.C. 613 (615).

Applicants offered no evidence to rebut, explain, or mitigate the evidence offered to show hundreds of past unauthorized movements by vendee; vendee was twice convicted and fined for unauthorized operations, also for violations of regulations, and further criminal proceedings against it are now pending; between initial and further hearings on purchase application inspections revealed numerous violations of safety regulations, and vendee's representatives were distinctly uncooperative with commission inspectors. Also, court action is still pending to enjoin vendee's unlawful control with two connecting carriers; and though the unlawfulness has been ended by voluntary termination of the connections' interstate rights, conclusion is warranted from all the facts that this was done to avoid criminal conviction or to safeguard approval of purchase, and not because of an earnest desire to comply with applicable law.—Id., pp. 616-8.

That vendee's tonnage and earnings have increased under temporary authority and

shippers have received a more satisfactory service does not overcome the showing of its unfitness. Examiner's recommendation of approval, to be held in abeyance for 1 year to permit vendee to demonstrate its fitness, which would allow it to continue the expanded operations under temporary authority in advance of tangible proof that it is fit to conduct them, must be rejected in view of its record of flagrant violations over the years and up to time of hearing. Vendee's fitness must be determined on the record as made, not on what it might be at some uncertain future date; approval on the evidence presented would make a mockery of enforcement provisions of the act and regulations promulgated thereunder, and an affidavit by vendee that it had placed its operations in compliance would be practically worthless. Until vendee has shown in actual practice that it will comply with terms of its authority and with safety and other regulations, it should not be permitted to expand its service as proposed. Denied.—Id., pp. 618-9.

Under §5, the fitness of the acquiring party applicant is always an important issue which must be resolved, and though denial is not necessarily required where premature consummation has occurred in violation of §5(4) if there is positive proof that public interest would best be served by approval, such applications have been denied where the accomplished fact was presented for approval and the law violation could properly be characterized as flagrant. Under the national policy the commission is concerned with obedience to and respect for the law; faithful compliance with the law would not be encouraged by approval of purchase by vendee which has been using the purchase rights under an unlawful leasing arrangement although, as a carrier for over 40 years and no stranger to §5 proceedings, it should have been aware that such arrangement was a clear violation of the leasing regulations; denied.—American Red Ball Transit Co., Inc.—Purchase—Fallon, 90 M.C.C. 515 (520-1)*; for like reasons, approval of continuance of control already effected in violation of §5(4) is denied.—Holdcroft—Investigation of Control, 90 M.C.C. 407 (412).

Fitness of an applicant for authority to extend its operations under §5 through acquisition of additional operating rights is one of the most important considerations in determining whether the proposed transaction would be consistent with public interest. When applicants have been interchanging traffic at a point which vendee not only has no authority to serve but does not even claim a color of right to serve, vendee is unfit to conduct the operations it seeks to purchase; denied.—Be-Mac Transport Co., Inc.—Purchase—Nix, 87 M.C.C. 737 (741).

In view of vendee's unauthorized lease of vendor's operating rights over a considerable period under purported lease-and-interchange arrangement, together with the unlawful common control and management of vendor manifested thereby, vendee is not shown to be fit to acquire and conduct any portion of the operating rights sought to be transferred; purchase application denied.—Stewart—Investigation of Control, 87 M.C.C. 681 (696, 697, 698).

"Grandfather" applications: [Vols. 12, 19]. —See also Brown—Control—United Expressways, n. 5, above.

Applicants may well be correct in their interpretation of §206 (a)(7) as precluding the commission, when considering issuance of a certificate of registration in a "grandfather" proceeding, from looking beyond the underlying State certificate to ascertain the scope of authority to be granted. However, the commission is not thus proscribed in a proceeding under §5 for the transfer of claimed or certificated "grandfather" rights; such a proceeding is not one for determination of the scope of authority to which vendor is entitled under the "grandfather" provisions, that being a matter properly for determination in vendor's "grandfather" proceeding. The principle issue in the §5 proceeding is consistency of the transaction with public interest, and determination thereof requires inquiry into the nature and scope of operations conducted by vendor in the past and by vendee under temporary authority, as well as appraisal of any adverse effects that consummation would have on operations of existing carriers.—Sierra Distributing—Purchase—F.T.S. Transport System, 97 M.C.C. 294 (299).

That registered rights, rather than rights embraced in a certificate of convenience and

necessity, are involved requires no different approach in carrying out the mandate of the provisions of §5. Denial of purchase application would not affect the scope of authority to which vendor is entitled under the "grandfather" clause; similarly, approval subject to a condition that vendee acquire less authority than is described in the State certificate would not abrogate the "grandfather" provisions, since any authority granted under §5 is purely permissive, and applicants may choose whether or not to exercise that authority.—Id., p. 300.

Since vendor was engaged in lawful operations in interstate or foreign commerce under the single-State proviso of §206(a)(1) before its repeal, and has since operated under "grandfather" provisions of §206(a)(7), it is a motor carrier subject to Part II and within meaning of §5; and since "carrier," as used in paragraph (7), is interpreted to mean a motor carrier subject to Part II and therefore not to preclude a single-State operation thereunder by a motor carrier affiliated with a multistate carrier of another mode, upon consummation of purchase of all vendor's California operating rights vendee, a California corporation commonly controlled with a multistate water carrier subject to Part III, will be entitled to receive any certificate of registration issued as result of vendor's pending "grandfather" application, and its application for a certificate under §207 (a) is therefore dismissed.—Security Transp. Co.—Purchase—Security Truck Line, 93 M.C.C. 385 (389, 390-1).

Since upon consummation of purchase of its intrastate rights vendor would no longer hold "grandfather" rights under §206(a)(7), approval is conditioned upon withdrawal of its application for confirmation of those rights.—Tallant Transfer, Inc.—Purchase—Guest Trucking Co., 93 M.C.C. 712 (714).

Most of vendor's operations in interstate commerce in Virginia are now conducted under the "grandfather" clause of §206(a)(7B), and upon consummation of approved purchase vendee will be entitled to continue such operations pending issuance of certificate authorized under §207(a). However, under the "grandfather" clause, if the transaction is not consummated by February 12, 1963, vendor must file application under §206(a)(7B) for a certificate of registration by that date in order to preserve its right to operate in interstate commerce and its right to a certificate of registration, pending consummation of purchase.—Overnite Transp. Co.—Purchase—Hill City Transfer, Inc., 90 M.C.C. 749 (755).

Intrastate operating rights: [Vols. 12-15, 17-19].—Vendor's intrastate certificate, used as basis of "grandfather" operations under §206(a)(7), must be interpreted in light of policy established by the issuing State. As Kentucky permits a regular-route carrier to serve off-route points within 3 miles of an authorized service point unless such point is specifically authorized to be served by another such carrier, vendor apparently could lawfully serve plant site within 3 miles of an authorized point on his route for purpose of interchange, when there is no evidence that other Kentucky carriers may serve that point under specific authority.—Liquid Transporters, Inc.—Purchase—Black, 93 M.C.C. 423 (428).

Vendor's sale of its regular-route rights in Ohio and retention of its Ohio irregular-route rights "to and from" Mount Vernon should not be approved when operations to and from Mount Vernon can be conducted under the regular-route rights and vendor could possibly compete for traffic that vendee could also handle. Vendor has pending a "grandfather" application for registration certificate under §206(a)(7), and if such certificate covering the irregular-route authority were issued and an interstate certificate issued vendee for the regular routes there would likely be a duplication of interstate rights, resulting in two operations in place of one. However, it is neither necessary nor desirable that purchase application be denied or held in abeyance pending decision in the "grandfather" proceeding; instead, approval of purchase and issuance of certificate to vendee is conditioned on vendor's withdrawal of its "grandfather" application. Such condition is necessary to finding that public convenience and necessity require vendee's operation over the regular routes, and vendor must decide whether to gain approval of purchase by forgoing the irregular-route authority.—Snyder Bros. Motor Freight, Inc.—Purchase—Mosholder, 93 M.C.C. 653 (657-8).

See also Central Motor Exp. case, n. 48 *Conditions imposed*, above.

Only matters in issue determined: [Vols. 14-17, 19].—Whether acquiring carrier provided bona fide management under temporary authority, whether it absorbed acquiring carrier's traffic, and whether or to what extent the latter misrepresented its financial position to the former, are not matters requiring resolution by the commission, and even if those issues could be resolved one way or the other they would have no bearing on final determination of control application. The parties' longstanding controversy is a matter for the courts to decide if they cannot otherwise resolve the controverted matters.—Adley Exp. Co.—Control—McFaddin Exp., Inc., 93 M.C.C. 378 (382)*; and termination of expense of litigating that controversy is not a matter requiring serious consideration in determining whether the proposed control would be consistent with public interest.—Id., p. 382.

Purchase and control: [Vols. 12, 17, 19].—Issue raised respecting vendee's relationship with, and possible unlawful control of, a carrier not a party to purchase proceeding is not appropriate for determination in that proceeding. Vendee has applied under §5 for authority to purchase that carrier's operating rights, and there is no warrant for prejudging the issues relative thereto.—Seuring Transit, Inc. —Purchase—Fullerton Motor Truck, 97 M.C.C. 241 (247-8).

Purchase of equipment: [Vols. 13, 15, 16, 18, 19].—Purchase of vehicles is part of the same transaction as purchase of vendor's operating rights and likewise requires the commission's approval.—Tallant Transfer, Inc.—Purchase—Guest Trucking Co., 93 M.C.C. 712 (714).

Vendee's unauthorized acquisition of vendor's equipment, following grant of temporary authority, violated §5(4) even though it resulted from an honest mistake of vendee's president. However, without condoning such action, purchase is approved when it is otherwise consistent with public interest.—Von Der Ahe Van Lines, Inc.—Lease and Purchase —Bee-Line, 90 M.C.C. 888 (896-7)*.

Rates: [Vols. 13, 14, 18, 19].—Although respondent complains that establishment of joint TOFC rates over certain through routes existing at time of merger, in compliance with condition imposed on merger approval, would result in uneconomical transportation at rate level proposed by petitioner, such results can probably be prevented by adjustments in either the rates or divisions; otherwise, the matter may be brought before the commission in another proceeding.—Rates, TOFC, between Midwest & South—Louisville & N.R., 318 I.C.C. 40 (44).

Requested conditions on control approval, that carriers be required, to extent of their power, to preserve present rate relations between the ports of Baltimore and Newport News, and that they give recognition to importance of Baltimore to the combined system, are not matters which should be considered in such a proceeding.—Chesapeake & O. Ry. Co.—Control—Baltimore & O.R. Co., 317 I.C.C. 261 (289, 290)*.

Regular, irregular routes: [Vols. 12, 14, 17, 19].—Conversion of vendor's irregular-route authority between Salt Lake City and Page, Ariz., to regular-route would eliminate any existing uncertainty respecting type of service performed, and public witnesses supporting related conversion application all indicated a need for regular-route service. Testimony shows there is no regular-route single-line service between Salt Lake City and major Texas points on vendee's routes between Texas and California and existing service between Salt Lake City and Arizona points has not been entirely satisfactory. Vendee's through service under vendor's rights has met a public need and should be continued; moreover, evidence does not show that such conversion, restricted against through service between Salt Lake City and California, will provide vendee with any competitive advantage.—Consolidated Copperstate Lines—Purchase—Nielsen, 90 M.C.C. 483 (488).

Restrictions upon operating rights and services: [Vols. 12, 14-19].—Although vendee is willing that the combines rights after purchase be restricted against single-line service to and from points in five States, which would be competitive with protestants' services, much of vendor's authority is already restricted against joinder with its other rights for through service; moreover, proposed further

restriction of service in portions of the authorized territory to traffic interchanged with other carriers would make any certificate issued therefor susceptible of different interpretations, a result not in the public interest. However, application is denied on other grounds.—R.L. Jeffries Trucking Co., Inc.—Purchase—Eck Miller, 97 M.C.C. 151 (166).

Tacking restrictions are not imposed in absence of a showing that nonimposition would have a materially adverse effect on operations of competing carriers. As protestants have made no such showing, imposition of a restriction to prevent vendee's tacking of purchased rights with its existing rights to provide through single-line service on the commodities involved is not warranted.—Seuring Transit, Inc.—Purchase—Fullerton Motor Truck, 97 M.C.C. 241 (247).

In view of their close working arrangement, vendee's offer to accept restrictions on interstate rights it seeks to purchase and also, on behalf of non-party purchaser of vendor's intrastate rights, on any registration certificate issued therefor, so as to preclude objectionable duplication of interstate operations, may be considered notwithstanding exclusion as evidence of the intrastate purchaser's letter to the commission offering to accept such restrictions. The commission may impose restrictions on acquired operating rights on its own motion where appropriate, and, because of the permissive character of authority granted under §5, conditions have sometimes been imposed on carriers not parties to the proceeding. Vendee is aware that its purchase of the interstate rights could not be consummated unless purchaser of the intrastate rights requests such a restriction, and is already dividing traffic with latter along the lines contemplated.—Illinois-California Exp., Inc.—Purchase—Salt Lake-Kanab, 97 M.C.C. 38 (46).

As the only traffic handled by vendor under irregular-route authority which one vendee would purchase, and by that vendee under temporary managerial control of vendor, was overhead traffic moving between points in vendee's southern New England territory and points in Pennsylvania, New Jersey, and New York, and vendee is agreeable to restriction of such rights to traffic moving between points in vendor's territory and points in Massachusetts, Rhode Island, and Connecticut, restriction is imposed accordingly. Also, as vendor rendered only limited service between points in Rockland County, N.Y., and four Connecticut counties, the involved rights are further restricted to prohibit such service by vendee. —National Transp. Co.—Purchase—Hartford Transp. Co., 97 M.C.C. 206 (214, 215)*.

Restrictions against tacking are generally not favored, and are imposed only if protesting carriers demonstrate that failure to do so will have materially adverse effect on their operations. Imposition of a no-tacking restriction is not warranted merely to maintain the presale, relative competitive positions of the parties.—Public Serv. Coordinated Transport —Purchase—Royal Blue, 97 M.C.C. 56 (61).

And although protestant has routes between Somerville, N.J., and New York City identical to those of vendor for over half the distance and closely parallel for the remainder, and it renders primarily a commuter service whereas vendor rendered service under through schedules to and from Pennsylvania, a restriction against vendee's operation of schedules which do not extend west of Clinton, N.J., would not be practical. However, since protestant renders a vital commuter service in the Somerville area, and vendor's service at that point and points east thereof was on a limited scale, imposition of a restriction against passengers boarding eastbound or alighting westbound at points between North Plainfield and New York City would effectively prevent vendee's establishment of a new local commuter service without impairing its service west thereof where protestant's routes are not duplicative of those acquired. —Id., pp. 62-3.

To restrict purchase of operating rights giving vendee a more direct route between Boston and Portsmouth, N.H., to preclude service between Boston, Newburyport, and points intermediate thereto, on one hand, and, on the other, Portsmouth and points in Maine would not only vitiate the purchase but would remove utility of operations long conducted by vendor jointly with vendee in competition with protestant Greyhound, and should not be imposed in absence of a clear showing by Greyhound that material impairment of its revenues and service would other-

wise result.—Trailways of New England, Inc. —Purchase—Interstate, 93 M.C.C. 217 (226).

Restrictions against rendition of through service by tacking of unified rights should not be imposed in absence of a showing that non-imposition thereof would have a materially adverse effect on operations of competing carriers. Notwithstanding that survivor has for some time been performing through service between points in its own territory and liquidating carrier's under temporary authority, protestants' evidence shows that their revenues have increased despite that fact, whereas liquidating carrier was in serious financial difficulties when survivor instituted the temporary operations and it is doubtful if it could continue the service provided under its rights if merger were disapproved. As supporting shippers strongly favor continuance of the unified service, public benefits reasonably to be expected from merger far outweigh any possible disadvantages to competing carriers; therefore, no tacking restriction is imposed.—Youngstown Cartage Co.—Control and Merger, 93 M.C.C. 318 (327-8).

Though Perth Amboy is the only point in Middlesex County, N.J., which vendors have ever served under their contract-carrier rights from that county, and plants of both supporting shippers are located there, the plant of one extends into an adjoining township and future plant expansion could well require vendee to provide service at other Middlesex County points in order to continue serving that shipper. Furthermore, since service under vendor's rights can only be performed for a limited number of shippers, public interest would not be served by restricting vendee's future operations thereunder to service only at Perth Amboy.—H. Prang Trucking Co., Inc.—Purchase—Hyer Trucking, 93 M.C.C. 695 (702).

Tacking restrictions are undesirable and should usually be limited to those cases where protestants show serious potential harm if they are not imposed; and restrictions agreed on by the parties as a condition of protestants' withdrawal without offering evidence have been rejected where their imposition was not shown to be consistent with public interest, noting that protestants withdrew in such instances at their peril; nor is the commission bound to impose stipulated conditions because the proposal purports to amend a related §207 application. Nevertheless, tacking restrictions are lawfully imposed in proper circumstances.—Tallant Transfer, Inc.—Purchase—Guest Trucking Co., 93 M.C.C. 712 (717).

Applicants proposed tacking restrictions on interstate authority sought by vendee, in lieu of acquired "grandfather" rights under §206(a)(7), on basis of consultations with the many protestants, and it is clear that protestants intended to show adverse effect on them of the combined operations, that applicants must have feared their ability to do so, that, as the proposal came near the end of applicants' case, they did not offer the restrictions to avoid time and expense of presenting their evidence, and that the restrictions would result in no substantial diminution of applicants' existing interline service. Imposition of the restrictions stipulated, which prompted protestants' withdrawal from the hearing, will give applicants no cause to complain, since they proposed the amendment of the §207 application themselves; however, as one supporting shipper for which applicants have handled substantial traffic testified to need for single-line movements of furniture from North Wilkesboro, N.C., to destinations in Maryland, Delaware, and the District of Columbia, the restrictions imposed will not extend to such movements.—Id., pp. 717-8.

Although vendor's Virginia intrastate authority, the basis of its "grandfather" operations under §206(a)(7B), is restricted against transportation of freight originating in Lynchburg and destined to Richmond, or vice versa, that restriction is not included in certificate authorized to be issued to vendee; since the commission construes "originating" and "destined" as not including traffic interchanged at those points, such restriction would not apply to traffic moving in interstate commerce. But restrictions against transportation between other named points, which are not limited to traffic "originating" at or "destined" to those points, are retained, insofar as such transportation could be performed as part of a longer interline movement in interstate commerce.—Overnite Transp. Co.—Purchase—Hill City Transfer, Inc., 90 M.C.C. 749 (753).

See also Evans purchase case, under *Routing practices*, below.

Since interstate shipments between points on vendor's routes between Buffalo and Utica and points south of New York-New Jersey boundary, and between points on its Rochester-Plattsburgh routes and points south of the New Jersey line and in Connecticut and Massachusetts, have been primarily inbound, and shippers have shown no real need for southbound service from such points, sale of its New York proviso rights to vendee operating in New England and Middle Atlantic States is conditioned on restriction against vendee's transportation of traffic originating at intermediate points on the Rochester-Plattsburgh routes and in area generally between Utica and Buffalo when destined to points south of the New Jersey line or New York commercial zone via Utica or Albany, and from intermediate points on the Rochester-Plattsburgh routes to vendee's service points in Connecticut and Massachusetts.—Dorn's Transp., Inc.—Purchase—Mayberry Motor Freight, 90 M.C.C. 269 (277-8, 279).

However, restrictions on operating rights generally create undesirable operating complications and should not be imposed unless the record conclusively shows them to be necessary in public interest. Though vendee under temporary authority may not have consistently observed proper gateways in operating to and from part of vendor's territory, the record does not definitely show this; accordingly, restrictions to assure such observance are not imposed, but vendee will be expected to limit its operations to the authority granted. —Id., p. 279.

It is generally commission policy to require opposing carriers to show that nonimposition of a tacking restriction will have a materially adverse effect on their operations, and, even though a vendee is agreeable to imposition of a restriction to satisfy protestants' objections, that alone does not necessarily warrant such imposition, the final criterion being whether it is necessary in the public interest. But where a vendee seeks a certificate under §207 to continue interstate operations theretofore conducted by it under the former single-State proviso, authority is granted in terms of an interstate service coextensive with the authorized intrastate service, or for operations, including restrictions, as actually conducted in interstate or foreign commerce under the proviso.—Dodds Truck Line, Inc.—Purchase—Strain, 93 M.C.C. 229 (236, 239).

At opening of hearing, vendee's counsel specifically indicated that authority sought in the related §207 application was not to be broader than operations which it could conduct under the proviso, and though no mention was then made of a restriction on the acquired authority, vendee's president testified in course of hearing that his company had no desire, following consummation, to tack the §207 authority with that purchased, to provide through service from St. Louis to Springfield and Rolla, Mo., and that it would accept a restriction precluding such service; protestants are entitled to rely on that representation. As applicants are not shown to have interlined any traffic between St. Louis and Springfield or Rolla and supporting shippers are not concerned with such movements, it is reasonable to conclude that other carriers in the area have been providing satisfactory service between those points, and to authorize vendee to institute such service would tend to disrupt the competitive balance without compensatory public benefits and would be inimical to the public interest generally. On balance, a restriction against such tacking is warranted and is imposed.—Id., p. 239.

No justification is shown for restricting heavy-hauling rights authorized to be purchased to protect protestants transporting aircraft, missiles, pipe, and related commodities. Even if vendor had not moved any such traffic (as it did occasionally), it would not be sound regulation to atomize its operating rights by excluding those specialized classes of commodities from a broad but standard commodity description which would otherwise include them.—Superior Trucking Co.—Purchase—Arthur Morgan Trucking, 93 M.C.C. 64 (69-70)*.

Protestant's contention that acquired automobile carriers' authority from one origin should be limited to traffic moving on government bills of lading is entirely without merit; such a restriction would result in service in nature of contract carriage. And additional restrictions requested on interline of second-

ary movements by acquired carriers are unwarranted and unnecessary, since they would restrict those carriers from that which they might perform with any other carrier, and continuance of the present interline situation would be no more than could be done if their operations were merged.—National City Lines, Inc.—Control—Automobile Carriers, 93 M.C.C. 683 (688-691).

Inasmuch as protestants withdrew their opposition to proposed purchase upon applicants' agreement to accept a restriction on acquired rights to preclude pipestringing service, and such restriction would not materially affect transportation service in area involved, approval is conditioned accordingly.—Hill & Hill Truck Line, Inc.—Purchase—Hunsaker Trucking, 93 M.C.C. 490 (495).

See also Consolidated Copperstate Lines case, §212(a), n. 30.

When two motor carriers withdrew their opposition upon vendee's stipulation to accept a restriction on acquired rights against transportation of bulk petroleum and products, and abstracts of representative shipments showing only one shipment of lubricating oil indicate that vendor has not emphasized transportation of that class of commodity, to accede to the stipulation would not be contrary to public interest, and purchase approval is conditioned accordingly.—Northern Pacific Transport Co.—Purchase—Stark, 90 M.C.C. 206 (210).

Vendor's transportation of chemicals from Providence, R.I., to points in Connecticut and Massachusetts is not shown to have been of such essentially local character as to require a restriction against tacking of those rights with vendee's existing rights between Providence and New York and New Jersey. Imposition of such a restriction does not rest on whether public convenience and necessity has been shown for vendee's through service, but on whether protestants have shown that nonimposition would have a materially adverse effect on their operations; their evidence does not support such a finding, and imposition of a tacking restriction is not warranted.—Berman's Motor Exp., Inc.—Purchase—Lang Storage & Trans., 90 M.C.C. 807 (814-5).

It is undesirable in public interest to place restrictions on authority for a highly specialized service on a special class of commodities such as would restrict ability of the vendee thereof to furnish a complete service to the industry it serves or limit its service with respect to the type of vehicle to be used. Where there is no evidence that protestants would be harmed if vendor's bulk-commodity rights were to remain intact in vendee, proposed restriction to handling of such commodities in liquid form in tank vehicles is not warranted. —Id., p. 815.

Authority for purchase of rights for truckaway of motor vehicles, mainly in secondary movements, from New York City and nearby New Jersey points to destinations in 3 to 27 States and the District of Columbia (depending on the certificate), is conditioned against their tacking with vendee's existing rights, to preclude institution of a new competitive operation that would adversely affect other carriers.—M & G Convoy, Inc.—Purchase—Great Lakes Forwarding Corp., 90 M.C.C. 693 (698)*.

Since vendee's service between Louisville and Memphis under the unified rights would be a new competitive service which would adversely affect existing carriers without any offsetting advantages to the public, a restriction prohibiting such service should be imposed. And though it is not conceded that a restriction prohibiting service at a municipality does not also include the commercial zone thereof, to eliminate doubts expressed by protestants the restriction is imposed against handling of traffic between Memphis and Louisville or their commercial zones.—Dean Truck Line, Inc.—Purchase—Allstate Truck Line, Inc., 90 M.C.C. 819 (827)*.

Restrictions on operating rights generally create undesirable operating conditions and should not be imposed unless the record conclusively shows that they are necessary in public interest.—Long Transp. Co.—Control —Marine Transit, Inc., 90 M.C.C. 261 (267); thus, a restriction against joinder of operating rights for purposes of providing through service should be imposed only if carriers requesting it show that nonimposition would have a materially adverse effect on their operations. —Garrett Freightlines, Inc.—Control and Merger, 87 M.C.C. 619 (625-6)*; imposition of restriction against tacking, urged by protes-

tants, is not warranted by the record.—Bowman Transp., Inc.—Purchase—A.W. Hawkins, Inc., 90 M.C.C. 303 (326); however, protestants have made a showing justifying imposition of a restriction against tacking of regular route granted, in lieu of vendor's irregular routes, between Page, Ariz., and Salt Lake City with vendee's existing routes, for purpose of serving California points on traffic moving to or from Salt Lake City.—Consolidated Copperstate Lines—Purchase—Nielsen. 90 M.C.C. 483 (489, 490).

Restrictions against tacking of acquired rights with acquiring carrier's existing rights should be imposed only on a showing by proponents thereof that nonimposition would have a materially adverse effect on their operations. Neither vendor nor vendee has been a serious competitive factor on traffic between Georgia and Akron, Ohio radial area, whereas protestant, a small carrier compared to vendee, has established that it transports substantial tonnage between and through those areas and that its continued existence depends on retention and expansion of its volume of such traffic; protestant has thus shown that nonimposition of a restriction would materially affect it adversely, endangering its ability to continue meeting its common carrier obligations. Restriction imposed against tacking of any of acquired rights with any of vendee's existing rights.—Pilot Freight Carriers, Inc.—Purchase—Bison Fast Freight, 90 M.C.C. 709 (722).

Since the commission necessarily is not bound by agreement between the parties, or by stipulation among counsel, to restrict service under the authority involved in a proceeding, refusal to impose the restriction in whole or in part would not constitute a broadening of the issues.—Lang and Givens—Purchase—T.I.M.E., Inc., 90 M.C.C. 195 (198).

Since purchase route between Hobbs, N. Mex., and Brownfield, Tex., is directly competitive with vendor's retained route between same termini, and by joinder with its existing routes vendee will also be competitive on traffic to and from Lubbock, Tex., approval is conditioned on restriction precluding vendee from serving Hobbs on traffic from, to, or through Lubbock and Brownfield, and originally proposed by applicants; restriction against traffic to or from latter points, only, would be only partially effective and would not provide the full protection to which the several carriers now operating in the territory are entitled.—Id., p. 199.

Protestant has shown adequate reason for imposition of restriction on service of survivor in merger which would preclude its transportation of shipments originating in Oregon and Washington west or south of Spokane, and in Spokane, and moving to Kalispell, Great Falls, and other Montana points on U.S. Highway 2 (Hi-Line) between Coram and Glasgow. Liquidating carriers have not been participating in such traffic, whereas protestant, a relatively small carrier, has augmented its facilities at considerable expense to provide service to the Hi-Line points and would be vulnerable to survivor's competition as a large carrier with attractive long-haul, single-line service. Thus protestant's ability to serve the smaller points would be lessened, to disadvantage of the public in the area; economy of that area will not sustain more than one carrier's service at the small points.—Garrett Freightlines, Inc.—Control and Merger, 87 M.C.C. 619 (625, 626)*.

However, survivor's local authority from Spokane to Kalispell should not be disturbed, since its service would be essentially no different from that now provided by liquidating carriers under common control. Restriction imposed will not affect survivor's authority to transport traffic between Portland and Great Falls through southern Idaho, or to provide local service between Spokane and Kalispell. —Id., pp. 625, 626.

Auxiliary, supplemental to other serviced, see NTP, n. 10 Restrictions.

Revocation, suspension, abandonment: [Vols. 12-14, 17-19].—The commission's finding, starting with its original report in control proceeding and continuing through its third and final report, that acquired carrier's self-conducted operations were not dormant appears to be supported by substantial evidence, and the mere presence of power of control over it by acquiring carrier does not negate such finding as a matter of law.—Alamo Exp., Inc. v. United States, 239 F. Supp. 694 (699)*.

There is no merit to argument that dorman-

cy should not be considered as a basis for cancellation of any portion of vendor's authority because it would tend to lessen the recovery of Internal Revenue Service, which had seized vendor's certificates for tax deficiencies. Under §6339(a)(2) of Internal Revenue Code of 1954, IRS acquired only such interest as vendor held in the rights, and, to extent that vendor's rights were dormant at time of seizure, they had already lost their transferability and value.—Public Serv. Coordinated Transport—Purchase—Royal Blue, 97 M.C.C. 56 (60).

It is normal for an irregular-route carrier to render only limited and sporadic service to some points, since such rights are used primarily for performance of a call-on-demand service; for this reason its operations must be evaluated over a longer than usual time, and a showing of service to every origin and destination area cannot be expected. To support a finding that its authority has been used actively and is not dormant, such a carrier need only show that it has rendered continuous and substantial service at a representative number of points in its authorized area. This test of substantiality is elastic, depending on the character of the area served in terms of population and industry, the nature of the traffic authorized, whether the rights are radial or nonradial, and whether the carrier's financial and material capabilities have been used as far as practicable.—Home Transp. Co., Inc.—Purchase—Chattanooga Transfer, 97 M.C.C. 173 (185, 187).

In ascertaining the scope of vendor's past operation under its right to transport machinery, equipment, and supplies used in operation and maintenance of industrial plants between Chattanooga and points within 175 miles thereof, the commission takes cognizance of the specialized and restrictive nature of the service authorized. While a substantial portion of its shipments moved to and from Chattanooga, as would normally be expected, the evidence shows in large measure that it has performed a sufficiently representative service, except to or from the small Mississippi area embraced in its authority, and that its call-on-demand service has been commensurate with its resources and facilities.—Id., pp. 185, 186, 187.

Moreover, a vendor is free to stimulate the use of its rights to make them more readily marketable, and it is only when the buyer influences such efforts that the commission will refuse to give weight to such increased activity; it must be clear that the buildup of the operations was free from control and domination by the purchaser. Vendee's joint handling of traffic with vendor to midwestern States preceded inception of the purchase negotiations, continued for a substantial period after initial negotiations ceased, and is attributable to the fact that it provided a practical route which eliminated circuity of vendee's single-line operations via Atlanta and East Point, Ga., gateways. Inception and continuance of the joint-line service was not related to any plan to facilitate approval of proposed purchase, and such movements may be given due consideration in resolving the issue of dormancy.—Id., pp. 186-7.

Since acquired carrier's use of its radial irregular-route authority reveals little or no service at Kansas points, other than Kansas City, which did not involve unauthorized cross-hauling, and evidence of such movements may not be considered in determining substantiality of its past service, its operations to Kansas points must be deemed to have been of such little competitive significance as to render them virtually dormant.—Southwest Frt. Lines, Inc.—Control—Direct Transports, 93 M.C.C. 439 (449).

That a preponderance of shipments of building and construction materials listed in vendor's abstract originated in Chicago is natural, since that is the largest city in the northern Illinois-northwestern Indiana territory served; and though no shipments to the Chicago area from other points in its territory are shown, it has been transporting building materials between a number of points in its territory. Since its authority is nonradial within a territorial boundary, the only question is whether substantial service to a representative number of points, involving a reasonably broad spectrum of authorized commodities, is established. It would be unfair to select, out of a nonradial service area, a single point and analyze operations to and from that point in a case where it was not, and upon approval would not be, the beginning or end of every

movement. No finding of general dormancy of vendor's rights is proper.—Steel Transp. Co., Inc.—Purchase—Barry Transports, 93 M.C.C. 773 (775-6).

In appraising substantiality of acquired carrier's past operations, interlined traffic is considered as having moved over its own line for the maximum distance permissible, since actual points of interchange are not shown; and that no interline movements to or from Wisconsin are shown is relatively insignificant in view of its active participation as an interline carrier otherwise, about one-seventh of its total shipments consisting of such traffic. Considering the specialized irregular-route nature of its operating rights, the number of shipments shown to each of the areas involved successfully rebuts any contention of dormancy.—Aero Trucking, Inc.—Control—Friedman Transfer, 93 M.C.C. 342 (350-1).

Abstracts of shipments submitted for acquired automobile carriers were designated as merely representative, but even a resume of all shipments, showing service as to both commodities and origin or destination points, would not warrant any further cancellation of their operating rights beyond that recommended by the examiner. It is generally required that service be shown as to each portion of a carrier's authority for it to be considered active and continuous, whether the transaction involves purchase, control, or merger; and where no need or reason is shown for revitalization of dormant rights by the acquiring party, particularly where protestants show that they would be adversely affected, cancellation of the dormant portion is required as a condition on approval. However, this is a flexible standard that varies with nature of the commodity transported, and under the test of substantiality irregular-route carriers of highly specialized commodities are not held to precisely the same standards as regular-route carriers of general commodities. —National City Lines, Inc.—Control—Automobile Carriers, 93 M.C.C. 683 (690).

Automobile carriers are highly specialized, usually providing service to a single shipper under any particular portion of their authority, sometimes subject to establishment or disestablishment of assembly plants at various locations, their status in that respect closely resembling that of a contract carrier; also, secondary authority is frequently granted at same time and as auxiliary to initial authority in order to enable the carrier to furnish a complete service. Examiner apparently concentrated on elimination of authorities never used and unlikely to be used, which were obtained in anticipation of plants or traffic that failed to materialize; and further cancellation based on limited traffic as to some origins or as to certain types of motor vehicles within the commodity classification is not warranted. —Id., p. 690.

Prior to May 28, 1960, vendor's authorized route between Jacksonville and Wilmington, N.C., was under lease to another carrier which operated one weekly trip thereover, and there is no showing that lessee ever transported any interstate passengers over the route or that the lease was submitted to and approved by the commission. On those facts, vendor's rights were dormant before that date, aside from fact that any interstate operations thereunder by lessee would have been unlawful. And though, after termination of the lease, vendor conducted one weekly round trip between those termini and a daily service between Wilmington and Southport, N.C., it reinstituted and continued such minimal operations, despite substantial losses, solely to meet the issue of dormancy and at a time when it was committed to sell the rights to vendee under an option which it considered binding. Whatever weight might be accorded evidence of that skeletal operation is discounted by the prior commitment to sell to vendee, and, under the circumstances, the involved rights must be found to have remained dormant after their return to vendor. —Carolina Scenic Stages—Purchase—Patterson, 97 M.C.C. 79 (89-90).

Although all but 15 of 243 movements shown in liquidating carrier's abstract of shipments were of exempt bulk commodities and included movements to or from points not authorized by its certificate, the minimal amount of service subject to regulation does not imply dormancy of the rights involved. While reasoning and conclusions in motor carrier cases involving transfer of dormant rights are applicable to water carrier cases, differences in nature of motor and water oper-

ations must be recognized; irregular character of the barge business and large number of exempt commodities which water carriers may normally transport must be considered. In the circumstances, the limited service rendered under liquidating carrier's rights does not require denial of proposed merger.—McAllister Bros., Inc.—Control and Merger, 317, I.C.C. 459 (464).

The commission has found, in proceedings specifically seeking revocation of operating rights on ground of dormancy, that where a carrier holds out to the public to provide the authorized service on demand, but there is no demand, the mere fact that it has not actually performed service is insufficient to warrant revocation of its authority. The only traffic within scope of acquiring carrier's authority to transport latex and other specified commodities is presently being transported by protestant, and shippers' satisfaction with protestant's service, coupled with dearth of other trafffic falling within scope of those rights, is largely responsible for their dormancy. As there is no showing that acquiring carrier is unable or unwilling, or has failed to hold itself out, to provide the service authorized by that certificate, there is no warrant for requiring revocation thereof as a condition on approval of control transaction.—Atlanta Motor Lines—Control—Atlanta-Asheville Motor, 93 M.C.C. 160 (164-5).

But while there is no showing that acquired carrier does not hold out to provide service under its duplicating authority, different treatment is accorded to attempted transfers of operating rights that are dormant due to lack of demand for the service. In §5 proceedings the commission has consistently found, in transactions involving acquisitions of control as well as in purchases, mergers, and consolidations, that where the rights sought to be acquired are shown to be dormant, for whatever reason, it is incumbent on applicants to show that the carrier proposing to acquire them would meet some transportation need not being met by existing carriers. In instant case no such showing has been made, and the coincidence that acquiring carrier already holds identical authority only supports the finding that it would be inconsistent with public interest to permit acquired carrier to retain its dormant authority in event of consummation of the transaction.—Id., p. 165.

Conditioning of purchase approval on cancellation of certain dormant operating rights for whose reactivation no need is shown is in no sense a prescriptive revocation of rights by the commission. Any cancellation of operating rights would be from those which vendor, under the purchase contract submitted, has agreed to convey, not from those stipulated for retention; and it would result entirely from applicants' voluntary action in consummating the transaction on the modified terms and conditions approved. Proceeding on that basis is consonant with all pertinent provisions of the act.—Knox Motor Service, Inc.—Purchase—K & A Truck Lines, Inc., 93 M.C.C. 26 (31, 32-3).

See also Long Transp. Co.—Control, n. 45 *Conditions imposed*,above.

In appraising the substantiality of vendors' past operations under their rights to transport machinery and commodities requiring specialized handling or rigging because of size or weight, the highly specialized nature of that service must be borne in mind; little repetitive or continuous traffic would move under such rights, and it is normal for a number of shipments to move between limited points during one period, and for no shipments to move between those points during a subsequent period. Such operations must be evaluated over a longer than usual time, and it cannot be expected that a full range of authorized commodities will have moved from every origin to every destination area. Under principles established or reaffirmed in cases cited, vendors are required to show only that they have rendered substantial service in transportation of a representative number of authorized commodities to a representative number of points in their authorized territory and have not abandoned service, in whole or in part, as to either commodity or territory.—Home Transp. Co., Inc.—Purchase—Clarkson, 93 M.C.C. 509 (519)*.

That vendors' movements of textile and related machinery and parts to and from points in the Carolinas were numerous and continuous is confirmed by protestant's tabulation of applicants' traffic exhibits; they also handled 131 such shipments to and from 13

scattered points in Virginia and 34 to or from 4 points in Alabama. While 62 of the Virginia, and all but 2 of the Alabama, shipments were transported about a year or more prior to the purchase agreement, in view of the specialized service provided and existence of later movements such traffic is not too remote in time to be considered as supporting evidence showing continuity and a general pattern of operations over a long period within the 4-State area.—Id., p. 519.

Exhibits also show that under their heavy hauling rights vendors transported 76 shipments of machinery and commodities requiring specialized handling or rigging, 51 prior to commencement of negotiations. Although 20 of latter shipments represented a nonrecurring movement of miscellaneous machinery to a South Carolina doll factory during a single month and may or may not have included textile machinery, and, except for one shipment originating in Alabama and one destined to Virginia, the remaining 31 all moved from midwestern or eastern origins to the Carolinas, such traffic, together with their transportation of textile and related machinery, some of which required special handling, constituted substantial service in transportation of a representative assortment of authorized commodities to a representative number of points in the 4-State area. Consequently there is no basis for limiting the rights to be transferred to textile and related machinery.—Id., pp. 519-20.

If carrier A's certificate were canceled it would cease to be a carrier as defined in the act and would no longer be unlawfully controlled or managed in common interest with carrier B, as found in 80 MCC 257. A's operations are confined to a limited class of commodities in the textile field and there are not very many origin-destination combinations common to its authority and B's general-commodity authority; thus, revocation of A's certificate would not eliminate a substantial, potential, independently controlled competitor of B. Since several protestants operate in area served by A and the textile market in that area is declining, it does not appear that the public would be inconvenienced or the public interest adversely affected by A's abandonment of service as one means of eliminating the §5(4) violation.—L. Nelson & Sons Transp. Co.—Investigation of Control, 93 M.C.C. 22 (23)*.

Vendors' heavy-hauling rights between points in Berks County, Pa., and West Virginia, Virginia, and District of Columbia are dormant when in 2½ years they transported only two shipments to latter area and none in reverse direction. No service was provided to or from Rhode Island, and though vendors handled 26 shipments to Massachusetts and Connecticut, 17 were interlined with vendee subsequent to entry into the purchase negotiations and are entitled to little consideration; even though heavy-hauling rights do not normally generate the same volume or frequency of shipments as general-commodity rights, only 9 outbound and 5 inbound to and from that area over a 2½-year period can hardly be considered an active operation. However, though of 49 shipments inbound and 2 outbound to and from Ohio 45 of the former moved west through Ohio in interline service to one destination from one consignor and therefore might be regarded as a single shipment, vendors' Ohio rights are found not to be dormant.—Aero Trucking, Inc.—Purchase—Kreitz, 93 M.C.C. 115 (121).

Reasons for a discontinuance of operations are not controlling in proceedings under §5.—Adley Exp. Co.—Control—McFaddin Exp., Inc., 93 M.C.C. 378 (384)*; reasons for failure to conduct operations have no bearing on question of whether carrier's rights are dormant.—H. Prang Trucking Co., Inc.—Purchase—Hyer Trucking, 93 M.C.C. 695 (698); furthermore, where question of dormancy is in issue, a mere "holding out" to perform service is not an acceptable substitute for actual operations, especially when evidence will not support conclusion that vendor actively attempted to secure traffic for transportation under the authority.—Willers, Inc.—Purchase—Kelly, 90 M.C.C. 21 (23; similarly, though vendor attributes sporadic nature of his operations to lack of calls for his service, his operating rights can only be found dormant when he transported no shipments during 6 months preceding filing of application, and only 3 interstate shipments in the preceding year.—West Nebraska Exp., Inc.—Purchase—Forsstrom, 87 M.C.C. 733 (736).

Though applicants formerly handled a sub-

stantial volume of automobile traffic in joint-line service, protestant's institution of plan I TOFC service between same points in collaboration with a railroad caused applicant's over-the-road traffic to virtually "dry up"; thus their failure to conduct active operations under the considered rights has been due to inability to secure traffic, not unwillingness to provide service. As they have continued to hold out to transport traffic under their joint-line arrangement, a finding that vendor has abandoned the purchase rights would not be justified.—Highway Transport Co.—Purchase—Dallas & Mavis, 90 M.C.C. 724 (728).

Vendor's general-commodity rights between Fitchburg, Mass., and described New Hampshire area are not dormant when he has served 6 or 7 shippers consistently and others occasionally and has never refused traffic tendered, and exhibits show that during periods covered he handled some 30 commodities of diverse nature; considering his limited facilities and territory, it cannot be considered unusual that there was no particular demand of him for transportation of additional commodities to or from New Hampshire or for service at additional points; he has rendered a continuous service to extent traffic was available at a representative number of points within his authorized territory.—United Transp. Co. of Rhode Island—Purchase—McCormick, 90 M.C.C. 201 (204).

Availability of traffic, nature of territory served, and sporadic nature of transportation needs of the oil industry, long recognized as valid reasons for limited operations, are considered in determining that vendor's heavy or cumbersome commodity authority between points in Texas and New Mexico, and its pipestringing authority, are not dormant despite its limited operations thereunder; however, those reasons may not be used as a crutch to bolster nonexistent operations, nor may conjecture or assumption be used in determining whether other portions of vendor's operations were active or dormant; there must be concrete proof of operations on which to base conclusions.—Belyea Truck Co.—Purchase—Ferguson Trucking Co., 90 M.C.C. 139 (147)*.

Although vendor's service to oilfields has been limited in certain instances and it has performed no stringing or picking up of pipe in connection with main or trunk pipelines in considered territory, there has been an almost complete absence of demand for such service in that territory for many months, and protestants likewise have rendered only limited pipeline service therein. Both vendor and protestants have maintained tariffs, insurance, and equipment and facilities necessary for pipeline operations and have solicited such traffic; vendor's inactivity has been due to scarcity of pipestringing jobs and inability to secure the few jobs available, not to any abandonment of its operating authority.—C & H Transp. Co., Inc.—Purchase—Tomlin Transp. Co., 90 M.C.C. 251 (254-5).

Although vendor's pipestringing activities have been somewhat limited, it transported and strung 106 shipments of line pipe in 1957, 1959, and 1960; whether such pipe was laid in a "main or trunk pipeline" as used in the Mercer description, or was to be used in transportation of petroleum products, is unimportant; the important thing is that vendor provided a service directly connected with the oil and gas industry, as contemplated by the Mercer case, and was equipped to and did provide service on large-diameter pipe normally used in main or trunk pipelines. Major pipestringing jobs are available only as pipelines are constructed, and there was little such construction in considered 3-State area during the 2 years preceding hearing; Mercer authority sold should remain intact, without cancellation of the pipestringing rights.—J. H. Rose Truck Line, Inc. — Purchase — Stanton Transp. Co., 90 M. C. C. 284 (290-1).

While no shipments are shown to or from York, Pa., under vendor's irregular-route rights between specified points in middle Atlantic States, a finding of dormancy as to that point is not warranted when performance of substantial operations under those rights is established.—Subler Transfer, Inc.—Purchase—Zanghi, 90 M.C.C. 911 (915).

While protestants contend that vendor has provided only limited service or none to certain points on its Montana intrastate routes, they do not contend that it has refused to handle, or has not solicited, traffic at those points; its failure to resume service between certain points prior to grant of temporary au-

thority to vendee does not of itself warrant finding that its corresponding proviso rights fell dormant; specific evidence of other service in the area during same period compels finding that each segment of its proviso rights north of Great Falls was in fact continued in use. Another segment involved a new route granted by the State commission; vendor took timely steps to implement proviso operations and inaugurate service, and its program was advanced without interruption by vendee; thus it cannot be said that those rights fell into such disuse as to require expansion by other carriers entitled to protection against a resumption of service by vendee.—United Truck Lines, Inc.—Purchase—United Freight Lines, 90 M.C.C. 337 (345-6).

Although evidence shows that liquidating carrier has conducted an active and substantial overall operation in area embracing many small agricultural communities, its operations must be examined in light of protestant's claim that portions of its rights were not used. Though it claims that it has never declined to serve the questioned points directly when so requested, and has served them through interline with local carriers, which is shown to be common practice in the general area, such a practice does not constitute service under its rights. And where it operated virtually with closed doors over a portion of its principal route, and provided no service whatever at intermediate points thereon, its rights are dormant as to such points.—Murphy Motor Freight Lines, Inc.—Control and Merger, 90 M.C.C. 535 (541, 542).

However, as a part of its overall operations it has provided some service at points at or near the ends of certain routes, and considering the low-density nature of the area embracing those and other intermediate points, a finding that its operations along those routes are dormant would not be warranted.—Id., p. 542.

As a rule, transactions involving disposition of operating rights are disapproved because of dormancy only where the evidence clearly shows that service from and to particular points and areas has been abandoned or discontinued for substantial periods of time.—Superior Trucking Co.—Purchase—Arthur Morgan Trucking, 90 M.C.C. 367 (370)*; similarly, where vendor's operating rights have not been used prior to purchase negotiations, a revitalization thereof during and after the negotiating period will not serve to activate the certificate. It is only where post-negotiation traffic reflects merely the continuation of pre-negoitation activities that the former traffic will be looked to in resolving the issue of dormancy.—American Red Ball Transit Co., Inc.—Purchase—Fallon, 90 M.C.C. 515 (519)*; and where no operations whatever are being conducted under the rights sought to be acquired, approval with resultant resumption of operations by another carrier would be consistent with public interest only on a clear showing of need for such service.—Deaton Truck Line, Inc.—Purchase—Magnolia Truck Line, 87 M.C.C. 674 (679).

Since operation under acquired carrier's radial authorities between La Grange, Ga., and points in Alabama and Georgia, respectively, is restricted by necessity of moving traffic between those States via La Grange, and transportation of traffic between points in extreme northern or southern portions of both States is unpractical owing to circuity, it was not a competitive factor on such traffic; however, it did conduct operations from points in those areas, and diversity of points from, to, and between which service is shown is sufficiently representative to establish substantial and continuous operations under its rights; conclusion that any portion of its authority is dormant is not warranted on the record.—Watkins Motor Lines, Inc.—Control and Merger, 90 M.C.C. 567 (583, 584).

Because of the specialized type of service vendor is authorized to render, it cannot be expected to operate with the same degree of regularity as carriers of general commodities. Vendor has not been shown to have refused any traffic offered, and in view of the volume of traffic transported during a 1-year period under considered portion of its rights, and the benefit to supporting shippers, evidence of traffic handled is sufficiently representative to show that it has rendered adequate and continuous service; a finding of dormancy and cancellation of those rights as a condition on purchase approval is not warranted.—C &H Transp. Co., Inc.—Purchase—Gulf Southwestern Transp., 90 M.C.C. 636 (640-1).

In order to resolve the issue of dormancy and not be misled by volume of traffic handled by vendor automobile-hauler, service actually rendered from each authorized origin must be considered, rather than its activities in the aggregate. And the nature of transportation needs of the automobile industry, long recognized by the commission as a valid reason for limited operations, is considered in concluding that vendor's rights, except those unexercised for periods upwards of 15 months prior to execution of purchase agreement, are not dormant despite the small amount of operations thereunder in some instances. However, the commission must have concrete proof of operations on which to base its conclusions, and applicants' argument that protestants also hold unused operating rights which they do not consider dormant does not support a finding that certain portions of vendor's rights are not dormant; nor may traffic generated subsequent to the purchase negotiations be considered in determining that issue.—Dealers Transit, Inc.—Purchase—Industrial Transit, Inc., 90 M.C.C. 873 (879-82).

When vendor transported only 10 shipments during year preceding filing of purchase application, the last one moving some 13 months before hearing, its operations must be considered dormant; protestant's transportation of 132 shipments over that entire period indicates that lack of movements cannot be attributed to seasonal nature of the commodity.—H.C. Gabler, Inc.—Purchase—Logan, 90 M.C.C. 436 (439).

Each case in which dormancy is an issue must be considered on its own merits. Regular routes of acquiring and acquired carriers are substantially duplicative between Lancaster, Pa., and New York City via Philadelphia, and since evidence warrants conclusion that latter's operations to and from points thereon are substantially dormant, it follows that full utilization of those rights under acquiring carrier's control would be tantamount to placing a new competitive operation in service between the points involved; decision in 65 MCC 312, distinguished. Since no inadequacy in existing service nor any need for new or additional service in New York City-northern New Jersey area is shown, approval of control on basis that would provide opportunity for full activation of that portion of acquired carrier's regular-route authority would be inconsistent with public interest.—Accelerated Transport-Pony Exp., Inc.—Control—Downing, 87 M.C.C. 711 (722, 723-4).

Routing practices: [Vols. 15, 18, 19].—See also Central Pac. Ry. Co. Control case, n. 45 *Conditions imposed*, above.

As a general rule, conditions should not be imposed unless they are clearly warranted by the record. Special routing conditions requested, which would require the Santa Fe to deliver to Southern Pacific at Texas junction points all westbound traffic originated on or moving over present lines of two subsidiaries it proposes to merge, when interchange junction is not specified by shipper, would require Santa Fe to short-haul itself on certain of its originated traffic, and cannot be justified in absence of a showing that they are necessary or desirable in public interest. Southern Pacific's competitive position will not be impaired by refusal to impose them; standard routing conditions imposed, which have generally been found adequate in merger cases, will afford uniform and adequate protection for all competing and connecting carriers by requiring Santa Fe to ensure continued maintenance of all routes and channels of trade via existing junctions and gateways.—Atchison, T. & S.F. Ry. Co. Merger, 324 I.C.C. 254 (256, 259).

Under findings in 286 ICC 373 that Peoria & E. Ry., as a nonoperating carrier, need not be a party to published joint rates, and that for purposes of rates and divisions commonly controlled and operated carriers should be treated as one system, New York Central, which operates the Peoria, must be considered the originating and terminating carrier on traffic over latter's line. As the Peoria has prospered in recent years under existing divisional arrangements, requested condition on Central's continued operation of its line, requiring routing of certain eastbound traffic via the Pennsylvania beyond Indianapolis to provide greater divisions to the Peoria, which would short-haul Central in violation of §15(4), should not be imposed under §5(2).—Cleveland, C., C. & St. L. Ry. Co.—Operating Agreement, 320 I.C.C. 430 (435-6).

In addition to standard conditions for preservation of through routes, special conditions which will create new through routes between Florida points on applicants' lines and the North and between such points and Birmingham and Montgomery, Ala., via Jacksonville, Fla., are imposed on merger of Atlantic Coast

Line into Seaboard Air Line, to minimize competing carriers' losses from diversion of interchange traffic and enhance their retaliatory powers. Opening of the Jacksonville gateway to Southern Ry. system on all traffic on a reciprocal basis will create new avenues of traffic for members thereof and their connections; also Illinois Central and Gulf, M. & O.R., which compete outside applicants' territory with Coast Line's subsidiary Louisville & N.R., and which could suffer substantial diversionary losses if the merged company close to favor L & N, will have available fully competitive reprisal routes.—Seaboard Air Line R. Co.—Merger—Atlantic Coast Line, 320 I.C.C. 122 (172-7, 181-3, 208-9)*.

Though Florida East Coast is now enjoined by outstanding court order from attempting to influence routing north of Jacksonville of traffic originating or terminating on its lines, the order provides for modification of that provision by the court or the commission; in view of the changed conditions resulting from the required opening of the Jacksonville gateway to the merged company's competitors, East Coast can be expected to take the necessary steps to secure removal of that restraint, which would revive its retaliatory power. Availability of new through routes in connection with Southern system lines, and fact that most fruit and vegetable traffic originates in the Florida area served by East Coast exclusively, give it a potentially strong reprisal weapon to use if the merged company should attempt to divert an excessive amount of traffic from it.—Id., pp. 175, 181, 208-9.

As Norfolk Southern serves 8 points competitive with Coast Line and 8 competitive with Seaboard, and as it is a financially weak, low-density carrier serving a predominantly rural area, interchanging the bulk of its joint-line traffic with those roads, without special protective conditions it would suffer substantial losses from diversion as result of their merger. Imposition of condition, effective only so long as Norfolk Southern remains an independent railroad, requiring the merged company to establish new through routes and joint rates with it via Wilson, Fayetteville, and Raleigh, N.C., is warranted. While that condition could conceivably provide Norfolk Southern more traffic than the volume actually needed to recoup its diversionary losses, it will not unduly affect the merged company, as such traffic will be subject to latter's solicitation efforts.—Id., pp. 177-8, 185, 209.

Since §203(a)(10) defines "interstate commerce" as including commerce between places in the same State through another State, vendee holding certain interstate but no intrastate authority within Pennsylvania could, after purchase of operating rights between Philadelphia and four New Jersey counties, transport Pennsylvania-to-Pennsylvania traffic via New Jersey unless a restriction is imposed on the unified rights. The test to be applied in such situations is the bona fides of the operation performed. Assuming a bona fide operation, the courts have held that a carrier may not be required to desist from serving two points in one State by conducting operations through another State. But where a carrier uses such a method of routing traffic as a subterfuge to evade State regulation of transportation of intrastate traffic, the operations have been held to be an abuse of its certificate, and the carrier, following appropriate proceedings brought for the purpose, may be required to cease and desist from such operations.—Evans—Purchase—Pocono Motor Freight Term., Inc., 97 M.C.C. 144 (148).

While vendee disclaims any intention to use the unified rights to transport Pennsylvania-to-Pennsylvania traffic, the rights now contain no prohibition against the institution of such operations by him or by any successor in interest. Should such operations by commenced, and protestants, the Commonwealth of Pennsylvania, or the commission were to challenge their bona fides, time-consuming procedures and perhaps extensive litigation would be required. Therefore, and in view of the Supreme Court's holding that if the State believes such an operation to be a subterfuge to escape its jurisdiction it should first file complaint with the commission under §204(c), and since vendee is agreeable to an appropriate restriction, purchase approval is conditioned to prohibit vendee from engaging in transportation between two points in Pennsylvania over interstate routes. But such restriction should not be construed as a limitation on vendee's right to apply to the State regulatory body for intrastate authority.—Id., pp. 148-9.

Louisville & Nashville's refusal to join in TOFC rates with Illinois Central via Martin, Tenn., interchange violates condition on approval of its merger of Nashville, C. & St. L. requiring preservation of all existing routes and channels of trade, also commission's in-

junction not to curtail right of industries on the Nashville to route traffic over any or all existing routes; 313 ICC 191 held that those conditions attach to subsequently established rates, and to joint rates. TOFC service does not require new routes merely because it employs new type of equipment, and the routes via Martin are open; L & N's refusal prevents commodities and traffic, for which through boxcar and other rates via Martin existed at time of merger and still exist, from moving as TOFC freight via that junction. Proceeding held open for 60 days for receipt of advice that L & N has complied with the prescribed condition, otherwise the matter will be further considered.—Rates, TOFC, between Midwest & South—Louisville & N.R., 318 I.C.C. 40 (43, 44).

Securities: [Vols. 12, 14, 16-19].—Although authorizations of an acquisition of control and of issuance of securities in partial payment of the consideration are governed by different statutory requirements and principles, and it may be desirable as a matter of administrative housekeeping to segregate them by separate docket numbers, they are one proceeding, and disposition of each must be read in light of the other; express deficiency of one may be overcome by express or implied conclusions in the other, or express grant in one may be markedly affected by an implied condition in the other. Approval under §5 of the "proposed" transaction must necessarily take into account the method of financing, and approval under §214 of the issue of securities necessarily takes into account the occasion for such financing; they are interdependent.—Walker v. United States, 208 F. Supp. 388 (392)*.

The court interprets as a single determination the commission's reports (1) authorizing control by carrier Central of a carrier and one noncarrier and issuance of promissory notes in amount of $750,000 to complete payment for their stock, also control of a second noncarrier by Callan (Central's controlling stockholder) as assignee of its rights under original agreement, and (2) authorizing Central (upon payment of the amount to it by Callan) to issue a note to plaintiff for $450,000 to complete payment for his stock in the noncarrier acquired by Callan, thus clothing Central with full authority and financial means (through Callan) to comply fully with its obligations under the original agreement; requirement of the law for §5 and §214 approval is thus satisfied; no further commission approval is needed.—Id., pp. 393, 396.

Though applicant proposes to finance purchase of carrier's stock through issuance and sale of bonds, it has not shown that this would be feasible without sale of its bonds on reasonable terms. As it will be required to buy shares of minority stockholders on same terms as under its agreement with the majority stockholder, final approval of control transaction should not be granted until the commission is assured of its ability to obtain on reasonable terms the funds necessary to acquire stock offered it by minority stockholders, as well as to consummate its agreement. Entry of order is therefore withheld pending applicant's making of necessary financial arrangements and granting of such authority as may be required under §20a.—Southern Ry. Co.—Control—Central of Georgia Ry. Co., 317 I.C.C. 557 (558, 560)*.

As recent increase in survivor's notes payable indicates possibility that the statutory limitation on its issuance of securities without prior commission approval may have been reached, approval of proposed merger is conditioned against construing it as authorizing issuance of additional capital stock within meaning of §214, if approval thereunder is required.—Atlas Van-Lines, Inc.—Control and Merger, 93 M.C.C. 570 (576).

Approval of merger of liquidating carrier into a new company is based on express understanding that it will take place immediately upon consummation of liquidating carrier's merger of an existing subsidiary, thereby eliminating necessity for it to seek or obtain authority to issue securities or assume obligation under §214.—All States Freight, Inc.—Merger, 90 M.C.C. 51 (56).

Without passing on whether execution and delivery of "acknowledgement of indebtedness" equal to net book value of assets acquired by vendor, payable on demand in whole or in part after 1 year from consummation of purchase, would constitute issuance of a security within §20a, as no application for authority therefor has been filed, purchase authority should not be construed as authorizing such issuance if authority is necessary under §214.—Santa Fe Trail Transp. Co.—Purchase—Santa Fe Transp. Co., 90 M.C.C. 123 (125).

Should it prove impractical or impossible for vendee to pay the purchase price out of

current funds as contemplated, purchase approval is not to be construed as authorizing issuance of any securities or assumption of any obligations in connection with the purchase which might be subject to §214, or the use of funds obtained under bank loans previously approved by the commission.—Helm's Exp., Inc.—Purchase--Keystone Transfer Co., Inc., 90 M.C.C. 679 (686).

Although on giving-effect balance sheet date survivor in proposed merger would have had capital stock and long-term obligations represented by securities within meaning of §214 that would not exceed the $1,000,000 exemption therein, should circumstances change so that at time of consummation the total amount of its securities outstanding, plus those to be assumed, would exceed $1,000,000, approval of the transaction should not be construed as authorizing such assumption or as approving consummation of the transaction without survivor's first having secured the commission's approval under that section.—M & G Convoy, Inc.—Purchase—Great Lakes Forwarding Corp., 90 M.C.C. 693 (698)*.

Following disapproval of original calling for applicant Central to issue promissory notes aggregating $1,500,000 to finance acquisition of control of a carrier and two noncarriers, Central assigned the contract for acquisition of one of the noncarriers (W & H) to its controlling stockholder, Callan, and proposed to finance acquisition of the other two companies by issuing notes for not over $750,000; approval of the proposal as thus modified did not authorize issuance under §214 of the $1,500, 000 notes called for by the initial contracts, since Central no longer sought such authority, but approved issuance only to a maximum of $750,000, and contemplated Callan's acquiring control of W & H as assignee of Central's obligation to purchase that company's stock; Central may not acquire W & H's stock by cash purchase, since that would depart substantially from the terms and conditions approved.—Central Freight Lines, Inc. —Control—Alamo Exp., 90 M.C.C. 96 (97, 99-100)*.

Apparently relying on the assignment as removing need to issue note for $450,000 called for by original agreement to complete payment for W & H's stock, Central did not seek authority therefor in the control proceeding, but now seeks such authority under §214, the proposed note to be issued only after payment of its full face value in cash to Central by Callan. Though no part of the transaction may be lawfully consummated without consummation of the entire transaction as authorized, Callan's acquisition of control of W & H may be consummated either through his direct purchase of its stock or through use of Central's note; proposed note authorized, in addition to all other outstanding authority to consumate the transaction.—Central Freight Lines, Inc., Note, 90 M.C.C. 246 (247, 249)*.

Although survivor, a noncarrier which would become a carrier upon consummation of proposed merger, unlawfully issued $300, 000 capital stock which is void because unauthorized, such issuance was under mistaken impression that it was not within commission's jurisdiction, and since survivor concurrently seeks authority under §214 to issue new stock to replace the void stock, disapproval of applications because of the law violation is not warranted.—Continental Tenn. Lines, Inc.—Control—Tennessee Coach, 87 M.C.C. 775 (779).

Separate agreements: [Vol. 19].—When plaintiff's petition for reopening of control proceeding (which attacked one of conditions imposed on control approval in 1923 and the agreement subsequently entered into between parties therein which embodied all the conditions imposed) raised issues relating to preferential solicitation and distribution of traffic between the control applicants, validity of the agreement as well as actions of the parties thereto should have been passed on by the commission in the reopened proceeding. Alleged preferential solicitation was attacked under several sections of the statute and the antitrust law; origin and authority for those practices being contained in both the challenged condition and the agreement, there was only one general issue before the commission; and the examiner developed all issues raised and received evidence thereon. Following decision in 376 US 375, the commission should have disposed of the entire matter; it should not have limited the issues on procedural grounds by considering the challenged condition separately, on the ground that attacks based on other sections of the act were not properly before it. Remanded.—Denver & R.G.W.R. Co. v. I.C.C., 229 F. Supp. 249 (251, 253-4)*.

Although New York Central and Pittsburgh

& Lake Erie have withdrawn their objections to Pennsylvania's proposed acquisition of stock control of Lehigh Valley, primarily because of filing of application for their merger with Pennsylvania, a considerable time may elapse before consideration of the merger application and even then the results are in doubt; public interest therefore requires that those carriers be considered.—Pennsylvania R. Co.—Control—Lehigh Valley R. Co., 317 I.C.C. 139 (147).

Although Reading Co.'s purchase of Lehigh & S.R. System is subject to Jersey Central's continued lease of the properties for a 35-year period, with the former owner continuing to receive the basic annual rental, purchase agreement provides that if the basic lease is terminated at any time during that period the parties will enter into a "Line Agreement" under which the Reading would have election to nonexclusive right to use the portion between Allentown, Pa., and Phillipsburg, N.J., and the former owner would be compensated on basis of a percentage of the salvage value of the line. However, while it appears to be the intent that the Line Agreement will be executed upon closing of purchase, effect thereof and of termination of the basic lease on rights and obligations of the parties is not clear; therefore, purchase approval should not be taken as approving any terms of the Line Agreement or modification of the basic agreement without the commission's prior approval.—Reading Co.—Purchase—Lehigh & S.R. System, 317 I.C.C. 633 (637).

See also Chicago & N.W. Ry. Co. v. Brotherhood of Locomotive Engineers, n. 70, above.

The commission's jurisdiction extends to the entire transaction and to all its terms and conditions, and that jurisdiction cannot be defeated by execution of separate contracts among the same parties, only one of which is presented for approval. Instant record contains the one and only agreement on which the commission's affirmative action is based, and the commission cannot be influenced in its decision by correspondence, not of record, which may have been interchanged by the parties and the commission after the record was closed. However, applicants are forewarned that approval does not extend to any other agreement concerning the transaction, if such there be; consummation must be predicated on the agreement of record contained in the application and presented at the hearing.—Atlas Van-Lines, Inc.—Control and Merger, 93 M.C.C. 570 (575).

Noncarrier company controlled by acquiring carrier's stockholders, which concurrently seeks authority to acquire stock control of acquiring carrier and through it indirect control of six subsidiaries including acquired carrier, by a separate agreement would acquire stock control of acquired carrier's present parent company and thereby indirect control of latter's three remaining subsidiaries. Since consummation of the second agreement is dependent on consummation of acquiring carrier's control of acquired carrier, the transaction is entirety is subject to the commission's jurisdiction, notwithstanding the separate agreements.—Mason & Dixon Lines, Inc.—Control—Silver Fleet, 90 M.C.C. 829 (833-4).

Five days before consummation of authorized control of two carriers engaged in armored-car operations, acquiring noncarrier agreed to restrictions suggested by Department of Justice on number of armored-car vehicles that would be operated in New York City, Newark, Buffalo, and Boston, in order to avoid long-drawn out court proceedings which it feared the Department would institute and which would delay the ultimate unification now proposed. While applicants submit that terms of the agreement are not to take effect without the commission's prior approval, the legal implications thereof, and whatever limitations applicants may have thereby imposed on themselves, are not for determination in unification proceeding.—Pittston Co.—Control—Brink's Armored, Inc., 87 M.C.C. 637 (649, 650-1).

Stock transactions: [Vols. 14, 17-19].—Although, effective upon approval of trackage agreement, the Milwaukee will acquire an option to purchase 29 percent of stock of Indiana Harbor Belt from New York Central at same price paid therefor by Central to the North Western, approval of that agreement is not to be construed as approving such stock purchase by the Milwaukee, which would give it a 49 percent stock interest in the Har-

bor Belt; if the option is to be exercised, prior supplemental authority must be obtained.—Chicago, M., St. P. & P.R. Co. Trackage Rights, 317 I.C.C. 14 (17)*.

Though incorporated in the same written instrument, provision for sale to New York Central and Harbor Belt of latter's stock held by the North Western is not a term or condition of proposed acquisition of trackage rights over the Harbor Belt's tracks by the Milwaukee and the North Western; transfer of the stock was not made contingent on the acquisition of trackage rights, or vice versa, and consideration paid by Central and Harbor Belt for the stock is not related to the charges to be paid by the Milwaukee and the North Western for the trackage rights. Thus, transfer of the stock was not an unlawful partial consummation of the trackage-rights transaction.—Id., 317 I.C.C. 550 (551-2)*.

But whether Central's acquisition of an additional 19 percent of Harbor Belt's stock, thus raising its direct or indirect ownership to 79 percent of the total outstanding , results in such a significant increase in its power to control the Belt as to bring the acquisition within purview of §5(2)(a) or §5(4) cannot properly be determined on present record; therefore, unless the situation changes or application is filed by Central, consideration will be given to institution of investigation under §5(7).—Id., p. 552.

Approval of purchase of vendor's interstate operating rights and brokerage license for a cash payment and 950 shares of vendee's 5-percent cumulative, nonvoting preferred stock is subject to condition requiring vendee to redeem the preferred stock to be issued within 10 years from date of issuance.—Shamrock Van Lines, Inc.—Purchase—Reely, 93 M.C.C. 455 (461).

See also U.S.A.C. Transport case, n. 45 *Violations of §5(4)*, above.

Temporary authority: [Vols. 12, 14-17, 19].—Since a new service could evolve after unification, the commission must determine whether compensatory benefits which would result from allowing the unification of vendor's and vendee's operating rights would outweigh the possible adverse effects on services and operations of competing carriers; and evidence of service rendered by vendee under temporary authority, although not conclusive, is admissible and properly to be considered with the other evidence in determining whether the transaction will be in the public interest.—Hove Truck Line—Purchase—Maurer, 97 M.C.C. 361 (369).

See also Hudson Transp. Co.—Purchase—Hillside Freight Lines, n. 115, below.

Examiner correctly concluded that vendee's application for temporary authority under §210a(b), predicated on claim that failure to grant such authority would result in destruction of vendor's operating rights, which were in fact dormant at the time, was fraudulent, and applicants did not except to such finding but filed affidavits attesting to termination of the temporary operations. In absence of objection such affidavits are incorporated in the record and considered as notice of voluntary termination of operations under §210a(b).—Calore Exp. Co., Inc.—Purchase—T.W. Waterman Co., 93 M.C.C. 291 (296, 297).

Extent to which acquiring carriers, under authority for temporary control through management, may reasonably take action to consolidate acquired carrier's general offices, terminals, and traffic and accounting functions with their own is a matter for their discretion, since they are forewarned that the order of approval issued under §210a(b) is not to be construed as creating any presumption as to the action which may be taken on the related §5 application.—Mason & Dixon Lines, Inc.—Control—Silver Fleet, 90 M.C.C. 829 (848).

A carrier which is temporarily leasing operating authority under §210a(b) may combine the leased rights with its existing permanent authority to provide a through service under the temporary unification, and may properly advertise the availability of the unified service, provided its tariff correctly identifies the leased authority.—Pilot Freight Carriers, Inc.—Purchase—Bison Fast Freight, 90 M.C.C. 709 (712).

Evidence of longstanding operations under temporary authority affords a means of establishing whether the unified operations have had any detrimental effect on protestants; when protestants have adduced no evidence to show effect, if any, on their operations of

vendee's service under temporary authority for a 4-year period, but merely express apprehension that they may lose some traffic to vendee after consummation, the improved service provided by vendee under the temporarily unified rights, together with shippers' expressed need therefor, warrants conclusion that public interest would be best served by its continuance on a permanent basis.—Ashworth Transfer, Inc.—Purchase—Willcoxon and Fowkes, 90 M.C.C. 107 (111)*.

Operations under temporary authority may properly be considered in determining whether a transaction would be in public interest, particularly where they are of long standing and afford a means of determining whether resulting unified service has had any destructive effect on protestants' operations. Protestant introduced no evidence to show effect, if any, of survivor's and its predecessor's control of liquidating carrier through management for over 5 years, but merely expresses apprehension that it might lose some traffic after consummation of merger. Considering the improved service provided during the temporary control, and supporting testimony of representative of a competing railroad that the merger would tend to stabilize existing transportation conditions, evidence as a whole warrants conclusion that public interest would best be served by continuance on a permanent basis of the unified service presently performed under temporary control. Merger approved.—Midwest Transfer Co. of Ill.—Control—Chamberland's, 90 M.C.C. 503 (508)*.

While grant of temporary authority for control of a carrier effectively terminates any unlawful control thereof that may have existed, it may not properly be construed as indicating that the commission either condoned or sanctioned any unlawful acts of the parties.—Central Freight Lines, Inc.—Control—Inland Motor, 90 M.C.C. 777 (786)*.

See also McFaddin Exp., Inc. v. Adley Corp., and Three "I" Truck Line, Inc. v. I.C.C., §210a, n. 1.

Transfer of operating rights: [Vols. 12-19].—Although the record shows that vendor has operated under soleproprietorship "grandfather" rights for many years and acquired a partnership interest in additional operating rights, and jurisdictional finding that transfer of the partnership rights to a successor corporation was not subject to §5 was made without knowledge of his individual carrier status, that jurisdictional question is merely collateral to the main issues in purchase of his individual rights and need not be determined in view of denial of the purchase on its merits; however, the matter will be given further separate consideration.—U.S. Van Lines, Inc.—Purchase—Holien, 90 M.C.C. 657 (661-1).

Violation of act: [Vols. 12-19].—Since it appears that carriers under unlawful common control may have commingled shipments in same vehicle and may have violated the lease-and-interchange regulations, the parties are warned that approval of proposed control transaction and lawful continuance of the common control would not make it lawful to engage in such practices.—West Bros., Inc.—Investigation of Control, 97 M.C.C. 125 (132).

While transactions accomplished in violation of §5(4) have sometimes been approved, especially in early days of motor carrier regulation, where it was shown that the parties had acted in good faith, perhaps without sound legal advice, and where they established by proper evidence that but for the law violation the transaction would be consistent with public interest for the future, as motor carrier law has matured transactions have been more consistently denied where the unlawful activity has been perpetrated by persons long acquainted with such law and with proceedings before the commission, and who know or should know the seriousness of their unlawful conduct and the commission's attitude toward it. See 75 MCC 45 and 80 MCC 257.—Ship-By-Truck Co. v. Crouch Bros., Inc., 93 M.C.C. 89 (102).

Applicant-respondents' deliberate and brazen attempt to mislead the commission, and the techniques employed, including filing of false or fraudulent applications under §5 and §210a(b) and submission of false exhibits supported by forged freight bills and false testimony under oath, are not only an affront to the commission but subversive of the entire regulatory process, requiring strong measures to ensure that there will be no recurrence of the flagrant violations of law and willful misrepresentations to which the commission has

thus been subjected. Neither the voluntary termination of operations under temporary authority nor termination of purchase agreement provides full assurance that vendee's unlawful control and management of vendor has been eliminated and will not be reinstated. Therefore, in addition to entry of cease-and-desist order, the Bureau of Inquiry and Compliance is instructed to consider criminal proceedings respecting the violations disclosed. —Calore Exp. Co., Inc.—Purchase—T.W. Waterman Co., Inc., 93 M.C.C. 291 (297, 298).

A transaction may be approved notwithstanding a law violation, where the parties have acted in good faith, or without sound legal advice, and where they have established by proper evidence that the transaction, except for the violation, would be consistent with public interest.—United States Van Lines, Inc.—Purchase—Bell, 90 M.C.C. 362 (365).

Regardless of whether or not an investigation under §5(7) has been instituted, it is entirely proper, in determining whether a proposed transaction is consistent with public interest, to consider matters bearing on possible prior unlawful operations.—Hart Motor Exp., Inc.—Control and Merger, 90 M.C.C. 527 (532)*.

Unauthorized consummation of transactions requiring the commission's prior approval under §5 impedes it from discharging its duties under the act; and approval of transactions already unlawfully consummated has usually been granted only where overriding public interest has been found so to warrant. —Seattle Transfer & Stor. Co.—Control—Mountain Road, 90 M.C.C. 15 (18).

Considered transaction is the third which applicant has unlawfully effected; report and order in the first case, approving his control of a carrier despite the law violation, should have been sufficient notice that prior approval is necessary whenever control of another carrier is proposed; yet instant control transaction was completely consummated despite finding in intervening purchase proceeding that a violation of §5(4) had again occurred; and, notwithstanding opportunity afforded by §210a(b) for temporary operation of carriers in financial distress, he waited at least a year after the unlawful consummation before filing instant application. Evidence is not persuasive that public interest requires approval; denied.—Id., p. 18.

While in the past transactions accomplished in violation of §5(4) have sometimes been approved where the parties acted in good faith and established by proper evidence that the transaction would otherwise be consistent with public interest for the future, as motor carrier law has matured approval has been consistently withheld where the unlawful activity has been perpetrated by persons long acquainted with the applicable law and proceedings before the commission, and who know or should know the seriousness of their unlawful conduct and the commission's attitude toward it.—Kaplan Trucking Co.—Control—Thomas Boyd, Inc., 90 M.C.C. 419 (426, 427)*.

Similarity of prior transactions whereby liquidating carrier's sole stockholder, a practitioner before the commission for many years, acquired operating rights and contracted for their sale to survivor barely a year later, and present proposal to sell liquidating carrier's stock for merger purposes, professedly because of his advanced age although he had not hesitated to acquire it the year before, makes clear that he is either trafficking in operating rights, which the commission has long disapproved, or is acting as accommodation party for survivor, which is unlawful. Applicants have already been brought under common control in violation of §5(4); considering experience of the principals involved with motor transportation law and the commission's requirements, such violation should not be blessed by approval of proposed merger.—Id., pp. 424, 427.

While examiner's report in proceeding whereby acquiring carrier in instant proceeding acquired control of another carrier disclosed elements of prior unlawful control of those two carriers by individual applicants, such violations were found not to have continued and are not properly before the commission in instant control proceeding.—Colonial Motor Freight Line, Inc.—Control—Central, 90 M.C.C. 441 (443).

Shipments between points in the Carolinas and points in Ohio, under vendor's authority

between the Carolinas and Parkersburg, W. Va., were transported, for the Ohio portion of the movement, in vendor's equipment under purported lease to an Ohio interstate carrier; no inspection was made at the claimed interchange point, although the driver, who remained on vendor's payroll, attached a placard to the tractor while in Ohio. The Ohio carrier had no knowledge of the shipment for several days and performed no service except permitting use of its rights. Such lease arrangement was clearly unlawful, and shipments transported thereunder cannot be considered as evidence of operation by vendor under the West Virginia rights.—Pilot Freight Carriers, Inc.—Purchase—Bison Fast Freight, 90 M.C.C. 709 (717-8).

111. Procedure, generally.—In considering whether the commission abused its discretion by denying motion of intervening railroad (plaintiff) to consolidate the North Western-Great Western merger proceeding with proceeding in NW's application to merge with the Milwaukee, the court recognizes that the statute does not explicitly require consolidation. However, §17(3) requires the commission to conduct its proceedings in a manner that will best contribute to the proper dispatch of business and the ends of justice; and defendants recognize that a refusal to consolidate may not prejudice a substantial right of any party to the proceeding or preclude the commission frmm properly performing its responsibilities under §5(2). And, in light of the Supreme Court's discussion of the consolidation issue in 386 U.S. 372, it seems that, although not required by law to consolidate all regional merger proceedings, the commission is required to impose those protective conditions which are necessary to survival of affected railroads before permitting a merger to proceed.—Soo Line R. Co. v. United States, 280 F. Supp. 907 (910-12)*.

There is merit to plaintiff's contention that consolidation of the pending Midwest mergers would have permitted (1) more thorough consideration of their overall effect on the area served, (2) better assessment of cumulative effects thereof, and (3) a better basis for judicial review. However, the commission did not require consolidation and the reviewing court can do so only if the commission's failure to do so was an abuse of its broad discretion; and, in making that determination, the court must of necessity, though with reluctance, give weight to the commission's argument that requested consolidation would cause a serious delay. Considering all the facts of record, and the fact that the Supreme Court has not held that the commission must consolidate all current and related merger proceedings, the court finds that refusal to do so in this instance was not an abuse of discretion.—Id., pp. 912, 913.

Although examiner found in investigation proceeding that vendee in instant purchase proceeding had performed unauthorized transportation and exercised control of two other carriers in lease and interchange arrangements contrary to provisions of §206(a), decision in instant proceedings need not be held in abeyance pending final decision in the investigation, which is an entirely separate and unrelated proceeding. Moreover, the matters at hand deal in large part with scope of rights of another carrier (vendor), and it is in public interest that it be formally informed as to the limitations on its rights without delay.—Home Transp. Co., Inc.—Purchase—Chattanooga Transfer, 97 M.C.C. 173 (189).

Motion to strike certain statements and references in applicant's reply to protestant's exceptions, denied; though they are admittedly outside the record and cannot be considered or given weight as evidence, they are also to some extent permissible assumptions presented in argument and raise no issues serious enough to warrant formal striking.—National City Lines, Inc.—Control—Automobile Carriers, 93 M.C.C. 683 (688-9).

There is no merit applicants' motion to strike portions of protestants' replies to their exceptions, on ground that protestants filed no exceptions and now seek, in guise of a reply, to argue issues beyond those considered in examiner's report; protestants' filing of exceptions after having won a decision from the hearing examiner would be a vain act tending to unnecessary prolongation of litigation. And though applicants request that, if those matters are not stricken, they be permitted to reply thereto, their proposed reply is directly contrary to rule 1.23(a) of Rules of Practice, which prohibits a reply to a reply,

and is therefore unacceptable.—Illinois-California Exp., Inc.—Purchase—Salt Lake-Kanab, 97 M.C.C. 38 (44-5, 46).

Applicants' motion to strike protestant's allegations in reply as exceptions not timely filed is without merit. Rule 1.87 of Rules of Practice, governing objections to an examiner's ruling on evidence, provides that an objection made at hearing may be pressed in the reply to exceptions; the present circumstances are appropriate for applying that part of the rule. Filing of exceptions merely to avoid waiver of an objection, after having won a decision from the hearing examiner, would be a vain act tending toward unnecessary prolongation of litigation, contrary to well-recognized judicial policies. Notwithstanding any previous decision to the contrary, in circumstances of instant proceeding protestant's objection was properly raised in the reply to exceptions and was not tantamount to an untimely filed exception.—Reading Transp. Co. —Control and Merger, 93 M.C.C. 11 (17).

112. Hearing; notice.—[Vols. 14-19].—See also Walker v. United States, §16(6), n. 1.

Lower court erred in concluding that the commission's denial of further hearing sought by appellees (protestants in commission proceeding) following execution of final nonexclusive operating agreement between applicant railroads and the Chicago Port District, which was part of proposed overall plan of extension of direct rail service to and within the Port District, constituted denial of due process to appellees. Changes in proposed lease agreement which the commission approved without a further hearing (deletion of objectionable exclusive right to operate clause and a more favorable formula for determining annual rental to be charged by the Port District) were insignificant compared with former agreements; appellees (though invited) refused to participate in negotiation of the contract, were not bound thereby, and had ample opportunity and did present evidence as to reasonableness of the rental charges; under the circumstances, therefore, appellees were not entitled to another hearing. judgment reversed and case remanded with directions to sustain the commission's orders.—Illinois Central R. Co. v. Norfolk & W.R. Co., 385 U.S. 57 (63-5, 73-5)*.

Plaintiffs' general allegations of being deprived of a constitutional right to a hearing before the commission merely for the sake of a hearing, without specifying particulars which made a hearing necessary and without showing how or in what way they have been injured, do not warrant setting aside the commission's finding that public interest did not require a hearing in considered railroad merger proceeding. Such finding is authorized by statute, is supported by substantial evidence, and is not arbitrary or capricious; moreover, though plaintiffs did not file a protest, the commission considered matters set forth in their letters in determining employee-protective conditions that should be imposed in connection with approval of the proposed merger. Commission's orders sustained.—Day v. United States, 264 F. Supp. 689 (691-3)*.

Whether hearings should be consolidated is a matter committed to the discretion of the administrative agency. In disposing of Chesapeake & Ohio's application to control Baltimore & Ohio without waiting for completion of hearings on applications pending before it for merger of other eastern railroads the commission did not abuse its discretion in that regard.—Broth. of Maint. of Way Employees v. United States, 221 F. Supp. 19 (29)*.

Ommission of hearing on trackage rights application, and finance board's alleged failure to state in its report on further consideration that hearing was unnecessary, did not constitute reversable error. In its original report the board concluded that hearing was not necessary in public interest, and its report and order on further consideration incorporated the prior report and order together with its conclusions. There is no requirement to repeat verbatim rulings made in a prior decision.—Chicago, M., St. P. & P.R. Co. Trackage Rights, 317 I.C.C. 550 (553)*.

Nor did grant of application without hearing deprive any opponents of their right to cross-examine and introduce evidence. Labor association's petition to intervene sought only to protect affected employees by imposition of appropriate conditions, and it did not request hearing then or when applicants sought reconsideration of the initial decision. The board considered effect of the transaction on

employees and imposed protective conditions, at which time no formal opposition had been registered. Thus it is evident that the association acquiesced in the determination and that all necessary facts were before the board.—Id., p. 553.

See also Seaboard Air Line R. Co. Merger, §17(6), n. 15.

Labor union's request for continuance of hearing to permit it to prepare its cross-examination of applicant's witnesses and offer rebuttal testimony was properly denied. The union was granted leave to intervene nearly 3 months before the hearing and was properly served with the required notices and orders. It has appeared in numerous railroad unification cases and should be familiar with commission hearings and types of testimony offered. Adequate opportunity was afforded for preparation of its case, and Rule 1.55 of the Rules of Practice requires that a party be prepared for hearing at its assigned time.—Detroit, T. & I.R. Co.—Control—Ann Arbor R. Co., 317 I.C.C. 619 (623)*.

Request for further hearing, based solely on substitution of bank which is executor of estates of two deceased controlling stockholders of vendee as applicant for indirect control of purchased rights, denied.—R.L. Jeffries Trucking Co., Inc.—Purchase—Eck Miller, 97 M.C.C. 151 (153).

Applicants' request for further hearing on purchase and related §207 applications, for purpose of submitting testimony and underlying documents to substantiate vendor's abstracts of past shipments, also shipper testimony indicating need for continuance of operations involved, denied. Though applicants assert that they were advised by counsel that evidence of past proviso operations by vendee would suffice to sustain their burden of proof without calling public witnesses, they do not claim that examiner interfered in any way with presentation of their case, and, having failed to avail themselves of opportunity to present such evidence at hearing, they are not entitled to have the proceeding reopened for that purpose, even if shipments they seek to authenticate could be given any substantial weight.—Prichard Transfer, Inc.—Purchase—Weiss, 93 M.C.C. 535 (542).

See also Illinois-California Exp. purchase case, n. 115, below.

Considering the relatively small number of shipments between Georgia and radial area around Akron, Ohio, in which vendor's services were involved, admission of additional evidence at further hearing would not warrant any change in conclusion reached on present record that neither vendor nor vendee, singly or jointly, has been a significant competitive factor on such traffic. Furthermore, the transaction as revised to exclude vendor's dormant West Virginia rights does not alter the burden of proof respecting the Georgia-Akron radius operations; protest filed prior to hearing served notice that protestant would raise the issue of tacking those rights with vendee's existing rights. Applicants have not satisfactorily explained their failure at initial hearing to introduce evidence within scope of that they now seek to present; request for further hearing denied.—Pilot Freight Carriers, Inc. —Purchase—Bison Fast Freight, 90 M.C.C. 709 (720-1).

Rule 1.240(c)(3) of Rules of Practice provides that protests which request public hearing shall specify with particularity the facts, matters, and things relied upon. Protest which merely states it "hereby protests the granting of" the application, and presses for an oral hearing, fails to meet the minimum requirements of that rule and Rule 1.40; therefore oral hearing is not required in the public interest.—Schenectady Transp. Corp.—Purchase— —Interstate Busses, 90 M.C.C. 623 (624).

Survivor's fears of competitive impact of interstate operations recently inaugurated by a Washington carrier under the single-State proviso, in combination with protestant's operations between Spokane and considered Montana area, do not warrant further hearing on proposed restriction of survivor's through service in the same territory. In view of pending proceeding to set aside the Washington carrier's registration of its intrastate certificate, there is no assurance that the proviso operations will be permitted to continue, and even if they are, the act contains adequate provisions for seeking modification of any restriction that may be imposed on survivor's rights.—Garrett Freightlines, Inc.—Control and Merger, 87 M.C.C. 619 (624)*.

115. Evidence.—[Vols. 12-19].—An administrative agency is not bound by common law principles of evidence and procedure; in proceeding on merger of two railroads exclusion by the examiner of report on earlier study concerning possible merger of those and a third railroad, and his curtailment of plaintiffs' cross-examination of a witness, was neither denial of due process nor prejudicial error in view of cumulative nature of any relevant part of such evidence.—Fried v. United States, 212 F. Supp. 886 (895-6)*.

Commission finding that Chesapeake & Ohio's control of Baltimore & Ohio would not result in any undue diversion of traffic from other eastern railroads is supported by substantial evidence. Representatives of a large number of major shippers over those roads testified that the affiliation would not cause any change in their habits of choosing rail carriers for their traffic; and, since shippers are the primary source of all freight traffic, their opinions are of impressive weight. Credibility of such witnesses and weight of their testimony were for the commission to determine, and plaintiffs' briefs are not persuasive that their testimony, and testimony of informed representatives of C & O and B & O that control would not result in substantial diversion from their rail competitors, was seriously impeached.—Broth. of Maint. of Way Employees v. United States, 221 F. Supp. 19 (26-7)*.

Though plaintiffs contend that the commission should have taken more evidence than it did, and, on its own initiative, should have employed independent counsel, accountants, and other experts to investigate and test the sufficiency of the evidence offered by the various parties, no interested party was foreclosed from offering any evidence it wished to offer, no counsel was denied opportunity to cross-examine witnesses, and at no time during the hearing did any plaintiff or the Department of Justice urge the commission to employ special counsel or other investigators to test the soundness of the evidence offered by the railroads applying for its approval. There is nothing in the statute requiring the commission to actively promote opposition to applicants before it by hiring independent counsel or experts.—Id., p. 28.

Porbative value of evidence pertaining to a particular operation, in determining issue of public convenience and necessity in directly-related §207 application proceeding, is not affected by fact that such operation may have been unlawful. If the operation shows a need for service, the need is no less because of fact (if it be a fact) that operating authority was lacking; therefore, evidence pertaining to an unlawful operation should not be rejected because it is "insubstantial." However, second-proviso operations of carrier to be acquired in proposed merger were carried on under color of law, since it held commission authority to do so, and no bad faith on its part was shown. In the circumstances of the case under review, the commission's rejection of protestants' (plaintiffs) contention that it was not appropriate to consider facts concerning the second-proviso operations as substantial evidence of need for that service, because question of validity of such operations was pending in another proceeding, was not an error.—Best Way Motor Freight, Inc. v. United States, 253 F. Supp. 314 (318-19)*.

See also Interstate Motor Freight System v. United States, n. 7 *Diversion*, above.

The commission is entrusted with broad discretion with respect to new evidence. In denying plaintiffs' request for further hearing to present evidence claimed to be "newly relevant" to questions of dormancy and unlawful control, the commission noted that they had failed to avail themselves of their prior opportunities at the hearing. Unlawful control was charged at the hearing, and plaintiffs could have then offered their proof; and, while the examiner had only sketchy evidence on which to base his conclusions as to dormancy, plaintiffs' new offer fails to undermine his findings. Sustained.—Lombard Bros., Inc. v. United States, 226 F. Supp. 905 (908-9)*.

Since, in accordance with rule 1.19 of the commission's Rules of Practice, sworn statements contained in carriers' joint verified purchase application are taken as part of the record and accepted as evidence unless specifically denied in a counterpleading, statements in complainant's purchase application, that it (the purchasing carrier) would employ all the vendor's employees, could be relied on by the commission; and the commission relied

on those sworn statements in determining that the proposed transaction was in the public interest.—Baggett Transp. Co. v. United States, 206 F. Supp. 835 (836-7, 838)*.

While the number of public and shipper witnesses for or against proposed Seaboard-Coast Line merger is not of controlling importance, it is significant that the proposal is supported by a substantial majority of both shippers and public officials; shippers representing approximately 90 percent of applicants' combined tonnage endorse the merger. The commission is required to and will give considerable weight to the views of these knowledgeable businessmen, civic leaders, and public officials.—Seaboard Air Line R. Co.—Merger—Atlantic Coast Line, 320 I.C.C. 122 (162)*.

Although extent to which estimated savings from proposed merger could be achieved through future abandonments of duplicating lines cannot be determined because of necessity for commission authorization in convenience-and-necessity proceedings, such potential savings cannot be completely ignored, since economies from elimination of duplicative services and facilities are a major objective of the merger. However, to extent that estimated economies from consolidation of survivor's remaining lines depend on effectuation of all or a substantial part of the proposed abandonments, or on discontinuance or substantial change of duplicate passenger services, which are likewise contingent on Federal or State authorization, they can be accorded very little weight.—Id., p. 155.

Although employees' representative questions acquiring carrier's estimate of number of jobs that would be eliminated by control transaction, the number of jobs to be affected is a matter within carrier's control and concerning which its officers have more accurate information; accordingly, its estimate is accepted as approximately correct.—Southern Ry. Co.—Control—Central of Georgia Ry. Co., 317 I.C.C. 557 (562)*.

Subsequent to reopening of electric railroad's §5 application, its trustee petitioned for leave to file a memorandum in connection with the commission's reconsideration; as no interested party has objected to such filing or has opposed commission's jurisdiction, no prejudice will result from filing of the memorandum and it is accordingly made part of the record.—Hudson & M.R. Co. Trustee Abandonment, 312 I.C.C. 701 (702)*.

Respondents, in their motion to strike, confirm adjudication as a bankrupt of carrier previously found to be unlawfully controlled, and copy of bankruptcy court's order authorizing sale of its operating rights to acquiring carrier was attached to the motion; these uncontroverted data may properly be incorporated in the record in investigation proceeding instituted to ensure termination of the law violations found to exist in the prior proceeding.—Jones Truck Lines, Inc.—Investigation of Control, 97 M.C.C. 225 (228).

Exhibits prepared from monthly IBM tabulations kept by vendor in regular course of business were properly admitted when the tabulations were available at hearing for inspection by protestants and witness who prepared the exhibits was available for cross-examination.—Buckingham Freight Lines—Purchase—Riss & Co., Inc., 93 M.C.C. 754 (761); also, protestant's exhibits based on IBM tabulations were properly admitted in evidence when they were prepared under direct supervision of witness testifying thereon. But exhibit prepared by protestant's traffic manager at Dallas and sent to its district manager at Oklahoma City solely for purpose of the hearing was properly excluded, since latter witness was not qualified to stand cross-examination thereon.—Arkansas-Best Freight System, Inc.—Purchase—Fine, 90 M.C.C. 858 (863).

Statement of vendor's gross revenues for a 15-year period, obtained from its ledger, was properly received in evidence; since the ledger is vendor's original record, financial statement prepared therefrom would be admissible. And since vendor's "day book" was kept in ordinary course of business and would be admissible as evidence under Rule 1.79 of Rules of Practice, it follows that an abstract based thereon was equally admissible. Moreover, vendor's owner who prepared the statement and abstract of shipments was qualified to testify, and was cross-examined, respecting data therein; and both the day book and ledger were available for inspection by prot-

estant's counsel.—North American Van Lines—Purchase—Fort Smith Furniture, 90 M.C.C. 629 (633).

Balance sheet and pro forma income statement with explanatory notes, estimating vendee's operating results and showing economies that would be realized by proposed purchase, submitted with applicants' exceptions, are received in evidence in absence of replies to their exceptions or objection to submission of such additional evidence.—Pre-Fab Transit Co.—Purchase—Hagan, 90 M.C.C. 65 (67-8).

Though protestants objected to vendor's attempt at the hearing to summarize numerous freight bills covering interline traffic, on basis that the freight bills were not in abstract form and that applicants had concluded their case, there is question as to whether applicants had in fact rested; doubt should have been resolved in applicant's favor and the evidence admitted, since a competent witness was available to testify concerning the data in the freight bills. Failure to present that information in a more concise manner in an exhibit does not render it inadmissible.—Barber Transp. Co.—Purchase—Conner, 90 M.C.C. 475 (479).

The fact that relevant data are abstracted orally, rather than in exhibit form, does not affect the admissibility of such evidence when offered by a competent witness. Testimony as to the volume of traffic handled by protestant was properly admitted over objection when presence of the underlying freight bills in the hearing room afforded opportunity for full cross-examination.—Pilot Freight Carriers, Inc.—Purchase—Bison Fast Freight, 90 M.C.C. 709 (721).

While examiner's refusal, in closing stages of hearing, to permit vendor to present documentary evidence concerning some 50 additional shipments was error, abstracts of shipments received in evidence, spanning a 21-month period, including some shipments after commencement of purchase negotiations, liberally supplemented by vendor's oral testimony concerning his transportation activities, were sufficient to portray clearly the pattern of service performed, and exclusion of the proffered evidence cannot reasonably be considered to have seriously prejudiced applicants' interests.—Aero Mayflower Transit Co., Inc.—Purchase—Walls, 93 M.C.C. 369 (376).

As to adequacy of evidence intended to show exercise of operating authority proposed to be purchased, the accepted rule is that exhibits of representative shipments indicating substantial systemwide operations need not show operation to and from every authorized point in order to establish that operations as a whole have been of continuing and substantial nature.—United Truck Lines, Inc.—Purchase—United Freight Lines, 90 M.C.C. 337 (346); likewise, while there is no established rule as to frequency of service required to establish that operations have in fact been conducted under vendor's special-commodity authority, some consistency of service must be demonstrated. Frequency of service and volume of traffic required to be shown depend on what would reasonably be expected of a carrier serving the area involved, considering its size and the points therein.—Emsley Truck Rentals, Inc.—Purchase—Foodway Exp., Inc., 90 M.C.C. 414 (416).

Abstract covering the 6 months preceding filing of purchase application, and abstract covering year ending 6 months prior to that period, both of which describe shipments as "vitrified products," together with applicants' explanation at hearing and affidavit concerning actual nature of commodities transported as vitrified products, are convincing that during those 18 months vendor was transporting sewer pipe, fittings, and related articles and clay products within scope of his permit. Shipments transported during the earlier period are not too remote to be considered as showing scope and continuity of vendor's service under his rights.—George L. Hooker, Inc.—Purchase—Ramey, 90 M.C.C. 792 (795).

Protestants were not prejudiced by receipt in evidence of copy of acquired carrier's operating authority, balance sheet and income statements taken from its books and records after its controlling stockholders had departed, list of its equipment after grant of temporary authority, or brochure advertising its authority and equipment utilized; however, such exhibits, other than the copy of its oper-

ating authority, are entitled to little weight.—Ashworth Transfer, Inc.—Control—Hawkes Transp. Co., 87 M.C.C. 653 (659)*.

Major deficits in acquiring carrier's own operations, despite constant and increasing revenues, are attributed by its management to the drain of conducting acquired carrier's operations under temporary authority; as there is no evidence to rebut such testimony and acquired carrier is shown to have been conducting substantial deficit operations, there is no reason not to accept that testimony as an accurate portrayal of the situation.—Adley Exp. Co.—Control—McFaddin Exp., Inc., 87 M.C.C. 665 (672)*.

Established evidentiary rules permit a cross-examiner to develop all circumstances within a witness's knowledge that may qualify or destroy his direct testimony, even though they may constitute new matters and part of the cross-examiner's own case. [See 130 F. 2d 330.] Liquidating carrier's operating manager testified on direct examination concerning operations whose lawfulness is directly in issue, and though no direct testimony concerning their legality was elicited from him, the only inference possible is that his evidence was intended to depict lawful operations in support of merger and certificate applications. As such, it was clearly within realm of the cross-examiner to explore that question through that witness, who by virtue of his position could be presumed to have personal knowledge of the pertinent details.—Hart Motor Exp., Inc.—Control and Merger, 90 M.C.C. 527 (531)*.

Vendor's stockholder testified that, to evidence his indebtedness to bank which financed his stock purchase, he executed his promissory note without endorser or comaker, pledging the stock as sole collateral; and at no time during the proceeding was he directly asked whether he was aware that vendee's stockholder had guaranteed or intended to guarantee the note, such evidence being elicited from other witnesses after he had been excused from the hearing. As vendee's stockholder did not believe that he had discussed the guarantee with vendor's stockholder, and bank employee who participated in the loan negotiations was uncertain whether the latter knew about it, but corroborated his testimony concerning the nature of the note and the collateral furnished, the record does not impeach the credibility of such witness's testimony concerning applicants' financial relations.—Thurston Motor Lines, Inc.—Purchase—Union Storage, 90 M.C.C. 595 (600)*.

The commission may take official notice of geographic facts.—Pilot Freight Carriers, Inc.—Purchase—Bison Fast Freight, 90 M.C.C. 709 (718, Note).

While there is not enough specific evidence to support any conclusion as to the newness of dry bulk transportation, the commission takes notice of the fact that it is a highly specialized form of transportation required by a relatively few shippers, more particularly when narrowed to dry chemicals as opposed to dry commodities generally, and that extensive facilities must be provided at both the shipping and the receiving ends for loading, unloading, and storage, which would retard acceptance and use of such service by shippers and receivers.—Berman's Motor Exp., Inc.—Purchase—Lang Storage & Trans., 90 M.C.C. 807 (815).

Although each transaction must be decided on its own record, the commission may take official notice of its findings in prior proceedings. In another transaction involving vendee and same protestants, new through service essentially the same as that proposed was found to be a destructive competitive factor, and there is nothing to indicate that approval of instant transaction would affect protestants differently. Thus, vendee's performance of single-line service under temporary authority in that proceeding cannot be considered to support its present proposal.—Barber Transp. Co.—Purchase—Conner, 90 M.C.C. 475 (480-1).

Inasmuch as temporary control authority was not exercised until mid-1959, and results of such operation, as well as acquiring carrier's independent operations, are not of record beyond mid-1960, a more informed judgement as to merits of proposed transaction, particularly its financial impact on acquiring carrier, calls for more current information, which is available in the carriers' annual and quarterly reports on file with commission and open to inspection by any interested party; official notice should there-

fore be taken of data in such reports; however, effectiveness of order will be deferred to allow any party to petition for further hearing to show why such data should not be considered.—Adley Exp. Co.—Control—McFaddin Exp., Inc., 87 M.C.C. 665 (670-1)*.

In considering vendee's fitness, the commission takes official notice of the fact that an action was filed in the district court seeking to enjoin vendee and two connecting carriers from continuing their unlawful common control, and that a criminal action was later filed in the same court charging vendee with 20 counts of unauthorized operations, which actions are still pending and were pending before the court prior to filing of purchase application.—Cooper's Exp., Inc.—Purchase—Ferguson Motor Transp., 90 M.C.C. 613 (618).

While the facts which form the basis for conclusions as to vendee's unfitness are not of record in purchase proceeding, but pertain to its conviction in a criminal action resulting from investigation instituted subsequent to hearing, they concern matters of which the commission may properly take notice without specific evidence, since the issue of fitness is always present in §5 proceedings.—United States Van Lines, Inc.—Purchase—Bell, 90 M.C.C. 362 (365-6); however, evidence relating to vendee's conviction of unauthorized operations 6 years prior to filing of purchase application, and prior to his acquisition of authority from the commission, is too remote to be considered in passing on his fitness to conduct operations sought to be acquired, and was properly excluded.—Pirkle—Purchase—P & A Refrigerated Exp., Inc., 90 M.C.C. 36 (37, 38).

Evidence of operations unlawfully conducted is entitled to little consideration in determining the question of public need for continuance thereof.—Tank Lines, Inc.—Purchase—S & N Freight Line, Inc., 90 M.C.C. 381 (386)*; similarly, vendee's unlawful charter operations out of Annapolis, Md., in vendor's origin area, can be given no probative value or weight to support activity under vendor's rights which it seeks to purchase.—Didlake—Purchase—Johnson, 87 M.C.C. 742 (744).

Where territorial or area operations are involved, to defeat an allegation of dormancy a showing of service must embrace a sufficient number of points throughout the territory to be considered representative of the whole. An irregular-route carrier is required only to submit evidence showing that it has rendered substantial service to a representative number of points in its authorized territory to support the conclusion that its operations have been substantial and continuous; and where a regular-route carrier has been conducting comparatively substantial operations throughout its system, it is not compelled to submit evidence of operations to and from every intermediate point or over all combinations of its routes. Generally, approval of transactions involving disposition of both regular- and irregular-route rights has been withheld and such rights considered dormant only where the evidence clearly shows that service to or from particular points or areas had been discontinued for substantial periods and other evidence to overcome the conclusion of dormancy has not been presented.—National Transp. Co.—Purchase—Hartford Transp. Co., 97 M.C.C. 206 (213)*.

Although vendor did not transport large volumes of traffic to and from certain points, the evidence of shipments transported is sufficiently representative to show that it has rendered a substantial and continuous service under its authority, except as to movement of household goods and other specified commodities, and, except as to those commodities, a finding that its operating rights are dormant would not be justified. Moreover, there is clear shipper testimony of advantages to the public which will result from unification of the rights involved.—Id., p. 213.

Though, considering the overall volume of traffic transported during the 1-year test period, acquired carrier's operations were active and voluminous, they must be examined, in light of protestants' claims, to determine whether they fail in any respects to meet the test of substantiality announced in prior decisions. The only service which may be considered in that regard is that lawfully conducted within scope of the carrier's operating rights, and a practice pursued for carrier's convenience of interlining shipments with local carriers to points within its own authority does

not constitute service under its rights. In applying that test the actual geographical coverage should be examined, as well as the number of shipments and range of commodities handled within such geographical coverage, to determine the extent to which the carrier provided service on a substantial number of commodities to a representative number of points within its authorized territories.—Branch Motor Exp. Co.—Control—Morgan Trucking Co., 93 M.C.C. 244 (256-7).

Though the Supreme Court, in 315 US 475, cautioned against pulverization of carrier's past operations, in discussing "bona fide" operations it pointed out that actual rather than potential or simulated service, and substantial as distinguished from incidental or sporadic service, is required, and that "substantial" service may have been confined to narrow limits. Applying those guides, evidence of acquired carrier's operations, to extent that it establishes a pattern of radial operations between eastern points and points in South Carolina and western North Carolina, fairly meets the test of substantiality; it does not, however, support a finding of substantial or continuous operations to, from, or between large geographical areas where there were relatively few shipments, involving a limited number of points, in service outside the pattern of operations shown by preponderance of the evidence. And whether the quantum of service provided had any direct relation to any circuity of operation necessitated by observance of gateway requirements of acquired carrier's authority need not be considered in applying the test of substantiality.—Id., pp. 257-8.

With exception of Virginia and eastern North Carolina, the length and breadth of considered southern area were adequately served in acquired carrier's East-South operations, preponderance of shipments during the test period being handled in that service. Over 200 points in the Carolinas were served either as origins or as destinations, and though hundreds of shipments could not be considered because they were duplicated in the exhibits, or were intrastate or unauthorized, the remaining thousands were apparently transported lawfully. That the carrier perforce provided a more abundant service at smaller communities is not unfavorable to a finding of substantiality, since it also served numerous large cities, and the variety of commodities listed in protestants' exceptions fully supports a finding that it handled a large cross-section of general traffic.—Id., pp. 258-9.

Though protestants object to consideration of traffic interlined at origin, such traffic involved only a small portion of vendor's shipments and is not critical in respect of the showing required to refute a challenge of dormancy. As existence and perpetuation of the practice of smaller household-goods carriers performing transportation for other line-haul carriers has been a characteristic of the household-goods-moving industry for many years, such activities are entitled to be weighed with other evidence in gaging vendor's competitive status in the industry.—Security Van Lines, Inc.—Purchase—Community & Johnson, 93 M.C.C. 399 (402).

Although a carrier has but one right to transport the same commodity between the same points, no matter how many times it may be described in carrier's certificate, where both duplicative rights are to be sold, or retained by acquired carrier in a control transaction, traffic that could have moved under either description should be considered as evidence, to the extent shown, that both rights have been utilized.—Aero Trucking, Inc.—Control—Friedman Transfer, 93 M.C.C. 342 (349-50).

There is no merit to protestant's contention that applicants' evidence and exhibits concerning liquidating carrier's intrastate operations were improperly received because such operations are outside the commission's jurisdiction and not material to the issue; in passing on a §5 acquisition the commission's jurisdiction extends to the entire transaction and it has an obligation to examine every facet thereof. Both applicants and protestants conduct integrated operations, subtended by both interstate and intrastate rights, to meet needs of shippers whose traffic frequently is of both kinds; this intimate and inescapable relationship makes evidence of intrastate operations material.—Reading Transp. Co.—Control and Merger, 93 M.C.C. 11 (17).

Since a proper interpretation of vendor's authority to transport uncrated furniture from

Baltimore and points within 50 miles thereof to points in 14 States and District of Columbia excludes shipments from Hagerstown, Md., which is beyond that radius, and, though it could lawfully serve Hagerstown in transportation of furniture under its general-commodity rights, movements to the 14-State area could be lawfully made only via Baltimore, a proper analysis of its service under the furniture rights should exclude all shipments which moved from Hagerstown to that area without observance of the Baltimore gateway. However, 130 shipments were lawfully transported during a 20-month period under the furniture rights, and, though 5 of them were transported after execution of the purchase agreement, there is no evidence of a buildup of vendor's traffic or of any appreciable change in its operations as a result thereof; accordingly, those shipments may be accorded full weight in reaching a determination on the merits.—North American Van Lines, Inc.—Purchase—Hagerstown Motor, 93 M.C.C. 125 (127, 128-9).

An irregular-route carrier of a limited class of commodities, such as vendor, is not required to show service to and from all points in its authorized territory to avoid a finding of dormancy; it is enough to show a fairly representative service and availability to perform additonal service had the traffic been offered. Such a showing has been made, although no service is shown at points in 2 of the 14 States; vendor held out to provide service on uncrated shipments of furniture, fixtures, and equipment and accepted all such shipments offered it; and it advertised its service and solicited some 100 shippers regularly by mail, as well as personal solicitation by its president and salesmen.—Id., p. 129.

While one of vendee partners served as vendor's agent in latter's Pennsylvania area and in that capacity solicited and arranged for transportation of traffic under rights vendee would now acquire, the record does not support a finding that the partnership thereby assumed control of vendor in violation of §5(4), and evidence concerning vendor's operations during the agency arrangement may be considered along with other probative evidence in that regard.—Bowser and Campbell —Purchase—Motorway Corp., 97 M.C.C. 192 (198).

Though proposal involving sale of irregular-route specific-commodity rights does not require a showing of transportation activity covering all of the territory, there must nevertheless be a fairly representative showing of service to support a finding that the operations have been active. Transportation services shown to have been actively performed under certain portions of vendor's rights are not sufficiently representative to preclude a finding of dormancy as to other portions which were entirely devoid of any activity whatsoever.—Id., p. 199.

To determine whether the single-line service proposed after unification of complementary operating rights would be substantially new or different from that furnished under the separate rights, consideration should be given to all traffic handled by applicants in interline service between their territories, whether interchanged with other carriers or between themselves. Considering the substantial volume of Michigan-St. Louis traffic in which applicants participated during the period preceding submission of purchase application, it is evident that their interline operations have been of competitive significance in connection with traffic between their territories.—Michigan Exp., Inc.—Purchase—Chicago-St. Louis Exp., Inc., 90 M.C.C. 671 (676)*.

Probative force of statement by witness of steel shipper with a large plant at Aliquippa, Pa., that his company needs additional single-line carriers to serve that point, is vitiated by his further statements that there are several hundred carriers now serving Pittsburgh and Aliquippa, and that services of such carriers have been satisfactory.—Wilson Freight Forwarding Co.—Purchase—Hammel, 90 M.C.C. 41 (44).

A showing of actual operations to, from or between all points or combinations thereof is not required to refute allegations of dormancy; and where a transaction would not result in acquisition of the involved rights by different interests, as in proposed purchase by one railroad subsidiary of an affiliate's property-carrying rights, the primary reason for requiring as detailed information concerning shipments handled as in case of unaffiliated car-

riers, namely, to guard against institution of a new and different service by unrelated interests where no need therefor has been shown, either becomes of minor importance or disappears.—Santa Fe Trail Transp. Co.—Purchase—Santa Fe Transp. Co., 90 M.C.C. 123 (128).

Determination of whether certain portions of vendor's operations were active or dormant may not be predicated on conjecture or assumption; there must be concrete proof of operations on which to base a conclusion. Applicants' protestation that exhibits submitted are merely representative of vendor's operations is insufficient to support a finding that certain portions are not dormant, especially where opposing counsel questioned adequacy of such evidence at initial hearing and applicants made no attempt at continued hearing some 2-1/2 months later to offer further proof of service under vendor's rights.—Belyea Truck Co.—Purchase—Ferguson Trucking Co., 90 M.C.C. 139 (147)*.

Although operations of a vendor should not be pulverized to show service at all points in its territory, it is incumbent on applicants to adduce sufficient evidence to show service between significant points. Failure to show movements of local traffic between Washington and Baltimore and northbound on vendor's regular routes in North Carolina clearly indicates that the traffic is being transported by other carriers.—Bowman Transp., Inc.—Purchase—A.W. Hawkins, Inc., 90 M.C.C. 303 (325); similarly, the single shipment of roofing shown in vendor's abstract of shipments can be given no weight as evidence of its activities under the involved rights. Moreover, that shipment was apparently handled under vendor's hardware authority and legality thereof is doubtful in view of fact that it originated at a steel company and was destined to a sheet metal company.—Willers, Inc.—Purchase—Kelly, 90 M.C.C. 21 (23).

Evidence required to show nature and scope of past and present operations under operating rights sought to be acquired should be such as to establish that interstate operations have been conducted and are continuing, and should include information relating to frequency of service, volume of traffic handled, territory served, and commodities transported. Evidence of generalized nature relating to revenues realized, equipment utilized, and persons employed is insufficient, standing alone, for proper evaluation of extent of interstate operations involved; the commission is bound by the evidence of record, which in instant case is not sufficiently comprehensive for a determination of the basic question of whether approval of proposed transaction would be consistent with public interest. Denied.—Zern—Control—William A. Kelly, Inc., 90 M.C.C. 25 (29).

Shipments listed in acquired carrier's abstract that are not shown to be lawful and interstate in character may not be considered in determining scope of its past operations; there is more than a mere suspicion that its operations have been conducted in disregard of restrictions on its authority, although the evidence as to some such operations is inconclusive. Considering all factors, it has shown active and continuous service only to the extent described in appendix B. And though certain authority is considered active because granted too recently for shipments thereunder to have been shown at hearing, the rights found dormant may not be presumed to be required merely because they were once found to be.—Mitchell Bros. Truck Lines—Control—Empire Transport, 93 M.C.C. 38 (42-3).

While every case must be considered on its own merits, examiner correctly took cognizance of certain evidence of vendor's past operations adduced in proceeding on a prior §5 application which was denied; evidence of operations under vendor's rights by acquiring carrier therein under temporary authority must also be considered, at least to extent that it shows continuity of vendor's service under the rights proposed to be sold. However, in gaging nature and extent of past service, pri-

mary consideration must be given evidence of vendor's independent operations several months prior to agreement in the earlier transaction and after termination of the temporary authority therein.—Dorn's Transp., Inc.—Purchase—Mayberry Motor Freight, 90 M.C.C. 269 (275).

Also, evidence of operations by instant vendee under temporary lease authority must be considered along with other evidence of need for continuance by it of vendor's single-State proviso operations and effect thereof on competing carriers. Past substantial and continued operations under the proviso merit the same status as past lawful operations by a vendor of a certificate issued by the commission, and proof required of a purchaser of proviso operations should be no less or greater than that required of a purchaser of certificated rights.—Id., p. 275.

Whether vendee's proposed all-motor service under purchased rights would be less costly and more expeditious than current rail service of its parent railroad cannot be determined when no evidence was presented as to transit time or operating costs of present l.c.l. service, or as to service that would be required of vendee to transport l.c.l. traffic now moving in rail service and operating costs thereof; nor is it shown what merchandise cars would be eliminated entirely from handling of l.c.l. traffic if purchase were approved.—Burlington Truck Lines, Inc.—Purchase—H.B. Green Transp., 90 M.C.C. 865 (870).

Though as a rule the commission should not be too critical in analyzing evidence of the scope of a vendor's past operations to find that it has rendered an active and continuous service under its authority, where operations under single-State proviso are involved and the transaction would result in issuance of a certificate for their continuance, based on past operations performed under the proviso, the proof presented should be convincing. See 38 MCC 547 and 85 MCC 447.—Roush—Control—Southern California Freight Lines, 90 M.C.C. 459 (469)*.

Applicants' late-filed exhibit covering liquidating carrier's proviso operations over route segment for which certificate is sought lists 304 shipments as handled by affiliated express company which operates solely in intrastate commerce. Such shipments have no probative value to show interstate operations by liquidating carrier; to consider them as its shipments would disregard the plain language of the exhibit. Applicants' statement that some of those shipments were incorrectly billed as traffic of the affiliate to avoid a State tax not only cannot be accepted as a valid reason for treating them as those of liquidating carrier, but strikes at applicants' very fitness.—Id., pp. 467, 468.

While it is possible that some of the other shipments rejected by the examiner as not clearly shown to have moved in interstate commerce could have so moved, the burden was on applicants to submit appropriate proof to support such a conclusion. One primary purpose of the further hearing was to give applicants opportunity to establish that liquidating carrier conducted interstate operations over considered segment, and they cannot now complain that the documentary data submitted to show such service should be disregarded in part as designated by them. It is implausible that the late-filed exhibit, practically the backbone of their case, would be prepared with such disregard for accuracy. Examiner correctly excluded 404 of the shipments shown from consideration.—Id., pp. 468-9.

The remaining 77 l.t.l. shipments handled during the 11-month period are completely inadequate to show that liquidating carrier's proviso operations over that segment were substantial enough to warrant grant of certificate. Claim of lack of time for that carrier to develop interstate traffic thereover is unimpressive, considering that it was eligible to conduct proviso operations thereon for almost a year prior to negotiations between the parties. And evidence introduced at further hearing showing subsequent substantial in-

crease in its service to and from points on that segment, both single-line and jointly with a prospective affiliate under temporary authority, has little value to show scope of its proviso operations and is of limited significance in determining whether the transaction would be consistent with public interest. Applicants have failed to justify inclusion of considered segment in certificate granted survivor.—Id., pp. 469-70.

Allegation that vendor's single-State proviso rights were dormant preceding its interline arrangement with vendee is not rebutted by abstracts of representative shipments showing no service under its irregular-route rights before that arrangement; and vendor's nebulous testimony that it served the involved areas when called upon does not refute protestants' definitive testimony that it did not serve one area, served the other only on occasion, and refused shipments for delivery except to points between termini of its certificated regular route. It is uncontroverted that vendor's operations changed dramatically almost immediately after inauguration of the interline arrangement, and there is ample evidence that vendee assumed the burden of building them up to present a picture of active operations throughout vendor's entire territory. As such, the proviso operations do not merit consideration, particularly in absence of cogent evidence of public need for service that would be provided thereunder.—Lombard Bros., Inc.—Purchase—Millis, 90 M.C.C. 604 (609, 611)*.

Where a carrier has been conducting comparatively substantial operations throughout its system it need not submit evidence of operations to and from every intermediate point, or in connection with all combinations of its routes, to show that its operations have been substantial and continuous. Considering nature of service that would result from proposed control, the record conclusively establishes that both acquiring and acquired carriers are conducting substantial operations generally throughout scope of their respective authorities; and while during the past 4 or 5 years acquired carrier's operations have admittedly deteriorated somewhat and it has increasingly used other carriers for service at intermediate points, its average annual earnings have remained constant in neighborhood of $5,000,000, its annual tonnage has never fallen below 200,000 tons of intercity traffic, and it has provided continuous service at principal cities on its routes.—Mason & Dixon Lines, Inc.—Control—Silver Fleet, 90 M.C.C. 829 (843-4).

In determining whether service resulting from a transaction would be substantially new and different from that formerly provided, all traffic handled by the carriers in interline service between their territories, whether interchanged with each other or with other carriers, is entitled to consideration. Acquiring and acquired carriers have continuously maintained interline arrangements for at least 12 years; and while volume of traffic interchanged between them was light compared to that handled by certain protestants, and they failed to show movements between many combinations of points and areas, failure of the interlining carriers to secure a large volume of traffic from and to any particular point or between points in small and select areas is entitled to little weight in determining the nature of the service that would evolve.—Id., p. 845.

Considering vendor's specialized irregular-route authority and the destinations involved, his transportation of 51 t.l. shipments from Chicago and 4 from Wilmington, Ill., to widely scattered points in Iowa shows a substantial service from those two origins commensurate with his resources and relation of that authority to his overall operations. While for a period of years he conducted operations almost exclusively in vehicles trip-leased from vendee and used vendee's drivers, and the involved traffic moved on vendee's billing and delivery receipts, applicants nevertheless endeavored to comply with the leasing rules respecting inspections, driver logs, and collection of charges, the traffic moved under vendor's insurance, and the vehicles and drivers were under his control. In the circumstances those shipments may properly be re-

garded as those of vendor and as supporting a finding of regular and continuous service to the extent indicated.—Kroblin Refrigerated Xpress—Purchase—Davis, 93 M.C.C. 356 (359-60).

Irregular-route carriers need not show service to and from all authorized points to establish that their rights have been actively utilized; and the rule of substantiality, under which such a carrier need only show that it has rendered substantial service to a representative number of points, applies to commodities as well as territory. Shipments handled by liquidating carrier in 1958, 1959, and first half of 1960 are similar to those transported in last half of 1960, prior to commencement of merger negotiations, and are material to show continuity of its operations. It has served its authorized territory for a substantial period, and while some points were served more frequently than others and some commodities transported less frequently than others, the several hundred representative shipments handled prior to filing of merger application, showing service at points in all authorized States and including products within principal classes of its authorized commodities, refute any claim of dormancy. Its operations are thus shown to have been substantial and continuous.—Youngstown Cartage Co.—Control and Merger, 93 M.C.C. 318 (325, 326-7).

Moreover, while not conclusive, evidence of service provided by survivor under temporary lease of liquidating carrier's rights is admissible and properly to be considered in determining whether the transaction would be consistent with public interest, particularly where the temporary operations, being of long standing , are indicative of whether unification might have detrimental effect on existing carriers. Survivor has been rendering service under temporary authority for over 2 years between points in liquidating carrier's territory, and between certain points in their respective territories by tacking their rights, and protestants who furnished information concerning their revenues for the years before and after the temporary unification showed an increase in the latter over the former; thus protestants have not shown that approval of merger without a restriction against tacking of survivor's existing and acquired rights would have a materially adverse effect on their operations.—Id., pp. 325, 327-8.

In determining consistency of service of irregular-route carriers of a limited class of commodities, it is recognized that such authority is not in same category as regular-route, general-commodity authority, but rather contemplates a specialized call-on-demand service for a few shippers and consignees; such a carrier is not required to present evidence of service to and from all authorized points in its irregular-route area, but evidence must show a continuous operation serving a representative number of points.—Superior Trucking Co.—Purchase—Arthur Morgan Trucking, 90 M.C.C. 367 (370-1)*.

An irregular-route carrier is required only to show that it has rendered substantial service to a representative number of points within its authorized territory to support a finding that its operations have been substantial and continuous; and where a regular-route carrier is conducting substantial operations throughout its system it need not submit evidence of operations to and from every authorized point or over all combinations of its routes.—Long Transp. Co.—Control—Marine Transit, Inc., 90 M.C.C. 261 (264); and there is even less reason for holding acquired carrier to a showing of more than representative points in view of its limited and highly specialized commodity authority, as well as fact that the traffic is seasonal in nature. While its services has been limited in some instances and not all origins and destinations have been served, evidence establishes that service under its rights has been frequent and widely dispersed to numerous points throughout its authorized territory. —Id., pp. 264, 265.

The test of substantiality of past irregular-route operations is a flexible standard gaged according to nature of the commodity transported and type of service performed, as opposed to a hard and fast rule requiring proof of service in each State, city, or other geographical area designated; and as nature of the commodity or service becomes more narrowly confined or specialized, greater leniency can be shown in determining whether vendor has conducted a substantial service

"throughout" his authorized territory. But to apply that test so that, whenever an irregular-route carrier has provided substantial and continuous service to any portion of his authorized territory, however extensive that territory might be, such geographically limited service would suffice to establish that the entire authority had been actively exercised would be a strained interpretation.—Knox Motor Service, Inc.—Purchase—K & A Truck Lines, Inc., 93 M.C.C. 26 (30).

Though the specific-commodity authority embraced in proposed purchase is broad and the authorized area is not extensive, vendor has confined its service to the area north and east of the Tri-Cities, and to avoid a finding of partial dormancy it is reasonable to require a showing of service to points in each of the areas designated in that authority. While the record does not show clearly what part of vendor's Wisconsin-Iowa operations shown in its abstract of shipments was performed by it and what part by interline carriers, the pattern of its operations otherwise, together with certain implications in the record, indicates that it performed the Wisconsin-Tri-Cities portion; but the only five shipments shown between the Tri-Cities and points in Iowa, for which its authority is questionable, are insufficient, even if allowed, to establish substantial service to the entire State.—Id., pp. 29, 30-1.

An irregular-route general-commodity carrier is required only to show service on a substantial number of commodities at a representative number of points within its authorized territory in order to support a finding that its operations have been substantial and continuous. Evidence of shipments andled on 9 separate days over a 22-month period reflects a substantial and active operation for a carrier of liquidating carrier's size, and summary of service performed on certain commodities, showing that contrary to protestants' contention they were in fact transported under its rights, is not intended to imply that every conceivable commodity must be shown to have been transported.—Jones Motor Co., Inc.—Control—Mundy Motor Lines, 90 M.C.C. 899 (906-908).

However, certain of liquidating carrier's general-commodity radial rights are totally divorced from and outside of territory wherein substantial operations are shown. Shipments shown as handled to such radial points are only 0.001 percent by number and 0.016 percent by weight of total shipments handled systemwide; more significantly, most of them were transported subsequent to execution of merger agreement; such shipments are entitled to little weight in determining nature and scope of a prospective seller's operations.—Id., p. 907.

Where territorial operations are claimed, a showing of service must embrace a sufficient number of points throughout the territory involved to be considered representative of the whole, and an irregular-route carrier is only required to submit evidence that it has rendered substantial service to a representative number of points within its authorized territory in order to support conclusion that its operations have been substantial and continuous.—Watkins Motor Lines, In.c—Control and Merger, 90 M.C.C. 567 (582); however, such evidence must of necessity include a showing that carrier has held itself out to handle all the traffic possible, commensurate with its facilities and ability.—Ashworth Transfer, Inc.—Control—Hawkes Transp. Co., 87 M.C.C. 653 (661)*.

The paucity of evidence relating to management policies of acquired carrier's stockholders during 1958 precludes finding that it has so held out; giving consideration to its authorized service area, its resources and facilities, its status as an irregular-route carrier of specific commodities, and testimony of supporting shipper, also giving credence to traffic handled as machinery, without determining whether it was properly so classified, analysis of shipments handled in 1958 shows that its service was limited to movement of building materials, explosives, and heavy machinery from a few origins to points in four States; the few isolated shipments transported to and from other points are insufficient to alter conclusion that its operating rights were not otherwise actively utilized.—Id., p. 661.

Evidence establishing the pattern of acquired carrier's operations prior to authorization of temporary control as being nonradial between New England points and radial between those points and Philadelphia gateway

and its other authorized points, except Scranton, Pa., Hudson Valley (including New York City and Long Island), and northern New Jersey areas, fairly meets the test of substantiality. However, that evidence cannot be used to support a finding of substantial or continuous operations to or from large geographical areas where, even giving full weight to shipments subsequent to date of stock-purchase agreement, only a few shipments are shown to a limited number of points, entirely outside the pattern of operations established by the preponderance of the evidence.—Accelerated Transport-Pony Exp., Inc.—Control—Downing, 87 M.C.C. 711 (717, 721).

Substantially all of acquired carrier's traffic to from the Scranton area is shown to have been interlined at Philadelphia, with only occasional or sporadic movements in single-line service. No direct service is established to or from Hudson Valley area until well after date of the agreement; shipments prior thereto are not supported by documentary evidence or are too remote in time to be considered in evaluating the pattern of operations. In the Long Island-New York metropolitan area, direct service is shown on only 7 shipments prior to temporary control; shipments thereafter are entitled to little weight. Only a relatively few shipments to scattered points in northern New Jersey are shown; shipments interchanged at Newark as part of an emergency tobacco movement were an exception to the usual practice of interlining at Philadelphia and have little weight. Operations to those areas were thus too sporadic and limited to have any competitive significance.—Id., pp. 717-22.

Although evidence of service rendered by a prospective purchaser under temporary authority cannot be considered conclusive, it is admissible and properly to be considered with other evidence to determine whether the transaction and unified service would be consistent with public interest.—Chicago Kansas City Freight Line, Inc.—Purchase—Capitol, 97 M.C.C. 68 (73); Sanborn's Motor Exp., Inc.—Purchase—Bemis Exp., Inc., 93 M.C.C. 728 (734); United Truck Lines, Inc.—Purchase—United Freight Lines, 90 M.C.C. 337 (345); C & H Transp. Co., Inc.—Purchase—Gulf Southwestern Transp., 90 M.C.C. 636 (640); Mistletoe Exp. Service—Purchase—Central News Exp., Inc., 90 M.C.C. 797 (803); particularly where the operations under temporary authority are of long standing and afford a means of establishing whether the unified operations have had any detrimental effect on protestants and other established carriers.—Bowman Transp., Inc.—Control and Merger, 93 M.C.C. 133 (139); Ashworth Transfer, Inc.—Purchase—Willcoxon and Fowkes, 90 M.C.C. 107 (111)*; Von Der Ahe Van Lines, Inc.—Lease and Purchase—Bee-Line, 90 M.C.C. 888 (895)*.

Evidence pertaining to nature and scope of operations conducted under vendor's rights, both prior and subsequent to grant of temporary authority to vendee, is entitled to full weight, since absence of any marked disparity in volume of traffic handled during the respective periods indicates that there was no influence or domination of vendee during the purchase negotiation.—Hart Motor Exp., Inc.—Purchase—Lake Superior Motor Frt., 90 M.C.C. 652 (654).

Service by two control applicants under their successive temporary authorities for control of acquired carrier may properly be considered, along with other factors, in determining scope of its operations, but is not controlling.—Watkins Motor Lines, Inc.—Control and Merger, 90 M.C.C. 567 (582); and, though merely representative, abstracts of over 1,300 shipments, representing every 20th shipment handled by acquired carrier during the last 8-1/2 months preceding authorization of temporary control, cover a sufficient period to give a clear picture of the carrier's operations and indicate that a substantial service has been performed.—Id., p. 582.

Operations under temporary authority, while not controlling, may properly be considered with other evidence to determine whether a transaction would be consistent with public interest, particularly when they are of long standing and afford a means of determining whether the resulting service has had any destructive effect on protesting carriers. Considering extent to which acquired carrier's operations have been rehabilitated under acquiring carrier's temporary management, and expressed need of supporting shippers for continuance and improvement of its service

within scope of its authority, evidence is convincing that substantial compensatory benefits have resulted, not only to acquired carrier, but also to the public served by it, without any serious adverse effect on protestants' operations and services.—Mason & Dixon Lines, Inc.—Control—Silver Fleet, 90 M.C.C. 829 (845, 847).

In view of applicants' claim that protestants' operating results have markedly improved during acquiring carrier's temporary control of acquired carrier, and fact that financial data used are somewhat outdated, official notice should be taken of data in protestants' latest filed annual reports; therefore, in consonance with §7(d) of Administrative Procedure Act, effectiveness of order of approval is deferred for a sufficient period to allow any party to petition for further hearing for purpose of showing why such data should not be considered.—Branch Motor Exp. Co. —Control—Morgan Trucking Co., 93 M.C.C. 244 (260).

Vendee's considerable operations under temporary lease of vendor's dormant rights are not the best evidence of need for their continuance. Nor is the fact that competing carriers have prospered during that period conclusive, particularly where it is not shown whether such prosperity extended to their operations in competitive area involved, since conceivably an overall operation may be progressively more prosperous despite the falling off of traffic in particular areas. Moreover, even temporary service over a long period does not alone establish public need, nor should it be considered solely as a reason for approval of purchase where it is not established by other evidence that the transaction, if approved, would result in fulfillment of such need.—C & H Transp. Co., Inc.—Purchase—Ferguson Trucking, 93 M.C.C. 741 (748-9)*.

Operations conducted under temporary authority have little weight in determining scope and manner of operations conducted by vendor prior thereto; pattern of instant vendee's operations under temporary authority is clearly not the same as that of vendor's past operations.—Bowman Transp., Inc.—Purchase—A.W. Hawkins, Inc., 90 M.C.C. 303 (325).

Evidence of shipments handled by a vendor after date of purchase agreement may be introduced to show that service subsequent thereto has continued to be substantially similar to that conducted previously; but the commission's conclusions are not based solely on such service.—Kroblin Refrigerated Xpress, Inc.—Purchase—Davis, 93 M.C.C. 356 (359); however, a seller has the right to augment his traffic subsequent to the agreement date so long as the augmentation is free from the control, influence, or domination of the prospective purchasej. Vendor's decreased gross operating revenues indicate that traffic handled before and after purchase agreement date was handled in the ordinary course of business and free from vendee's influence and dominion (otherwise its revenues probably would have increased) and such shipments may properly be considered. —Barber Transp. Co.—Purchase—Conner, 90 M.C.C. 475 (478).

Ordinarily traffic handled after applicants enter their purchase agreement is entitled to little weight in establishing continuity of operations under particular rights, principally because of buildup of service thereunder to meet a possible challenge of dormancy; but where the traffic handled after the contract date merely shows a continuation of activities prior thereto it may be considered.—Midwest Transfer Co. of Ill.—Control—Chamberland's, 90 M.C.C. 503 (508)*.

Iron and steel shipments transported under vendor's heavy-hauling rights after purchase negotiations began are considered as made in anticipation of the proposed sale and as moved solely as result of vendee's influence, and therefore are entitled to little weight as showing active operations. This is not to say that a prospective seller is foreclosed from stimulating the use of its operations in anticipation of their sale, but that when the buyer

dominates such efforts the commission refuses to give significant weight to the evidence of such increased activity.—Aero Trucking, Inc. —Purchase—Kreitz, 93 M.C.C. 115 (117).

Shipments transported under vendor's heavy-hauling authority some 2 years prior to purchase negotiations are not too remote to be considered; were this the only evidence of vendor's activity, its exclusion on ground of remoteness would be proper, but as evidence to show continuity and general nature of vendor's specialized service over a long period it is entitled to some weight. Neither should all vendor's operations after initiation of negotiations be disregarded, but only those movements under vendee's domination or influence; in that category are shipments interlined between applicants under arrangement entered into about the time negotiations began, since that arrangement, which replaced one between vendor and other carriers, must be held to have been for purpose of facilitating approval of purchase. Since no temporary authority was sought or granted, there is no basis for finding that other shipments during that period were under vendee's influence; a vendor has the right to build up its operations to make them more readily marketable, and evidence of such increased activity will be denied substantial weight only when the prosepective buyer influences such efforts.—Superior Trucking Co.—Purchase—Arthur Morgan Trucking, 93 M.C.C. 64 (68)*.

Although no traffic is shown between any two points in Tennessee and/or Kentucky, and little recent traffic is shown between either of those States and other States, in view of the specialized nature of vendor's rights there is enough to establish that it has been providing latter service as part of its pattern of operations, although its main activity has been between Illinois and Missouri; applicants have shown that vendor's rights are not dormant territorially as to movements between Missouri and Illinois and between those States and Tennessee and Kentucky. Further, the record shows that it has transported a representative assortment of commodities embraced by its heavy hauler authority.—Id., pp. 68-9.

Where dormancy is an issue under §5, little weight should be given evidence of operations conducted after negotiations for the sale of the rights were entered into.—K-Lines, Inc. —Purchase—Consolidated Freightways, 93 M.C.C. 720 (722); similarly, operations instituted by prospective vendor after it commenced or concluded negotiations for sale of its rights are entitled to little weight in determining nature and extent of its activity as a motor carrier.—Deaton Truck Line, Inc.—Purchase—Magnolia Truck Line, 87 M.C.C. 674 (680); and, since transfer of dormant operating rights under §5 may be approved only on a showing that there is need for the service which may be reestablished thereunder, contention that since there were no protestants at the hearing it was unnecessary to introduce shipper witnesses is without merit.—West Nebraska Exp., Inc.—Purchase—Forsstrom, 87 M.C.C. 733 (736).

Evidence relating solely to operations conducted subsequent to a purchase contract is entitled to little weight in reaching a decision on the merits, especially where such operation appears to have been intended primarily to facilitate approval of the transaction. Shipments handled by vendor to and from West Virginia points under unlawful leasing arrangement may not be considered, and there is no other evidence of service to those points prior to purchase agreement; vendor reactivated those rights after lease of another portion of its rights to vendee, undoubtedly aided by money loaned it by vendee under the agreement, and interlined a substantial volume of traffic with vendee. Such reactivation was clearly an endeavor to eliminate or mitigate the issue of dormancy, and shipments thus handled are entitled to no weight.—Pilot Freight Carriers, Inc.—Purchase—Bison Fast Freight, 90 M.C.C. 709 (718).

Little weight can be given evidence of shipments handled by vendor in interline service

with other household-goods carriers after commencement of purchase negotiations with vendee when its annual reports for the 3 preceding years show no operating revenues, portions of prorated line-haul revenues paid the interchange carriers are not shown with any degree of certainty, and its principal stockholder admitted at hearing that in many instances bills of lading underlying the shipments had been altered to show the correct routing by the participating carriers.—American Red Ball Transit Co., Inc.—Purchase—Fallon, 90 M.C.C. 515 (518)*.

No underlying documents were made available to substantiate vendor's abstract of shipments allegedly transported prior to 1962, and he was unable to testify concerning any of them from his own knowledge. He also lacked adequate personal knowledge as to 1962 shipments, some 75 percent of which were handled under a lease-and-interline arrangement with vendee, and relied entirely on his abstract, which was supported mainly by purported invoice copies made by a typist, that he had not checked against originals, and no other witness was made available to vouch for their accuracy. Obviously, most of the copies presented as underlying documents were not made in ordinary course of business and would never be relied on by vendor for collection of debts owed. Without any other means of authenticating vendor's abstracts or of providing protestants opportunity to test their reliability on cross-examination, examiner, on protestants' objection, properly rejected that evidence.—Prichard Transfer, Inc.—Purchase—Weiss, 93 M.C.C. 535 (540-1).

Additionally, all shipments abstracted were moved long after execution of the purchase agreement, the earliest some 75 days, and the most recent about 16½ months, subsequent to that date. Traffic developed after negotiations for sale of rights is entitled to little weight in determining continuity and scope of prior operations under those rights, and, following 80 MCC 245, 87 MCC 117, and 90 MCC 515, application must be denied when applicants' entire case rests on vendor's activity long after negotiations were instituted for the sale of his rights.—Id., pp. 541-2.

Though the general rule is that where a financial exhibit is questioned by opposing parties a competent witness should be made available for cross-examination thereon, a transaction may be found consistent with public interest even though no competent witnesses are presented to authenticate the financial data. While applicants failed to make such a witness available at either initial or further hearing, they were severely handicapped by the death of vendor's general manager prior to initial hearing, also by illness of its stockholder-president which prevented his attending that hearing and his death prior to the further hearing, which forced them to rely on witnesses only secondarily related to vendor to establish the nature and scope of its past operations. In the circumstances, and in view of transparent nature of vendor's financial statements, their consideration as evidence did not prejudice protestants.—Von Der Ahe Van Lines, Inc.—Lease and Purchase—Bee-Line, 90 M.C.C. 888 (889, 891)*.

While there is no requirement that abstracts of shipments transported by a carrier be made only from bills of lading, they must be supported at hearing by the underlying data used, in order to assist cross-examination and prevent inclusion of spurious evidence. Abstracts have been admitted when underlying documents were made in ordinary course of business, even though witness had no knowledge of how they were prepared and could not otherwise stand cross examination, and also where underlying data were not available but the witness was qualified to testify and stand cross-examination with regard thereto. Vendee's president was properly qualified to authenticate the supporting data, and stand cross-examination theron, as to shipments transported by vendor and vendee in interline arrangements, but not as to shipments allegedly transported by vendor alone or by a third carrier under lease arrangement with vendor. —Id., pp. 891-2.

However, the abstract of shipments interlined with the third carrier was admissible when testimony of the widow of vendor's general manager, who had gained some knowledge of vendor's operations while assisting her husband, was corroborated by individual who inspected vehicles of other carriers being leased to vendor, who identified underlying manifests as signed by him or by one of his authorized employees, and by a State Highway Department employee who verified shipments listed thereon as entering the State on trucks owned by or leased to vendor.—Id., p. 894.

Also, the widow of vendor's general manager, who assisted her husband in handling its transportation matters during a 2-year period prior to his death, submitted verbatim abstracts of notations made by her husband in his diary and on his office calendar covering shipments handled during a period of about 6 months. Both the diary and calendar were made available at the hearing, and witness identified some shipments shown in the abstracts and testified she had catalogued underlying documents and assisted in preparing other exhibits listing shipments interlined with vendee and the third carrier. Applicants have attempted to present every witness who could possibly authenticate vendor's records and testify concerning abstracts predicated thereon; to reject such testimony, in the circumstances, as insufficient to establish authenticity of the records offered could create a situation in which proof of a vendor's operations would be impossible solely because those who made the records are dead. Even at common law the unavailability of the witnesses would supply the need for use of vendor's records.—Id., 93 M.C.C. 498 (503)*.

In any event, the disputed exhibits are admissible under the "normal course of business" exception to the hearsay rule. The main purpose of the Federal Business Records Act and rule 1.79 of the commission's Rules of Practice, which is almost identical in language, is to lighten the burden of producing or accounting for witnesses by permitting records to be verified by anyone who knows that they are made in the regular course of business; and fact that the witness neither prepared the records nor supervised their preparation does not affect their admissibility. [See 81 MCC 683 and 305 F. 2d 121.] Testimony of the general manager's widow, who worked in her husband's office and assisted him in preparation of many of the records, is sufficient to establish that those documents and records, including the shipping papers and notations from the diary and calendar, were made and kept in the regular course of business.—Id., pp. 504, 506.

Technical ules on admission of evidence should not be permitted to frustrate the ends of justice; see 278 F. 2d 415. In addition, when the commission functions in a quasi-judicial capacity, unlike a court it is dealing with an area of specialized knowledge and activity in which it presumably has a special competence; and, also unlike a court, it is in every case obligated to weigh the public interest considerations, not merely those of the particular litigants. Consequently, it should not be limited by strict rules on admissibility of evidence, such as may govern adversary proceedings between private litigants before a court.—Id., p. 505.

Abstracts of past shipments may be received to show scope and nature of a carrier's past service only when they are supported by original underlying records, which in contested cases must be available to opposing parties for inspection and cross-examination thereon; and admission of such data, even though supported by underlying documents, has been refused where the witness presented was not sufficiently competent to verify their authenticity. Abstract of shipments submitted with the application, although prepared from acquired carrier's books and records, may not be considered when the shipments listed therein, except those embraced in exhibit subsequently submitted at the hearing, could not be further supported.—Ashworth Transfer, Inc.—Control—Hawkes Transp. Co., 87 M.C.C. 653 (659-60)*.

While exhibit submitted at hearing listed

some 345 shipments over a period of 3-1/2 years prior to December 1958, the only witness presented for cross-examination were one of acquiring carrier's controlling stockholders, who could testify only as to shipments interlined by the two carriers, a shipper representative who was familiar to some extent with explosives shipments handled by acquired carrier, and latter's driver-manager who had been in its employ since January 1958 and managed its operations after departure of its stockholders; those witnesses were sufficiently qualified to testify respecting its operations subsequent to January 1958; shipments prior thereto were substantially unauthenticated and were too remote in time to be considered for purpose of establishing the pattern of operations evolved under acquired carrier's rights, responsive to transportation needs of the area served, and may not be considered.—Id., p. 660.

While data in vendor's abstract of shipments handled in 1957 are somewhat remote, consideration thereof is necessary to afford a picture of the scope and nature of services performed under its rights prior to assignment for the benefit of creditors. Also, though evidence of service performed under temporary lease authority (granted because of vendor's adverse financial condition), by a prior vendee-applicant which later withdrew, cannot be considered conclusive, it is entitled to consideration along with other evidence; in instances where lessee withdraws and the rights revert to lessor, service by lessee must be considered a continuation of operations previously by lessor in future consideration of sale of the rights to another party. Contention that shipments so handled by prior vendee should not be considered because its stockholders subsequently acquired duplicating rights and continued operations in the area, is without merit; its abstract covers a period antedating termination of the temporary authority.—Hudson Transp. Co.—Purchase—Hillside Freight lines, Inc., 87 M.C.C. 759 (763).

Operations performed by instant vendee under temporary authority are pertinent to determination of questions of scope thereof as compared to service performed by vendor and prior vendee, shipper support for continuation of its service, particularly to extent it exceeds that of vendor and prior vendee, and effect thereof on protestant motor carriers. However, shipments originated by vendee under temporary authority at points also embraced in its own authority, and the few shipments from points beyond vendor's authorized area and not clearly shown to have been handled in interline, have little value to show scope of service under vendor's rights. Considering broad areas involved, as well as existing service available, evidence does not warrant finding of need for continuance of vendee's service to and from points in northern Pennsylvania area.—Id., pp. 764, 765-6.

Except where provision has been made by the hearing officer, or where there is special justification, the commission will not receive in evidence any documents, letters or other writings submitted after the close of a hearing. Accordingly, affidavit of one law firm and letter of another concerning their employment by vendee, submitted with applicants' exceptions to the proposed report, are excluded; however, official notice may be taken of information contained in vendee's annual report to the commission, copies of which were also submitted with those exceptions. Also, certain other matters complained of therein, being without foundation in the record, are stricken as not properly in evidence.—R. L. Jeffries Trucking Co., Inc.—Purchase—Eck Miller, 97 M.C.C. 151 (165).

Letter to the commission from carrier (not a party to purchase proceeding) which purchased vendor's intrastate rights and instituted interstate operations under former single-State proviso, offering to accept restrictions on any certificate of registration issued in its pending §206(a)(7) proceeding, as proposed by the parties to meet objections to vendee's purchase of vendor's interstate rights, is not properly in evidence and may not be considered because of its hearsay character and inability of opposing parties to cross-examine; any consideration thereof would also be contrary to rule 1.86 of the Rules of Practice. And while the commission may take official notice of certain matters of fact, the restriction proposed in that letter and its effect in conjunction with other restrictions proposed on those rights and vendor's interstate rights are not such matters of common knowledge and,

thus, may not be the subject of official notice by the commission.—Illinois-California Exp., Inc.—Purchase—Salt Lake-Kanab, 97 M.C.C. 38 (41, 44, 45).

And though applicants request further hearing solely to admit the letter into evidence, rule 1.101(b) of Rules of Practice requires that an explanation be given why such evidence was not previously adduced. Hearings covering a period of 3 months were held at Salt Lake City where purchaser of the intrastate rights has its headquarters, and applicants were apprised of protestants' opposition based on creation of duplicate rights during the first day of hearing, yet made no effort to present the proposed restrictions. In absence of an acceptable reason why such evidence was not submitted in a timely manner, applicants should not be permitted to supplement the record at this late date.—Id., p. 45.

Control applicants' contention at oral argument that it is doubtful whether they jointly control or have power to control a noncarrier company which controls three carriers, and their assertion in subsequent letter to the commission that their stock interest in that company has been reduced to about 20 percent, must be disregarded in absence of supporting evidence of record.—Best Transport, Inc., 88 M.C.C. 147 (150, Note 4)*.

Evidence is entirely deficient to support the requisite finding that proposed control by Canadian railroad's subsidiary holding company of a motor carrier also operating partly in United States would enable the railroad to use the motor service to public advantage in its operations. Though applicants state that the railroad would turn some l.c.l. traffic over to the motor carrier where its rail service is considered inadequate and the traffic would be expedited, they submitted no estimate either of volume of rail traffic that could be handled in substituted motor-for-rail service or of economies and benefits that could be effected thereby. Nor do they show extent, if any, to which resulting operations would require a prior or subsequent rail movement; on the contrary, they admit that there would be no elimination or reduction of rail service and that the motor carrier would be used separately as a funnel for traffic of all motor carriers under the holding company's control. Application denied.—Canadian Natl. Transp.—Control—Husband International, 93 M.C.C. 80 (87-8).

Contention in protestants' reply to applicants' exceptions, that examiner erred in refusing to admit an exhibit purporting to contain testimony of one of applicants' witnesses in an unrelated proceeding, and requesting that it be received in evidence, is tantamount to an exception to the examiner's ruling on the exhibit; as an exception included in a reply will not be considered unless timely filed (Rule 1.96(a), (b) of Rules of Practice), such request is denied. Also, supplemental data contained in applicants' exceptions may not be considered in view of protestants' objections to acceptance thereof as part of the record, on ground that such material was not offered at hearing when all parties were present and had opportunity for cross-examination; protestants' motion to strike such data, granted.—Be-Mac Transport Co., Inc.—Purchase—Nix, 87 M.C.C. 737 (740).

Applicants must make a prima facie showing of fitness, but unless some error in that showing or some other fact indicating unfitness is brought out by another party on cross-examination, vendee's fitness may be accepted. When protestants failed to uncover any specific violations in vendee's interline practices, they demanded production of drivers' logs, lease agreements, etc., in order to explore legality of the interline. Applicants properly objected to bringing in every document or piece of information as to their interline for purposes of a "fishing expedition"; there is nothing unusual in fact that a vendee in a §5 purchase proceeding, not coupled with any investigation or enforcement proceeding, did not have copies of written interline agreements, drivers' logs, or shipping manifests available in the hearing room for protestants' inspection. Protestants' mere questioning of lawfulness of the interline falls far short of showing facts to create a valid doubt.—Security Van Lines, Inc.—Purchase—Community & Johnson, 93 M.C.C. 399 (403).

Evidence relating to unauthorized shipments or transportation cannot be considered in determining the extent to which a carrier has exercised its operating authority.—Southwest Frt. Lines, Inc.—Control—Direct

Transports, 93 M.C.C. 439 (449).

Applicants have the burden of establishing details of past operations by a competent representative. When, under an agreement not introduced in evidence, survivor leases its equipment and drivers to liquidating carrier from origin to destination, and liquidating carrier's stock owner, the only witness presented to stand cross-examination on its operations, had little knowledge of its day-to-day operations and had no knowledge of location of inspection station established at the carriers' common gateway or of identity of person relied on to inspect and placard vehicles, but apparently relied on her office manager, there is ample reason to doubt that liquidating carrier exercised any control over survivor's equipment and drivers while operating in former's territory. Cross-examination of applicants' witnesses was piercing enough to rebut any presumption that the purported interline arrangements were lawful; moreover, since lawfulness of the interline is seriously questioned, and all such interline occurred after merger application was filed, any evidence as to such operations is entitled to no weight.—Dealers Transit, Inc.—Control and Merger, 93 M.C.C. 611 (618-9, 620).

Evidence of deficit operations ascribed to the purchase routes in protestant's traffic study is inconclusive to show that available traffic in considered area will not support competitive operations of two buslines. Its selection of a week in autumn for purpose of showing that vendee and itself do not conduct compensatory operations over the direct Boston-Portland route is not sufficiently representative for determination.—Trailways of New England, Inc.—Purchase—Interstate, 93 M.C.C. 217 (225-6).

Realizing that an exhibit depicting scope of operations performed under the rights to be acquired is necessary and important in a §5 proceeding, applicants made a concerted effort to prepare an exhibit to withstand the charge of dormancy of vendor's rights, and to substantiate shipments listed therein, most of which were handled in vendee's equipment and on its billing, vendee's transportation documents were traced onto those of vendor, signatures forged, and the documents crumpled and stepped on to give them appearance of having been handled by drivers of the vehicles. Despite sanctity of the oath, testimony of participants in those machinations differed widely, and there is no doubt that some of the witnesses perjured themselves; nevertheless, the sum total of the evidence discloses a flagrant violation of §5(4).—Calore Exp. Co., Inc.—Purchase—T.W.Waterman Co., Inc., 93 M.C.C. 291 (296).

The techniques employed--submission of false exhibits supported by forged freight bills and false testimony under oath--are not only an affront to the commission but subversive of the entire regulatory process. In order to exercise informed judgment in discharging its statutory responsibilities the commission must be able to rely fully on integrity of the basic documents reflecting the business transacted by the transportation companies subject to its regulation; therefore, strong measures are warranted to prevent a recurrence of such willful misrepresentations by applicant-respondents or others. Bureau of Inquiry and Compliance is accordingly instructed to consider criminal proceedings respecting the violations of the act disclosed, and to bring to attention of the Department of Justice the perjury which appears to have been committed by certain witnesses.—Id., pp. 297, 298.

Exhibits which admittedly were not statistics or documents maintained in regular course of business, but were abstracted from freight bills and specially prepared for presentation at hearing to show alleged adverse effect on protestant of vendee's operations under temporary authority, and traffic which would be exposed to vendee's single-line competition after permanent unification, represent a type of evidence which the commission, in a long line of cases, has required to be supported by underlying data when objection to its admission is raised. See 74 MCC 193. Examiner correctly rejected the proffered exhibits when applicants objected to their receipt in evidence.—Michigan Exp., Inc.—Purchase—Chicago-St. Louis Exp., Inc., 90 M.C.C. 671 (675)*.

Acquiring carrier's valuation of acquired carrier's equipment and terminals was not supported when persons who appraised three terminals were not available at hearing for cross-examination; appraiser of a fourth was

not familiar with structural features of the buildings, did not know thickness of yard paving, which would determine its value, and could offer no basis for his appraisal other than asking price of other property in the area; excess of fair market value over depreciated book value of a fifth terminal was not shown; appraised value of a sixth exceeded cost of its construction the preceding year by some $90,000; and appraised value of motor equipment did not necessarily represent its fair market value at time of hearing. While the equipment and terminals might well have fair market value in excess of net book value, no reasonable determination thereof could be made from evidence submitted.—Red Ball Motor Freight, Inc.—Control—Couch Motor, 87 M.C.C. 627 (630-1).

Though acquiring carrier based its appraisal of acquired carrier's operating rights on estimate that, based on its experience with another subsidiary, it could increase former's operating revenues by 20 percent, operating revenues of both under its control showed a lesser percentage of annual increase than prior thereto, and it is not shown that acquired carrier's operating problems are the same as those of the existing subsidiary at time control of it was acquired; acquiring carrier admits its estimate of savings includes duplications, and it is evident that some represent arbitrary figures not based on a careful study of its operations and that others would materialize only to extent that an increase in revenues would be actually achieved; such estimates are overly optimistic and lack substantial support in the records.—Id., pp. 631-2.

Presumptions: [Vols. 14, 17-19].—In absence of evidence to the contrary, it must be presumed that acquiring carrier, under temporary control authority, has been providing honest and bona fide management, with unfavorable results to both that carrier's and its own otherwise profitable operations, to which much weight should be given in determining whether the transaction would be consistent with public interest.—Adley Exp. Co.—Control—McFaddin Exp., Inc., 87 M.C.C. 665 (672)*.

When at further hearing applicants again failed to support vendors' exhibit by production of underlying data, which they assert were lost or mislaid since preparation of the exhibit, and freight bills offered were rejected because not within limits prescribed by order assigning and defining purpose of the further hearing, and there is no other evidence to support contention that a reasonably active and continuous service was rendered under vendor's rights prior to grant of temporary authority, it must again be presumed that the operations were dormant.—Ashworth Transfer, Inc.—Purchase—Willcoxon and Fowkes, 90 M.C.C. 107 (109):.

126. Burden of proof.—[Vols. 15-19].—Once dormancy has been found, in proceeding involving sale of motor carrier operating rights, purchasing carrier has the burden of proving public need for his service in order to justify reactivation of dormant routes; and logically, the commission then requires the same degree of proof in an application to reactivate wholly unused routes as it would in an application for new routes. Purchasing carrier's obligation is to show by shipper testimony that need for additional service is present or immediately forseeable—and, conversely, upon protest of authorized carriers, that existing service offered is incapable of meeting shipper demands. Testimony of vendee's (plaintiff) shipper witnesses clearly shows that, while they might prefer its service, they have no great difficulty in obtaining service from other carriers. The commission's order denying plaintiff authority to purchase rights of another motor carrier sustained, and temporary restraining order vacated.—C & H Transp. Co., Inc. v. United States, 249 F. Supp. 97 (100-1)*.

Where water carrier seeks authority to purchase motor-carrier operating rights and property, in absence of a clear showing of a different intent by Congress, the *maxim expressio unius est exclusio alterius* should apply, and proviso of §5(2)(b) and the provisions of §5(14) and (16) should not be construed to require water carrier, having no affiliation with a railroad, to sustain the same burden of proof as rail carriers, namely that it will be able to use the motor carrier rights to public advantage in its own operations; water carriers need only show that proposed transaction will be consistent with public interest,

which phrase has been construed to mean compatible and not contradictory or hostile to the public interest.—TTC Corp.—Purchase—Terminal Transport Co., Inc., 97 M.C.C. 380 (385, 397-9, 403)*.

See also Illinois Central case, §5(16), n. 13.

Proviso of §5(2)(b) makes it mandatory that an applicant motor carrier which is controlled by a railroad present evidence that the transaction proposed will enable the railroad to use the acquired motor operations to public advantage in its rail service; and fact that railroad-controlled vendee's present operations generally are not restricted to service auxiliary or supplemental to the rail service, or that it has been authorized to acquire unrestricted rights in other proceedings, is neither controlling nor determinative.—Burlington Truck Lines, Inc.—Purchase—H. B. Green Transp., 90 M.C.C. 865 (869).

Although vendor is authorized to serve 195 points in Illinois and Iowa, its routes out of Chicago do not parallel the lines of vendee's parent railroad in several instances, and applicants submitted evidence to show that the railroad could use the motor service proposed under the acquired rights to public advantage at only 1 point in Illinois and 5 small points in Iowa; they have not attempted, even by a modicum of proof, to show how the railroad would be able to use vendee's substituted motor service to a substantial number of large points served by vendor but not on the rail lines, as well as a number of large points on the rail lines and served by vendor but not by vendee. Applicants have thus failed to meet the proof requirements of §5(2)(b); denied.—Id., pp. 869-71.

See also Pilot Freight Carriers purchase case, n. 110 *Restrictions on operating rights*, above.

Dormancy does not in all instances preclude transfer of operating authority particularly if public need is shown for revitalized service thereunder; thus, transfer of dormant rights has been permitted when testimony of shipper witnesses established that they need the service and cannot be served satisfactorily by existing carriers. However, when such a showing is attempted, the burden of proof rests with applicants and cannot be shifted to protestants as if the matter were simply one of proving adverse competitive effect. And where service in several States is authorized under the rights involved, it is generally incumbent on the parties to show service to each State, in order to demonstrate active use of those rights. Applicants failed to meet their burden of showing need for revitalized service under the portion of considered rights found to be entirely dormant in prior report.—C & H Transp. Co., Inc.—Purchase—Ferguson Trucking, 97 M.C.C. 741 (748, 750)*.

Where rights sought to be acquired have become dormant, for whatever reason, it is incumbent on applicants to show that the carrier proposing to acquire the rights would meet some transportation need not being met by existing carriers, and fact that control alone is sought, rather than unification by purchase or merger, does not alter that burden.—Adley Exp. Co.—Control—McFaddin Exp., Inc., 93 M.C.C. 378 (384)*; also, the mere fact that acquiring carrier may reap additional benefits from the transaction does not lessen applicants' burden of proof concerning public need, nor does protestants' failure to show with particularity the traffic or revenues they would lose under the unified rights warrant special consideration where applicants fail to establish that the transaction would be consistent with public interest.—U.S. Van Lines, Inc.—Purchase—Holien, 90 M.C.C. 657 (661).

In transactions subject to §5 applicants have the burden of proving that their proposal will be consistent with public interest, and where a new service is involved they must show a need therefor. They may not escape this required showing by contending that protestants have not submitted positive proof of diversion of their traffic as a result of the proposed unification. Evidence of sporadic movements in the past and possibility of increased movements for the future fails to establish a need for the new type of service which was not previously rendered by vendee and vendor between themselves or with other carriers.—North American Van Lines, Inc.—Purchase—Hagerstown Motor, 93 M.C.C. 125 (131-2); and applicants may not evade their burden of proof by such contentions, particularly where vendor's service has been for the most part a local operation out of one

area, with little or no service conducted from a vast number of other authorized origin areas.—Aero Mayflower Transit Co., Inc.—Purchase—Walls, 93 M.C.C. 369 (377).

Although the burden is on applicants to show that approval of proposed transaction would be consistent with public interest, the burden is on protestants to show with more particularity just how much traffic they would lose and to what degree their operations would be harmed by approval. Requirement that conjectural and speculative data be displaced by more concrete evidence is only placing on protestants the burden of supporting their contention that they would be materially adversely affected by the transaction. Protestants have not made such a showing.—Helm's Exp., Inc.—Purchase—Keystone Transfer Co., Inc., 90 M.C.C. 679 (685); C & H Transp. Co., Inc.—Purchase—Gulf Southwestern Transp., 90 M.C.C. 636 (641).

Burden is on applicants to submit evidence to support a finding that proposed transaction would be consistent with public interest, including, where single-line service amounting to a new and different service would result, evidence of need for such service.—Bowman Transp., Inc.—Purchase—A. W. Hawkins, Inc., 90 M.C.C. 303 (327); accordingly, while fact that no shipper expressed need or preference for vendee's proposed single-line service is not fatal to the purchase application, applicants failed to meet their burden of proving the transaction would be consistent with public interest when they submitted no evidence of substantial participation by vendee in interline traffic between Chicago and Omaha (which would be fruitful sources of traffic for its proposed service) and approval would adversely affect protestants who are providing adequate service.—Barber Transp. Co.—Purchase—Conner, 90 M.C.C. 475 (480, 481).

The act does not in so many words require a finding of fitness to be made in §5 proceedings; rather, a showing of fitness is part of applicants' burden of showing the transaction to be consistent with public interest.—Security Van Lines, Inc.—Purchase—Community & Johnson, 93 M.C.C. 399 (403).

Applicants' burden of proving that their interline operations prior to grant of temporary authority were lawful is of more than usual importance where such operations are being used to establish public convenience and necessity for their continuance by vendee in related §207 proceeding, and vendee's fitness in both proceedings rests heavily on their legality.—Liquid Transporters, Inc.—Purchase—Black, 93 M.C.C. 423 (427).

Approval of a transaction unlawfully accomplished in violation of §5(4) requires a positive showing that continuance of the common control and management would be consistent with public interest. Merger applicants have not met that burden when only evidence offered is desire of liquidating carrier's stock owner to dispose of it because of his age, plus fact that survivor would benefit from single-line service; such evidence, without more, would not support a finding that any overriding public interest would be served.—Kaplan Trucking Co.—Control—Thomas Boyd, Inc., 90 M.C.C. 419 (427)*.

As a prerequisite to a finding that a proposed transaction under §5 is consistent with public interest, it is part of applicants' burden to show by competent evidence the nature and scope of past and present operations under the interstate rights sought to be acquired, or, alternatively, where there is no acceptable evidence of what operations are being performed that material benefits to the public would result were operations to be instituted under those rights. As to latter alternative, applicants chose not to submit shipper evidence, and their case consequently hinges entirely on whether examiner properly rejected vendor's exhibit of shipments allegedly transported during a 3-month period subsequent to the purchase agreement. Since shipments listed in vendor's abstracts were not authenticated, that evidence was properly rejected and cannot be found to resolve the basic question of consistency with public interest; applicants have failed to meet their burden of proof, and application must be denied.—Prichard Transfer, Inc.—Purchase—Weiss, 93 M.C.C. 535 (541).

While the test of substantiality of a selling carrier's past operations may have been more frequently applied to territory or points served, it has also been employed where the issue embraced types of commodities transported, and under principles laid down in 315

US 475 there is no justification or logic for limiting that test to geographical scope of operations under the rights involved. A showing should be made that the carrier operated as a common carrier of a large group of commodities or of a whole class or classes of property, even although it may not have transported all commodities falling within their generic classification.—Gillette Motor Transport, Inc.—Control—Voss, 93 M.C.C. 265 (267-8)*.

Initially, applicant for authority under §5 to acquire carrier operations has the burden of establishing that the transaction would be consistent with public interest. Part of that burden is to show the nature and scope of the operations to be acquired; if applicant elects to do this on a representative basis, it is its burden to introduce evidence of those operations that is truly representative not only of their geographic coverage but also of the volume and frequency of shipments transported within the geographical coverage shown.—Accelerated Transport-Pony Exp., Inc.—Control—Downing, 87 M.C.C. 711 (723).

If record in control proceeding contains all the necessary elements and accurately depicts, on a representative basis, the past operations of acquired carrier, conclusions reached as to the limited nature or dormancy of substantial portions thereof are fully justified; on the other hand, if evidence furnished is deficient and does not accurately reflect the nature and scope of those operations, responsibility therefor rests with control applicant; in either event it has not met its burden of proof as to those portions of acquired carrier's rights.—Id., p. 723.

In all purchase proceedings under §5 the burden is on applicants to show the scope and nature of, and to establish the continuity of, the selling carrier's past operations.—Superior Trucking Co.—Purchase—Arthur Morgan Trucking, 90 M.C.C. 367 (370)*; and such a showing is necessary even where the issue of dormancy has not been raised. As part of such proof, the commission requires applicants to submit an abstract of shipments transported by the selling carrier during the 6 months immediately preceding filing of the application.—West Nebraska Exp., Inc.—Purchase—Forsstrom, 87 M.C.C. 733 (736).

Part of applicants' burden of proof in a §5 proceeding is to show the nature and scope of past and present operations conducted under operating rights sought to be acquired, or in the alternative, material benefits that would enure to the public as a result of institution of operations under rights where there is no evidence that any interstate operations are being performed. And when application seeks authority for purchase by a corporate carrier of operating rights of an individual, but latter, through related and inseparable transactions, would acquire control of all the operating rights and properties involved and is the real party in interest, the individual is in fact the purchaser and the corporate carrier is the seller in the transaction when viewed in entirety; therefore, applicants' burden of proof is to show scope of operations conducted by the corporate carrier.—Zern—Control—William A. Kelly, Inc., 90 M.C.C. 25 (28, 29).

The "test of substantiality" of a selling carrier's past operations has usually been applied in reference to the territory or points served, and a carrier holding general-commodity authority need not show that it has transported each and every commodity embraced thereby. However, where general-commodity authority contains no restriction against transportation of commodity classes usually excepted therefrom because they involve services in specialized fields of transportation and require special equipment and unique services which general-commodity carriers usually cannot provide, no less should be expected of applicants in showing a vendor's past exercise of its rights to transport such commodities, or of need for their revitalization by vendee if dormant, than would be required of specialized carriers involved in a transfer of like rights.—Gillette Motor Transport, Inc.—Control—Voss, 90 M.C.C. 663 (664-5, 669)*.

Burden of establishing that a transaction under §5 is consistent with public interest is on applicants, and must be met with competent evidence; in meeting this burden, and to enable a carrier to show scope and nature of its past service without necessity of introducing voluminous data, abstracts of shipments it has transported are received, but only where they are supported by the original under lying records, which in contested cases must be available to opposing parties for inspection

and cross-examination thereon; and the commission has refused to accept such data, even though supported by underlying documents, where the witness presented was not sufficiently competent to verify the authenticity of the data.—Ashworth Transfer, Inc.—Control—Hawkes Transp. Co., 87 M.C.C. 653 (659)*.

Applicants seeking approval of common control of two or more carriers have the burden of showing that the proposed transaction will be consistent with public interest; and as the number of motor carriers to be controlled or managed in a common interest increases, proportionately greater justification for such common control must be shown.—Schwerman Trucking Co. of Ala., Inc., 88 M.C.C. 495 (499).

See also Roush Control case, n. 115, above.

Factors deemed sufficient grounds for approving common control of two or a limited number of operating companies in the past are not necessarily controlling of situations wherein a large number of carriers are sought to be controlled in common interest; as the number of commonly controlled carriers expands, and the resulting administrative and substantive problems increase, an applicant seeking authority to control additional motor carriers is logically required to establish more substantial reasons for the formation of additional carrier entities than might otherwise be necessary.—Best Transport, Inc., 88 M.C.C. 147 (155-6)*.

Section 5. (3) Noncarrier deemed carrier upon acquiring control.j

[Unchanged. See vol. 11, p. 9212.]

Notes of Decisions

Volume 11—p. 9213; Volume 12—p. 10272; Volume 13—p. 10980; Volume 14—p. 11477; Volume 15—p. 12052; Volume 16—p. 12686; Volume 17—p. 13355; Volume 18—p. 14121; Volume 19—p. 15267.

10. Controlling person subject to reports, accounting, provisions.—[Vols. 11-19].—See also Schwartz v. Alleghany Corporation case, 28 USC §2325, n. 7.

In light of the primary jurisdiction of the commission, and its outstanding orders and decisions regulating Alleghany Corp. as a common carrier, the court lacked jurisdiction under the Investment Company Act to entertain stockholder's derivative action to set aside railroad corporation's sale of owned stock to individual defendants, who are alleged to be nominees of Alleghany. Plaintiff's suit proceeds on the theory that, because Alleghany was then an investment company which failed to register with the Securities and Exchange Commission as required by Investment Company Act, considered sale of stock to its nominees was void; however, evidence establishes that at all relevant times Alleghany was subject to regulation by the commission as a carrier and, therefore, was not an investment company which was required to register with SEC; moreover, SEC's order declaring that it had ceased to be an "investing company" was also outstanding when the transaction took place.—Schwartz v. Bowman, 244 F. Supp. 51 (54-60, 65-6, 69)*.

As provisions of §5(3) for subjecting noncarriers acquiring control of carriers to the accounts, reports, and securities requirements of the act are permissive, it is discretionary with the commission whether to designate as a "carrier" subject to those requirements an investment company which, principally through a holding company that it controls by stock ownership, will acquire power to exercise indirect control of survivor in approved railroad merger. Since its direct interest in the merger company is merely incidental to its primary business of managing trusts and estates, and in addition to its minor stockholdings in the merging carriers it holds securities of other railroads in various fiduciary capacities and in relatively small amounts, the public interest does not require that it be subjected to those provisions of the act.—Seaboard Air Line R. Co.—Merger—Atlantic Coast Line, 320 I.C.C. 122 (197)*.

Since interests in transportation of paper company and its parent timber company, authorized respectively to acquire direct and indirect control of a carrier, are incidental and subordinate to their primary noncarrier activities, it is unnecessary to subject either to provisions of the act under §5(3), except that both will be required to file such special reports as may be directed under §20.—Georgia-Pacific Corp.—Control, 320 I.C.C. 115 (120).

Since interest of noncarrer holding company in acquiring indirect control of three small railroads, through stock purchase by lines of Mo.-Pac. system whose stock it owns, is incidental and subordinate to its primary business (i.e., the operating of a natural gas pipeline system and of cement production and distribution facilities), and since railroad carriers involved in the acquisition are required to file regular reports, it is not necessary to subject noncarrier to regulation under §5(3), except to extent of filing annual reports on commission's Form A and of such special reports as may be required pursuant to §20(1) and (2); however, jurisdiction is reserved for requiring compliance with provisions of §20a(2-11) if considered necessary in the future to protect public interest.—Texas & Pac. Ry. Co.—Control—Kansas, O. & G. Ry. Co., 324 I.C.C. 309 (320, 323)*.

Although merger of holding company which controls a single established railroad system into a new corporation amounts merely to a reincorporation of the old company and is not subject to §5(2), and therefore the new company may not be subjected to the accounts, reports, and securities provisions of the act under §5(3), upon consummation the new company will be subject to, and must comply with, provisions of §§20(1-10) and 20a(2-11) in lieu of the old company to extent provided by order in debt adjustment proceeding, 254 ICC 239.—Delaware & Hudson Co. Merger, 317 I.C.C. 177 (180).

Inasmuch as the activities and investments of the four applicant corporations which control vendee are principally related to transportation, all four should be subjected to the reporting regulations; jurisdiction reserved to subject any of them to other provisions in §5(3) by supplemental order, should that be necessary in the future.—Hudson Transit Lines, Inc.—Purchase—Inter-City Transp., 97 M.C.C. 524 (529-30)*.

As the primary investment of recently organized noncarrier corporation is in capital stock of vendee carrier, it should be considered a carrier and should be subjected to the accounts, reports, and securities provisions of the act.—Deaton Truck Line, Inc.—Purchase—Lavender, 97 M.C.C. 256 (257, 269)*; likewise, since primary function and purpose of controlling noncarrier is to hold stock of vendee carrier, upon consummation of proposed purchase the noncarrier will be made subject to accounts, reports, and securities provisions of the act.—E. & L. Transport Co. —Purchase—Dealers Transport Co., 87 M.C.C. 785 (787).

Since Greyhound Corp.'s principal source of income, upon its becoming a holding company after sale of its operating rights to a wholly owned subsidiary, would be from carrier operations subject to the act and from noncarrier companies engaged for the most part in activities closely related thereto, public interest requires that it continue to be subject to the accounting, reporting, and securities provisions of the act.—California Parlor Car Tours Co.—Purchase—Greyhound, 93 M.C.C. 392 (395).

Though upon consummation of control transaction motor carrier operations would represent a substantial portion of total investment and revenues of acquiring noncarrier company, it would not be engaged primarily in such transportation and it is therefore presently unnecessary to subject it to the accounts, reports, and securities provisions of the act. Should necessity therefor arise in the future, extent to which it should be subjected to those provisions may be determined by supplemental order under §5(9).—Lease Plan International Corp.—Control—National, 93 M.C.C. 203 (207)*.

Although Crown, a noncarrier controlled by acquiring carrier's stockholders, seeks authority to acquire control of that carrier and through it 6 subsidiaries including acquired carrier, also to acquire control of latter's parent holding company and through it 3 noncarrier subsidiaries, it desires not to be subjected to provisions of the act enumerated in §5(3)

because of its plans to act as an investment company with diversified interests. However, upon consummation it would directly control acquiring carrier and would indirectly control latter's 2 carrier subsidiaries as well as 7 noncarrier companies engaged in activities related to transportation, and its principal source of income at that time would be from carriers subject to the act and companies engaged in activities closely related thereto. In such circumstances public interest would require that Crown be subjected to the act as specified in §5(3).—Mason & Dixon Lines, Inc.—Control—Silver Fleet, 90 M.C.C. 829 (834, 848-9).

Crown is not now a carrier as defined in the act and if, as it has indicated, it would not consummate control of acquiring carrier if it were thereby subjected to §5(3), it would not be a corporation which has directly or indirectly acquired control of any carrier pursuant to a §5 authorization, and the provisions of §5(3) would be inapplicable. Therefore, in view of its stated desire not to be subjected to the securities provisions of the act, the transaction as authorized will not include authority for Crown to acquire control of the acquiring carrier.—Id., p. 849.

Section 5. (4)-(8). Control effected by other than prescribed methods; Affiliation; Investigation; Injunctions.—[Unchanged. See vol. 11, p. 9213-9215.]

Amendments, see footnotes, vol. 6, pp. 5170-5176, vol. 11, pp. 9213-9215; historical notes, pp. 5170-5176; cross references, vol. 9, p. 7461.

Section 5. (9).—[Unchanged. See vol. 11, p. 9215, vol. 15, p. 12054.]

Amendments, see footnotes, vol. 6, p. 5177, vol. 11, p. 9215; historical note, p. 5177.

Notes of Decisions

§5(9): Volume 2—p. 1387; Volume 6—p. 5177; Volume 9—p. 7464; Volume 12—p. 10272; Vol. 13—p. 10981; Volume 14—p. 11478; Volume 15—p. 12053; Volume 16—p. 12687; Volume 18—p. 14122; Volume 19—p. 15270.

10. Supplemental orders.—[Vols. 6, 9, 12-16, 18, 19].—Although order authorizing acquiring carrier to issue a promissory note to plaintiff in partial payment for his stock in a noncarrier affiliate of acquired carrier was issued in a finance-docket proceeding, it was a supplemental and integral part of the control proceeding under review. Plaintiff's contention that this supplemental order is invalid because wholly in camera is unfounded; he had notice of the §214 application and filed formal pleading seeking its dismissal, and he was not denied right to participate in it.—Walker v. United States, 208 F. Supp. 388 (393)*.

Plaintiff likewise fails as to the merits; there was no need for any further or new evidence, since acquiring carrier's controlling stockholder is required to provide in advance the funds with which to make the cash payment and fund the retirement of the note.—Id., p. 394.

The commission, having concluded on controverted evidence that vendee in purchase proceeding had not complied with terms of its application with regard to protection of carrier employees, had the power under §5(9) to supplement and modify its original order by imposition of an employee protection condition, although certificate covering the purchase rights had been issued, apart from inadvertence and fraud. [Citing 367 US 316.] Vendee's failure to abide by material statements in its application, although arising from a mere breach of obligation to do so, would constitute "good cause shown" for supplementing order based on such application, when proceedings to redress the failure were in fieri when the certificate was issued and notice and opportunity to be heard was afforded the carrier.—Baggett Transp. Co. v. United States, 206 F. Supp. 835 (842)*.

Section 5[1] (10) Unifications, consolidations, etc., of motor carriers only.—Nothing in this section shall be construed to require the approval or authorization of the commission in the case of a transaction within the scope of paragraph (2) where the only parties to the transaction are motor carriers subject to part II (but not including a motor carrier controlled by or affiliated with a carrier as defined in section 1(3)), and where the aggregate gross operating revenues of such carriers have not exceeded $300,000 for a period of twelve consecutive months ending not more than six months preceding the date of the agreement of the parties covering the transaction. (Aug. 9, 1935, c. 498, §1, 49 Stat. 555; Sept. 18, 1940, c. 722, §7, 54 Stat. 908; July 27, 1965, Pub. Law 89-93, 79 Stat. 284.)

Section 5. (11) Plenary nature of authority under section.—[Unchanged. See vol. 11, p. 9216.]

Amendments, see footnotes, vol. 6, p. 5178, vol. 11, p. 9216; historical note, vol. 6, p. 5178.

Notes of Decisions

Volume 2—p. 396; Volume 6—p. 5178; Volume 9—p. 7464; Volume 14—p. 11478; Volume 15—p. 12054; Volume 16—p. 12687; Volume 17—p. 13357; Volume 18—p. 14123; Volume 19—p. 15270.

1. Relief from antitrust laws, in general.—[Vols. 14-16, 18, 19].—Although the statute does not authorize the commission to ignore the antitrust laws, there can be little doubt that it is not to measure §5(2) proposals by the standard of the antitrust legislation; rather, it must accommodate §5(2) and the antitrust legislation. It matters not that the railroads merger in issue, which the commission approved, might otherwise violate the antitrust laws; Congress has authorized the commission to approve a proposed merger of railroads if it makes adequate findings, in accordance with criteria set forth in 321 US 67, that such merger would be consistent with the public interest. Judgment vacated and case remanded to district court for full review of he commission's findings and order.—Seaboard Air Line R. Co. v. United States, 382 U.S. 154 (155, 156-7)*.

Decisions in 369 US 482, 371 US 296, and 374 US 321 confirm the view that an exemption such as is afforded by §5(11) cuts across the antitrust laws and avoids necessity of their enforcement by the agency exercising regulatory jurisdiction.—Seaboard Air Line R. Co.—Merger—Atlantic Coast Line, 320 I.C.C. 122 (134)*.

See also TTC Corp.—Purchase—Terminal Transport Co., Inc., NTP, n. 10 *Water carriers*.

Upon commission's approval of a transaction under §5, parties thereto are relieved, by virtue of §5(11), of prohibition of the antitrust laws to extent of the authorized participation. However, while the commission's jurisdiction arises under §5 and not under the antitrust laws, this does not mean that it should not consider matters relating to restraint of competition and monopolistic tendencies which

are the specific object of the antitrust laws.—Pittston Co.—Control—Brink's Armored, Inc., 87 M.C.C. 637 (650).

2.——State laws.—[Vols. 14-19].—Section 5(11) makes the commission's jurisdiction under §5 exclusive and plenary, but with an important restriction with respect to shareholder voting; that restriction provides for a majority of votes of shareholders unless a different vote is required by State law, and language "required under applicable State law" therein embraces all State laws. Missouri Pacific's proposal to consolidate Texas & Pacific is a "corporate consolidation" within §5(11); and governing Missouri statute, which requires affirmative vote of at least two-thirds of all outstanding voting shares, provides that articles of incorporation shall control when they require "a greater portion of the shares, or of any class or series thereof." Thus, since §D(3) of MoPac's Articles of Association (providing that four kinds of corporate change shall not be effected without assent of a majority of both Class A and Class B stockholders) clearly includes the plan of consolidation in issue, Missouri law must be applied; that law requires application of MoPac's articles of association, which in turn require assent of the majority of the shareholders on a separate class-vote basis.—Levin v. Mississippi River Fuel Corp., 386 U.S. 162 (167-70)*.

The controlling consideration in approving mergers and consolidations being the public interest, the commission may authorize a carrier to abandon facilities within a State even though State laws prohibit the same; under §5(11), the commission has power to exempt railroads from operation of State laws in a §5 proceeding.—Chicago & N.W. Ry. Co. v. Brotherhood of Locomotive Engineers, 202 F. Supp. 277 (284)*.

Although it is unnecessary to determine whether agreement covering operation of Peoria & E. Ry. by New York Central is an operating agreement or a lease, notwithstanding such distinction may have special significance under Illinois law, since in either case it is subject to the commission's plenary and exclusive jurisdiction under §5, and approval leaves nothing for determination under State law that affects validity of the unified operations, applicants to not thereby escape any applicable statutory requirements for obtaining stockholder assent; and, since authority granted under §5 is permissive, the order of authorization cannot prejudice any rights the Peoria's security holders may desire to assert in the courts.—Cleveland, C., C. & St. L. Ry. Co.—Operating Agreement, 320 I.C.C. 430 (432-3).

Whether noncarrier's assent or vote, as owner of over 90 percent of common stock of carrier it proposes to merge, in favor of such unification, including elimination of interveners' minority stock interest, would be null and void under Illinois law is not controlling on commission's exercise of its exclusive and plenary authority under the act. However, applicants do not, by obtaining commission's approval, avoid any statutory requirement of lawful assent; legality of steps assailed by interveners is for determination under the applicable State laws by courts of competent jurisdiction.—Pittston Co.—Control—Brink's Armored, Inc., 87 M.C.C. 637 (643).

3.——Other acts.—[Vols. 18, 19].—The plain language of §5(11), conferring exclusive and plenary jurisdiction on the commission to approve mergers and relieving the carrier from all other restrainst of federal law, indicates intent of Congress that the commission have jurisdiction to prescribe the method for resolving labor problems arising directly out of approved mergers, and there is no express or implied exception of provisions of Railway Labor Act from the operative provisions of §5(11). Moreover, §5(11) is self-executing, and the commission need not expressly order or declare that a carrier be relieved from certain restraints; approval of appellee's merger, including protective agreement stipulated by it with employees, carried with it, in absence of language indicating a contrary intent, any exemption from restraints of other laws to extent necessary to carry out the merger.—Brotherhood of Locomotive Engineers v. Chicago & N.W. Ry. Co., 314 F. 2d 424 (431-2)*.

See also Schwartz v. Bowman, §5(3), n. 10.

Since the commission adopted the "stipulation" of railroads and unions for protection of railroad employees as part of its order approving merger of the railroads, the parties in

carrying out consolidation of certain railroad yards are relieved from requirements of the Railway Labor Act by virtue of §5(11). Defendant's contention that §5(11) provides only for relief from State laws or Federal antitrust statutes cannot be sustained; no such limitation can be found in words of that statute.—Chicago & N.W. Ry. Co. v Brotherhood of Locomotive Engineers, 202 F. Supp. 277 (284-5)*.

See also Texas & N.O.R. Co. v. Brotherhood of Railroad Trainmen, §5(2), n. 70.

Section 5. (12), (13), (14).—[Unchanged].

Notes of Decisions

§5(13): Vol. 15—p. 12055; Volume 19—p. 15272.

§5(14): Volume 2—p. 1405; Volume 6—p. 5186; Volume 9—p. 7466; Volume 11—p. 9218; Volume 12—p. 10273; Volume 13—p. 10981; Volume 14—p. 11480; Volume 15—p. 12056; Volume 16—p. 12688; Volume 18—p. 14124; Volume 19—p. 15272.

§5(13). 2. Construction and interpretation.—[Vols. 15, 19].—See also McFaddin Express, Inc. v. Adley Corporation, 363 F. 2d 546, 28 USC §1331, n. 4.

The commission has found consistently since 1941 that a carrier operating in interstate or foreign commerce under partial exemption of the former second proviso of §206(a)(1) is a carrier within meaning of §5(13) and as defined in §203(a)(14); and that conclusion applies to carriers continuing former proviso operations under the "grandfather" provisions of §206(a)(7).—Caton Transfer Co., Inc.—Lease—Caton, 93 M.C.C. 416 (417, 419).

When vendor, in addition to claiming benefits of single-State proviso for certain of its operations, holds certificates from the commission, it is a carrier as defined in the act, regardless of whether it has actually been conducting operations under the proviso.—United Truck Lines, Inc.—Purchase—United Freight Lines, 90 M.C.C. 337 (343).

Carrier status under Part II of vendors operating under single-State exemption proviso depends on facts existing at the date operations are discontinued, or taken over by a vendee, as result of the purchase contract.—Midwest Motor Exp., Inc.—Purchase—Daniel, 90 M.C.C. 590 (592).

Since evidence adequately supports conclusion that intrastate carrier (liquidating carrier in proposed merger) was not operated as a bona fide independent going concern, but even before filing of its BMC-75 statement was controlled and managed by individual controlling a multistate carrier, its interstate operations under single-State proviso were unlawful from their inception; thus it has no carrier status under the act and, since the commission has no power to adjudicate matters concerning transfers and acquisitions of noncarriers, its purported rights are not properly the subject of an application under §5.—Hart Motor Exp., Inc.—Control and Merger, 90 M.C.C. 527 (533-4)*.

§5(14). 4. Carriers affected; "interest."—[Vols. 2, 6, 9, 11, 12].—Proposed merger of an intercoastal water carrier into parent lumber company which also controls a railroad subject to Part I is not within prohibition of §5(14) when there is neither competition nor possibility of competition between them, the railroad being a class III short line principally handling traffic interchanged with truckline railroads and having no facilities or other connection at the water carrier's ports of call.—Weyerhaeuser Co. Merger, 317 I.C.C. 434 (439)*.

Section 5. (15), (16).—[Unchanged.]

Notes of Decisions

§5(15): Volume 2—p. 1409; Volume 6—p. 5188; Volume 9—p. 7468; Volume 11—p. 9220; Volume 19—p. 15272.

§5(16): Volume 2—p. 1410; Volume 6—p. 5190; Volume 9—p. 7469; Volume 11—p. 9221; Volume 14—p. 11481.

§5(16). 1. Construction.—[Vols. 2, 6, 9, 11, 14].—Purpose of Panama Canal Act respecting waters "elsewhere" was to restore all water routes of the country to a condition of freedom from any domination that would reduce their usefulness in the common interest of the people; on a watercourse where the water lines are free from domination or control by the railroads there will be a healthy competition between them and paralleling railroads for all suitable and available traffic. —Illinois Central R. Co.—Control—John I. Hay Co., 317 I.C.C. 39 (48-9).

However, §5 was not intended to forbid railroad ownership, operation, or control of water carriers, but to forbid use of such ownership or control in a manner which would restrict movement of interstate commerce in the interest of the railroad's competing rail lines. The 1940 revisions of that section make clear that paragraph (16) is primarily directed to interests by railroads in competing water lines, and that this, not the operation of the water line in and of itself, was the matter to be brought under control; mere interest of a railroad in a water carrier, or existence of some competition between them, particularly where the water routes are in effect an extension of the rail lines, does not of itself warrant denial of an application by a railroad to acquire control of a competing water carrier.—Id., pp. 50, 51-2.

The phrase "does or may compete for traffic" does not mean a vague, possible though improbable, competition, but a probable, potential competition, as when the water line is entirely divorced from the railroad; therefore, from a practical view the question is, would the water carrier, when free to consult only its own interests, compete for traffic with the railroad line?—Id., p. 49.

"Control" as used in the act means power or authority to manage, direct, superintend, restrict, govern, administer, or oversee. Where two railroads, through a wholly owned subsidiary, seek to acquire upwards of 95 percent of stock of a water carrier whose operations are substantially competitive and parallel to their rail lines, finding is warranted that the water carrier would be under their complete domination and control and that insofar as its overall policies are concerned it would not be independent, when directors of the existing subsidiary, which through liquidation acquire and operate the water carrier properties, hold and would continue to hold director and officer positions with the railroads; and even if neutral directors could be elected it would be unreasonable to assume that the railroads would permit selection of any director or officer who would not be amenable to their control.—Id., p. 52-3.

13. [Proceedings]——Showing required.—[Vol. 2].—Where bargeline's routes substantially parallel lines of railroads seeking to acquire joint control of it, the railroads provide service at a number of ports and terminals served by it, and it and the railroads are in constant competition for traffic susceptible of barge movement, approval of the transaction must be based on conclusion that proposed control satisfies the provisions of §5(16) and, as a part thereof, the provisions of §5(2); evidence presented must be specific in showing that the transaction would comply with the provisions of the act, including requirement of §5(16) that it will not exclude, prevent, or reduce competition on the water routes involved. Applicant railroads have failed to establish that their proposed acquisition of ownership operation, and control of the

bargeline would not prevent that common carrier from being operated in interest of the public and with advantage to the convenience and commerce of the people. Denied.—Illinois Central R. Co.—Control—John I. Hay Co., 317 I.C.C. 39 (47, 52, 53-4).

15.——Effect of finding of competition.—[Vols. 2, 9].—A mere finding that there is actual or potential competition between a railroad and a water carrier in which it has an interest does not ipso facto require their separation; and a conclusion that some reduction in competition might result from a railroad's control of a water carrier does not necessarily justify denial of an application under §5(16). The important considerations are whether the proposed acquisition would prevent the water carrier in future from being operated in advantage of and for convenience of the people, and whether railroad control would "exclude, prevent, or reduce competition" on the water routes involved; provisions of the statute, including that phrase, must be strictly interpreted and applied, and evidence presented must be specific in showing that the transaction would comply with provisions of the act.—Illinois Central R. Co.—Control—John I. Hay Co., 317 I.C.C. 39 (48, 52).

In determining whether proposed acquisition of control by two railroads of a bargeline whose operations are substantially competitive to and parallel their rail lines, serve same river ports, and offer little prospect of supplementing or extending the rail lines, would exclude, prevent, or reduce competition on the water routes, the question is whether the transaction would eliminate, diminish, forestall, hinder, or frustrate competition on those routes in any manner or to any material degree; to decide this question in applicants' favor would require a finding that the acquired carrier's competitive status under railroad control would compare favorably with its present status as an independent water carrier.—Id., pp. 52, 54.

Considering the directly competitive nature of the water and rail operations involved, such finding cannot be made when the facts are convincing that, following its acquisition by the railroads, the bargeline operations would not be free from their control and supervision and would be managed in such manner as to serve the railroads' interests and enhance movement of traffic over all-rail routes; it is apparent that the railroads intend to retain all possible traffic on all-rail routing, and that any through routes and joint rates with acquired carrier and other water carriers would be limited to noncompetitive traffic; under railroad domination, the bargeline's employees would be reluctant to solicit traffic adverse to the railroads' interest, particularly if diversion from all-rail to all-barge movement might result; thus the transaction would reduce competition between acquired carrier and the railroads.—Id., pp. 53, 54. [But see dissent.]

In addition, the competitive advantage over independent water carriers which would accrue from control by two strong railroads, particularly in enhancement of the bargeline's already strong financial position and availability of the railroads' industrial development and solicitation staffs, would be so substantial as to jeopardize continuance of independent water operations on considered routes; any additional traffic it might obtain from increased industrial activity in area served would be at expense of other carriers plying those routes; and while the transaction would result in immediate increase in competition for available water traffic, and protestants might be able to withstand such competition for a time, the end result, considering acquired carrier's expanded facilities, additional equipment, more frequent sailings, and enlarged solicitation force, would be a sharp reduction, and possibly complete elimination, of competition on the water routes. Denied.—Id., pp. 54-5. [But see dissent.]

16.——Permission granted or denied.—[Vols. 2, 6].—Considering all factors, it cannot be found that proposed acquisition of control of a competing bargeline by two strong railroads would not exclude, prevent, or reduce competition on the water routes involved; transportation services now provided by competing water carriers are reasonably satisfactory and reliable, and their ability to continue to serve the public would be impaired by approval of the transaction, whereas denial would not alter existing competitive relation of the parties or deprive the shipping public of adequate and continuous water serv-

ice. Nor would the transaction be consistent with public interest even if approved with conditions suggested by the examiner; restriction of the bargeline's operations to those auxiliary or supplemental to rail service would be unrealistic and impractical, and even if acceptable to applicant railroads would not permit the findings necessary to approval. Denied.—Illinois Central R. Co.—Control—John I. Hay Co., 317 I.C.C. 39 (55).

Regulations of the Commission

30 FR 12467, Sept. 30, 1965, Parts 7, 179, 180: Following enactment of Public Law 89-93 (79 Stat. 284) which makes gross operating revenues the basis for determining whether proposed unification or acquisition of control comes within §5(10) exemption, Forms BMC-44 (Rev.), BMC-45 (Rev.), BF-200, and BF-201 are revised; footnote 1 of §179.1(a) is revised; §§180.2 Definitions, and 180.3 Computation of vehicles involved in uifications, are deleted; and new §180.3 Computation of gross operating revenues of carriers involved in unifications, substituted in lieu of deleted §180.3, effective Sept. 25, 1965.

31 FR 8872, June 25, 1966, Part 180: Control or Consolidation of Motor Carriers or Their Properties, §180.3 Computation of gross operating revenues of carriers involved in unifications, paragraph (a) revised, and new §180.4 Deduction of revenues from sources other than regulated transportation, added, effective on date of publication.

Section 5a. Agreements between carriers.—[Unchanged. See vol. 14, p. 11481.]

Historical notes, vol. 14, p. 11483.

Notes of Decisions

Volume 15—p. 12056; Volume 16—p. 12688; Volume 17—p. 13358; Volume 18—p. 14124; Volume 19—p. 15273.

2. Construction and interpretation.—[Vols. 15, 17-19].—Statute providing that, if the commission approves a rate agreement between two or more carriers, parties thereto are relieved from operation of the antitrust laws, does not authorize a "contract" between carriers and the commission. Therefore it does not support appellant's contention that defendants breached their "contract" with the commission by continuing to charge rates critized but not yet cancelled by the commission. Such contention is utterly lacking in merit and appellant's newly advised theory is merely a novel presentation of a rejected claim.—Lynchburg Traffic Bureau v. Smith's Transfer Corp. of Staunton, Va., 339 F. 2d 478 (480-1)*.

Mere reference in §5a(2) to an agreement between or among two or more carriers "relating to" rates (including charges between carriers) does not mean that every agreement between carriers which has some such relation is within purview of that section; almost any carrier activity can be said to "relate to" rates and charges in some way, and so to interpret §5a(2) would be illogical and a complete distortion of the clear congressional purpose in its passage. Legislative history of §5a(2) reveals that the language descriptive of the agreements to be covered was adopted to narowly restrict that coverage in accordance with the limited congressional purpose in enacting §5a, namely, to provide a means whereby parties to an agreement relating to procedures for joint consideration and establishment of rates and charges might be relieved from operation of the antitrust laws; commission has long recognized and adhered to that limited purpose.—Alaska S.S. Co. and Consolidated Freightways—Agreement, 322, I.C.C. 726 (730).

Although, under 1962 amendment of §216(c) subjecting to regulation by the commission any through routes and joint rates established for transportation of property between Alaska or Hawaii and the other 48 States by water carriers subject to the Shipping Acts and motor carriers subject to Part II, applicant water carrier operating between ports in Alaska and Washington under juris-

diction of the Maritime Commission became subject to the commission's jurisdiction, including any necessary administrative determinations under §5a, when it joined with a motor common carrier to establish through motor-water-motor routes and rates between Seattle and points in Alaska, proposed agreement covering the joint operations contains no joint ratemaking procedures and has no such purpose. Only such provisions could be approved under §5a, and without them there is nothing in the agreement requiring such approval; application dismissed.—Id., pp. 728, 730.

As no single railroad serves both origin and destination areas of considered canned goods traffic, reduced transcontinental rate in issue could be established only by joint action, which was taken pursuant to respondents' §5a agreement (approved in 287 ICC 701) relating to their joint ratemaking procedures; §5a(9) relieves parties to such an approved agreement, and other persons, from operation of antitrust laws with respect to making of the agreement and to carrying it out in conformity with its provisions and the terms and conditions prescribed by the commission; and protestant makes no claim that respondents failed to employ the procedures outlined in their agreements in processing the proposals which culminated in the reduced rate. Respondents' concerted action was therefore immune from antitrust laws.—Canned Goods from Pacific Coast to Eastern Points, 315 I.C.C. 769 (791).

Since purpose and intent of §5a is to give immunity to certain antitrust violations, it is immaterial whether complaint against rate bureau's filing of protests of rates published by complainant, a nonmember, actually alleged antitrust violations or only violations of §5a. Holding of 365 US 127 that joint solicitation of government action respecting enforcement of laws does not violate the Sherman Act applies also to solicitation of such action before administrative agencies (299 F. 2d 133). The bureau's practice of filing protests and appearing in the resulting proceeding before the commission is a lawful representation of interests of its member carriers; and its action in protesting some 12 percent of complainant's schedules over a 10-year period does not constitute harassment of, unwarranted interference with, or a restraint upon the free and unrestricted right of a nonmember carrier to make necessary rate adjustments.—Arbet Truck Lines, Inc. v. Central States Motor Freight, 321 I.C.C. 460 (461, 463, 466). [But see dissent.]

4. Carriers of one class; agreements not within §5a provisions.—[Vols. 15-19].—Though bylaws of Alaska Carriers Assn. provide for inclusion of motor carriers of passengers, there is no such provision in the articles of incorporation, and language used throughout application and related exhibits clearly indicates intention to confine membership to carriers of property; application is therefore so considered. And though all present parties to the agreement are common carriers, the agreement does not limit participation to such carriers, and thus is incompatible with standards of §5a in that carriers of more than one class might be permitted to consider jointly rate matters other than those permitted by §5a(4). Further, provisions of the bylaws requiring approval of new members by the board of directors or membership committee place a restraint on participation in the agreement; bylaws should be amended to provide clearly that any motor common carrier operating in interstate or foreign commerce under authority from the commission within the territory involved may become a party to the agreement on same terms and conditions as apply to existing members.—Alaska Carriers Association, Inc.—Agreement, 321 I.C.C. 7 (9-10)*.

Also, though parties to the agreement are engaged in both interstate and intrastate commerce within Alaska, rates applicable exclusively to intrastate commerce are not within purview of §5a, and, since the commission has no jurisdiction over such rates under that section, antitrust relief cannot be granted with respect thereto under §5a.—Id., p. 10.

Although amended agreement provides that any motor common carrier operating in Alaska may enter into it and participate in association tariffs and, through membership in the general rate committee, have voting rights as to all matters pertaining to such participation, admission to membership in the association is still subject to approval by the board of directors or the membership committee. The

commission has consistently held that no agreement under §5a will be approved unless all carriers of same class in the territory are admitted to membership as a matter of right on same terms as existing members. While carrier signatories to the agreement agree to be bound by bylaws of the association governing the essential ratemaking procedures, those not members of the association have no voice as to any future changes in the bylaws; accordingly, to extent that such provision of the bylaws continues to place a restraint on a carrier's participation in the agreement through restriction of membership, it is incompatible with standards for approval established under §5a and should be removed.—Id., 322 I.C.C. 697 (698-9)*.

Provision of bylaws of forwarder bureau that any "eligible" applicant may seek membership in manner prescribed by board of directors, upon payment of dues in compliance with rules also presecribed by the board, but without further specification of eligibility requirements, and provision of ratemaking agreement that it shall become effective when executed by a majority of participating forwarders, thus indicating that an application for membership must be approved by existing members, are not compatible with standards established by and under §5a. Appropriate amendments should be made to provide that any freight forwarder of property operating in interstate commerce under authority from the commission within the territory involved may become a party to the agreement on same terms and conditions as existing members.—Hawaiian Freight Tariff Bureau, Inc.—Agreement, 319 I.C.C. 8 (10).

5. Independent action; ratemaking procedure.—[Vols. 15-19].—There is no merit to defendant's contention that plaintiff household goods carriers, who are parties to different rate bureaus approved by the commission under §5a, had no right of independent action in connection with considered supplements filed by their respective rate publishing agents for account of member carriers. Each plaintiff was told of its bureau's proposal to publish new §22 rate quotations and specifically given an opportunity to reject participation in the blanket cancellation of individual rate tenders previously filed as well as the new rates; no member carriers objected to proposed changes. Moreover, both plaintiffs were specifically informed that their respective agent's filing of proposed supplements did not preclude their rights to independent action. Cancellation of plaintiffs' individual rate tenders by blanket cancellation notices issued by their respective agents did not violate their individual right to free and independent action.—United Van Lines, Inc. v. United States, 353 F. 2d 741 (745).

Provisions of carrier association's bylaws which might unduly restrain freedom of individual members to take independent action by subjecting them to possible expulsion for violating any provisions thereof, other than one involving payment of money owed to the association, should be stricken.—Alaska Carriers Association, Inc.—Agreement, 321 I.C.C. 7 (11)*.

Provisions of rate bureau's bylaws concerning membership of general rate committee consisting of carrier representatives and alternates are vague as to manner in which such representatives are to be elected or selected, and are so framed that one member carrier could conceivably have more than one representative on the committee; however, the commission has consistently held that no carrier member of such an organization shall have more than one representative or vote on any board or committee dealing with matters within purview of §5a. Also, though it is indicated that such rate committee shall have a chairman, no provision is made as to his representation or manner of his election. The bylaws should be appropriately amended in those respects.—Oil Capital Tariff Bureau, Inc.—Agreement, 321 I.C.C. 263 (265-6).

Although each member of forwarder bureau is entitled to one vote in election of directors or transaction of business, which may be exercised in person or by proxy, the bylaws are silent as to number of votes required to carry an action; amendment should be made providing that all actions of the bureau are by majority vote of members present and voting at regular and special meetings. Likewise, amendment should be made to provide as to the number of votes required to carry an action of the board of directors.—

Hawaiian Freight Tariff Bureau, Inc.—Agreement, 319 I.C.C. 8 (11).

And though rules of procedure governing publication of tariffs provide that members of the general rate committee "elect" members of their respective standing rate committees, the bylaws empower the board of directors to "appoint" standing rate committees. This discrepancy should be clarified or appropriately amended.—Id., p. 12.

Causes for expulsion of a carrier from a tariff-publishing bureau, conference, or association should be limited to failure to pay financial obligations incurred under the agreement. Provision in bylaws of forwarder bureau for termination of membership for violation of rules prescribed by board of directors should be stricken to extent it might unduly restrain freedom of individual members to take independent action by subjecting them to possible expulsion from the bureau for violating any provisions thereof other than one involving payment of money owed to the bureau.—Id., p. 10.

Under §5a(6) the commission may not approve an agreement establishing procedure for joint consideration of any matter unless each party is accorded the free and unrestricted right to take independent action. Agreement covering use and interchange of equipment defines "compensation" as that which users of equipment shall pay to the owners thereof; provides that, unless independent action is taken, all parties are mutually bound by contract to the rate of compensation established by the committee; and specifies a method whereby an owner may take independent action as to the rate of compensation it will charge, but does not provide for independent action by the user as to the rate it will pay. In failing specifically to accord users such right of independent action, the agreement is contrary to §5a(6).—National Motor Equipment Interchange—Agreement, 319 I.C.C. 46 (48-9)*.

While the statutory right of independent action does not confer on a party to the agreement the power to determine unilaterally what another must accept for use of that other's vehicles, neither owners nor users are bound by each other's independent announcements, since they are bound by the agreement only to the extent that independent action has not been taken, and no justification appears for permitting users to be accorded less freedom of independent action than owners. Order terminating approval of the agreement will be entered unless it is revised in accordance with the commission's finding and the commission notified of such action within 60 days from service of report.—Id., p. 49. [But see dissent.]

Article III of agreement for joint consideration of matters pertaining to interchange of equipment, as approved in 305 ICC 196, contemplates a schedule of charges for use of vehicles and a procedure whereby owners may make independent announcement of charges varying therefrom, but makes no mention of a user's right of independent action as to the rate of compensation he will pay; thus, guarantee by article IV of the right of independent action established by article III guarantees the user's right of independent action only to the extent of negotiating a rate different from that in the schedule of charges, or of withdrawing from the agreement, and does not establish in users of interchanged vehicles the right to make independent, unilateral announcements as to charges they will pay for such use.—Id., 316 I.C.C. 448 (452)*.

Section 5a(6) guarantees the right of independent action only with reference to matters specifically contemplated in each agreement; therefore, interchange committee's cancellation of independent user announcements unless concurred in by connecting carriers concerned was no denial of the right of independent action guaranteed under §5a. The right to private ownership of property includes the power to determine the charge which the user thereof shall pay, and considered agreement does not divest owners of this right.—Id., p. 452.

Although question of whether the interchange committee's action in issuing challenged directive was valid, since a quorum failed to vote, is not germane to issue of whether interchange agreement guarantees to users the right to issue independent announcements, the committee is admonished to follow strictly the procedures set forth in the agreement.Id., p. 451.

Respondents' right of independent action

under §5a has no bearing on removal of undue prejudice found to exist in rates proposed by them under that right of action.—Iron and Steel from Ill,. Ind., Kans., and Mo. to Iowa, 315 I.C.C. 403 (410).

Respondents' collaboration with each other outside formal ratemaking procedure, their nonpublic meetings with shippers, and action of Special Canned Goods Committee, which did not keep regular records of its proceedings, were all preliminary to consideration of transcontinental adjustment finally approved, including reduced rate in issue, by the duly constituted bodies specified in their approved agreements, for purpose of obtaining information necessary to thorough and intelligent consideration of the subject matters; exchange of information by individual railroads and formation of special committees to investigate any traffic matter before the organization are expressly provided for in the agreements; function of the canned goods committee was solely advisory, and it was not required by the agreements to hold hearings or keep minutes of its informal conferences with shippers; such action complied fully with the applicable §5a agreements.—Canned Goods from Pacific Coast to Eastern Points, 315 I.C.C. 769 (791-2).

Tariff bureau's bylaws should be corrected to provide that members of the board of directors shall each represent a different carrier member, and that members of the board and members of subcommittees appointed by the rate committee shall be bureau members or their employee representatives. And though the bylaws provide for changes or amendments thereof, it should be understood that the relief provided by §5a(9) will not apply to any such change which results in a revision of the ratemaking procedures unless it is first approved by the commission.—New York Movers Tariff Bureau, Inc.—Agreement, 319 I.C.C. 283 (285-6).

8. Notice.—[Vols. 15-19].—Although procedures for handling of proposals before general rate committee are published in rate bureau's bulletin, no specific provision is made in the bylaws for giving advance notice to the committee membership of meetings, other than special meetings, at which such proposals are to be considered. To eliminate any possibility of members not being represented at meetings, the bylaws should be amended to provide for at least 5 days' advance written notice thereof.—Oil Capital Tariff Bureau, Inc. —Agreement, 321 I.C.C. 263 (266).

While the bureau's rules of procedure provide that notice of all proposals received and disposition thereof by the standing rate committee shall be published in the bulletin, the bylaws do not specifically provide for notice to interested parties of final actions taken by the general rate committee upon appeal. Notice of final actions should be given in the same manner and to the same extent as docketed proposals; the bylaws should provide for notice of final actions of the general rate committee in same manner as provided therein respecting actions taken by the standing rate committee.—Id., pp. 267-8.

Notice to members of any special meetings of membership of forwarder bureau should set forth, in addition to the place, day, and hour, the reason for the called special meeting, and appropriate provision therefor should be made in the bylaws.—Hawaiian Freight Tariff Bureau, Inc.—Agreement, 319 I.C.C. 8 (10).

And in view of the wide territory in which members of applicant bureau are located, mailed or wired announcements of 48 or 24 hours, respectively, for calling of board meetings appear too short notice to afford sufficient time for all directors who might wish to be present at meetings of the board. As in case of membership meetings, 5 days' notice should be required.—Id., p. 11.

Proposed ratemaking agreement contains no provision for giving notice of filing of proposals or of action taken thereon to any persons other than member carriers, or which affords shippers opportunity to be heard and to make presentations orally or in writing for or against any proposals; thus, unless advised by member carriers, shippers would not be aware of pending proposals or of final action thereon. Agreement should be amended to provide that appropriate notice of filing of proposals be given to interested parties desiring such information, that they be permitted to be heard on such matters, and that notice of final actions taken by the bureau be given in same manner and to same extent as for

docketed proposals.—New York Movers Tariff Bureau, Inc.—Agreement, 319 I.C.C.283 (287).

18. Approval of agreements by commission. —[Vols. 15-19].—Inasmuch as petitioner's §5a agreement, as approved by the commission, does not include specific procedures for consideration or publication of quotations made by its member carriers under §22 to apply on government traffic, and petitioner does not detail procedure which might be employed in the joint consideration of §22 quotations, §5a(9) relief will not apply to joint consideration of such quotations without further amendment of the present agreement. Moreover, language of §22(2) is explicit in providing that §5a(9) will apply to consideration of §22 quotations, but only on submittal of quotations made pursuant to an agreement approved by the commission (except those not submitted for security reasons); therefore, joint consideration of quotations without their subsequent submittal to the commission would not constitute action under the protection of §5a(9).—Southern Motor Carriers—Agreement, 323 I.C.C. 396 (397-8)*.

Agreement of motor common carriers operating within, from, and to Alaska for joint consideration of rate matters, including through routes and joint rates with carriers of other classes, approved, subject amendments indicated. However, it should be understood that relief granted from antitrust laws under §5a(9) will not apply to any changes in bylaws or rules of the association which may result in changes in the ratemaking procedures unless and until an amended agreement establishing such change is submitted to and approved by the commission.—Alaska Carriers Assn., Inc. —Agreement, 321 I.C.C. 7 (15)*.

Notwithstanding provision of bylaws of forwarder bureau that they may be amended by majority vote of members present at any regular or special meeting, to extent that any proposed change in the bylaws may result in revision of ratemaking procedure relating to matters specified in §5a(2), and to safeguard the right of independent action of any individual member as provided in §5a(6), it should be understood that the relief provided by §5a(9) will not apply thereto unless and until an amended agreement establishing such change is submitted to and approved by the commission.—Hawaiian Freight Tariff Bureau, Inc. —Agreement, 319 I.C.C. 8 (12).

Entry of order of approval of revised rate agreement withheld for 3 months from date of service of report to afford applicants opportunity to present amendments thereto in harmony with those outlined.—Oil Capital Tariff Bureau, Inc.—Agreement, 321 I.C.C. 263 (269); similarly, since ratemaking agreement of New York-New Jersey household goods carriers is approved, subject to indicated revisions, entry of the order is withheld for 3 months to afford applicants time to effect such corrections.—New York Movers Traffic Bureau, Inc.—Agreement, 319 I.C.C. 283 (287).

Proposed amendment to conduct committee meetings concerning both Texas and Louisiana in Dallas rather than at two different locations on different dates would reduce carrier expenses, result in more economical functioning of the bureau and facilitate disposition of rate matters. Use given New Orleans meetings has been relatively small and need for their continuance has not been established. Meetings at Dallas would not cause undue hardship to any shippers or receivers of freight and rules as to public hearings will not be changed. The agreement of the Western Traffic Association, modified as proposed, is in furtherance of national transportation policy and in accordance with §5a. Amendment approved.—Western Traffic Association —Agreement, 318 I.C.C. 726 (727, 729-30)*.

Regulations of the Commission

28 FR 1960, Feb. 28, 1963: Retention periods, records, rate-making organizations, 49 CFR §130.30.
29 FR 3088, Mar. 5, 1964: Same records retention periods reference.
30 FR 3163, Mar. 6, 1965: Same records retention periods reference.
31 FR 4067, Mar. 8, 1966: Same records retention periods reference.
32 FR 3664, Mar. 2, 1967: Same records retention periods reference.
NOTE: For recodification, see 49 CFR, Editorial Note, 32 FR 5606, April 5, 1967.
32 FR 15484, Nov. 7, 1967, Part 103 [formerly Part 3]: Carrier Agreements Relating to Rates, Fares, etc., new §103.5 Public notice, added, effective Nov. 15, 1967.
33 FR 4067, March 1, 1968: Record Retention Guide, XXIV Interstate Commerce Commission [Revised] 1.8 Rate-making organizations, 49 CFR Part 1253.

Section 6. Schedules and statements of rates, etc., joint rail and water transportation—(1) Schedule of rates, fares, and charges; filing and posting.—[Unchanged. See vol. 9, p. 7472.]

Amendments, see footnotes, vol. 2, p. 1413; historical notes, p. 1414, vol. 12, p. 10273, vol. 13, p. 10982.

Notes of Decisions

Volume 2—p. 1416; Volume 6—p. 5192; Volume 9—p. 7472; Volume 11—p. 9221; Volume 12—p. 10274; Volume 13—p. 10982; Volume 14—p. 11483; Volume 15—p. 12060; Volume 16—p. 12692; Volume 17—p. 13362; Volume 18—p. 14128; Volume 19—p. 15277.

2. Construction.—[Vols. 2, 6, 12, 19].—Mere publication of a tariff does not of itself make the publisher a common carrier or make every service it performs a part of common carriage with consequent common carrier liability; in unloading forwarder freight consigned to plaintiff forwarder (lessee of a portion of defendant's freight depot), after line haul by a motor carrier or a connecting railroad, and in assessing unloading charges published in its tariff, defendant performed such service at plaintiff's request as consignee, and not as a common carrier of shipments in question.—Republic Carloading & Distrib. Co. v. Missouri Pac. R. Co,. 302 F. 2d 381 (386, 387, 388)*.

So long as a carrier files with the commission, and keeps open for public inspection, schedules showing all rates, fares, and charges for transportation which it is authorized to perform, there is substantial compliance with §6(1).—All Commodities, New York to Baltimore and Washington, 319 I.C.C. 627 (629)*.

3. Purpose; uniformity and prevention of discrimination, publicity, and certainty as to rates.—[Vols. 2, 6, 18, 19].—Purpose of statutory requirements that tariffs containing carriers' rates and charges be filed and published is to secure uniform treatment of shippers and to shut out opportunity for discrimination and prejudice.—Atchison, T. & S.F. Ry. Co. v. Bouziden, 307 F. 2d 230 (234).

One of the principal purposes of the statute was to prevent discrimination by granting preferential rates. Accordingly, a positive duty was imposed on all carriers to establish schedules of reasonable rates which should have uniform application and which should not be departed from so long as established schedules remained unaltered in the manner provided by law.—Humble Oil & Refining Co. v. Great Northern Ry. Co., 212 F. Supp. 747 (751).

Rates, Fares, and Charges

27. Joint rates.—[Vols. 2, 6, 9, 13, 15-18].—Although proportional rates on automobiles transported in substituted motor-for-rail service following rail TOFC movement are found unlawful and ordered canceled, joint rail-motor rates published in same schedule are unchallenged, and order of cancellation is without prejudice to refiling of such joint rates.—Motor Vehicles—Idaho, Nevada, and Utah Origins, 318 I.C.C. 859 (867-8).

38. Proportional rates.—[Vols. 2, 6, 9, 11-19].—Schedules naming proportional rates on automobiles from unloading ramps at specified points to destinations in five States, which apply on traffic having prior rail TOFC movement and include delivery to consignee in substituted motor-for-rail service, ordered canceled because general-commodity motor carriers performing the service under contract with respondent lack authority to transport automobiles in special equipment such as standard carryall or convertible Durabilt trailers.—Motor Vehicles—Idaho, Nevada, and Utah Origins, 318 I.C.C. 859 (866-7).

Charges (Other than Rates and Fares)

55. All services offered and performed.—[Vols. 2, 6, 9, 11, 16, 17, 19].—There is no proof that Pennsylvania R., through a subsidiary equipment company, is engaged in furnishing equipment and services to defendant freight consolidator at charges not published and filed with the commission, since the Pennsylvania's tariffs applicable to the involved traffic (which moves in plan III TOFC service) were not made part of the record. However, any failure of the Pennsylvania to publish trailer rental charges is not a violation of the Interstate Commerce Act or the Elkins Act, under decision in 314 ICC 5; while that decision has been challenged in the courts, it nevertheless presently stands as an order of the commission and is recognized as the applicable law until overruled or modified by the courts.—Natl. Motor Freight Traffic Assn. v. Delaware Valley, 323 I.C.C. 560 (573)*.

56. Switching.—[Vols. 2, 6, 9, 11-14, 16, 17, 19].—Under Tariff Circular 20 switching line which is not a party to water carrier's tariff publishing joint rail-water rates on coal is required to have on file a tariff naming its charges for intermediate switching from originating railroad to private company which performs the transfer to vessel; publication of per-car charge equivalent to 5 days' per diem reclaim which it receives in connection with terminal switching under the lake-cargo rates complies with §6.—Chicago, B. & Q. R. Co. v. Chicago & E.I.R. Co., 315 I.C.C. 37 (39)*.

57. Terminal services; lighterage included.—[Vols. 2, 6, 9, 11-13, 15, 17, 18].—It is not unlawful for carriers to publish tariffs which extend to shippers, under the line-haul rate or charge, various services generally regarded as accessorial; §6(1), in providing that tariffs shall "state separately all terminal charges * * * and all other charges which the commission may require," makes no requirement that all "other" charges be separately stated, but only such as "the commission may require," and in numerous cases the commission has refused to require separate statement of accessorial charges.—Port of New York Authority v. Aberdeen & R. R. Co., 318 I.C.C. 469 (475)*; Id., 321 I.C.C. 738 (744)*.

66. Protective service.—[Vols. 2, 6, 11-14, 16].—It was not intended, by enactment of §6(1) and the "transportation" definition in §1, to prohibit a carrier from regarding the haulage of the freight and any incidental protection against heat or cold as one combined transportation service for which a single charge might lawfully be made, but merely to require, where a separate charge is in fact levied, that it be published and filed so that it will be uniformly available and applied without discrimination. Thus, while all charges must be separately stated, it is not unlawful to secure compensation for the protective service by including it in the line-haul rate (citing 56 ICC 449); and since tariff circular rule 10(a) was adopted merely to enforce that part of §6, such inclusion does not violate that rule.—Refrigeration, Meats & Packinghouse Products—Midwest, 319 I.C.C. 113 (119).

Though a rail carrier may in its discretion propose and perhaps justify inclusion of refrigeration charges in line-haul rates, no unlawfulness is shown in rail respondents' present method of separately publishing the refrigeration charge on considered citrus traffic; 241 ICC 503 indicated that charges for terminal services on perishables, including storage and icing, should be separately stated.—Frozen Juice and Fruit from Florida to the North, 319 I.C.C. 577 (597).

Rules and Regulations

81. In general.—[Vols. 2, 6, 9, 12].—Inasmuch as assays and other ore tests in the smelting industry are directed to determining the market value of ores, the term "value" as used in plaintiff's intrastate commodity rate tariff rules concerning certification of ore val-

ues means the commercial or market value made on the basis of such assays or other ore tests. Artificially created incentive prices for manganese ore under government stockpiling program did not constitute the values of such ores in considered intrastate shipments for purposes of certification in accordance with the tariff rules since, other than under the stockpiling program, manganese ores shipped had no market value and could not have been sold at any price. No form of certification is prescribed in the rules, and record is clear that both parties considered notations on the bills of lading as certification of value; there was substantial compliance with the tariff rules. Plaintiff found not entitled to recover additional charges claimed.—Northern Pac. Ry. Co. v. United States, 355 F. 2d 601 (605-6). [Not arising hereunder.]

Although, due to elasticity in the descriptions of oil which enter each stream, it is difficult to outline minimum and maximum gravity, and the oliensis of the various streams in which oil is transported through pipelines, the tariff in issue should contain rules governing the segregation of crude oil into streams, with definite specific specifications for each stream. Many pipeline tariffs provide rules governing segregation requirements, so that shippers are fully aware of conditions under which a certain grade of crude oil will or will not be accepted; and it is clearly desirable that defendant's tariff contain similar rules which will avoid future controversies. Defendant's tariff should be amended accordingly and, while no order to that effect is entered, such amendment should be accomplished within a reasonable time in accordance with tariff-circular rules.—Denver Oil Co. v. Platte Pipe Line Co., 316 I.C.C. 599 (604-5)*.

84. Limitations upon liability.—[Vol. 2].—Rules 130 and 135 of Perishable Protective Tariff, relied on by carrier (in action against it to recover for damage to shipment of melons) as absolving it from liability upon proof that it exercised reasonable care and complied with shipper's instructions, do not reflect a change in the federal law governing carrier's liability when read in light of history underlying their adoption. Rule 130 merely restates the common-law rule that carrier shall not be held liable, in absence of negligence, for damage resulting wholly from an inherent vice or defect of the goods; and rule 135 merely reiterates common-law and bill-of-lading rule that carrier is not liable, in absence of negligence, for act or default of shipper or owner: they reflect nothing more than the objective of giving "some warning to shippers" that a carrier was not liable for inherent tendency of perishable goods to deteriorate or decay, or for shipper's failure to give proper transportation instructions. A carrier's liability for loss or damage is determined by law; nothing can be added to or subtracted from the law by limitations or definitions in tariffs.—Missouri Pac. R. Co. v. Elmore & Stahl, 377 U.S. 134 (139-43)*.

86. Furnishing equipment.—[Vols. 2, 6, 9, 13].—Rule in tariff naming plan II-1/2 TOFC rates, under which the railroad furnishes the trailer but leases it to shipper or consignee for performance of the terminal pickup and delivery, providing that a trailer lease and inspection form receipt be filled out and signed by lessee when the trailer is received from the railroad at the rail ramp site, is clear and unambiguous. While execution of such receipt at shipper's office is a clear violation of the tariff, any such violation is not due to ambiguity of the rule, and no amendment thereof is required.—Foodstuffs, Macon, Ga., to Florida, Indiana, Kentucky, Ohio, 321 I.C.C. 132 (133, 135).

Form and Effect of Publication

136. Plain and definite statement required.—[Vols. 2, 6, 9, 11-19].—It is a sound principle that, to preclude application of rates over routes which carriers consider to be undesirable, unduly circuitous, or unnatural, such routes must be specifically excepted from general routing instructions, as provided in plan 2 of rule 4(k) of Tariff Circular 20. Any different conclusion would foster confusion in tariff interpretation and encourage uncertainty in tariff publication, contrary to express requirements of §6 that all tariffs shall "plainly state" the rates and charges applicable on the traffic covered thereby.—Producers Co-operative Oil Mill v. St. Louis-S. F. Ry. Co., 322 I.C.C. 267 (271)*.

Publication of all-commodity rates restricted to shipments loaded by shipper or at his

expense in not over two standard cars, but not subject to promiscuous loading or marriage rules, is not indefinite in violation of §6(1). Individual packages are sorted and consolidated by shipper-forwarder, loaded in accordance with a detailed assignment list, and tendered to carrier at end of the day; shipper, having presumably tendered the freight in a manner to obtain the most favorable rates, knows with reasonable certainty what the applicable rate will be, since it alone knows the quantity intended to be shipped, prior to the actual tender; and fact that the precise transportation charges may not be determined beforehand is true of most shipments subject to specified weights, due to the related problem of having sufficient density to meet the minimum weight.—All Commodities, New York to Baltimore and Washington, 319 I.C.C. 627 (629)*.

Nor are the proposed rates uncertain because they alternate with all rates named in the same or other tariffs, as provided by two general rules in the pertinent tariff governing alternative application of rates producing lower charges, as result of which the applicable rates might not be known in many instances until time fo tender, the quantity shipped being within control of the shipper.—Id., p. 630.

Commodity description of Railway Exp. Agency's proposed quantity rates on "wearing apparel" is indefinite in that it is not clear whether that generic description includes such articles as boots and shoes. Since the governing tariff contains other rates on boots and shoes, REA is admonished to state specifically therein whether they are included in the proposed commodity description.—Aggregate Rates on Wearing Apparel—Ry. Exp. Agency, 318 I.C.C. 737 (747)*.

Since proposed boxcar rate, minimum 40,000 pounds, on all freight in no more than two 40-foot cars, would alternate with (but not supplant) respondent's rate, minimum 26, 500 pounds in one car, and its 30,000 pound-minimum all-freight rate which is subject to the so-called promiscuous loading and marriage rules, shippers would have no way of knowing until after a shipment is loaded just what rates they must pay. It is only just and reasonable to require preseveration of the shipper's right to know in advance what rates and what applicable minimum weights are available, so they may exercise their option of using the lowest rate available through selective loading. Proposed rate is potentially discriminatory because under actual operating conditions applicable charges could not be ascertained at least until the car doors are closed; not approved.—Freight, All Kinds, N. Y. & N. J. to Indianapolis, 316 I.C.C. 623 (624-5).

137. Binding on carrier and shipper, notwithstanding contract.—[Vols. 2, 6, 9, 11-15, 17]. —Once a tariff has been duly filed and lawfully published, it is binding upon both the carrier and any shipper taking advantage of it; its terms (in essence) become in such respects the only contract between the two allowed by law. A person who claims and accepts the benefits of a tariff therfore is bound also by its limitations and reciprocal obligations.—Union Pac. R. Co. v. Higgins, 223 F. Supp. 396 (401).

See also Atchison, T. & S.F. Ry. Co. v. Bouziden, §6(7), n. 5.

141. Points of origin and destination stated. —[Vols. 2, 9, 12, 16, 17, 19].—Under §6 it is incumbent on rail carriers to publish rates and rules compatible with the actual services to be performed. Though tariff publishing proposed TOFC rate indicates a holding out of modified plan II service from Mechanicsburg, Pa., carrier actually provides physical rail service from Harrisburg, and shipper moves the trailers 9 miles in line-haul service from Mechanicsburg to Harrisburg. Form of publication of proposed rate is therefore not proper; cancellation required.—Aluminum Billets, Mechanicsburg, Pa., to Youngstown, Ohio, 319 I.C.C. 307 (308).

151. Notice chargeable to shipper.—[Vols. 2, 6, 9, 12-15, 17, 18].—Both shippers and carriers are presumed to know that provision of tariff governing diversion of shipments required diversion orders to be made in writing or confirmed in writing. Shippers' verbal request for diversion, given to stockyards operator who had charge of feeding, watering, and resting their shipments of cattle in transit, did not comply with tariff requirement and was not binding on the railroad.—Atchison, T. & S. F. Ry. Co. v. Bouziden, 307 F. 2d 230 (234).

Regulations of the Commission

27 FR 9654, Sept. 29, 1962, Part 141: Freight schedules, amended by adding thereto §141.200 Alternation of through rates with aggregate of intermediate rates, effective Oct. 1, 1962.

30 FR 6162, May 1, 1965, Part 141: Freight Schedules, §141.200 Alternation of through rates with aggregate of intermediate rates, paragraph (a) amended, effective May 10, 1965. [Special Permission No. 16500; Amdt.]

33 FR 4603, March 15, 1968: Ex Parte No. 259 Increased Freight Rates; Special Permission 68-4000, Master Tariffs.

Section 6. (2) Schedule of rates through foreign country.—[Unchanged. See vol. 9, p. 7483.]

Amendments, see footnotes, vol. 2, p. 1455; historical notes, p. 1455.

Notes of Decisions

Volume 2—p. 1455.

Section 6. (3) Change in rates, fares, etc.; notice required, simplification of schedules.—[Unchanged. See vol. 9, p. 7484.]

Amendments, see footnotes; vol. 2, p. 1456; historical notes, p. 1456.

Historical Note

By Executive Order 11107, Administration of Alaska Railroads, dated April 25, 1963, the Interstate Commerce Commission is given jurisdiction "to fix, change, or modify rates for the transportation of passengers and property" under the authority set forth in the Alaska Railroad Act, 38 Stat. 305, which jurisdiction had been given to the Secretary of the Interior by Executive Order No. 3861 of June 8, 1923; latter order superseded. (28 FR 4225, April 30, 1963)

Executive Order 11107 codified as Title 49, Chapter II, Part 1200—Administration of Alaska Railroads (49 CFR §§1200.1 - 1200.4), 28 FR 12278, Nov. 20, 1963.

Notes of Decisions

Volume 2—p. 1457; Volume 6—p. 5210; Volume 9—p. 7484; Volume 12—p. 10276; Volume 16—p. 12694; Volume 17—p. 13366; Volume 18—p. 14130; Volume 19—p. 15280.

Section 6. (4) Joint tariffs.—[Unchanged. See vol. 9, p. 7486.]

Amendments, see footnotes, vol. 2, p. 1461; historical note, p. 1461.

Notes of Decisions

Volume 2—p. 1461; Volume 6—p. 5214; Volume 9—p. 7486; Volume 11—p. 9226; Volume 12—p. 10277; Volume 13—p. 10985; Volume 14—p. 11486; Volume 15—p. 12063; Volume 16—p. 12695; Volume 17—p. 13367; Volume 18—p. 14130.

Section 6. (5) Copies of traffic contracts to be filed.—[Unchanged. See vol. 15, p. 12063.]

Amendments, see footnotes, vol. 2, p. 1466, vol. 15, p. 12063; historical note, vol. 2, p. 1466.

Notes of Decisions

Volume 2—p. 1466.

1. Filing division sheets.—[Vol. 2].—If defendants adopt divisions of through rates on ex-rail from Tennessee and Mississippi River ports to the South as measure of nondiscriminatory rates on ex-barge grain, they will be required to file with the commission and maintain on current basis the appropriate division sheets or other evidence of contemporary sharing of revenue from the joint all-rail rates. —American Barge Line Co. v. Alabama G. S. R. Co., 316 I.C.C. 759 (773, 775)*. [But see dissent.]

Section 6. (6) Form and manner of publishing, filing, and posting schedules; unlawful use.—[Unchanged. See vol. 11, p. 9227.]

Amendments, see footnotes, vol. 2, p. 1468, vol. 11, p. 9227; historical note, vol. 2, p. 1468.

Historical Note

Rates and fares of railroads within the Alaska Railroad Act, jurisdiction of the commission, see Historical Note concerning Executive Order 11107 following §6(3).

Notes of Decisions

Volume 2—p. 1468; Volume 6—p. 5217; Volume 9—p. 7488; Volume 11—p. 9227; Volume 14—p. 11487; Volume 17—p. 13367; Volume 19—p. 15282.

Section 6. (7) Transportation without filing and publishing rates forbidden; rebates; privileges.—[Unchanged. See vol. 9, p. 7489.]

Amendments, see footnotes, vol. 2, p. 1472; historical notes, vol. 2, p. 1472, vol. 16, p. 12695.

Notes of Decisions

Volume 2—p. 1475; Volume 6—p. 2518; Volume 9—p. 7489; Volume 11—p. 9228; Volume 12—p. 10277; Volume 13—p. 10985; Volume 14—p. 11487; Volume 15—p. 12064; Volume 16—p. 12696; Volume 17—p. 13367; Volume 18—p. 14131; Volume 19—p. 15282.

1. Transportation prohibited without lawfully filed tariff.—[Vols. 2, 6, 9].—Rates on government traffic which have been properly submitted to the commission pursuant to §22(2) are not unlawful on ground that they have not been published and filed as required by §6(7).—Tennessee Products & Chem. Corp. v. Louisville & N. R., 319 I.C.C. 497 (507).

See also Bangor & A. R. Co. Trackage Rights, §5(2), n. 56.

5. Effect of tariff in force.—[Vols. 2, 6, 9, 11, 12, 14-19].—Until changed, tariffs bind both carriers and shippers with the force of law; under §6 the carrier cannot deviate from the rate specified in the tariff for any service.—Pennsylvania R. Co. v. United States, 315 F. 2d 460 (464-5)*.

A tariff, so long as it remains in effect, binds both carriers and shippers with the force of law. Tariff requirement that diversion orders be made in writing or confirmed in writing was not complied with by shippers; no contract of the carrier could reduce amount legally payable for transportation of defendants' cattle shipments, or release shippers from obligation to pay the charges. Compromise agreement between railroad and shippers under which shippers paid charges on basis of lesser through rate, rather than on basis of applicable combination rate, was unlawful and not binding on carrier.—Atchison, T. & S. F. Ry. Co. v. Bouziden, 307 F. 2d 230 (233, 234, 235).

Rates charged for interstate rail shipments are controlled by tariffs duly published and filed with the commission, and such tariffs have the same force and effect as a statute.—Chicago, R. I. & P. R. Co. v. Furniture Forwarders of St. Louis, Inc., 267 F. Supp. 175 (176); also, since railroad's lighterage and terminal tariff filed with the commission has the weight of law, it may not be altered or modifed by the parties.—Pennsylvania R. Co. v. Moore-McCormack Lines, Inc., 246 F. Supp. 143 (147)*.

A tariff is in essence a statement by the carrier to possible shippers that it will furnish certain services under certain conditions for a certain price, and once it has been legally promulgated it is binding on both the carrier and any shipper who takes advantage of it; its terms (in essence) become in such respects the only contract between the two allowed by law; one who claims and accepts the benefits of a tariff therefore is bound also by its limitations and reciprocal obligations. Thus, when defendants requested and accepted advance

payment of inbound freight and storage charges on considered shipment, as provided in the tariff, they obligated themselves to pay all lawful charges due thereon.—Union Pac. R. Co. v. Higgins, 223 F. Supp. 396 (401).

A rate, to have final lawfulness and validity, must be lawfully established, must be just and reasonable, nondiscriminatory and nonprejudicial. Lacking any of these essentials, it cannot be the valid, lawful rate even though it becomes the applicable rate by virtue of being on file with the commission. [Citing 253 F. 2d 449.] While federal court restraining order and injunction prevented railroads' charging and collecting the lawfully established reduced rate in issue during effective period thereof, since defendants did not amend their tariffs to show effect of the court order, the injunctive order did not affect validity of the lawful rate.—Humble Oil & Refining Co. v. Great Northern Ry. Co., 212 F. Supp. 747 (752-5).

Principles Governing Tariff Interpretation

10. In general.—[Vols. 2, 6, 9, 11-19].—When the issue in carrier's action to recover amount of claimed overcharges, deducted by the Government on post-audit from amounts admittedly due plaintiff for other services, involves construction of published tariffs, it presents purely a question of law. And, in accordance with established rules of tariff interpretation, the court must examine and give effect to every pertinent word, clause, and sentence of the §22 Quotation and the tariffs before it.—Great Northern Ry. Co. v. United States, 352 F. 2d 375 (376-7).

See also Baggett Transp. Co. case, 319 F. 2d 864, §22(1), n. 5.

In tariffs which permit application of substantially lower "battery" rates when a number of different articles in volume equal to two or more carload shipments are tendered at named origin points and are loaded at carrier's freight house or facilities leased from carrier in one day under one bill of lading for each carload "or" under one bill of lading for entire quantity by one consignor to one consignee at one destination over one route, the word "or" presents alternative methods for shipping. Plain meaning of the tariffs is that "or" separates alternative methods of drawing bills of lading and that the shipments must be "tendered * * * and loaded * * * in one day * * *by one consignor to one consignee via one route," regardless of which type of bill of lading is used. Therefore, in order to obtain the battery rate on a shipment of two or more cars, the cars must be tendered for shipment in the same day and, if shipper gives cars to carrier over a period of several days, the cars must be held by carrier until entire battery is received.—Chicago, R. I. & P. R. Co. v. Furniture Forwarders of St. Louis, 272 F. Supp. 62 (63-4)*.

A tariff must be construed to avoid unjust, absurd, or improbable results; and strict construction of tariffs against carriers that drafted them is not justified when such construction would ignore a permissible and reasonable construction which conforms to intention of the tariff framers. Although nothing in considered commodity tariff (containing an intermediate rule) specifically precludes its application over route constructed, the route used to justify application of an intermediate rule cannot under any circumstances be unreasonable. While constructed route physically exists, there has been no commercial use of such a route, and mere physical connections are not enough to establish a route; moreover, both carriers' and shippers' course of business negatives existence of such route. Therefore, and in light of principles stated in 212 F. 2d 812, the commission's application of the intermediate rule was arbitrary and improper; reparation orders set aside and enjoined.—Hygrade Food Products Corp. v. New York Central R. Co., 266 F. Supp. 946 (951-2)*.

Railroads draft their own tariffs, and such instruments should be construed strictly against them and in favor of the shipping public. Thus, while it is generally held that tariffs must be applied strictly according to their terms, strict interpretation of two alternating sections of tariff naming rates on ground limestone (lower rates in sec. 4 thereof being restricted to limestone "having value only" for building, paving, etc., purposes and so certified on bills of lading) would lead to an absurd and unjust conclusion. There is no limestone that can be used solely for construction purposes; plaintiff's limestone can be used for

construction and other purposes; considered shipments moved to feed mills under bills of lading containing certification from which word "only" was omitted; for over 3 years railroads accepted feed shipments with such certification, and charged lower rates, without questioning its applicability. The restriction in tariff section 4 being impossible of accomplishment is a nullity; thus, unrestricted, lower rated of the alternate sections would apply. —Calcium Carbonate Co. v. Missouri Pac. R. Co., 329 I.C.C. 458 (462-3)*.

By ordinary rules of tariff interpretation, phrases that follow are subordinate to, and modify or qualify, the initial phrase.—Guerdon Industries, Inc. v. Union Pac. R. Co., 315 I.C.C. 277 (279).

A basic rule of tariff interpretation is that tariffs must be given a fair and reasonable construction.—Traylor Engineering & Mfg. v. Lehigh Valley R. Co., 316 I.C.C. 31 (36); a meaning which is clear from the context may not be rendered obscure by resort to technical rules of grammer.—Petition of Southern Pacific Co. for Declaratory Order, 316 I.C.C. 661 (664); but where there is no ambiguity in the provisions of a tariff there is no room for construction.—R.M. Hollingshead Corp. v. Alton & S. R. Co., 319 I.C.C. 86 (88).

Tariffs are to be construed strictly according to their language, and an allegation under §6 requires that the commission strictly interpret the terms of the governing tariff; as §6 does not deal specifically with the justness or reasonableness of the end result, there is no room for construction where the language of the tariff is clear and unambiguous.—Allis-Chalmers Mfg. Co. v. Great Northern Ry. Co., 315 I.C.C. 152 (154).

11. Intent of framers not controlling.—[Vols. 2, 6, 9, 11-13, 15-19].—Intention of the framers of a tariff is not controlling where the tariff provision in controversy is so clearly worded as to leave no room for construction. —Metropolitan Metals, Inc. v. Pennsylvania R. Co., 314 I.C.C. 737 (738).

12. Ambiguities construed against maker.—[Vols. 2, 6, 9, 12, 14-19].—See also Halstead v. Norfolk & W. Ry. Co., n. 263, below.

In tariff providing that, where transit privileges are authorized in tariffs of participating lines, distances shall be computed via the transit point, the only explanation of "transit privileges" is another item titled "Terminal or Transit Privileges or Services," apparently listing four categories thereof without evident segregation; thus, though latter item lists both "reconsignment" and "transit privileges," it is patently ambiguous and does not support district court's statement that it specifically defines "reconsignment" as a transit privilege. That the tariff framers listed the two items under different headings supports conclusion that they did not assume one term used under one heading to encompass the other; and, as the first item does not specifically define "transit privileges," it likewise is ambiguous and must be construed before any correct application of the distance rates can be made.—United States v. Great Northern Ry. Co., 337 F. 2d 243 (254-6)*.

Appellee railroad's argument that construction of "transit privileges" is unnecessary to a decision in its favor, because appellant chose the route of movement and the distance rate should therefore be applied via the route so chosen, regardless of presence or absence of transit privileges, ignores the plain meaning of the words of the tariff, which make the distance rate applicable to the short origin-to-destination distance regardless of physical movement of the cars, except where transit privileges are granted. As appellee authored the tariff, it must have been aware of that fact, and cannot now attempt to change the rate by judicial construction not in harmony with the plain meaning of the words used.—Id., p. 249.

The commission's decision, in proceeding to which appellee was a party and which involved construction of the same tariff in a similar situation, that "transit privileges" as used therein did not include reconsignment, is consistent with its traditional view, accepted by the courts, and is entitled to great weight in appellant's subsequent suit to recover overcharges on shipments stopped for reconsignment. Possibility that in some circumstances unreasonable results might flow from that interpretation does not entitle appellee to one different from the plain meaning of the words used by it in the tariff; tariffs are written by the carrier and accordingly are construed in

shipper's favor in case of ambiguity. If the commission's construction was not in accord with carrier's understanding and intent, its obvious remedies were either a direct attack on those findings in the case in which it was a party, or amendment of the tariff to correspond with its intent. The district court's interpretation of "transit privileges" as including reconsignment was in error; reversed with direction to enter judgment for appellant.—Id., pp. 247, 248-9.

Construction of a rail tariff should be that meaning which the words used might reasonably carry to the shippers to whom they are addressed, and any ambiguity or reasonable doubt as to their meaning must be resolved against the carriers. But claimed ambiguities or doubts as to meaning of the tariff must have a substantial basis in the light of the ordinary meaning of words used and not a mere arguable basis. Governing tariff was obviously drafted to cover all export shipments; since meaning of relevant tariff item is doubtful when applied to present unusual situation, the doubt as to considered shipments is resolved against the railroad.—Chicago, R. I. & P. R. Co. v. Furniture Forwarders of St. Louis, Inc., 267 F. Supp. 175 (176-7).

Had defendant railroads wished to specifically restrict provisions of commodity tariff (publishing rates from Evansville, Ind., which the commission found applicable on plaintiff's shipments from Indianapolis to southeastern points under intermediate rule therein) only to shipments originating in Kentucky and at Ohio River crossings, they could have done so by stating that fact clearly; however, on its face, the tariff applies to shipments from "Kentucky also Ohio River crossings" and its index of stations lists Kentucky points and Ohio River crossings (including Evansville but not Indianapolis). Fact that the commodity tariff was published solely by carriers' southern territory agent, whereas class rate tariff containing rates actually collected was published by agents for their central and southern territories, is a fact that merely gives rise to an ambiguity as to whether the commodity tariff was restricted to shipments from Kentucky or from Ohio River crossings; such ambiguity is to be resolved against the carriers.—Hygrade Food Products Corp. v. New York Central R. Co., 266 F. Supp. 946 (949-50)*.

13. Reasonable doubts resolved in favor of shipper.—[Vols. 2, 6, 9, 11-14, 16-19].—Part II, §217(b), n. 25.

Although doubt as to meaning of a tariff provision must ordinarily be resolved in favor of shipper, the doubt must be a reasonable one; and carriers' inconsistency in interpreting their tariffs is not conclusive that a reasonable doubt exists.—Guerdon Industries, Inc. v. Union Pac. R. Co., 315 I.C.C. 277 (279).

15. Construction not to be strained or unnatural.—[Vols. 2, 6, 9, 11-19].—Interpretation of restriction in tariff item naming rate sought on 11 carloads of iron or steel sheets, i.e., iron or steel sheet not over 36 inches in length or width, as applying to rolled packages rather than to length of the sheets if unrolled would be strained and unnatural. To extract a dimensional restriction from its position in the middle of phrases modifying the initial description and apply it to a subsequent shipping requirement would do violence to the context and sequence of the description; moreover, considerations other than the tariff item describing the commodities determine size of the package.—Guerdon Industries, Inc. v. Union Pac. R. Co., 315 I.C.C. 277 (278-9).

16. Entire tariff to be considered.—[Vols. 2, 6, 9, 11-19].—Construction of a rail tariff presents a question of law and does not differ from that presented when construction of any other document is in dispute. The four corners of the instrument must be visualized and all of the pertinent provisions considered together, giving effect so far as possible to every word, clause, and sentence contained therein. Governing tariff was obviously drafted to cover all export shipments; however, meaning of item relevant to responsibility for freight at Pacific Coast ports is doubtful when applied to shipments to Naval Supply Depot, Pier 91, Seattle, Wash., since drafters thereof did not contemplate the unusual situation which such a government supply depot would create. Therefore, resolving doubt as to the tariff's meaning against the carrier, considered tariff item did not exclude application of export rate named therein to the 13 shipments in issue. Judgment in favor of defendant.—Chicago, R. I. & P. R. Co. v. Furniture For-

warders of St. Louis, Inc., 267 F. Supp. 175 (176-7).

Proper construction of tariffs requires that the interpretation accord some meaning to all provisions. Accordingly, in interpreting minimum-rate rule in transit tariff governing application of multiple-car rates on soybean cake and meal, the parenthetical phrase "(in volume unit forwarded from the transit point)" may not be disregarded.—Vol. Rates on Processed Meal—Midwest to Ports, 322 I.C.C. 456 (478).

In applying the minimum-tender requirement of promiscuous loading rule providing for computation of charges on mixed shipments tendered "in volume equivalent to two or more carload shipments," the test is whether or not the volume tendered is equivalent to two or more carloads, using the minimum weight applicable to any of the articles in the shipment; rates published to apply on the articles shipped do not enter into such determination.—Ford Motor Co. v. Atchison, T. & S. F. Ry. Co., 315 I.C.C. 134 (136).

Once the minimum-tender requirement is met, provisions of tariff item referred to in the rule concerning rate and c.l. minimum weight become applicable. On shipment of automobile parts, bumpers, and wheels, a single rate and minimum weight was provided for parts and bumpers, and that rate was correctly applied to weight of those articles; but as wheels were subject to alternative rates and minima, the "lowest charge obtainable" under those rules resulted from application of the lowest of the alternative rates to the actual weight of the wheels. Applicable charges determined and reparation awarded.—Id., pp. 135, 136.

All pertinent provisions of a tariff must be considered together, and a reasonable interpretation thereof as a whole is required.—Metropolitan Metals, Inc. v. Pennsylvania R. Co., 314 I.C.C. 737 (738); and if those provisions may be said to express the intention of the framers under a fair and reasonable construction, that intention must be given effect.—Nonapplication of Coarse or Feeding Grain Rates, 316 I.C.C. 547 (550).

17.——Effect of title page.—[Vols. 2, 6, 9, 11, 12, 14-16, 18, 19].—General title page description of territory for which rates are published in a tariff does not have the effect of limiting application of the tariff, particularly of intermediate rules therein, to points within the territory described on the title page. On its face, commodity tariff containing intermediate rule, which the commission applied to plaintiff's shipments from Indianapolis, Ind., shows that it applies from Ohio River crossings (which include Evansville but not Indianapolis); and the tariff does not designate points of origin with more particularity. Thus, since restrictions on intermediate rules must be clear and not merely inferred from tariff provisions or from the title page, intermediate rule in considered commodity tariff is not limited to territory specified on title page thereof; however, the route used to justify application of an intermediate rule cannot under any circumstances be unreasonable.—Hygrade Food Products Corp. v. New York Central R. Co., 266 F. Supp. 946 (949-50)*.

18.——Reference to other tariffs or classifications.—[Vols. 2, 6, 9, 12-16, 18, 19].—Sand coated with less than 5 percent phenolic resin may appropriately be termed either foundry-core or bonded molding sand; complainant's addition of phenolic resin as binding agent to sand used for coating purposes establishes its identity as artificially or synthetically bonded molding sand. Tariff naming class rate charged, on "sand, foundry core, containing 5% or less phenolic resin," provided (without reference to value of commodity shipped) that commodity rates named in other tariffs for domestic traffic via same routes would apply on coastwise, export, or intercoastal shipments if they produced lower charges; therefore, lower rate named in sand and gravel tariff on "sand, molding, bonded (naturally or otherwise)" was applicable on complainant's export shipments, notwithstanding their comparatively high value. Reparation awarded.—Akron Brass Mfg. Co., Inc. v. Baltimore & O. R. Co., 315 I.C.C. 468 (469-70).

Commodity Rates

46. Commodity; whether specific designation supersedes general description.—[Vols. 2, 6, 9, 11-19].—It was not arbitrary, capricious, or an abuse of discretion for the commission to construe tariff item "automobile parts, noibn, iron or steel" published under the generic heading "Automobile parts," rather than the items "forgings, nos" or "forgings, noibn" under the heading "Manufactured iron or steel articles," as more specific for application on shipments of iron or steel bumper back bars and stabilizer bars which, though made by a forging process, moved to complainant's automobile assembly factory where they were installed on automobiles without any further work on them. Record contained substantial evidence from which the commission could conclude that catch-all term "automobile parts" is restricted to automobile parts made of iron and steel, while catch-all term "forgings" applies broadly to parts made of iron and steel; affirmed.—General Motors Corp. v. United States, 207 F. Supp. 641 (642, 645)*.

Where a commodity falls within a specific description in the classification, the rating for that specific description applies thereon. Class B rating and rates on "Boards or sheets, flat, sawdust or ground wood with added resin binder not exceeding 10% by weight," under general heading "Lumber, Veneer, or Forest Products," were applicable on shipments of Plaswood lumber made of pinewood shavings or pieces coarsely ground and bound together by resin, rather than lower commodity rates on lumber, including yellow pine lumber.—Plaswood Corp. v. Alton & S. R., 321 I.C.C. 434 (446, 449).

47.——Cross reference in commodity rates.—[Vol. 2].—Purpose of a commodity index is merely to aid the user of a tariff in locating rates or rate bases, and failure to index a commodity in a tariff does not void a rate published therein. Though rate item producing lower rates sought is not shown opposite scrap brass and copper in commodity index, rate columns specified both in that item and in item producing higher rates charged were plainly made subject to note providing that rates therein would apply on scrap brass and copper having value only for remelting, thus setting up conflicting rates.—Zack v. Canadian National Rys., 315 I.C.C. 256 (257-8).

The purpose of commodity index in a tariff being merely to facilitate reference to rates or rate bases, failure to index a point, a commodity, or an item in a tariff does not void a rate published therein; thus, defendants' contention, that a published rate basis cannot be used unless properly indexed, is without merit. While note providing that rates shown in certain rate items would apply on scraps of brass and copper having value only for remelting was not referred to in the index, it was plainly shown in connection with each of conflicting commodity rate columns and applied with equal force to all items making reference to it; shipper is entitled to the lower commodity rates named in those items.—Metropolitan Metals, Inc. v. Pennsylvania R. Co., 314 I.C.C. 737 (738-8).

49.——Commodity description; determination by analogy.—[Vols. 2, 6, 9, 11-19].—The nature and character of a commodity at time it is tendered for shipment determine its identity for transportation purposes. Significant facts which weigh heavily in determining the description applicable to a given shipment are (as stated in 306 ICC 611) the producer's description of the commodity for sales purposes, the manner in which it is billed, its use and value, and how it is regarded in the trade. Considered in the light of those criteria, evidence establishes that considered commodity, used as padding in automobile door panels, was padding material in batting form made from synthetic fiber, and that tariff item naming rates on "Batting, Wadding, Pads, or Padding * * *" provides an accurate description of commodity shipped.—Fibre Bond Corp. v. Canadian National Rys., 318 I.C.C. 549 (552-3, 554).

Lower rate named on "Alcohol and other articles as designated" did not apply on considered shipments of brake fluid mixtures; although complainant's witness testified that each of the raw materials contained in the mixtures were listed in that item, he did not identify them. A reasonable interpretation of that item, which lists specific chemicals, does

not permit inclusion of chemicals more generally described as polyglycols or glycol ethers, which complainant's mixtures contained. It is incumbent on complainant to show by affirmative evidence that its mixtures are included in the tariff item, and mere assertion, without supporting evidence, that the unidentified raw materials are included therein does not establish the fact. Since only two of chemicals contained in one or more of the several mixtures are shown to be specifically included in that item, complainant's claim of its applicability is not sustained.—R. M. Hollingshead Corp. v. Alton & S. R., 319 I.C.C. 86 (88).

Absence of essential parts not affecting the identity of an article transported does not destroy its fundamental character for ratemaking or tariff-interpretation purposes. Though corrosion and oxidation inhibitors are added to the brake-fluid mixtures after they are received by complainant, the volume of those additives is not disclosed, and in absence of convincing evidence to the contrary the brake-fluid rates charged were applicable.—Id., p. 89.

Rate on "clay, noibn, crude (not crushed, ground, or pulverized)" found inapplicable as factor of lower combination under aggregate rule on crude clay air-dried and reduced to finely broken clay by passing through a "shredder" machine. Condition of the clay after passing through such machine is unlike that of "shredded" products as usually known and accepted, such as shredded cabbage, rags, or paper. Moreover, shredding is usually associated with cutting, and complainant's machine employs no cutting devices; exhibit picturing the clay after passing through the machine shows it to be grated or pulverized to some extent, and it has all been reduced to fine particles. Assailed single-factor rate on "clay, noibn, crude or ground," found applicable.—Universal-Rundle Corp. v. Texas & N.O.R. Co., 319 I.C.C. 458 (460)*.

Complainant's evidence consisting of photographs of commodity shipped (showing it to be a flexible plastic product, in rolls) and photographs of flat rectangular pieces described by its witness as sheets, together with verified statement of its traffic manager to the effect that commodity shipped was sheeting, not sheets, is not convincing that the rate on plastic sheets was inapplicable on considered shipments. From the photographs, the only distinguishing feature between commodity shipped and that represented by complainant to be sheets is that former is flexible enough to be marketed and shipped in rolls, while latter is shipped flat; however, the classification provides a rating on plastic "sheets in wrapped rolls," indicating that "sheets" are not confined to pieces of inflexible plastic.—Firestone Tire & Rubber Co. v. Atchison, T. & S.F Co., 318 I.C.C. 107 (109-10).

Rate named on topped or reduced crude petroleum oil with API gravity not over 38° and requiring further "refining or processing" for production of refined petroleum products, restricted to movement to a refinery for further manufacture or processing, applied on considered shipments to consignee which processes and sells asphalt. That the material shipped is a residue of refining processes within tariff definition of topped or reduced oil, with gravity not over 38°, is undisputed; since treatment of the material is necessary to meet consignee's customers' specifications as to grade of asphalt desired, there is "further processing"; and consignee's plant, being a place for further processing, is in nature of a refinery within meaning of the tariff description.—Empire Petroleum Co. v. Chicago, B. & Q.R. Co., 315 I.C.C. 291 (296).

Class rates on rust-preventive pipeline coating, asphaltum based, were applicable on complainant's coating consisting of 81 percent asphalt and 19 percent slate flour, designed for application to pipelines to prevent corrosion, rather than lower commodity rates on asphalt; considered product is a manufactured compound which is more than merely asphalt; and inclusion of the pipe coating description under generic heading "Paint, Paint Material or Putty" has no special significance, since such protective coatings may reasonably be considered paint materials.—Monsanto Chemical Co. v. Alton & S.R., 314 I.C.C. 745 (746, 747).

Since rate claimed applicable on electric transformer parts shipped was subject to a tariff note providing that it applied only on transformers weighing not over 1,100 pounds, or parts thereof, that rate was not available on

transformers parts shipped with, and pertaining to a transformer weighing 288, 604 pounds; rates charged on parts shipped found applicable.—Westinghouse Electric Corp. v. Pennsylvania R. Co., 318 I.C.C. 1 (3).

In description "Iron or Steel Sheet, * * * not over 36 inches in length or width," latter phrase modifies the article itself and has no relation to size of shipping package; rate named thereon was inapplicable to sheets 1,650 to 3,000 feet long, shipped in rolled packages not exceeding 36 inches in length or width; higher rates named on sheet under heading "Iron or Steel Articles" applied.—Guerdon Industries, Inc. v. Union Pac. R. Co., 315 I.C.C. 277 (278, 279).

In view of the various operations performed on considered rotary kiln shell sections before shipment, and fact that final welding together of the sections was not performed until after arrival at destination because of extreme length of completed kiln shell, conclusion is warranted that they were "machine parts," rather than "structural forms," "unfinished shapes," or "pipe"; and various iron and steel articles shipped therewith but not itemized in the bill of lading, which were made according to specifications for use in assembly of a rotary kiln, constituted parts of the machinery included in rate item covering "machine parts." Furthermore, since only assembly, including welding the sections together, was required at destination, the articles shipped could not be considered merely unfinished shapes or structural forms.—Forms or Unfinished Shapes, Fabricated—Classification, 316 I.C.C. 679 (681-2).

Although eight shipments together constituted all parts necessary to erect and operate a rotary cylinder kiln, they were not within description "Kilns, rotary cylinder," when none of them individually constituted a rotary kiln in any form; and since they moved at different times, the situation was not within classification rule 20 providing that parts constituting a complete article, when moved as one shipment on one bill of lading, will take the rate provided for the complete article.—Traylor Engineering & Mfg. v. Lehigh Valley R. Co., 316 I.C.C. 31 (35).

Item naming rate sought, on "Machinery, paper mill or pulp mill, K.D. or Parts thereof," with no other restriction on its application, is not limited to machinery which can be used only in pulp or paper mills, or even to machinery actually used in making paper or pulp; it is therefore not a strained or unnatural construction to hold that complainant's shipments, which were intended for use in a paper mill as part of the pulp-making process, constituted pulp or paper mill machinery within that item.—Id., p. 36.

51. Use to which article is put.—[Vols. 2, 6, 9, 11-10].—See also General Motors Corp. v. United States, n. 46, above. While use to which a commodity is put is not controlling, it is helpful in determining what the commodity is, and the question of use is implicit in commodity description "insulating material." Though complainant, in reliance on agreement with carriers' Weighing and Inspection Bureau, billed as "insulating material" shipments of bonded fiber padding intnded for use in automobile door panels, that description neither specifically covers complainant's product nor accurately describes its use; its insulating qualities are only incidental to its use and sale as padding, and it would be a strained construction of the governing tariff descriptions to find that padding material becomes insulating material simply because it can be so used. Lower rates on pads and padding found applicable.—Fibre Bond Corp. v. Canadian National Rys., 318 I.C.C. 549 (552-3, 554).

Although use of rotary kilns for recovery of lime is not restricted to the pulp-making industry, considered shipments constituted parts of a complete machine to be installed in consignee's paper mill, which was designed specifically for that mill and became an integral and indispensable part of its pulp-making operations; rate named on paper or pulp mill machinery parts, rather than higher rate on machinery parts, therefore applied.—Traylor Engineering & Mfg. v. Lehigh Valley R. Co., 316 I.C.C. 31 (33, 36).

Considered rotary kiln sections were not entitled to the rate on pipe, since they were designed for a specific purpose other than purposes for which pipe is designed and generally used; see 308 ICC 529.—Forms or Unfinished Shapes, Fabricated—Classification, 316 I.C.C. 679 (681, 682).

52. Invoices, billing, bills of lading, not conclusive.—[Vols. 2, 6, 9, 14, 16-19].—While description in the bill of lading is not controlling as to identity of the commodity shipped, it is a factor to be considered. In absence of convincing evidence to the contrary, rate on brake fluid was applicable on shipments billed as brake fluid mixture, to which an undisclosed volume of corrosion and oxidation inhibitors was added after their receipt by complainant.—R. M. Hollingshead Corp. v. Alton & S.R., 319 I.C.C. 86 (89).

Use of an erroneous commodity description in shipping documents, even though agreed on between shipper and carriers, does not deprive shipper of right to recover overcharges if a different and lower-rated description was in fact applicable. Though carriers' Weighing and Inspection Bureau advised complainant that its batting, when used as padding for automobile door panels, should be described as "Insulating Material, NOIBN," and so described it in weight agreement submitted to complainant, and complainant in reliance thereon billed considered shipments accordingly, complainant was not bound by that agreement to pay the higher charges on insulation when nature and use of the commodity warranted application of lower rate on pads or padding. Shipments found overcharged.—Fibre Bond Corp. v. Canadian National Rys., 318 I.C.C. 549 (551, 553-4).

53. Rates applicable to articles as commercially described.—[Vols. 2, 6, 9, 11-19].—Terms used in a tariff must be given the meaning recognized and understood in the industry or trade in which they are used. Paco sand, though a geological sand, is not a sand for rating purposes when it is used for same purpose as feldspar mixed with silica sand, is sold like other feldspar mixtures on basis of chemical analysis, and is advertised by its producer as "a natural feldspar-silica blend." Rates on former description "Sandspar, feldspathic, chemical content not exceeding 14 percent alumina" and on present description "Feldspar, containing in excess of 23 percent free silica" were and are applicable on Paco sand, rather than lower rates on sand.—Copps v. Alabama G.S.R. Co., 319 I.C.C. 192 (196, 198).

Producer's description of a commodity for sale purposes is a significant factor in determining its identity for transportation purposes. Though complainant, in conformity with its weight agreement with carrier bureau, billed as "insulating material" shipments of bonded-fiber batting for use in automobile door panels, its advertising stressed use thereof as batting or padding and there is no showing that it ever described the commodity as "insulating material" for purposes of sale. Lower-rated description "Batting, Wadding, Pads or Padding" accurately describes the commodity involved and was applicable.—Fibre Bond Corp. v. Canadian National Rys., 318 I.C.C. 549 (552, 553-4).

Combination Rates

80. Not applicable when single-factor through rate is published.—[Vols. 2, 6, 9, 12-14, 16-18].—As a general rule, if a through rate is in existence, shipper may not combine the intermediate rates; the through tariff is the only lawfully applicable rate. However, the United States, unlike a private party, may contract with railroads for transportation "at reduced rates," and carriers need not as a general rule abide by their published tariffs in dealing with the United States. Thus, if a §22 quotation rate reveals intention that it may be so used, it may be combined with another quotation rate to produce an aggregate lower than the through tariff rate; and since the Government may receive preferences, a quotation rate may conceivably be also combined with a local tariff if the quotation is designed to be used in that manner.—Great Northern Ry. Co. v. United States, 312 F. 2d 901 (903).

81. Lowest combination applicable in absence of published single-factor through rate.—[Vols. 2, 6, 9, 12, 14-19].—See Great Northern Ry. Co. v. United States, 312 F. 2d 906, §22(1), n. 5.

82. Rule of commission governing combination rates.—[Vols. 2, 6, 9, 11].—See Great Northern Ry. Co. v. United States, 312 F. 2d 906, §22(1), n. 5.

Rates Fixed by Combination Rule

93. Effect of provisions restricting use of rule.—[Vols. 2, 6, 9, 14].—See Great North-

ern Ry. Co. v. United States, §4(1), n. 139.

96. Effect upon the aggregate-of-intermediate rates.—[Vols. 2, 6, 9, 13-19].—Although none of shipments moved over routes over which combination rates claimed under aggregate rule apply, that rule removes application of class rates if lower combinations apply over any class-rate route, and no limitation has been shown upon application of class rates via route over which the lowest combination of rates sought was published. Rates on basis sought found applicable.—Sioux City Foundry & Boiler Co. v. Chicago, B. & Q. R. Co., 318 I.C.C. 13 (16).

Intermediate Provisions

109. In general.—[Vols. 2, 6, 9, 11-19].—Part II, §217(b), n. 80.

Restrictions on intermediate rules, while permissible, must be clear and not merely inferred from general provisions in the tariff or from its title page; thus, intermediate rule in commodity tariff naming rates on shipments from "Kentucky also Ohio River crossings" to southeastern points is not limited by title-page description of territory and "Index of Stations" list of origins, since restriction of the tariff's application, and particularly of the intermediate rule therein, may not be inferred from such general description of territory. However, the route constructed for application of an intermediate rule must be reasonable in light of the extent and direction of circuity and the commercial usage of such route. See 212 F. 2d 812. Therefore, there being no commercial usage at all of the route constructed for application of considered commodity tariff to plaintiff's shipments, the commission's finding that the constructed route was reasonable was arbitrary and unsupported by the evidence; the commission improperly applied tariff intermediate rule to an unreasonable route. Reparation order set aside and enjoined.—Hygrade Food Products Corp. v. New York Central R. Co., 266 F. Supp. 946 (950-2)*.

Since orders granting fourth-section relief are permissive, authorizing higher rates at intermediate points to the extent indicated, the reference to §4 orders in rate tariff containing intermediate rules does not change application of the intermediate rules.—Sioux City Foundry & Boiler Co. v. Chicago, B. & Q. R. Co., 318 I.C.C. 13 (15).

Since respondent's tariff naming plan II TOFC rates provides routes between Chicago and Kansas City via Milwaukee and Savanna, Ill., as well as more directly through Savanna, each of which is as much "a given route" as the other within meaning of the intermediate rules, and with only four exceptions no commodity rates are named on TOFC traffic between Milwaukee and Kansas City, under terms of the intermediate rules the Chicago rates apply between those points. Argument that only a strained interpretation of the rules could place Milwaukee intermediate between Chicago and Kansas City is unsound because the rules do not require that a point be directly intermediate, and the 25.2-percent circuity of the route via Milwaukee is not so great as to preclude application of the rules. See 281 ICC 705.—Addition of Milwaukee to Chicago Group Rates—K. C., 318 I.C.C. 755 (758-9).

An intermediate rule is a rule of general application, unless specifically restricted, and as such exists independently; it applies either generically or specifically according to its own language.—Allis-Chalmers Mfg. Co. v. Great Northern Ry. Co., 315 I.C.C. 152 (154).

More-distant-point rate claimed applicable under destination intermediate rule was subject to encircled reference indicating that it was published under authority of a fourth-section order, and the intermediate rule was subject to an exception providing that it would not apply where such specific reference is shown in connection with the more-distant-point rate; that such reference was erroneous because the order referred to did not grant relief at the more distant point on traffic from origin of shipments involved is a factor unrelated to application of the rule, which operates only according to its terms; that reference can only be construed as giving effect to the restrictive language of the rule; therefore, the rate sought had no application to the intermediate destination.—Id., pp. 153, 154.

Single-factor rate on coke from Indianapolis to Niagara Falls, Ont., is not applicable under intermediate rule to Hamilton and Sarnia, Ont., when that rule is restricted not to

apply to intermediate points on Canadian National, Grand Trunk, or New York Central, and other defendants either do not serve Hamilton or Sarnia or are not parties to tariff naming the rate to Niagara Falls.—Board of Directors for Utilities v. Canadian National Rys., 315 I.C.C. 471 (475).

110. Specific rate established by intermediate rule.—[Vols. 2, 6, 9, 11-19].—An intermediate rule in a tariff establishes specific rates just as positively, plainly, and legally from unnamed intermediate points as if such points were specifically named.—Addition of Milwaukee to Chicago Group Rates—K. C., 318 I.C.C. 755 (758).

An export rate established by an intermediate rule is just as specific as though specifically published, and takes precedence over a domestic rate.—Nueces County Nav. Dist. No. 1 v. Atchison, T. & S.F. Ry. Co., 315 I.C.C. 155 (162-3).

111. Effect as to points indexed or named.—[Vols. 2, 6, 9, 12-15, 17, 18].—Although fourth-section application incorporated by reference in fourth-section order referred to in connection with destination intermediate rule in tariff naming rate from Milwaukee to Omaha (sought to be applied to Sioux City under that rule) stated that destination departures in Iowa were at named points to which specific commodity rates were published, no commodity rate to Sioux City is shown which could be applied from Milwaukee on considered shipments in lieu of the specific rate made by the intermediate rule; use of that rule is therefore not precluded by the fourth-section order.—Sioux City Foundry & Boiler Co. v. Chicago, B. & Q.R. Co., 318 I.C.C. 13 (15).

114. Routing restrictions to be observed.—[Vols. 2, 6, 9, 12, 16-19].—While destination intermediate rule in tariff naming rate from Milwaukee to Omaha (claimed applicable on shipments to Sioux City) is restricted not to apply "via lines operating west of the Missouri River," fourth-section order referred to in connection with that rule was issued in response to and incorporates §4 application which indicates that Milwaukee-Omaha rates covered thereby were to be subject to the intermediate rule except at points on routes operating west of the river. However, as carriers serving Sioux City (on the east bank) have lines operating both east and west of the river, limitation on application of the rule over their lines west of the river has no effect on its application at points on their lines east of the river.—Sioux City Foundry & Boiler Co. v. Chicago, B. & Q. R. Co., 318 I.C.C. 13 (15).

Rate sought is restricted to two routes, one of which embraces the Soo Line to Waukesha, Wis., thence a route of the North Western via Sioux City, and defendants have shown no tariff authority for their interpretation of the routing provisions as precluding availability of that route. Had the North Western desired to limit routing from Waukesha to Omaha to specific lines of its system, it was free to do so, but it provided no internal routing, and 12.3-percent circuity of that route compared with its short route between those points does not prevent complainant's use thereof to apply the rate sought to Sioux City.—Id., p. 16.

115. Unreasonably circuitous routes.—[Vols. 2, 6, 9, 11-13, 16, 17, 19].—See Blandin Paper Co. v. Great Northern Ry. Co., §16(2), n. 2.

116. Reasonable and practical routes.—[Vols. 2, 6, 9, 11-16, 18, 19].—Route used to justify application of an intermediate rule cannot under any circumstances be unreasonable, and its unreasonableness is judged by the extent and direction of circuity and commercial usage of the route. As stated in 212 F. 2d 812, a route constructed for such use must be reasonable in light of three equal factors: (1) the extent and (2) direction of circuity and (3) commercial usage of a route. While maximum circuity limitation in commodity tariff in issue may meet requirement that extent and direction of circuity be reasonable, there was no commercial use of any kind of route constructed for intermediate application of the rates therein; and maximum circuity limitation may not be used to defeat the third element to be considered in determining reasonableness of the constructed route. In light of evidence of record on the absence of commercial usage, the commission's finding that the constructed route was nevertheless reasonable was arbitrary and unsupported by sufficient evidence. Orders awarding reparation to plaintiff are invalid, unenforceable,

and are set aside and enjoined.—Hygrade Food Products Corp. v. New York Central R. Co., 266 F. Supp. 946 (950-2)*.

Switching Rates

124. In general.—[Vols. 14-19].—Railroad is not entitled to collect alleged undercharges for switching service on cars of scrap iron purchased by defendant from seven other railroads when vendor railroads moved the cars to the Kansas City Switching District (before title to the lading passed to buyer) and there turned them over to plaintiff for switching delivery to consignee's plant located within that switching district; reciprocal switching rate in tariff Sec. 1, rather than Sec. 2 intraterminal rate, is the proper applicable rate for plaintiff's switching service. Although the tariff provides that Sec. 1 rates apply only in connection with road-haul shipments, the term "shipments" therein is interpreted as encompassing considered switching movements to defendant consignee's plant, even though vendor railroads did not have to charge any rates for the movement from various origins outside the switching district, since the scrap remained company property until arrival at Kansas City, and the cars were not delivered to consignee by vendors' employees. Judgment in favor of defendant.—Atchison, T. & S.F. Ry. Co. v. Erman-Howell Division, 279 F. Supp. 625 (626-7, 629-31).

Conflicting Rates

141. Lowest of conflicting rates applicable.—[Vols. 2, 6, 9, 11-19].—Carriers are responsible for their published tariff provisions, and where conflicting provisions are maintained, those resulting in the lowest charge to shipper are applicable.—Farmers Union Grain Term. Assn. v. Canadian Natl. Rys., 315 I.C.C. 559 (565)*.

Tariff naming column commodity rates on generator parts and electric switchboards from Pittsburgh to float bridge at New York City provided that they would be superseded by commodity rates published in other tariffs either specifically or by intermediate application; tariff naming lower specific rates sought by complainant under intermediate rule therein provided that that rule would not apply if a commodity rate otherwise applicable was named in any other tariff. Since the tariff provisions were in conflict, complainant was entitled to application of the lower rates sought as factors for movement to the float bridge.—Westinghouse Electric Corp. v. Pennsylvania R. Co., 318 I.C.C. 460 (462-3).

When tariff note specifically provided that rates published in certain rate items under description of brass or copper scrap would also apply on scrap having value for remelting only, and that note was referred to in connection with each of rate columns named in items naming different rates, it applied with equal force to all, thus setting up conflicting rates. Shipper is entitled to the lowest charge where there is a tariff conflict or where reasonable doubt exists as to applicability of two disputed rate bases; reparation awarded to basis of the lower rates.—Zack v. Canadian National Rys., 315 I.C.C. 256 (258); Metropolitan Metals, Inc. v. Pennsylvania R. Co., 314 I.C.C. 737 (738-9).

160. Export and domestic rates.—[Vols. 2, 6, 9, 11-18].—All of the requisites of the tariff must be met in order to entitle shipper to an export rate. Defendant's failure to comply with all the tariff conditions precedent results in application of the higher domestic rates on its shipments.—Louisiana & A. Ry. Co. v. Export Drum Co., 228 F. Supp. 89 (95)*.

Item in governing export tariff pertaining to responsibility for freight at Pacific Coast ports did not exclude application of export rate which defendant prepaid, instead of higher domestic rate sought to be applied, on considered shipments which were billed for export and consigned to Naval Supply Depot, Pier 91, at Seattle, Wash. The tariff was obviously drawn to cover all export shipments; and, that drafters thereof unfortunately did not contemplate the unusual situation which government supply depots similar to Pier 91 would create, is borne out by fact that considered item has since been amended to cover the problem posed by such supply depots. Meaning of the tariff is certainly doubtful when applied to the situation under consideration, and that doubt must be resolved against the carrier; judgment in favor of defendant.—Chicago, R.I. & P.R. Co. v. Furniture For-

warders of St. Louis, Inc., 267 F. Supp. 175 (176-7).

An export rate established by an intermediate rule takes precedence over a domestic rate.—Nueces County Nav. Dist. No. 1 v. Atchison, T. & S.F. Ry. Co., 315 I.C.C. 155 (162-3).

162. Distance rates.—[Vols. 2, 6, 19].—See also United States v. Great Northern Ry. Co., n. 12, above.

Although tariff publishing Minnesota intrastate scale on grain and providing for refund to basis of intrastate rates to Duluth on shipments to Superior, Wis., when reshipped beyond by water, requires use of distances over short-line intrastate routes embracing not more than three railroads, individual tariffs of two originating carriers, in sections governing inspection and reconsignment, require use of actual distances over routes of movement when there is reconsignment at intermediate points, in direct conflict with provisions of the rate tariff and of orders in 164 ICC 619 which contemplate application of the Duluth rates to Superior. Under principle that, where tariff provisions conflict, those resulting in lowest charge to shipper apply, applicable rates on shipments from Minnesota origins to Superior, held at Minneapolis for inspection and reconsignment, were the scale rates from each origin over the short intrastate route to Duluth, plus any inspection, diversion, or reconsignment charges.—Farmers Union Grain Term. Assn. v. Canadian Natl. Rys., 315 I.C.C. 559 (564-5)*.

Routing

180. Restriction in tariff.—[Vols. 2, 6, 9, 11, 12, 15-19].—Neither rate charged nor rate sought to be collected applied on shipment from Power Mont., to Oklahoma City, in group E-1; former applied on shipments from Montana only when destined to points in group H, and latter was restricted to points taking a different rate basis than Power; higher rate named to group E-1 points from points in Montana and not otherwise restricted, found applicable.—Clements Foods Co. of Oklahoma City v. St. Louis-S.F. Ry., 315 I.C.C. 516 (517).

181. Unrestricted rates apply over any route made up of lines of participating carriers.—[Vols. 2, 6, 9, 11-19].—See also Hygrade Food Products Corp. case, n. 17, above.

Where tariff specifically provides, in accordance with plan 2 of rule 4(k) of Tariff Circular 20, that rates will apply over all routes composed of lines of carriers parties thereto, such publication renders application of claimed routes both definite and certain and presumably reasonable. Burden is on carriers to publish definite routing restrictions if they deem any routes to be in any respect unreasonable; nor may a carrier claim a route to be excessively circuitous or unreasonable when the tariff thus specifically provides for its use.—Producers Cooperative Oil Mill v. St. Louis-S.F. Ry. Co., 322 I.C.C. 267 (271)*.

183. Backhauling or circuitous routing required.—[Vols. 2, 6, 9, 11, 12, 16-19].—Routing provisions governing application of through rate charged on shipments from Oklahoma City to Quincy, Ill., and rate to Moberly, Mo., claimed as factor of lower combination rate inserted by shipper in the billing, specified Moberly as the gateway to Quincy and Boonville, Mo., as the gateway to Moberly, but provided no specific routing east of either gateway. Shipments forwarded over the higher-rated route were misrouted when, under those provisions, they could have moved over a route via Booneville to Moberly and beyond, over which the higher rate did not apply. While the described route via Booneville to Moberly involved an out-of-line haul, the circuity of about 11 percent is not excessive; moreover, as the tariff specifically provided that rates would apply over all routes composed of participating carriers, defendants may not claim that route to be excessively circuitous or unreasonable.—Producers Cooperative Oil Mill v. St. Louis-S.F. Ry., 322 I.C.C. 267 (270-1)*.

Reconsignment, Diversion, Reshipment; Transit

194. In general.—[Vols. 17, 18].—By agreement of the parties charges on Government shipments originally shipped to Seattle under a §22 quotation and backhauled to ultimate

destinations upon reconsignment are to be computed under rule 14 of plaintiff's reconsignment tariff, which provides for application of the combination of tariff rates to and from the reconsignment point as maximum. Though the §22 quotation is not a "tariff," it provided that shipments thereunder would be subject to all charges and allowances respecting reconsignment and to all other rules which in any way increase or decrease the amount to be paid; thus, the maximum charge should be computed using the quotation as if rule 14 were included therein, and treating the quotation as a tariff for purpose of that rule, to permit aggregation of favorable rates in case of reconsignment; the United States is entitled to combine the quotation and local tariff to produce the maximum charge.—Great Northern Ry. Co. v. United States, 312 F. 2d 901 (905).

Three of carriers originating considered shipments of grain held at Minneapolis for inspection and reconsignment, which were later moved beyond Superior, Wis. by lake vessel, maintain rules in their local tariffs governing reconsignment of freight and holding of shipments for surrender of bills of lading or written orders, or for inspection at stations on their lines; the fourth originating carrier provides for those services in an agency tariff. Reasonable construction of those tariffs and tariff providing for rates on grain moved beyond Superior by water, as a whole, indicates that defendants authorize inspection, holding for disposition orders, and forwarding from hold points as part of their diversion and reconsignment service; applicable rates determined accordingly.—Farmers Union Grain Term. Assn. v. Canadian Natl. Rys., 315 I.C.C. 559 (563-4, 565)*.

195. Reconsignment as distinguished from reshipment.—[Vols. 2, 6, 9, 19].—See Great Northern Ry. Co. v. United States, §1(6), n. 303.

201. Rate applicable in absence of privilege.—[Vols. 2, 9, 18].—Since tariff authorizing fabrication in transit did not name billboards or signboards as outbound articles in connection with which transit was permitted, transit did not apply on iron and steel articles reshipped after fabrication as parts of completed billboards or signboards; rates on iron and steel articles not subject to transit applied on the inbound shipments, and flat rates on billboards and signboards, plus transit charge, on the outbound shipments.—Dolby Advertising of Lake Charles v. Texas & N. O. R. Co., 315 I.C.C. 33 (36).

205. Transit.—See §1(6), n. 538, applicable charges.

Observance of Published Tariffs

215. Departure from rate named in tariff unlawful.—[Vols. 2, 6, 9, 11, 12, 14-19].—Defendants' master increase tariff making applicable general increases authorized in Ex Parte No. 212 specifically provides that no increase is to apply on "Plate or sheet, iron or steel, NOIBN," which abbreviation is defined in that tariff as meaning "not otherwise indexed by name and not more specifically provided for in this tariff"; as waster plates or sheets are not otherwise indexed or more specifically provided for in the increase tariff, it is apparent that they ar embraced in that provision and that no increase was provided on those commodities. Rates including 2 percent increase authorized in Ex Parte 212 were therefore inapplicable; applicable rates determined.—Joliet Wrought Washer Co. v. Chicago, R. I. & P. R. Co., 315 I.C.C. 477 (479).

217. Strict compliance with tariff rules as to service offered.—[Vols. 2, 6, 9, 13-19].—Under §6 a carrier cannot deviate from the rate specified in its tariff for any service; and when one of conditions of export tariff, that the export rates would apply only of traffic which did not leave the delivering carrier's possession at the port, was not fulfilled in case of certain war-blocked export shipments of Government freight, the railroad had to collect the domestic rates called for by the tariff in that circumstance.—Pennsylvania R. Co. v. United States, 315 F. 2d 460 (464-5)*.

Railroad could not waive tariff requirement that any diversion request be made in writing or confirmed in writing; nor could it authorize stockyard operator, who was in charge of feeding, watering, and resting cattle in transit, to accept oral diversion requests from shippers. Shippers concede they did not give carrier a written diversion request, or confirm such a request in writing; oral request given to

stockyard operator was not lawful and was not binding on the railroad.—Atchison, T. & S.F. Ry. Co. v. Bouziden, 307 F. 2d 230 (233, 234).

When tariff in issue, in railroad's suit for claimed undercharges on defendant's shipments of empty steel drums from Texas to Baton Rouge, La., provides that lower rates therein apply only when (a) immediate preceeding transportation of the filled drums to shipping point of empty drums was by rail freight, (b) a record is maintained of filled containers received and empty containers returned, and (c) shipper furnishes carrier a certificate of prior rail service on the filled containers, shipper is entitled to the lower rate only if all requirements are met. Requirements (a) and (c) were met when, though defendant trucked the shipments from plant where filled drums were received by rail about 15 miles to the rail yard, the rail yard and plant (in same commercial zone) constitute a "shipping point"; and the certificate defendant furnished contains the substance, but not precise language, of that required. However, defendant's maintenance of a record on empty containers shipped, but no record of filled containers received, does not meet requirement (b); thus, defendant is not entitled to the lower rate on its shipments. Railroad is entitled to judgment, with interest.—Louisiana & A. Ry. Co. v. Export Drum Co., 359 F. 2d 311 (315-7)*.

Also, railroad is entitled to collect alleged undercharges on defendant's shipments from Knoxville and Nashville, Tenn., to Baton Rouge, which were moved in defendant's trucks therefrom to New Orleans for export. Applicable tariff provides that export rates named therein apply only over routes published in Southern Ports Routing Guide, and the routing guide named no direct routes between either of the origins and the destination; there being no published routes available to those shipments, lower export rates claimed by defendant could not possibly apply. Furthermore, tariff provided that export rates applied only on goods exported from destination point of the inbound shipments; considered shipments were not exported from their rail destination point, Baton Rouge, but were trucked to New Orleans and exported therefrom by defendant's vendee; under the circumstances, no export rates can apply.—Id., 228 F. Supp. 89 (93-5)*.

Under applicable tariffs naming "battery" rates on a shipment of different articles of volume equal to two or more carloads, the cars must be tendered for shipment in the same day (regardless of whether they move under bills of lading for each car or under one bill of lading for the entire quantity), and it follows that in order to give defendants the substantially lower battery rates on a shipment of several cars which were delivered to the railroad over a period of several days, plaintiff was compelled to detain the cars until the entire battery was delivered. There is no question that plaintiff may detain cars in such shipment until entire battery is received, but if it does so in order to give shipper benefit of the lower battery rate, it must, under the regulations, charge demurrage on the detained cars for such service. Judgment for carrier in amount of demurrage charges claimed.—Chicago, R.I. & P.R. Co. v. Furniture Forwarders of St. Louis, 272 F. Supp. 62 (64)*.

Even assuming that all chemicals contained in complainant's shipments of brake fluid mixtures were embraced in tariff item claimed applicable, mixing rule 10 of governing classification would not apply since it comes into operation only when there are a number of articles in a shipment or the same article is shipped in different containers; the various chemicals included in the physical mixtures are no longer separate articles on which charges can be computed under a mixed-carload rule. Moreover, both rule 35 of the classification and the considered tariff provide for mixtures in compartmentalized tank cars, whereas complainant's shipments moved in uncompartmented tank cars.—R.M. Hollingshead Corp. v. Alton & S.R., 319 I.C.C. 86 (89).

The prerequisite to application of a through transit rate is strict observance of the substantial conditions of governing transit tariff; subjecting the inbound commodity to a process not authorized by the transit tariff is not the required compliance. Governing tariff contained no provision for transit on pipe fabricated from sheets and wrapped at Portland, Oreg., and thus no fiction of transit to trans-

form the separate movements to and from Portland into a single through movement from origin to ultimate destination; therefore, through rates from points of origin to ultimate destinations, with transit at Portland, were not applicable on such shipments.—Petition for Southern Pacific Co. for Declaratory Order, 316 I.C.C. 661 (665).

222. Carriers' duty to collect tariff charges.—[Vols. 2, 6, 9, 11-19].—No act or omission of a carrier will estop or preclude it from enforcing payment of amount due under a lawful tariff. Hence, by its action in accepting a shipping order coupled with an unlawful diversion request, connecting carrier could not estop or preclude, by implied agreement or otherwise, right and duty of delivering carrier to collect freight charges on considered cattle shipments on basis of the applicable combination rate, rather than on lower through rate which would have applied had shippers' diversion request been in accord with tariff requirements.—Atchison, T. & S.F.Ry. Co. v. Bouziden, 307 F. 2d 230 (234-5).

See also Chicago & E.I.R. Co. v. Midwest Homes, Inc., §6(7), n. 263.

In railroad's actions to recover freight charges from the United States on shipments consigned to two naval bases, and which moved on uniform straight bills of lading carrying notations "to be prepaid" and "Total Prepaid," plaintiff's motion to strike the government's pleas of estoppel must be denied. In view of the Supreme Court's statement in 352 US 59, "Nor, unlike the case of a private shipper, do we think the defense of estoppel is unavailable to the Government," the pleas of estoppel cannot be stricken unless there is a distinction between the government as a shipper and as a consignee; no such distinction is apparent to the court.—Southern Pac. Co. v. United States, 243 F. Supp. 834 (838-9)*.

Shipping documents on considered shipments are the basis of established commercial transactions and are relied on by all parties as a correct statement of the realities of the situation. Plaintiff, initial carrier, accepted bill of lading stamped "to be prepaid" and issued the Freight Bill for Prepaid Charges, thus leading destination carrier to deliver to consignee the Check-out Slip marked "prepaid." Those events instituted by plaintiff led consignee to accept the goods and pay the consignor therefor on the mistaken assumption that freight charges had been prepaid by consignor in accordance with his contractual obligations; thus the United States, by reason of plaintiff's conduct, paid the freight charges to the consignor. Though carrier could not collect the freight charges from consignor because it was insolvent, under the circumstances, plaintiff's conduct warrants invocation of the doctrine of estoppel in its suit to collect from the government as consignee.—Id., 243 F. Supp. 839 (840-1)*.

It has long been established that if freight rates paid for a shipment are less than the tariff approved by the commission, the railroad is required to collect the undercharges under penalty of severe fines.—Louisiana & A. Ry. Co. v. Export Drum Co., 228 F. Supp. 89 (95)*.

A carrier cannot waive or be estopped from collecting full charges prescribed by published tariffs. Plaintiff is not permitted nor can it be required to waive collection of the charges due on considered shipment, nor is it privileged to do so. Defendants, by requesting and accepting advance payment of inbound freight and storage charges in issue, guaranteed payment of all lawful charges due on the shipment and are indebted to complainant in amount thereof; judgment for plaintiff for that amount plus interest and costs.—Union Pac. R. Co. v. Higgins, 223 F. Supp. 396 (401-2).

Agreement between plaintiff railroad and defendant shippers to be governed by decision of Maryland district court in plaintiff's suit involving same question as to whether the commission's service order (reducing free time for unloading boxcars at ports) applied to plaintiff's storage tariff granting grain shippers a longer free time for storage in cars, is not unenforceable on ground that, according to a diffent decision by the Court of Appeals in another circuit, it would permit carrier to waive charges it is legally obligated to collect under §6(7). The act would be violated only if the parties had agreed between themselves that carrier would not collect the extra charges it claims are due under the service order. Agreements like the one under review, which tend to expediate disposition of multi-

ple claims, are within policy of the Federal Rules of Civil Procedure and should be encouraged if otherwise valid and not contrary to any statutory provision.—Western Maryland Ry. Co. v. Continental Grain Co., 219 F. Supp. 126 (129-30, 131).

Although, in investigation proceeding where the primary issue is lawfulness of considered rates for future application, there is no need to determine applicability of the rates on shipments moving prior to effective date of amended schedules rendering that issue moot as to future shipments, carriers are required and expected to collect any outstanding undercharges that may be due on past shipments.—Vol. Rates on Processed Meat—Midwest to Ports, 322 I.C.C. 456 (475).

Carriers subject to regulation by the commission are required to charge the applicable rates published in their tariffs, and tariff users are entitled to rely on the plain provisions thereof. Where reasonable doubt exists as to applicability of two disputed bases, shipper is entitled to benefit of the lowest charge.—Zack v. Canadian National Rys., 315 I.C.C. 256 (258).

223. Liability for payment.—[Vols. 2, 6, 9, 13, 19].—See Union Pac. R. Co. v. Higgins, n. 222, above.

225. Refund of overcharges.—[Vols. 2, 6, 9, 17].—Although rates charged are found applicable and not unreasonable or otherwise unlawful, one shipment involved an overcharge, on which defendants are making refund; dismissal of the complaint will not preclude a refund of any overcharges which may be outstanding.—Lakeland Hide & Leather Co. v. Atlantic Coast Line R. Co., 316 I.C.C. 303 (306).

228. Rebates and concessions.—[Vols. 2, 6, 9, 11-19].—While ownership or maintenance of tracks inside a plant by a carrier, for use or benefit of the industry, violates §6(7), when such tracks are not in fact plant facilities, though used incidentally for temporary placement of industry cars to facilitate interchange of cars in line-haul service, no violation occurs.—A. O. Smith Corp. Terminal Allowance, 319 I.C.C. 99 (101)*.

Provision in tariff naming TOFC rates under which shippers move railroads' trailers to and from ramp sites, that, if prior arrangements are made with respondents, shippers or their agents may transport the trailers to destinations beyond tariff terminal areas, is a privilege within meaning of §6(7) since it holds out to provide something of value to shippers. As there is nothing to indicate the charge therefor or that it would not invite discrimination, since it would be discretionary with respondents to grant the privilege, and it is also a possible source of illegal rebating, it cannot be found lawful; cancellation required, without prejudice to any different conclusion in Ex Parte No. 230.—Iron and Steel Articles between Atlanta and St. Louis, 318 I.C.C. 80 (83).

231. Misquotation by carriers or tariff error.—[Vols. 2, 6, 9, 11-18].—Assurance to complainant by initial carrier's representative that the carriers would file special-docket applications to make refund on any shipments from considered origins to basis of lower per-car rates sought, previously requested per-car rates not having been published, was in legal effect similar to a misquotation of rates when not all participating carriers were agreeable to paying reparation; misquotation of rates is not an excuse for paying or charging either less or more than the rate duly filed in tariffs.—Farmers Potato Distr. Co., Inc. v. Atchison, T. & S.F Ry., 318 I.C.C. 415 (419)*.

That encircled reference governing rate claimed applicable under intermediate destination rule, indicating that it was published under authority of a fourth-section order, was erroneous because the order referred to did not grant fourth-section relief at the more-distant point on tariff from origin of complainant's shipments is irrelevant to application of the intermediate rule, which operates only according to its terms.—Allis-Chalmers Mfg. Co. v. Great Northern Ry. Co., 315 I.C.C. 152 (153, 154).

That a conflict in rates may have been the result of an error in tariff publication is irrelevant to shipper's right to application of the lower of the conflicting rates; determination of an issue of applicability of rates is not affected by the equities of the complaint.—Metropolitan Metals, Inc. v. Pennsylvania R. Co., 314 I.C.C. 737 (739).

238. Furnishing cars to conform with tariff minimum weights.—[Vols. 2, 6, 9, 12, 13, 16-

18].—First sentence of paragraph (a) of minimum weight rule in tariff naming rates on sand and gravel provides for a minimum based on 90 percent of marked capacity of car used, unless loaded to full visible capacity; second sentence provides a carriers' convenience rule; and third sentence limits size of cars for which carriers will accept orders to those of not less then 80,000 pounds capacity. That paragraph must be considered as a unit; and notwithstanding carrier's furnishing of a 100,000-pound car in lieu of 60,000-pound car ordered, the applicable minimum weight, unless loaded to full visible capacity with less weight, was 72,000 pounds, that being the minimum for the smallest car for which, under the tariff rule, orders would be accepted. —Infilco, Inc. v. Chicago, R. I. & P. R. Co., 315 I.C.C. 511 (513-4).

While no explanation is offered for carrier's acceptance of orders for 60,000-pound cars in direct contravention of the tariff provisions, its action or special agreements in that respect cannot take priority over the tariff provisions as published, which are binding on shippers and carriers alike.—Id., p. 515.

Actions before the Courts and Commission

260. Construction and interpretation of tariffs by commission.—[Vols. 2, 6, 9, 12, 16-19].—Ordinarily, tariff construction, like the interpretation of any other writing, is a typical judicial function, even though the divination be a difficult one. But though some of the possible constructions of the involved transit tariff are more plausible than others, and the court could pick a path through the tariffese if none but the immediate adversaries would be affected, the stakes are much higher. First, there is the desirability of uniformity which runs through carrier tariff law; second, and perhaps more important, the commission and the courts recognize that transit tariff privileges are subject to much abuse and unless carefully policed may be the instrument of forbidden discriminations and undue preferences between shippers, points, commodities, and the like. Lest such basic perils to a sound transportation policy be overlooked, and since the record in carriers' suit for undercharges is too sketchy in testimony as to both railroad practices and the provisions of the tariffs for the court to divine with safety what is really meant, the commission should first interpret and apply the considered tariff to the situation posed by the record.—Louisville & N.R. Co. v. Knox Homes Corp., 343 F. 2d 887 (892, 893-4)*.

Primary jurisdiction is most frequently resorted to where application of tariff provisions, as in the instant case, turns on factual evaluation of typically transportation matters; uniformity and consistency in the regulation of business entrusted to a particular agency are secured, and the limited functions of judicial review are more rationally exercised, by preliminary resort for ascertaining and interpreting the circumstances underlying legal issues to agencies better equipped than courts by specialization, by insight gained though experience, and by more flexible procedure. The primary jurisdiction of the commission properly may and should be invoked for the construction and interpretation of the tariff at issue. The district court's judgment in that respect is therefore vacated with directions to hold the cause in abeyance while the parties seek the commission's views in any form of proceeding it deems appropriate.—Id., 894, 896.

If the policy reflected by commission decisions interpreting tariff provisions is reasonably sound, then uniformity of application so essential in a regulated transportation industry makes it important that courts give their imprimatur to the policies thereby reflected. Efforts by courts, no matter how plausible on traditional construction principles, to avoid the impact of the general policy by refined distinctions based on terminology will inevitably impinge on uniformity and thereby put the court in the transportation-regulating business.—Strickland Transp. Co. v. United States, 334 F. 2d 172 (178).

Though ordinarily construction of a tariff is a matter of law for the court, preliminary resort to the commission may sometimes be required, as when words requiring construction are of a technical nature, or where extrinsic evidence within its particular field of expertise is required to reach a satisfactory conclusion. This "primary jurisdiction" doctrine applies where a claim, though originally cog-

nizable in the courts, is of such nature that the question involved should be determined initially by an agency, resort to which is deemed necessary because the courts, while retaining the final authority, should avail themselves of the agency's aid in gathering the relevant facts and marshalling them into a meaningful pattern. It is only when the words in the tariff are used in their common, ordinary sense, with no particular connotation in the field of the agency, that the doctrine of primary jurisdiction is inapplicable and the construction becomes a matter of law for the courts without prior resort to the agency.—United States v. Great Northern Ry. Co., 337 F. 2d 243 (246)*.

"Transit privileges," being a generic term requiring specific definition, must have a particular connotation in the transportation field, and is therefore a matter for primary construction by the commission within its particular expertise and knowledge in that field; and where it has previously made such a determination its decision should be given some consideration by the courts. Where such an issue is raised, requiring knowledge of a specialized field beyond the normal scope of experience of a court, it is necessary to review to establish that the expertise of an agency has at least been considered by the court, and if it appears that it has done so a judgment rendered by it is a priori suspect. As the specific question raised in the instant case has been ruled on by the commission in a proceeding involving similar traffic and the same tariff, wherein appellee was a party, the primary jurisdiction has been satisfied and there was no need to refer the instant matter again to the commission.—Id., pp. 246-8.

Although the commission's prior determination of the issue has no res judicata effect in the instant action and is not binding on the court per se, it is manifestly entitled to the greatest deference and weight; and the rationale requiring such weight to be given that decision applies when the same question comes up in a subsequent matter rather than on direct review, since the rulings, interpretations, and opinions of the agency constitute a body of experience and informed judgment to which courts and litigants may properly resort for guidance. The determination now to be made is quite in line with the commission's prior pronouncement distinguishing "transit privileges" and "reconsignment," and the district court should have considered that decision in construing those terms as found in the tariff involved.—Id., p. 248.

Only issue the commission was called upon to determine was the meaning of "in bond" as used in tariff item naming rates on "alcohol * * * in bond." The commission's finding, based on its expert knowledge, that "in bond" has a settled meaning which does not apply on complainant's shipment, is a reasonable one and should not be set aside.—United States v. I.C.C., 309 F. 2d 645 (645, 646)*.

Railroads draft their own tariffs and, like any other written instruments, tariffs should be construed against the drafters and in favor of the shipping public. Interpretation of two alternating sections in tariff naming scale rates on ground limestone (lower rates in tariff Sec. 4 applying on limestone "having value only for building, paving, roadmaking or roofing purposes" and so certified on bill of lading) and construction of commodity description in Sec. 4 as not including complainants' shipments of limestone that moved to feed mills under bills of lading stating that limestone shipped "has value for" those purposes (but omitting word "only" because it can be used for other purposes) produces an absurd result and strips that tariff section of all meaning. Moreover, for more than three years the railroads accepted plaintiffs' certification as being in substantial compliance with Sec. 4, and charged the lower rates on shipments to feed mills. Thus, the commission's decision that lower Sec. 4 rates are inapplicable cannot stand; case is remanded for further commission proceedings in conformity with the court's opinion.—Calcium Carbonate Co. v. United States, 256 F. Supp. 99 (101-3)*.

262. Remedy of carrier on shipper's refusal to pay.—[Vols. 2, 9, 11, 15, 16].—In railroad's suit to collect alleged undercharges on shipments of empty steel drums, shipper is not entitled to lower rate named in tariff in question when, by its failure to maintain a record of filled drums received by rail freight and empty drums returned, it did not comply with all requirements in tariff provision governing

application of that rate; and carrier is entitled to judgment plus interest. Both the act and the commission's regulations are silent as to allowance of prejudgment interest, but that question is initially one of federal law. The parties should be in the same position at the end of the dispute regardless of whether shipper refuses to pay disputed amount and carrier is forced to sue, or shipper pays and then sues for overcharges, and propriety of including interest from date of payment of overcharges has long been upheld by the courts; accordingly, prejudgment interest is awarded from dates of all of defendant's shipments to date of judgment and, pursuant to 28 USC §1961, interest is also awarded on the judgment from date thereof.—Louisiana &A. Ry. Co. v. Export Drum Co., 359 F. 2d 311 (317)*.

263. Actions to enforce provisions.—[Vols. 2, 6, 11-15, 17-19].—It is carrier's duty to collect the full tariff rate irrespective of mistake, misquotation of rates, or collusion between carrier and a third party resulting in lower rates to shipper. Trial judge properly computed charges on defendant's shipments of mobile-home sections on basis of the minimum weight for a 46-foot long flat car when defendant's letter (signed by its president) addressed to plaintiff's agent ordered cars of up to a maximum length of 46 feet, and that letter constituted its only order for flat cars. While each shipment moved under a bill of lading stating that, plaintiff being unable to furnish the 41' 6" flat car ordered, larger flat car was "furnished at carrier's convenience," and defendant paid charges computed for a 41' 6" car in accordance with Classification Rule 34, the bills of lading were prepared after cars were in transit and did not constitute orders for any of the shipments. Also, measurement showed that the loads could not be placed on a 41' 6" car and Rule 34 provides that, in such circumstances, shipper pays the rate for the car furnished. Judgment for plaintiff affirmed. —Chicago, E.I. & R. Co. v. Midwest Homes, Inc., 371 F. 2d 300 (301-3).

Since applicable tariff rules and regulations approved by the commission and contained in the Uniform Freight Classification have the force and effect of law, their construction is a matter of law for the court; and since shipper had no hand in their preparation, if they are found to be susceptible of different interpretations the construction most favorable to shipper must be adopted.—Halstead v. Norfolk & W. Ry. Co., 236 F. Supp. 182 (189). [Not arising hereunder.]

Although, after Maryland district court had held (adversely to plaintiff's contention) that commission service order reducing free time on boxcars held for unloading at ports to 7 days was intended to deal only with demurrage tariffs and did not affect plaintiff's storage tariff granting grain shippers 20 days' free storage in cars, the Court of Appeals for a different circuit reached a contrary conclusion in a suit by another railroad, latter decision (though it will be persuasive in future litigation involving interpretation of the service order) is no more conclusive than the decision of the Maryland district court and in no way impairs that court's holding, which plaintiff and instant defendants agreed would govern the outcome of their dispute. That agreement, freely entered into between the parties, cannot now be ignored because of such conflicting determination, particularly since plaintiff did not appeal the district court decision and thereby lost its opportunity to obtain a reversal or, failing that, to create a conflict among the circuits which would afford basis for certiorari by the Supreme Court.—Western Maryland Ry. Co. v. Continental Grain Co., 219 F. Supp. 126 (128, 130).

Plaintiff's failure to appeal the district court's decision also undermines its contention that it cannot abide by the agreement because the Interstate Commerce Act requires it to litigate all its rate claims against shippers; it cannot consistently brush aside its failure to litigate that decision to appellate determination while insisting that it is under an absolute duty to prosecute its rate claims to effect. Further, plaintiff cites no statutory or case law obligating it to litigate all rate claims; and if it was not required by the act to take an appeal in the test case (which apparently it was not), it was not required to shop for a circuit which would disagree with the decision in the test case. In its suit in New York district court to collect charges for storage and detention beginning on the eighth day after arrival, plaintiff has not sustained its burden of showing why the considered agree-

ment should not be enforced; defendants' motion for summary judgment granted.—Id., pp. 130, 131.

Words and Phrases

328. "In bond."—[Vol. 18].—The term "in bond" as used in considered tariff item covers shipments which are under bond to the Government as security for payment of the excise tax. Considered shipments having been taken out of storage and no longer under bond to the Government at time of their tender for transportation, were not "in bond" as that term is used in the tariff.—United States v. I.C.C., 309 F. 2d 645 (645-6)*.

Section 6. (8)-(10). Preference to shipments for United States; Schedule lacking notice of effective date; Penalty.—[Unchanged. See vol. 9, p. 7521.]

Amendments, see footnotes, vol. 2, pp. 1530-1532; historical notes, pp. 1530, 1531; vol. 17. p. 13389.

Historical Note

Rates and fares of railroads within the Alaska Railroad Act, jurisdiction of the commission, see Historical Note concerning Executive Order 11107 following §6(3).

30. Establishment of proportional rates by rail.—[Vols. 2, 6, 12, 13, 15, 17-19].—Although §6(11)(b) does not state the circumstances under which authority therein granted to prescribe proportional rail rates to and from the ports in connection with coastwise water movements may be exercised, it is apparent that such action must be based on a record in an appropriate proceeding which provides evidence justifying exercise of that power.—Agricultural Insecticides—Heyden, N.J., to Houston, Tex., 319 I.C.C. 493 (496)*.

Although Seatrain Lines urges that the commission, in connection with approval of reduced rail rate on candy from New York City area and intermediate Pennsylvania points to Texas points, order respondents to establish proportional rates on same level from those origins to Edgewater, N.J., and from Texas City to the interior destinations, the existing rates to and from the ports, which are not under investigation, are not unreasonable merely because they are higher percentages of first class than the reduced all-rail rate, and cost evidence does not indicate that they exceed a maximum reasonable level. As the reduced rate is amply compensatory and not competitively destructive or discriminatory, there is no justification for prescription of the proportionals sought.—Candy and Confectionery from N.J., N.Y., & Pa. to Tex., 321 I.C.C. 154 (161).[But see dissent.]

Section 6. (12) Jurisdiction of commission over carriers contracting with water carriers operating to foreign country.—[Unchanged. See vol. 11, p. 9239.]

Amendment, see footnote, vol. 11, p. 9239.

In General

2. Construction.—[Vols. 2, 7, 9].—Since §8 relates to rail and water carriers, not to common carriers by motor vehicle, it does not provide appellant a remedy for its claim that defendant motor carrier and its rate bureau breached their "contract" with the commission to be bound by decision in consolidated investigations into proposed rate increases, by charging rates criticized but not yet cancelled by the commission.—Lynchburg Traffic Bureau v. Smith's Transfer Corp. of Staunton, Va., 339 F. 2d 478 (480-1)*.

The commission's power with regard to reparation is discretionary, and it may in certain instances deny reparation even though a rate is unreasonable when there is good and sufficient reason for doing so. However, since carriers were notified in 300 ICC 373 that, except in extraordinary circumstances, a 5-year period after effective date of the docket No. 28300 class rates was the maximum reasonable for correcting abnormalities in the rate structure, and since record contains no convincing evidence of any such extraordinary circumstances, the numerous and complex problems faced by the railroads in bringing the rate structure into alignment with new uniform class rates cannot be the basis for a waiver of reparation after that 5-year period has expired.—William Volker & Co. of Texas v. Atchison, T. & S.F. Ry., 318 I.C.C. 249 (271).

3. Applicability to transportation in United States.—[Vols. 2, 7, 9, 12, 13, 15-19].—When defendant United States railroads and their connecting Canadian railroads had entered into a joint through international rate on potash from New Mexico origins to Canadian destinations, the commission had jurisdiction to determine reasonableness thereof in Canadian shipper's reparation proceeding assailing the rate as unreasonable on its shipments, and to order the domestic carriers to pay reparations in the entire amount by which the joint through rate charged is unreasonable. Lower court's holding that, since the commission had no jurisdiction to determine reasonableness of rates for transportation taking place in Canada, it had no power to order reparations with respect to Canadian portion of considered transportation, reversed.—Canada Packers, Ltd. v. Atchison, T. & S.F. Ry. Co., 385 U.S. 182 (183-4)*.

4. Retroactive findings (Arizona Grocery Doctrine).—[Vols. 7, 9, 11-19].—General revenue increases authorized in freight rates to offset railroad operating expenses are not prescribed rates within the Arizona Grocery case principle, as reports in the various ex parte proceedings expressly found. Reparation may

be awarded in amount by which assailed rate on previously prescribed basis plus general increases exceeds rate sought which is not lower than the basis prescribed.—American Colloid Co. v. Illinois Central R. Co., 321 I.C.C. 375 (377).

General increases authorized in line-haul rates on bituminous and lignite coal and in charges for transfer or dumping of coal and coke at lake and river ports are not to be considered prescribed within meaning of Arizona Grocery case, 284 US 370.—Increased Rates on Coal and Petroleum Coke, 316 I.C.C. 159 (178).

Although complainant has made a prima facie showing of unreasonableness of rate charged on salt from Silsbee, Utah, to Olympia, Wash., compared with reduced rate subsequently established, under Arizona Grocery case doctrine (284 US 370) the commission may not award reparation to a lower basis than that previously prescribed; however, increases authorized in general revenue proceedings are not "prescribed" within meaning of that decision; reparation awarded in amount by which assailed rate exceeded base rate prescribed as reasonable maximum between those points in 197 ICC 115.—Van Waters & Rodgers, Inc. v. Western Pac. R. Co., 315 I.C.C. 743 (745, 746).

Nature of Liability Imposed

13. Relation to rates for the future.—[Vols. 2, 7, 9, 11-19].—Awarding reparation for the past and fixing rates for the future involve determination of essentially different matters: one is in its nature private and the other public; one is made by the commission in its quasi-judicial capacity to measure past injuries sustained by a private shipper, and the other is made, in its quasilegislative capacity, to prevent future injury to the public.—William N. Feinstein & Co. v. United States, 209 F. Supp. 613 (620)*.

The commission's finding in 298 ICC 637 that unloading charges on shipments of vegetables delivered at carrier's Manhatten pier station would be unreasonable for the future did not preclude its finding in 313 ICC 783 that previous collection of such charges for unloading plaintiff's shipments of onions was not unreasonable. Such finding of future unlawfulness did not logically compel a subsequent finding of unlawfulness for the past; neither the commission in 298 ICC 637, nor the Supreme Court in 347 US 645 in considering the same charges, found that they were unlawful when assessed; thus there was extant no prior finding which would bind the commission in 313 ICC 783 to find that the unloading charge was unlawful when paid.—Id., p. 620.

Though basic and well-founded when applied to proper factual situations, the principles that (1) a reduction in rate or prescription of a reduced rate for the future does not establish unreasonableness of the previous higher rate, and (2) awarding of reparation for the past and fixing of rates for the future involve essentially different questions, are irrelevant in instant proceeding where damages are sought in amount of the difference between increased switching charge which became effective upon expiration of the suspension period and the lower switching charge subsequently approved.—Flores v. Texas & N.O.R. Co., 316 I.C.C. 440 (441).

To Whom Right of Action Accrues

17. Person or persons injured.—[Vols. 2, 7, 9, 19].—Pullman conductors are persons who will be injured by failure of carriers to observe provisions of Part I of the act if they lose their jobs as result of the Pennsylvania and the Pullman Co. instituting proposed new operation, in which the Pennsylvania's train conductors would perform all functions now performed by Pullman conductors in sleeping cars operated in service local to the Pennsylvania, under an agreement which purports to amend existing pooling agreement without the procedure required by §5(1). Therefore, Pullman conductors thus injured may recover damages from those carriers as provided in §§8 and 9.—Brogan v. Pennsylvania R. Co., 211 F. Supp. 881 (884, 886).

40. Person paying charges.—[Vols. 2, 7, 9, 11, 12, 17, 18].—In absence of adverse claimants, reparation may properly be awarded to the consignee who paid the freight charges.—William Volker & Co. of Texas v. Atchison, T. & S.F. Ry., 318 I.C.C. 249 (257).

43. Persons bearing charges.—[Vols. 2, 7, 9, 13, 16-19].—Though defendants allege that freight charges on involved shipments were not paid or borne by either complainant A, which produces the commodity, or complainant B, which markets it, evidence is persuasive that under procedure for settlement of accounts between B as broker and its consignees, on one hand, and B as consignee of A, on the other, B's consignees paid the freight charges in the first instance upon delivery of shipments and transmitted the freight bills to B, which deducted amounts thereon from prices shown on its invoices to consignees; and that A, in turn, upon surrender of the paid freight bills by B, deducted such charges by crediting them against invoice prices paid it by B. Thus, although the freight charges were initially paid by consignees, they were ultimately borne by A.—Plaswood Corp. v. Alton & S. R., 321 I.C.C. 434 (445).

Grounds for Recovery, Generally

81. Violations of the act.—[Vols. 2, 7, 9, 11, 15].—When a shipper relies on carriers' advice as to how its commodity should be described in shipping papers, shipper may not be deprived of his right to recover overcharges if the advice furnished is erroneous and, in reliance thereon, an incorrect commodity description appears on the shipping documents. In other words, use of an erroneous description, even though agreed on by the shipper and carriers, does not deprive shipper of the right to recover overcharges if a different description providing a lower rate was, in fact, applicable.—Fibre Bond Corp. v. Canadian National Rys., 318 I.C.C. 549 (553).

83. ——Acts not a violation; agreement to reduce rates.—[Vols. 2, 7, 9, 12, 14, 15, 17, 19].—Although import rates on crude rubber from North Atlantic ports to Pauline, Kans., had originally been reduced to parity with Topeka, in same rate base area, at the Government's request, defendants failed to reduce the rates to Pauline when they reduced rates to Topeka and other midwestern points; and despite a letter from delivering carrier to effect that rates to Pauline should not exceed those currently in effect to Topeka, parity was not restored until nearly 14 months after th Government requested that the Topeka basis be applied retroactively to Pauline; defendants' explanation of the delay as due to their consideration of retroactive application of the basis sought, together with difficulties concerning port differentials, is not satisfactory; reparation awarded.—United States v. Atchison, T. & S. F. Ry. Co., 315 I.C.C. 259 (261-2, 263).

85.——Delay.—[Vols. 2, 9, 12-14, 16-18].—Recovery of damages for delay in shipment must be limited to compensation for loss. Although shipment of plums was not transported and delivered to plaintiff with "reasonable dispatch" within meaning of that term in uniform bill of lading, and the 2-day period of delay was unreasonable and unexcused, plaintiff is not entitled to damages when there was no physical damage to or deterioration of the plums, and they were sold at retail at the identical price for which they would have been sold had they been delivered 2 days earlier. Plaintiff has not shown that it suffered any compensable loss; cause dismissed.—Great Atlantic & Pacific Tea Co. v. Atchison, T. S.F. Ry. Co., 224 F. Supp. 903 (903, 905, 907)*.

89.——Taxes.—[Vols. 2, 14-16, 18, 19].—The commission is without authority to order refund of transportation taxes.—William Volker & Co. v. Atchison, T. & S.F. Ry., 318 I.C.C. 249 (250); Budlong Pickle Co. v. Ann Arbor R. Co., 315 I.C.C. 333 (334).

94. Willingness of carrier to make reparation.—[Vols. 2, 6, 9, 16, 18, 19].—Though no special-docket application was actually filed to make refund on shipments of fish oil residium which moved from Atlantic coast points to Muscatine, Iowa, and Mendota, Ill., during period between establishment of reduced basis in official territory generally and the establishment of that basis to Muscatine and Mendota, the facts that originating carriers had indicated a willingness to do so, that complainant actively supported the reductions, and that western carriers serving those destinations introduced no evidence in the complaint proceeding, are entitled to consideration along with other evidence of unreasonableness. Reparation awarded.—Kent Feeds,

Inc. v. Pennsylvania R. Co., 319 I.C.C. 427 (429)*.

Assurance of a railroad official that shipments would be handled for reparation is not controlling as to reasonableness of rates charged.—Farmers Potato Distr. Co., Inc. v. Atchison, T. & S.F. Ry., 315 I.C.C. 105 (109)*.

While defendant's admission in its statement registered on special docket that assailed rate was published in error is not controlling, it is a relevant factor that has probative value to support complaint seeking reparation.—Arkansas Plant Food Co. v. St. Louis S.W. Ry. Co., 315 I.C.C. 680 (681, 682).

95. Failure to obey orders of commission.—[Vols. 2, 7, 9, 11, 12, 14, 16, 17].—Carrier's violation of an order prescribing a rate relation to remove undue prejudice does not create a presumption that shippers have been damaged thereby; without a showing of actual damage caused by violation of the order, no reparation can be awarded.—Phillips Petroleum Co. v. Panhandle & S.F. Ry. Co., 315 I.C.C. 378 (380).

Although, during period between competitive reduction of rates on naphtha from Oklahoma group 3 to Illinois points and subsequent corresponding reduction of rates to considered Indiana points, assailed rates to Indiana exceeded differentials prescribed over Effingham, Ill., in 243 ICC 589, they were not unreasonably high merely because defendants were not in compliance with order in that proceeding. The differential rates to Indiana were not prescribed as reasonable maxima, but to remove undue prejudice, and complainants do not show specific damage as result of temporary widening of the differential. Reparation denied.—Anderson-Prichard Oil Corp. v. Alton & S.R., 315 I.C.C. 59 (62).

Measure of Damages, Generally

109. Interest.—[Vols. 2, 7, 9, 11, 13-19].—Both the act and the commission's regulations are silent on question of allowance of prejudgment interest; however, being part of the determination of proper remedy for enforcement of tariffs established pursuant to the act, the question is initially one of federal law. As the common law recognizes, only way a wronged party can be made whole is to award him interest from time he should have received money due him; disputing parties should be in same position at end of the dispute regardless of whether shipper does not pay amount claimed and carrier is forced to sue, or shipper pays and then sues for overcharges, and the propriety of commission practice of including interest from date of payment in a reparation award on overcharges has long been upheld by the courts. Whether or not the commission in its discretion could refuse to award such interest, interest from time the money is due (date of shipment) is a mandatory element of the damages in actions initiated in federal district courts for undercharges on freight shipments.—Louisiana & A. Ry. Co. v. Export Drum Co., 359 F. 2d 311 (317)*.

Unreasonable Rates and Charges

121. Basis of award, in general.—[Vols. 2, 7, 9, 16-19].—Before an award of reparation may be made under §1, it must appear that the assailed rates exceeded a maximum reasonable level. Depressed rates are not an acceptable standard of maximum reasonableness, nor does subsequent reduction of assailed rates indicate that they were unjust and unreasonable. Since assailed rates were the going rates on considered traffic, and the lower compared rates were reduced to retain traffic threatened by motor competition and to establish a higher minimum weight, reparation is denied.—Grand Rapids Gypsum Co. v. Ann Arbor R. Co., 321 I.C.C. 293 (295-6); also, prior findings awarding reparation on shipments charged combination rates, because clearance difficulties required movement over nontariff routes, are not controlling in similar circumstances when there is no showing that the rate sought for reparation purposes was ever prescribed as reasonable maximum on considered commodity in the territory involved.—Westinghouse Electric Corp. v. Pennsylvania R. Co., 318 I.C.C. 1(4).

Defendants concede that charges collected on shipments of steel plates at combination rate applicable over route of movement, which because of clearance difficulties was used instead of lower-rated route specified by

shipper, were unreasonable. Charges suggested by them as reasonable maximum, based on mileage scale prescribed on iron and steel articles in 155 ICC 517, including authorized increases through Ex Parte No. 212, would be just and reasonable and they will be expected to make reparation to complainant on that basis.—Electric Boat Division v. New York, N.H. & H.R. Co., 319 I.C.C. 83 (85)*.

Defendants have failed to rebut presumption of unreasonableness in charging of commodity rates on considered shipments which exceeded exceptions rates contemporaneously applicable on like traffic in same general territory and to more distant points over same route. Reparation awarded to basis of the exceptions rates, with interest.—Westinghouse Electric Corp. v. New York Central R. Co., 318 I.C.C. 277 (280).

Assailed rates on Government shipments of crude rubber from port of New York to Pauline, Kans., were higher during claimed reparation period than rates on same commodity from North Atlantic ports, including New York, to points in official and western territories which then had the lower Topeka basis sought, and at same time rates to Topeka and Pauline were on parity from certain gulf ports and western origins; Pauline and Topeka are in same rate base area and transportation conditions are substantially the same to both points; moreover, delay of nearly 14 months in reestablishing rate parity of Pauline with Topeka, as requested by the Government, is not satisfactorily explained; reparation awarded to basis of the rates to Topeka.—United States v. Atchison, T. & S.F. Ry. Co., 315 I.C.C. 259 (263).

122. Voluntary reductions.—[Vols. 2, 7, 9, 12, 14, 17-19].—See also §1(5), n. 319.

Where reduced rates which have become effective upon expiration of the statutory suspension period are ultimately found unlawful, §8 appears to provide that carriers would be liable in damages to persons injured thereby, since all provisions of the act are required to be administered and enforced with a view to carrying out the national transportation policy, and an unreasonably low rate found to violate that policy would give rise to an action for damages.—Arrow Transp. Co. v. Southern Ry. Co., 308 F. 2d 181 (185-6)*.

Where no significant difference is shown in transportation or competitive conditions affecting movement of cement over different routes from same origin to same destination as those of complainant's shipments, no reason appears why reduced rate established over other routes with different delivering carriers was not made applicable over route of movement. Assailed rate found unreasonable and reparation awarded.—Penn-Dixie Cement Corp. v. Chesapeake & O. Ry. Co., 319 I.C.C. 289 (290)*.

While subsequent voluntary reduction of assailed rate does not establish unreasonableness thereof, it is a relevant factor and has probative value to support complaint seeking reparation.—Arkansas Plant Food Co. v. St. Louis S.W. Ry. Co., 315 I.C.C. 680 (682).

Though neither subsequent reduction of a rate, nor comparative distances, nor destination grouping on other traffic would be alone controlling, all are relevant factors having probative value to support complaint seeking reparation. Rate sought on salt from Silsbee, Utah, to Olympia, Wash., is the same as that which applied on shipments to more-distant points of Aberdeen, Seattle, and Tacoma, with the latter two of which Olympia is grouped on commodities generally, and complainant's competitor at Newark, Calif., had a lower rate which was the same to all those destinations; moreover, reduced rate established to the other points and subsequently made applicable to Olympia was established in anticipation of a continuing movement expected to recur each year. Considering all those circumstances, complainant has made a prima facie showing that rate charged to Olympia was unjust and unreasonable. Reparation awarded.—Van Waters & Rodgers, Inc. v. Western Pac. R. Co., 315 I.C.C. 743 (746).

125. Reduction by order of commission.—[Vols. 2, 7, 11].—The commission's approval of a lower switching charge as a reasonable maximum, after proposed higher charge had become effective at the end of the suspension period, was tantamount to finding that any charge assessed after expiration of the suspension period which exceeded that subsequently approved was unlawful.—Flores v. Texas & N.O.R. Co., 316 I.C.C. 440 (442).

127. General readjustment; exceptions and limitations.—[Vols. 2, 7, 9, 11, 19].—All involved shipments were delivered after the cut-off date of the 5-year period fixed by 303 ICC 373 as a reasonable time for carriers to correct abnormalities resulting from general class-rate revision and establishment of uniform classification basis. Assailed exceptions rates and charges paid exceeded the uniform classification basis, and no extraordinary circumstances are shown to warrant denial of reparation; awarded to basis of corresponding uniform class rates on same commodities between same points, plus authorized general increases.—United States v. Missouri Pac. R. Co., 322 I.C.C. 418 (421).

Although prior to 300 ICC 373 the commission, in recognition of the many complex problems involved in bringing the rate structure into alinement with the prescribed uniform class-rate basis, denied reparation in case of commodity or exceptions rates exceeding the new class rates, notwithstanding their unreasonableness, that decision notified carriers that a period of 5 years from effective date of the uniform class rates would be a maximum reasonable time for completion of such adjustments. The 5-year period was suggested by the railroads themselves, and the difficulties cited by defendants, which were the very reason for the commission's past denials, cannot be the basis for waiver of reparation after that period has expired. Reparation awarded, with interest, on shipments charged rates higher than the uniform class rates.—William Volker & Co. of Texas v. Atchison, T. & S.F. Ry., 318 I.C.C. 249 (271).

132. Proof and measure of damages.—[Vols. 2, 7, 12, 13, 17-19].—Burden of proving unreasonableness of rates which are in effect is on complainant; and where reparation is sought the total rates must be shown to exceed reasonable maximum levels. Complainant's evidence respecting unreasonableness of assailed rates on iron or steel waster sheets is directed solely to reasonableness of 2-percent increase made in the basic rates, which was not specifically authorized in Ex Parte No. 212, and fails to indicate that the total rates exceeded reasonable maxima; no award of reparation may be made on ground of unreasonableness.—Joliet Wrought Washer Co. v. Chicago, R.I. & P.R. Co., 315 I.C.C. 477 (480, 481).

Though neither fact that lower rate sought applied in reverse direction during movement of considered shipments, nor defendant's admission that rate charged was published in error, and its subsequent reduction thereof to basis sought, nor complainant's showing that, minimum weights and actual loadings considered, rate sought would yield higher car-mile earnings than that assailed, would alone be controlling, all are relevant factors and have probative value to support complaint; complainant has made a prima facie showing of unreasonableness; reparation awarded to basis sought.—Arkansas Plant Food Co. v. St. Louis S. W. Ry. Co., 315 I.C.C. 680 (681-2).

133. Effect of suspension order, or postponement.—[Vols. 9, 15, 17].—Although no order was entered requiring carrier to keep records of amounts received after increased switching charge became effective, as provided by §15(7), where the ultimate determination of maximum reasonableness is made after termination of the suspension period the findings may be applied retroactively to effective date of the charge, and in a subsequent complaint proceeding claiming reparation based on such findings, additional evidence of unlawfulness need not be submitted. Contention that approval of the lower charge was solely a prescription for the future ignores fact that it was tantamount to a finding that any higher charge assessed after expiration of suspension was unlawful. Reparation awarded to basis of the lower charge approved, with interest.—Flores v. Texas & N.O.R. Co., 316 I.C.C. 440 (442).

134. Interim percentage increases.—[Vols. 16-19].—Rates on crude vermiculite which included full percentage interim increases authorized in first and second reports in Ex Parte No. 166 were not unreasonable merely because those reports prescribed maximum holddowns on limestone rock, furnace slag, and perlite rock; shipments of furnace slag and limestone rock ordinarily move only relatively short distances and therefore are generally charged same percentage increases as complainants' shipments, thus were not treated differently; though perlite rock moves substantial distances, during the reparation peri-

od it was a relatively minor competitor of crude vermiculite; and there is no showing of similarity of transportation characteristics warranting finding rates on perlite rock to be a reasonable maximum level for complainants' shipments.—Zonolite Co. v. Great Northern Ry. Co., 315 I.C.C. 303 (305, 307)*.

Moreover, where reparation is sought, total charges resulting from the basic rates plus the increases must be shown to exceed reasonable maximum levels; basic rates on crude vermiculite were not prescribed by the commission, but were reduced rates established at shipper requests; and complainants' comparison of revenues from the assailed rates with their determination of out-of-pocket costs of the transportation service is not controlling in passing on maximum reasonableness thereof. Reparation denied.—Id., pp. 306, 307.

Unreasonable Classifications, Regulations, and Practices

140. In general.—[Vol. 2].—Although defendants attempt to justify their failure to establish reduced exceptions basis on fish oil residuum to the border point of Muscatine, Iowa, and the northern Illinois point of Mendota (both served by western railroads) at the same time as that basis was established in official territory generally, on ground that such a practice is not uncommon, there is no apparent difference in transportation conditions justifying such failure. In the circumstances, the prior and subsequent similarity of rate treatment of those points and other official territory destinations constitutes a prima facie showing of unreasonableness of a practice causing unreasonable rates. Reparation awarded to basis of the reduced rates established subsequent to movement of considered shipments.—Kent Feeds, Inc. v. Pennsylvania R. Co., 319 I.C.C. 427 (429-30)*.

142. Weights and weighing.—[Vols. 2, 7, 9, 11-19].—See U.S. Department of Defense v. Alton & S.R., §1(6), n. 236.

149. Routing and misrouting.—[Vols. 2, 7, 9, 17, 18].—See also Blandin Paper Co. v. Great Northern Ry. Co., §16(2), n. 2.

Shipments were misrouted and shipper is entitled to reparation when rate named in bill of lading, which was held out by an aggregate rule, was not established over route named in the billing until after shipments moved, but initial carrier's agent did not call shipper's attention to the conflict, and at time of movement the lower aggregate was available over a route embracing initial carrier, over which the higher joint rate applicable over the route of movement did not apply.—Producers Cooperative Oil Mill v. St. Louis-S.F. Ry. Co., 322 I.C.C. 267 (269, 271)*.

Unjust Discrimination

171. Cause of action based on statute.—[Vols. 2, 9, 19].—See Wright v. Chicago, B. & Q. R. Co., §3(1), n. 103.

Undue Preference and Prejudice

180. Proof and measure of damages.—[Vols. 2, 7, 9, 11-19].—To establish undue prejudice and disadvantage under §3, complainant must show that it was injured by reason of the rates charged, how the discrimination or disadvantage affected it to its damage, and the extent of the injury or amount of damage; and the proof of damage must be by such evidentiary facts as would be required to sustain a recovery in a court of law.—Lakeland Hide & Leather Co. v. Atlantic Coast Line R., 316 I.C.C. 303 (306); that complainant, in order to meet competition from a lower-rated origin, had to bear substantial out-of-pocket loss on each carload of salt shipped does not alone constitute the definiteness needed to prove damage under §3.—Van Waters & Rodgers, Inc. v. Western Pac. R. Co., 315 I.C.C. 743 (745-6).

To be entitled to award of reparation under §3, complainant must show with same degree of certainty as required in a court of law that he has been damaged by the unlawful rate situation, and the amount of damage thus suffered. Measure of damages is not necessarily the difference between one rate and another; complainant claims damages in amount of difference between assailed rate and that subsequently established in compliance with outstanding §3 order, but such difference is not shown to be equal to the actual monetary damage suffered; reparation denied.—Phillips Petroleum Co. v. Panhandle & S.F. Ry. Co.,

315 I.C.C. 378 (380); similarly, departure from a prescribed nonprejudicial differential relationship due to carriers' reduction, for competitive reasons, of rates to the preferred destinations does not alone create a presumption that complainant has been damaged.—Anderson-Prichard Oil Corp. v. Alton & S.R., 315 I.C.C. 59 (62).

Complainant's showing that the market price of sulphuric acid at Thompson, Utah, was set by its competitor at Avon, Calif., and that it was forced to absorb the difference between the rate applicable on its shipments from Fort Worth and the lower rate available to the competitor is not rebutted; such difference was unduly prejudicial to complainant; reparation awarded in amount of the difference in charges collected and those based on the lower rate charged the competitor.—Stauffer Chemical Co. v. Fort Worth & D. Ry. Co., 315 I.C.C. 63 (65)*.

Section 4 of Interstate Commerce Act

186. Long-and-short-haul; rates subject to rule 27.—[Vols. 2, 7].—With respect to shipments of potatoes to destinations covered by holdout rule in tariff publishing lower per-car rates from a more distant point, defendants voluntarily held themselves out to provide the rate basis set out in the holdout rule, which basis was used by the railroads and approved by the commission in granting fourth-section relief for the per-car rates; that basis may therefore be accepted as reasonable for reparation purposes for those shipments.—Farmers Potato Distr. Co., Inc. v. Atchison, T. & S.F. Ry., 315 I.C.C. 105 (109-10)*.

Since fourth-section order granting relief on potatoes from southern to official-territory points required official-territory defendants, to extent they were applicants in the fourth-section proceeding, to maintain from Portlock, Va., an intermediate point on direct routes from Euclid, Va., in official territory, rates constructed on same basis and in same manner as rates established by them from Euclid to same destinations, their failure to provide that basis for constructing rates from Portlock in holdout rules voluntarily established in compliance with intermediate-point condition of that order violated the terms thereof. Such failure to comply with the commission's orders should not be allowed to defeat the right to reparation of a shipper at a higher-rated intermediate point. Reparation awarded on direct-route shipments from Portlock to basis of rates constructed as described.—Id., 318 I.C.C. 415 (417-8)*.

Section 6 of Interstate Commerce Act

193. Overcharge.—[Vols. 2, 7, 9, 11, 13, 14, 17, 19].—See also Zack v. Canadian National Rys., §6(7), n. 141.

When a shipper relies on carriers for advice as to how its commodity should be described in shipping papers, he may not be deprived of his right to recover overcharges if advice furnished is erroneous and, in reliance thereon, an incorrect commodity description appears in the shipping documents. Carriers' Weighing and Inspection Bureau advised shipper that its batting, when used as padding for automobile door panels, should be described as "Insulating Material, NOIBN," and so described it in the weight agreement; accordingly, shipper so described considered shipments in its billing. In view of evidence as to nature and use of commodity shipped, which shows it to be padding material in batting form, tariff item naming lower rates on "Batting, *** or Padding" provides an accurate description thereof; and since charges were based on class ratings published on insulating materials, the shipments were overcharged. Reparation awarded with interest.—Fibre Bond Corp. v. Canadian National Rys., 318 I.C.C. 549 (551, 553, 554).

Commodity rate per gross ton on ferrophosphorus, minimum 56,000 pounds, was applicable on shipment weighing 68,200 pounds, rather than lower rate on 100,000-pound mimimum; collection of charges at class 22.5 rate per 100 pounds resulted in overcharges on that shipment; complainant is entitled to reparation.—H. A. Lott, Inc. v. Louisville & N.R. Co., 316 I.C.C. 409*.

In view of finding that shipments comprising parts of a rotary kiln for installation in consignee's paper mill were pulp or paper mill machinery parts within item in section 1 of tariff, it need not be determined whether that description was more specific than that of

machinery parts in section 2, under which shipments were billed and charged; under alternating provisions of the tariff for application of the lower of charges applying under the two sections, the lower charges under the section 1 item should have been applied; reparation awarded, with interest.—Traylor Engineering & Mfg. v. Lehigh Valley R. Co., 316 I.C.C. 31 (36-7).

Charges based on combination rates which did not become effective until after considered shipments moved were inapplicable; reparation awarded to basis of single-factor rate still in effect when shipments moved.—Hutchinson Iron & Metal, Inc., v. Balitmore & O.R. Co., 316 I.C.C. 667 (670).

194. Undercharge.—[Vols. 2, 7, 9, 12-17].—In actions initiated in federal district courts for undercharges on freight shipments, interest from the time the money is due (date of shipment) is a mandatory element of the damages.—Louisiana & A. Ry. Co. v. Export Drum Co., 359 F. 2d 311 (317)*.

201. Failure to observe commission's tariff rules.—[Vols. 2, 7, 17, 18].—Defendants' failure to publish a tariff provision in accordance with tariff circular rule 66 was prima facie unreasonable and resulting presumption of unreasonableness of charges collected on minimum weight for 53-foot car used is not rebutted. Rule 66 requirements as to notations on the bill of lading were generally followed, and if defendants had published a rule in conformity therewith applicable charges would have been those on basis of the 40-foot car ordered; reparation awarded with interest.—United States v. Atlantic Coast Line R. Co., 318 I.C.C. 869 (870, 872).

Complaints Seeking Reparation

217. Necessity of through charges being in issue——parties.—[Vols. 2, 7, 9, 11, 15-19].—For reparation purposes it must be shown that the total charges were unjust or unreasonable, not just a single factor or segment; thus, no award can be made on Government shipments of crude rubber which moved from the port of New York to Pauline, Kans., whence they were reshipped by rail to Topeka after storage in transit under a §22 arrangement, when the complaint assailed only the factor charged from New York to Pauline.—United States v. Atchison, T. & S.F. Ry. Co., 315 I.C.C. 259 (262).

But in respect of shipments which moved by rail from Pauline to Memphis or by truck to other destinations, as to which complainant's transit privilege was either unexercised or not available, the assailed rates from New York to Pauline constituted through rates and their reasonableness is properly in issue.—Id., p. 262-3.

Proof of Damage

221. Showing of proximate cause and financial damage prerequisite to award.—[Vols. 2, 7, 9, 11, 16, 17].—Even if defendant's acquisition of stock of Central of Georgia violated §5(4), it was not the proximate cause of plaintiff's alleged losses from "short sales" of stock of that carrier during a period beginning some 3-1/2 years, and ending about 16 months, prior to the time when defendant began acquiring Central's stock; plaintiff has failed to establish any ground for recovery of damages under §8.—Goldsmith v. St. Louis—S.F. Ry. Co., 201 F. Supp. 867 (870).

222.Burden of proof.—[Vols. 2, 7, 9, 11, 14, 17-19].—The commission's finding in 298 ICC 637 that unloading charges on shipments of vegetables delivered at carrier's Manhattan pier station would be unreasonable for the future did not preclude its finding in 313 ICC 783 that previous collection of such charges for unloading plaintiff's shipments of onions was not unreasonable. Burden of proof in each case rests on different parties: as the earlier case was a suspension proceeding under §15(7), burden was on proponent carriers to show that the unloading charges were just, reasonable, and otherwise lawful, while in the case under review the burden was on plaintiff (complainant therein) to show that the unloading charge was unlawful when assessed. Clearly, plaintiff could not sustain his burden of proof by showing that the carriers failed to meet theirs in the earlier case.—William N. Feinstein & Co. v. United States, 209 F. Supp. 613 (620)*.

In order to refute validity of team track delivery as an option to pier delivery, it was incumbent on plaintiff to show that team track

facilities for delivery of fresh vegetables were not available to meet the reasonable demands therefor. This burden plaintiff failed to meet; there is no evidence in the record that any shipper or consignee who requested team track delivery during the period involved found it unavailable, and it can only be inferred that there was room at the team tracks for all who wanted it.—Id., p. 623.

Recovery cannot be had under §8 unless it is shown that, as a result of defendant's acts, damages in some amount susceptible of expression in figures resulted; these damages must be proved by facts from which their existence is logically and legally inferable; they cannot be supplied by conjecture.—Goldsmith v. St. Louis-S.F. Ry. Co., 201 F. Supp. 867 (870).

Even though entire commission found in an earlier proceeding that lower rates sought by instant complainants were applicable under origin intermediate rule over routes not directionally out of line or unreasonably circuitous, complainants still have burden of identifying their shipments, establishing that shipments are within rule of the prior case, and proving that they paid and bore assailed charges. This evidence and proof cannot be supplied by reference to assertions in informal proceedings unless the parties agree that the informal dockets may be incorporated in the formal record; since defendants refused to agree to incorporation of any portion of the informal proceedings, they may not be considered.—Harden Farms of California v. Akron, C. & Y. R. C., 318 I.C.C. 186 (187-8).

224. Quantum and character of evidence.—[Vols. 2, 7, 9, 16-19].—Before considering the merits of claims for reparation of a part of charges paid on past shipments, manifestly it should appear initially, by at least a fairly representative showing, that the charges claimed to have been unlawful were in fact paid.—B.G. Anderson & Co. v. Atlantic Coast Line R. Co., 319 I.C.C. 224 (225).

Although affidavits of 11 individuals as to complainants' paying and bearing of charges at assailed rates were submitted under modified procedure, none of them appeared at subsequent hearing for cross-examination. In view of defendants' objections, statements of those witnesses may not be considered as evidence.—Harden Farms of California v. Akron, C. & Y.R. Co., 318 I.C.C. 186 (188).

225.——Personal knowledge of shipments.—[Vols. 2, 7, 9, 11, 12, 14-16].—Only complainants' counsel and two traffic consultants appeared at hearing on complaint seeking reparation on behalf of 10 complainants. Counsel's knowledge of the paying and bearing of assailed charges was based on perusal of complainants' records, which he obtained either by mail from the consultants or by going to complainants' places of business. The consultants' knowledge was obtained in the same manner and, though one states he gave advice on paying of charges and the other that he witnessed unloading of some shipments, neither testified as to personal knowledge that complainants paid and bore charges on any particular shipment. Affidavit from officer of each complainant to effect that affiant had personal knowlege of all of his company's shipments and that his company paid and bore charges thereon, offered by the consultants, could not be considered as evidence thereof, when the officers were not present for cross-examination. As general confusion prevails in identification of shipments, no purpose would be served in considering the merits; complaint dismissed.—B. G. Anderson & Co. v. Atlantic Coast Line R. Co., 319 I.C.C. 224 (225, 226).

Although affidavits of 11 individuals concerning various complainants' paying and bearing of assailed charges were submitted under modified procedure, at subsequent hearing none of those affiants appeared for cross-examination; instead, complainants presented four traffic bureau officials whose only knowledge of considered shipments was derived from their perusal of complainants' freight bills. Evidnce offered by witnesses having no knowledge of the facts has no probative value, and complainants have failed to meet their burden of proof, since their failure to submit a witness with personal knowledge of movement of their shipments and paying and bearing of charges thereon deprived defendants of opportunity by cross-examination to test the accuracy of the facts adduced or reliability of the real source

of the information.—Harden Farms of California v. Akron, C. & Y. R. Co., 318 I.C.C. 186 (188-9).

But deposition by sales and office manager of one complainant, including cross-examination by defendants, which was taken by agreement of the parties and made part of the record, in which he testified that he personally ordered routing of that complainant's shipments under assailed rates and knew that it paid or bore the charges, and that during same period he performed another complainant's traffic work, had personal knowledge of all its shipments, and knew that it also paid or bore the charges, establishes right of those complainants to reparation under prior decision in which issue of applicability of assailed rates was determined.—Id., pp. 188, 189.

230.——Rule 100 statements.—[Vols. 2, 7, 9, 12, 14, 15].—Where complaint alleging unreasonableness of charges collected or assessed was filed more than 2 years after shipments were delivered, and record does not show which, if any, met conditions of §16(3)(d) governing extension of the limitation period, entry of order awarding reparation or authorizing waiver of undercharges on all shipments not barred, or dismissing complaint because all shipments are barred, is withheld pending compliance with Rule 1.100 of Rules of Practice.—Foremost Food & Chemical Co. v. Alton & S. R., 318 I.C.C. 35 (38, 39).

Defenses

244. Laches.—[Vol. 2].—See Plaswood Corp. case, §16(3), n. 8.

Attorneys' Fees and Costs

251. Proceedings in court.—[Vols. 2, 7, 9, 16, 17].—Damages claimed by appellant consist, in large measure, of counsel fees and other expenses incurred in prior court and commission proceedings; the court knows of no precedent or authority for reimbursing an unsuccessful litigant for such expenditures.—Lynchburg Traffic Bureau v. Smith's Transfer Corp. of Staunton, Va., 339 F. 2d 478 (481)*

Section 9. Remedies of persons damaged; election; witnesses.—[Unchanged. See vol. 9, p. 7575.]

Amendments, see footnotes, vol. 2, p. 1650; historical note, p. 1650.

Notes of Decisions

Volume 2—p. 1651; Volume 7—p. 5368; Volume 9—p. 7575; Volume 11—p. 9246; Volume 12—p. 10294; Volume 13—p. 11001; Volume 14—p. 11505; Volume 15—p. 12082; Volume 16—p. 12724; Volume 17—p. 13402; Volume 18—p. 14158; Volume 19—p. 15319.

3. Construction.—[Vols. 2, 7].—Section 9 does not impair the right of shippers to obtain judicial review of adverse orders of the commission under 28 USC §1336 merely because the order is sought as a basis for reparations. [337 US 426.]—General Motors Corp. v. United States, 299 F. 2d 233 (234)*.

See also Brogan v. Pennsylvania R. Co., §8, n. 17.

Actionable Damage Entitling to Relief

22. Controversies not arising under the act.—[Vols. 2, 9, 12, 13, 19].—See Western Maryland Ry. Co. v. Continental Grain Co., §6(7), n. 263.

Election of Forum

31. Option of forum matter of right.—[Vols. 2, 7, 9, 12-15, 17, 19].—The fact that plaintiff elected to make complaint for reparation to the commission, instead of the court, did not preclude it from obtaining judicial review of the commission's adverse order. This is implicit in the holding in 337 US 426 that Congress never intended to vest final jurisdiction in the commission; it makes no difference that in instant case only the question of reparations was in issue before the commission.—General Motors Corp. v. United States, 299 F. 2d 233 (234)*.

Exclusive Jurisdiction of Commission and of Courts

37. General statement of rule.—[Vols. 2, 7, 12, 15, 16, 18, 19].—Although §9 gives the complainant the alternatives of seeking reparations by complaint to the commission or by bringing suit in a federal district court, the primary jurisdiction doctrine requires initial submission to the commission of questions that raise "issues of transportation policy which ought to be considered by the commission in the interests of a uniform and expert administration of the regulatory scheme laid down by [the] Act." See 352 US 59 and 234 US 138. Thus, a shipper who commences his §9 reparation proceeding in a district court will nevertheless be required to obtain the commission's decision on issues, such as reasonableness of rates, which call the primary jurisdiction into play; and the court ordering referral to the commission has exclusive jurisdiction of any civil action to enforce, enjoin, or set aside a commission order arising out of such referral.—I.C.C. v. Atlantic Coast Line R. Co., 383 U.S. 576 (579-80)*.

Since the doctrine of primary jurisdiction, being a question of proper allocation of business between the courts and administrative agencies, is not subject to waiver, the court must apply it if it is applicable. Therefore, the court must determine whether, under that doctrine, tariff items in dispute in railroad's suit to recover alleged undercharges must first be construed by the commission, although that issue had not been raised by either party at any stage in the proceedings.—Louisiana & A. Ry. Co. v. Export Drum Co., 359 F. 2d 311 (314)*.

41. Weight accorded determination by commission.—[Vols. 2, 7, 9].—See United States v. Great Northern Ry. Co., §6(7), n. 260.

44. Questions as to damages justiciable without determination by commission.—[Vols. 2, 7, 9, 11-17].—Railroad's court action to recover alleged undercharges, involving construction of "shipping point" and "a record" in the tariff, does not fall within primary jurisdiction of the commission; intial resort to the commission is required only when words in dispute are used in a technical sense, requiring extrinsic evidence to determine their meaning. Although the commission has neither construed the disputed tariff items nor indicated their purpose, and both parties believed expert testimony necessary, reasonableness of the rates is not in question; purpose of the tariff is clear, even to laymen; thus, the courts are as competent as the commission to interpret the disputed tariff.—Louisiana & A. Ry. Co. v. Export Drum Co., 359 F. 2d 311 (314-5)*.

Tariff construction and overcharges.—[Vols. 2-19].—See U.S. v. Great Northern Ry. Co., §6(7), n. 260.

Section 10. (1)-(4) Violations of regulations by carrier: false billings, classification, claim; inducing unjust discrimination; penalties.—[Unchanged. See vol. 9, 7582, 7583, 7586.]

Amendments, see footnotes, vol 2, pp. 1671, 1686, 1694, vol. 9, p. 7582; historical notes, vol. 2, pp. 1671, 1680, 1687, 1694, vol. 9, p. 7584.

Notes of Decisions

Volume 2—pp. 1672-1694: Volume 7—p. 5378: Volume 9—pp. 7582-7586; Volume 12—p. 10295; Volume 13—p. 11002; Volume 18—p. 14160.

§10(1). 2. Construction—[Vols. 2, 13].—Primary intent and purpose of the act is to insure uniform treatment of those who use this country's transportation facilities; employment of trivialities to differentiate one shipping point, where two such points in the same commercial area are contiguous, destroys uniform treatment and the intent of the

statute is frustrated.—Louisiana & A. Ry. Co. v. Export Drum Co., 228 F. Supp. 89 (92, 93)*.

§10(4). 6. Jurisdiction.—(Vol. 2].—Evidence offered to support contention of a conspiracy of railroads and other shippers to eliminate competition of complainant's product by improper classification thereof was inadmissible in complaint proceeding; damages provided in §10(4) follow conviction in Federal court of the misdemeanors therein set forth.—Copps v. Alabama G.S.R. Co., 319 I.C.C. 192 (196-7).

Section 11. Interstate Commerce Commission; appointment, term, and qualifications of commissioners.—[Unchanged. See vol. 11, p. 9247.]

Amendments, see footnotes, vol. 2, p. 1696, vol. 9, p. 7587, vol. 11, p. 9247; historical note, vol. 2, p. 1696.

Historical Notes

By Joint Resolution, Public Law 87-429, April 4, 1962, Congress authorized and requested the President to issue a proclamation designating April 5, 1962 as Interstate Commerce Commission Day; for the purpose of commemorating the seventy-fifth anniversary of the Interstate Commerce Commission.

Executive Order 11222, dated May 8, 1965, Prescribing Standards of Ethical Conduct for Government Officers and Employees; 30 FR 6469, May 11, 1965.

Section 12. Authority and duties of commission; witnesses; depositions—(1) Authority, duties and proceedings of commission, witnesses.—[Unchanged. See vol. 11, p. 9247.]

Amendments, see footnotes, vol. 2. p. 1701, vol. 11, pp. 9247-9248; historical notes, vol. 2, p. 1701, vol. 15, p. 12084, vol. 16, p. 12726.

Historical Note

The commission recommends, in view of prohibitions in 18 USC §1001, that the IC Act and various related acts be amended to eliminate the mandatory requirement that certain reports, applications, and complaints be filed with the commission under oath, and that such oath provisions be made discretionary with the commission.—Annual Report, 1962, p. 209; renewed, Annual Report, 1963, p. 21.

Notes of Decisions

Functions of Commission

5. In general.—[Vols. 2, 7, 19].—In absence of express constitutional provision for executive agencies with quasi-legislative and/or quasi-judicial functions, their clear constitutionality rests on their capacity to function exclusively within limits of each of their several personalities. It is only where there is a pretense of one personality, while in fact there is a performance of another, that the action of a regulatory agency with judicial functions becomes artbitrary, capricious, and unconstitutional. Even where two or three heads of these multi-headed creatures of modern government perform at the same time, and even where that multi-performance is by one unit or by one individual, the performance of each head must be true to its character, and one may not act in guise of the other. This principle of "separation of functions," as it applies to administrative agen-

cies, finds statutory expression in §5 of Administrative Procedure Act.—Atchison, T. & S.F. Ry. Co. v. United States, 231 F. Supp. 422 (428)*.

6. Nature of functions.—[Vols. 2, 7, 9, 19].—It is a basic principle that executive, legislative, and judicial functions of an administrative agency should to a considerable extent be separated from each other. The act of defending a judicial determination in court is executive, not judicial, and when, to perfect that defense, an ex parte reconsideration of a judicial determination is made, such reconsideration is an executive act done in guise of the judicial, and is arbitrary and unfair. However, the commission's reopening of proceedings before it, while they are the subject of judicial review, without prior request of or notice to the court, does not appear to be sufficient reason of itself to justify the court's holding the commission's subsequent order void and of no effect.—Atchison, T. & S.F. Ry. Co. v. United States, 231 F. Supp. 422 (427, 428)*.

7.——Quasi-judicial functions.—[Vols. 2, 7, 9, 19].—The commission is a quasi-judicial administrative agency exercising judicial functions in its licensing and enforcement activities; and an appeal from, or reconsideration or review of, a decision by such a body is not essential to due process provided due process was accorded in the original determination.—Studna v. United States, 225 F. Supp. 973 (981)*.

It is a denial of due process of law, and is arbitrary and unfair, when a judicial branch of a regulatory agency, under review by the court, once made aware by the executive branch of that agency of a litigant position taken in seeking higher judicial review of its determination, may, without notice to the appellant and an opportunity to be heard, change and adjust the form of its judicial position to facilitate a victory by its executive branch for its original judicial determination. Such a situation might well demand of the court that it hold the report and order on reconsideration void and of no effect.—Atchison, T. & S.F. Ry. Co. v. United States, 231 F. Supp. 422 (428)*.

When the commission functions in a quasi-judicial capacity, unlike a court it is dealing with an area of specialized knowledge and activity in which it presumably has a special competence; and, also unlike a court, it is in every case obligated to weigh the public interest considerations, not merely those of the particular litigants. Consequently, it should not be limited by strict rules on the admissibility of evidence.—Von Der Ahe Van Lines, Inc.—Lease and Purchase—Bee-Line, 93 M.C.C. 498 (505)*.

9.——Legislative.—[Vols. 2, 7, 9].—Regulations of an agency of the United States must be issued within the powers conferred by Congress; if agency regulations go beyond what Congress has authorized, they are void.—Federal Maritime Commission v. Anglo-Canadian Shipping Co., 335 F. 2d 255 (258). [Not arising hereunder.]

Since it is elementary that power to prescribe rates for the future is a legislative function, it would seem equally clear that power to suspend or not suspend proposed rates involves determination of what the rates shall be during the suspension period and is itself a legislative function.—Arrow Transp. Co. v. Southern Ry. Co., 308 F. 2d 181 (184)*.

While, narrowly, the commission in passing upon fourth-section application was called on to determine whether applicants had made out a special case to justify long-and-short-haul discrimination, it was broadly engaged in performing its quasi-legislative function of rate-making, involving exercise of broad discretion.—Igert v. United States, 211 F. Supp. 42 (44)*.

Powers and Duties

16. Authority dependent on statute.—[Vols. 2, 7, 9, 15].—The commission, being a creature of statute, cannot exceed the specific authority delegated to it by Congress. Stated purpose of the Safety Appliance Acts and §25, as amended, is "to promote safety of employees and travelers on railroads"; therefore, since neither of those statutes nor §1(21) vest the commission with any safety jurisdiction over railroads with respect to rail-highway grade-crossings, jurisdiction to establish safety regulations with respect to such grade-crossing matters resides exclusively in the States. The commission's conclusion that it lacked jurisdiction over railroads with respect

to rail-highway grade-crossing matters, and its discontinuance of investigation proceeding, sustained.—American Trucking Associations, Inc. v. United States, 242 F. Supp. 597 (600-1)*.

Inquiry Into Business Management of Carriers

37. Use of information.—[Vols. 2, 7, 19].—When plaintiffs, against whom the [Federal Trade] commission had issued a complaint, showed that public disclosure of information contained in a document they produced pursuant to a subpena duces tecum would cause serious injury to their business, there was good cause for holding such information confidential. Business secrets should be kept from sight and knowledge of plaintiffs' competitors so far as it is practicable to do so in the discharge of the commission's responsibilities under the law.—Graber Mfg. Co. v. Dixon, 223 F. Supp. 1020 (1022-3).[Not arising hereunder.]

Power to Require Testimony

45. In general.—[Vols. 2, 7].—Shipper protestant's request for issuance of subpenas to require a designated officials of respondents to disclose amounts of divisions to be received by the participating carriers out of proposed joint rail-water rates, denied; the division of a joint rate is of no concern to shippers.—Rail-Water, Grain in Bulk, from Mo., Ill., & Ind. to Buffalo, 319 I.C.C. 123 (126-7)*.

Production of Books, Papers, Etc.

54. Power of commission.—[Vols. 2, 11].—The commission is one of three federal agencies which appear to have been vested with express statutory authority to authorize prehearing inter-party discovery involving the production of documents. In each case, the agency also has both general rulemaking power and subpena power; this indicates that Congress did not intend federal agencies to predicate discovery procedures upon statutes conferring general rulemaking or subpena power.—Federal Maritime Commission v. Angol-Canadian Shipping Co., 335 F. 2d 255 (261). [Not arising hereunder.]

57. Subpena.—[Vols. 2, 11, 12, 17-19].—There was no error in examiner's refusal to grant protestants' request for subpena duces tecum to require respondent to produce certain documents underlying cost data submitted. Respondent offered at hearing to produce as much data as would be reasonably material; the data were inspected by an independent accountant through agreement of the parties, and protestants made no subsequent request.—Towing Rates, Pittsburgh Towing Co., 321 I.C.C. 366 (367).

Regulations of the Commission

27 FR 7640, Aug. 2, 1962, Part 6: Fees for copying, certification, services, etc., paragraph (h) of §6.1 amended, effective on date of order.

28 FR 7397, July 19, 1963, Part 6: Fees for copying, certification, services, etc., paragraph (h) of §6.1 amended, effective on date of order.

28 FR 9435, Aug. 28, 1963, Part 9a: Administrative Interpretations, §9a. 1 Authorizattion for adjustment of claims for damages resulting from misrouting. New part and section added, effective on date of order.

29 FR 8418, July 3, 1964, Part 6: Fees for copying, certification, services, etc., paragraph (h) of §6.1 amended, and the Commission's policy regarding reproduction of copies of transcript from any source other than the official reporter stated, effective on date of order.

29 FR 4914, April 8, 1964, Part 500: New Subchapter E—Intermodal Transportation, Part 500 Practices of For-Hire Carriers of Property Participating i Trailer-on-Flatcar Service, §§500.1 - 500.8, added, effective July 6, 1964.

29 FR 8421, July 3, 1964, Part 500: Practices of For-Hire Carriers Participating in Trailer-on Flatcar Service, effective date of order (29 FR 4914) postponed pending further order.

29 FR 11126, July 31, 1964, Part 51: New Part 51—General Requirements, added under the heading Parts 51-59, Consolidation, Finance, and Reorganization, effective Oct. 1, 1964.

29 FR 11273, Aug. 5, 1964, Part 500: Practices of For-Hire Carriers Participating in Trailer-on-Flatcar Service, effective date of order (29 FR 4914) fixed as Sept. 11, 1964.

29 FR 12508, Sept. 2, 1964, Part 500: Effective date of order (29 FR 4914) as amended (29 FR 11273) postponed until further order.

30 FR 8968, July 16, 1965, Part 6: Fees for Copying, Certification and Services in Connection Therewith, §6.1 Charges, paragraph (h) amended, effective on date of order.

30 FR 12669, Oct. 5, 1965, Part 6: Fees for Copying, Certification, and Services in Connection Therewith, §6.1 Charges, paragraphs (a), (b), (c), (d), (e), and (f) amended, effective Oct. 1, 1965.

31 FR 8573, June 21, 1966, Part 6, Fees for Service Performed in Connection with Licensing and Related Activities, amended, effective July 22, 1966.

NOTE: For recodification, see 49 CFR, Editorial Note, 32 FR 5606, April 5, 1967.

32 FR 9020, June 24, 1967, Part 100 [formerly Part 0]: The Commission, §100.10 Availability of statements of policy, interpretations, and other matters not required to be published in the Federal Register, added, effective July 4, 1967.

32 FR 9020, June 24, 1967, Part 105a (new part): Inspection of Records, §§105a.1 through 105a.4, added, effective on July 4, 1967.

32 FR 9816, July 6, 1967, Part 105a: Inspection of Records, §105a.] amended by addition of paragraph (f) ICC Manual-Administration, effective July 4, 1967.

32 FR 11214, Aug. 2, 1967, Part 100 [formerly Part 0]: The Commission, §100.5 Credentials required by special agents, accountants, and examiners, amended, effective Aug. 1, 1967.

32 FR 12689, Sept. 1, 1967, Part 600 [formerly Part 500]: Practices of For-Hire Carriers of Property Participating in Trailer-on-Flatcar Service, effective date, except as to §§600.7 and 600.8, is Aug. 18, 1967; §600.7 shall become effective Nov. 16, 1967, and §600.8 shall become effective Feb. 18, 1968.

32 FR 13414, Sept. 23, 1967, Part 106 [formerly Part 6]: Fees, §106.2 Filing fees, amended, effective Oct. 20, 1967.

NOTE: For Republication and Redesignation of Regulations, see 32 FR 20003, Dec. 20, 1967.

33 FR 3135, Feb. 17, 1968, Part 1001 [former Part 105a, formerly Part 5a]: Inspection of Records, list of locations of the Commission's field offices, which follows §1001.4, amended to show changed addresses of certain area offices, effective Feb. 15, 1968.

33 FR 4370, March 9, 1968, Part 1000 [former Part 100, formerly Part 1]: The Commission; Subpart B—Canons of Conduct, §§1000,735-11 through 100.735-30 and Appendixes I and II revised and republished.

33 FR 6162, Apr. 23, 1968, Part 1001 [former Part 105a, formerly Part 5a]: Inspection of Records, list of field offices and locations which follows §1001.4, amended, effective upon publication, except as to Louisville, Ky. which is effective Apr. 30, 1968.

Section 12. (2)-(7).—[Unchanged. See vol. 9, pp. 7592-7596.]

Amendments, see footnotes, vol. 2, pp. 1720-1730; historical notes, vol. 2, pp. 1720-1725.

Notes of Decisions

§12(2); Volume 2—p. 1720; Volume 13—p. 11003; Volume 14—p. 11507; Volume 16—p. 12727; Volume 18—p. 14161.

§12(3): Volume 2—p. 1723; Volume 9—p. 7593; Volume 12—p. 10297; Volume 14—p. 11508.

§12(4): Volume 2—p. 1726; Volume 7—p. 5387; Volume 9—p. 7594; Volume 11—p. 9250; Volume 12—p. 10297; Volume 14—p. 11508.

§12(5): Volume 2—p. 1728; Volume 7—p. 5388; Volume 9—p. 7595.

§12(6): Volume 2—p. 1729; Volume 7—p. 5389.

§12(7) : Volume 2—p. 1730; Volume 7—p. 5389.

§12(2). 1. Extent of power to subpena.—[Vols. 2, 13, 14, 16, 18].—The [Federal Trade] Commission may exercise its broad power of investigation and subpoena prior to filing a complaint; as an administrative agency of the United States charged with seeing that the act is enforced, it "has a power of inquisition"; is somewhat analogous to the Grand Jury. If the investigation is within the commission's authority and unless evidence sought by subpoenas is clearly irrelevant and immaterial, it is the duty of the District Court to order compliance; and subpoenaed documents may be retained by the commission for a reasonable length of time. And, in an investigational hearing there is no requirement that subpoenas be made returnable to the commission or a hearing examiner; they may be made returnable to an attorney-examiner.—Federal Trade Commission v. Standard American, Inc., 306 F. 2d 231 (234-5, 236). [Not arising hereunder.]

§12(2). 2. Aid of courts.—[Vols. 2, 14].—In proceeding on application of the [Securities and Exchange] commission for an order requiring obedience to subpena duces tecum issued by it in a duly authorized investigation, the trail court should inquire whether the commission was acting arbitrarily and whether it was acting within scope of its authority in issuing the subpena. The commission's position that facts bearing upon those questions cannot ever be material, because even if established the court must nevertheless enforce

the subpena, is not correct.—Shasta Minerals & Chemical Co. v. Securities & Exchange Commission, 328 F. 2d 285 (286-8). [Not arising hereunder]

§12(3). 7. Contempt.—[Vols. 2, 12, 14].—Statutes providing that a Federal Court may order compliance with a subpena issued by an administrative agency make available a judicial remedy for the agency which, if granted, is enforceable as any court order by the power to punish for contempt. Such power to punish is not generally available to federal administrative agencies; thus recourse is sought in separate judicial proceedings.—Shasta Minerals & Chemical Co. v. Securities & Exchange Commission, 328 F. 2d 285 (286).

Section 13, Complaints to and investigations by commission—(1) Complaint to commission of violation of law by carrier; reparation; investigation.—[Unchanged. See vol. 9, p. 7597.]

Amendments, see footnotes, vol. 3, p. 1731; historical note, p. 1731.

Historical Notes

By Executive Order 11107, Administration of Alaska Railroads, dated April 25, 1963, the Interstate Commerce Commission is given jurisdiction "to fix, change, or modify rates for the transportation of passengers and property" under the authority set forth in the Alaska Railroad Act, 38 Stat. 305, which jurisdiction had been given to the Secretary of the Interior by Executive Order No. 3861 of June 8, 1923; latter order superseded. (28 FR 4225, April 30, 1963)

Executive Order 11107 codified as Title 49, Chapter II, Part 1200 – Administration of Alaska Railroads (49 CFR §§1200.1 - 1200.4), 28 FR 12278, Nov. 20, 1963.

Notes of Decisions

Volume 3—p. 1733; Volume 7—p. 5390; Volume 9—p. 7598; Volume 11—p. 9252; Volume 12—p. 10297; Volume 13—p. 11004; Volume 14—p. 11509; Volume 15—p. 12086; Volume 16—p. 12728; Volume 17—p. 13406; Volume 18—p. 14162; Volume 19—p. 15323.

Generl Nature of Proceedings

3. Jurisdiction to entertain complaint.—[Vols. 3, 7, 19].—A complaint against reduced rates established on government traffic by a §22 quotation, particularly one alleging violation of §3(1), may not be entertained. Unlawfulness defined by §§2 and 3 consists either in an "unjust discrimination" or an "undue or unreasonable preference or advantage," and object of §22 was to settle beyond all doubt that discrimination in favor of persons therein named should not be deemed unjust (145 US 263). Moreover, the Supreme Court stated in 355 US 534 that §22 exempts transportation for the United States from the rate provisions of the act; Congress has thus seen fit to accord preferential treatment to government traffic, and such action may not be presumed to be an idle gesture. And since §22 permits free carriage, the minimum-rate provisions of §1 are likewise inapplicable. Complaint assailing defendant's granting to TVA of §22 rates on coal moving to its power plant from western Kentucky mines, but not from complaining southern Tennessee mines, dismissed for lack of jurisdiction.—Tennessee Products & Chem. Corp. v. Louisville & N.R., 319 I.C.C. 497 (501-2, 503).

The commission has no authority to entertain complaints, alleging illegal abandonment, by crewmen on defendant's tugboat who lost their jobs as result of discontinuance of its tugboat operations, when neither defendant nor any other interested party has applied for certificate permitting abandonment of the tugboat operations. However, under §1(20) a competent court is the only forum having jurisdiction to grant relief for a violation of §1(18); and in absence of an application for certificate authorizing abandonment of all or a portion of a line of railroad, or operation thereof, the commission has no jurisdiction to consider whether an abandonment should be permitted.—McGrody v. Baltimore & O. R. Co., 317 I.C.C. 253 (254).

10.——Moot questions.—[Vols. 3, 7, 9, 11, 12, 14-19].—Part II, §204(c), n. 26

Alleged violations of §§5(1), 5(2), 6(1), 6(7) and 15(8) in the complaint proceeding, which (following issuance of examiner's report and recommended order) was consolidated with merger application proceeding, would become moot upon consummation of the merger, as approved, since the factual foundation upon which the complaint rests would thereby be destroyed. Therefore, relying upon merger applicants to promptly consummate their proposal within the 90 days provided in the order, the complaint is dismissed.—Southern Pac. Co. Merger, 327 I.C.C. 38 (39, 47-8)*.

Though after issuance of proposed report defendant restricted assailed rate on petroleum products to shipments in tank cars of not less than 10,000-gallon capacity, and issues are therefore moot as to cars of less capacity, the complaint is not moot when lawfulness of assailed rate on shipments in cars of 10,000-gallon capacity or more remains in issue.—Prue Motor Transp., Inc. v. Boston & M.R., 316 I.C.C. 299 (299-300).

Where no court suit was filed by carrier within 3 years from date of delivery of shipments, complainant was not liable for undercharges beyond the 3-year statutory period, and issue as to waiver of undercharges on such shipments is moot.—Foremost Food & Chemical Co. v. Alton & S. R., 318 I.C.C. 35 (38).

11. Effect of satisfaction of complaint.—[Vols. 3, 12, 19].—When informal complainant accepted without qualification railroads' offer to pay reparation on all shipments covered by informal complaint on which the statute had not run, making of such payment pursuant to special-docket order terminated the informal complaint as provided in Rule 25(e) of the commission's Rules of Practice; and when subsequently, after a nominally contested formal proceeding, complainant was paid a further sum on additional shipments allegedly covered by the informal complaint, the railroads were justified in considering that this had entirely closed out the matter. Established principles of contract law regarding compromise and settlement require a like conclusion; complainant's acceptance of the second check representing "payment in full of all matters in Informal Complaint" terminated and compromised whatever might then have been left of the informal complaint, and it could no longer stay the statute of limitations.—Atlantic Coast Line R. Co. v. United States, 213 F. Supp. 199 (202, 203, 205)*.

Scope of Power to Investigate

27. Duty to make investigation; lack of diligence in bringing complaint.—[Vols. 3, 7, 9, 12].—Although 5 telegraphic informal complaints and one written one were filed within the statutory period, complainants failed to comply with the commission's requests for written confirmation of the telegraphic complaints, accompanied by sufficient copies for service on all defendants, or to correct deficiencies pointed out by the commission in the mailed informal complaint, or to take any further action regarding those complaints prior to filing of formal complaint nearly 10 years later, following declination of other informal complaints. The commission does not condone laxity in preparation and presentation of cases before it; complainants are estopped by laches from raising issue of unreasonableness of rates charged on shipments embraced in the 6 specified informal complaints, which are deemed to have been abandoned.—Plaswood Corp. v. Alton & S.R., 321 434 (439-42).

29. General-revenue cases; general findings.—[Vols. 7, 9, 11-19].—In condemning plaintiffs' flat increase in intraterminal and interterminal switching charges in eastern district solely because it would result in substantially greater percentage increases at some localities than at others, the commission ultimately treated the case as a §3 matter. There are unquestionably differences between reasonableness and rate relations, and consideration of the latter is a matter for procedures and standards of §3; the commission made no finding of undue or unreasonable prejudice or disadvantage, and could not have done so, for no such theory was pursued and no such evidence presented. Since, on the commission's own finding, the increased rates remain within the zone of reasonableness, its order requiring cancellation of the increase is set aside.—Pennsylvania R. Co. v. United States, 216 F. Supp. 199 (201, 202)*.

Parties

30. Complainants; in general.—[Vols. 3, 7, 9, 11, 13, 15, 18, 19].—Although complainant, a corporation engaged in producing and purchasing natural gas and operating a system for transportation thereof at rates subject to jurisdiction of Federal Power Commission under Natural Gas Act, is neither a shipper or consignee of coal nor a competitive common carrier under provisions of Interstate Commerce Act, it has standing under §13(1) to complain of anything done or omitted to be done by any common carrier subject to provisions of part I of ICA; that section establishes a complainant's right, without regard to nature of its interests, to allege violation of any section of the act, including §§2 and 3(1). Complaint alleging unlawfulness of defendant's unit train rates on coal, based on annual volume minima, may properly be entertained. —Natural Gas Pipeline Co. of America v. N.Y.C. R. Co., 323 I.C.C. 75 (84).

37. Parties of whom complaint may be made; in general.—[Vols. 3, 15, 17].—Since controversies between noncarriers are for the courts, not the commission, noncarrier consignor and consignee were not proper parties defendant to complaint by competing noncarrier attacking rates charged, and contained in tariffs published, by carriers subject to the act; decision in 333 US 169, distinguished. And provisions of §2 of Elkins Act authorizing inclusion as parties of all persons interested in or affected by the rates considered concern enforcement proceedings brought by the commission or other proper authorities, not by private parties; a complaint under §13 is not an enforcement proceeding.—Empire Petroleum Co. v. Chicago, B. & Q.R. Co., 315 I.C.C. 291 (292-3).

38.——Effect of receivership.—[Vols. 3, 7, 9].—A trustee is not a proper party defendant for acts not arising from the trustee's conduct of the business of the bankrupt carrier. Since alleged violations occurred before movants' appointment as trustees of the New Haven, they could not be made defendants without permission of the bankruptcy court, which was not obtained; motion granted to dismiss complaint as to the trustees and to substitute the railroad corporation as defendant.—Foremost Food & Chemical Co. v. Alton & S. R., 318 I.C.C. 35 (36, 39).

Trustees were not in charge of defendant railroad's operations at time involved shipments moved and cannot be joined as defendants without permission of bankruptcy court; motion to dismiss complaint as to them, granted.—Firestone Tire & Rubber Co. v. Atchison, T. & S. F. Ry. Co., 318 I.C.C. 107 (108).

Pleadings, Generally

46. Scope of issues.—[Vols. 3, 7, 9, 11-17, 19].—Though western trunklines that are active defendants urge that hearings should have covered all traffic between eastern and w.t.l. territories, notwithstanding eastern complainants' 1955 agreement with midwestern lines for application of the Docket No. 28277 divisional basis previously accepted by western railroads other than those defendants, at the time of the prehearing conference it was fully understood that the midwestern group's action had practically satisfied the complaint as to them, and no suggestion of needed amendments was made at that time.—Akron, C. & Y. R. Co. v. Atchison, T. & S.F. Ry. Co., 316 I.C.C. 351 (362)*.

And though the active defendants urge that they should have been permitted to amend their cross-complaint to include subdivisions of the interterritorial rates, their petition thus to amend, filed 13 months after the prehearing conference, was denied as a procedural matter and they did not appeal from that order or file separate complaint against the other defendants. Such an issue would not necessarily be germane to the proceeding, since more than half the indicated revenue would not involve subdivisions. The commission may properly pass upon primary divisions of the interterritorial rates without considering subdivisions; and there is likewise no error in handling the proceeding as a controversy solely between complainants and the active defendants.—Id., pp. 362-3.

Broadening the issues: [Vols. 7, 9, 14-19].—As San Francisco County, including San Francisco, is not among counties allegedly preferred, evidence pertaining to competition with companies located at San Francisco or other points beyond the allegedly preferred

area cannot be considered to establish existence of unlawful prejudice to Stanislaus County. To include San Francisco within scope of the complaint would unduly broaden the issues.—Stanislaus County v. Atchison, T. & S.F. Ry. Co., 315 I.C.C. 459 (465)*.

Since complainant's allegation that it is unduly prejudiced because competitors have lower inbound rates on green salted hides, and thus have an undue rate advantage in sale of finished leather products in competitive markets, was not embraced in the complaint as required by Rule 1.30(a) of Rules of Practice, and defendants were unaware of that allegation and thus not prepared to answer it, it may not be considered.—Lakeland Hide & Leather Co. v. Atlantic Coast Line R., 316 I.C.C. 303 (305).

Prayer for general or particular relief: [Vols. 3, 7, 11, 14].—In fairness to defending parties, it is elemental that a complaint should state all relief which is sought, and the basis thereof. Prayer in complaint that the commission enter such orders or further orders as it might deem necessary or appropriate to afford complainants relief in the premises is a catchall clause that cannot be construed as encompassing claims not specifically stated in the complaint.—Copps v. Alabama G.S.R. Co., 319 I.C.C. 192 (193).

48. Averments sufficient to put defendant on notice.—*Issue of reparation:* [Vols. 3, 7, 9, 11, 15, 19].—Examiner properly sustained defendants' objection that they were taken by surprise when, at the hearing, complainants sought to amend the complaint to include a request for reparation, there being no notice of claimed damages in the complaint. Prayer in the complaint that the commission enter such orders as it might deem necessary or appropriate to afford complainants relief in the premises is a catchall clause that cannot be construed embracing reparation.—Copps v. Alabama G. S. R. Co., 319 I.C.C. 192 (193).

Complaints

53. Consolidation for hearing and decision. —[Vols. 3, 7, 9, 17].—Suspension of considered order of the commission prescribing divisions of joint rates between southern border points and official territory on the basis prescribed in Docket No. 29885 for rates between the border points and southern territory, until conclusion of reopened proceedings in the latter case, would be tantamount to reversal by the court of the commission's refusal to consolidate the proceeding under review with the reopened Docket No. 29885, which was clearly within the commission's discretion.—Boston & M. R. v. United States, 208 F. Supp. 661 (677)*.

See also Southern Pac. Co. Merger case, n. 10 above.

Jurisdiction to Proceed

62. Appearance and failure to appear.—[Vols. 3, 7, 17].—See B. G. Anderson & Co. case, n. 121, below.

Interventions

71. Interventions; generally.—[Vols. 3, 7, 9, 11, 12, 16, 17].—Complainant's motion to exclude North Carolina Utilities Commission from participation in proceeding involving rate relations between two North Carolina ports, on ground that State law restricts its representation to shippers and receivers in North Carolina, whereas its evidence was directed to rates applicable beyond that State, overruled. The utilities commission is empowered and authorized to bring actions before the Interstate Commerce Commission which in its opinion are necessary to secure just and reasonable freight rates for North Carolina shippers and receivers; and no provision is cited which limits the type of action it may bring, or the extent of its participation in commission proceedings, to achieve that end. —City of Wilmington v. Alabama G. S. R. Co., 316 I.C.C. 709 (710)*.

Motions

86. For dismissal.—[Vols. 7, 9, 12-16, 18, 19].—Examiner did not exceed his authority in overruling defendant noncarriers' motions for dismissal of complaint as to them on the ground that, not being common carriers, they were not subject to the commission's jurisdiction; under Rule 1.70 of the Rules of Practice, examiner's power to decide motions for dis-

missal is denied only as to those involving final determination of merits of the proceeding, and defendants' motions did not seek dismissal on the merits.—Empire Petroleum Co. v. Chicago, B. & Q. R. Co., 315 I.C.C. 291 (292).

However, since controversies between noncarriers are for the courts, not the commission, motions to dismiss as to those defendants should have been, and are, sustained; provision of §2 of Elkins Act, cited by complainant noncarrier, authorizing inclusion as parties of all persons interested in or affected by the considered rate, concerns enforcement proceedings by the commission or other proper authorities, and a complaint under §13 is not an enforcement proceeding. —Id., pp. 292, 293.

The Hearing

120. Right to a full hearing.—[Vols. 3, 7, 9, 11, 12, 16, 17, 19].—See also §15(6), n. 8.

Although defendants were advised that their request for oral hearing and cross-examination did not meet the specificity requirement of rule 1.53 of Rules of Practice, and were allowed ample time for compliance, adequate response was not forthcoming and oral hearing was denied. Defendants' reply statement did not dispute any of facts stated by complainant's witnesses. Where material facts are not controverted, oral hearing would serve no useful purpose and denial thereof is within the agency's discretion; §7(c) of Administrative Procedure Act is ample authority for the procedure followed. Failure to accord defendants an evidentiary oral hearing was not error under the circumstances.—United States v. Missouri Pac. R. Co., 322 I.C.C. 418 (419).

121. Duty to present case with diligence.—[Vols. 3, 7, 12, 13].—Although hearing was transferred to Philadelphia expressly to facilitate complainants' appearance, only their counsel and two traffic consultants, none of whom had personal knowledge as to paying and bearing of assailed charges, appeared; and affidavits of complainants' officers to that effect cannot be considered because affiants were not present for cross-examination. As record indicates that more than one claim was made, either formally or informally, on some shipments, and general confusion prevails in identification of shipments, no purpose would be served by considering the merits. The claims have been abandoned by failure to present admissible evidence respecting the paying and bearing of charges; complaint dismissed.—B. G. Anderson & Co. v. Atlantic Coast Line R. Co., 319 I.C.C. 224 (225, 226).

126. Burden of proof; when upon complainant.—[Vols. 3, 7, 9, 15, 17-19].—The presumption of unreasonableness created by Rule 66(a) of Tariff Circular 20, where charges assessed on basis of the minimum weight published for a larger car furnished for carrier's convenience exceed those based on a lower minimum for a smaller car ordered by shipper, does not become operable unless and until the basic facts on which its application is predicated are established by substantial evidence; and it is only reasonable that the burden of proving those facts rests on shipper as the person seeking the advantage of that presumption.—Baltimore & O. R. Co. v. United States, 217 F. Supp. 918 (922)*.

See also Southern Ry. Co. v. United States, §15(3), n. 36.

In a complaint proceeding the burden of proof rests with complainants. Complaining railroads have not established that their lost coal traffic was captured by defendants through establishment of assailed joint rail-water rates, thus it cannot be found that those rates are inimical to maintenance of just and reasonable coal-rate structures or that they constitute a destructive competitive practice. —Chicago, B. & Q. R. Co. v. Chicago & E.I. R. Co., 322 I.C.C. 138 (146)*.

Complaints assailing divisions of rates, see §15(16), n. 32

Before considering the merits of claims for reparation on numerous past shipments, it should appear initially, by at least a fairly representative showing, that the charges claimed to have been unlawful were in fact paid.—B. G. Anderson & Co. v. Atlantic Coast Line R. Co., 319 I.C.C. 224 (225).

Reparation, proof of damages, see §8, n. 222.

Statement in 331 US 284 that it is a matter of right that regions and shippers be not preju-

diced nor their competitors preferred does not overrule the oft-repeated holdings of the courts and the commission that the burden of supporting an allegation under §3 by adequate proof rests on complainant. While, where such evidence is of record, the burden is on the carriers to show by convincing evidence that there is enough dissimilarity in the transportation circumstances to justify the difference in rate treatment, absence of latter evidence does not afford a basis for relief without the requisite showing by complainant.—Lynchburg Traffic Bureau v. Chesapeake & O. Ry. Co., 319 I.C.C. 74 (81-2)*.

Complainants have the burden of proving that rates complained of are unlawful under some provision of the act.—Louisville Chamber of Commerce v. Ahnapee & W. Ry. Co., 318 I.C.C. 749 (753).

Burden is on complainant alleging inapplicability of rate charged to prove that commodity shipped was of a character to entitle it to rate claimed applicable; evidence consisting merely of a conclusion of complainant's traffic manager and photographs which do not definitely distinguish commodity shipped from those on which rates charged are named does not meet that burden.—Firestone Tire & Rubber Co. v. Atchison, T. & S. F. Ry. Co., 318 I.C.C. 107 (109-10).

Although motor carrier parties in embraced complaint and suspension proceedings, involving existing and proposed motor rates which they admitted were not compensatory, had very little interest in outcome of the proceedings, that fact does not compel a conclusion in rate bureau's complaint proceeding that rail TOFC rates on the same commodities are noncompensatory; if such conclusion were reached, complainant would succeed by its own procedural ambivalence and regardless of the lack of substance of the complaint. The issue being whether assailed TOFC rates are just and reasonable, the primary question to be considered is whether they are compensatory, and complainant has the burden of proving that they are noncompensatory; as no convincing evidence of noncompensativeness was presented, complainant failed to sustain its burden of proof.—Middlewest Motor Freight Bureau v. Great Northern Ry., 318 I.C.C. 443 (445, 447).

See also Terminal Charge on Order Bills of Lading Shipments, APA, 5 USC *Burden of Proof*.

Evidence

135. Application of principles of stare decisis and res judicata.—[Vols. 3, 7, 9, 11-14, 16-19].—A question of tariff interpretation does not differ in character from that presented in construction of any other disputed document; the rule that parol evidence cannot be admitted to vary the terms of a written agreement governs, and if state and Federal cases are not at odds "federal law" may include relevant state cases.—Baggett Transp. Co. v. United States, 319 F. 2d. 864 (868). [Not arising hereunder.]

See also William N. Feinstein & Co. v. United States, §8, n. 13.

Although a decision of the commission has been challenged and is pending before a three-judge district court, it nevertheless presently stands as an order of the commission and is recognized as the applicable law until overruled or modified by the courts.—Natl. Motor Freight Traffic Assn. v. Delaware Valley, 323 I.C.C. 560 (573)*.

Approval of a ratemaking innovation because of unusual facts and circumstances surrounding the transportation does not constitute a precedent for indiscriminate use of that form of ratemaking.—Vol. Rates on Processed Meal—Midwest to Ports, 322 I.C.C. 456 (478).

With respect to the issue of applicability, the division of the commission is obliged to follow the precedent established by the entire commission in prior proceeding involving application of the same tariff provisions on the same commodities.—Harden Farms of California v. Akron, C. & Y. R. Co., 318 I.C.C. 186 (187).

Finding in 308 ICC 529 that same shipper's rotary kiln parts were not pulp and paper making machinery when shipped to pulp and paper mills was made in connection with allegations under §§2 and 4 that rotary kilns and paper making machinery were like kinds of traffic; that finding was general in nature, to effect that rotary kilns as such are not necessarily pulp and paper making machinery, and is not determinative of complaint seeking ap-

plication of rate on "Machinery, paper mill or pulp mill, K.D. or Parts thereof," on shipments of parts of a rotary kiln for installation in consignee's paper mill.—Traylor Engineering & Mfg. v. Lehigh Valley R. Co., 316 I.C.C. 31 (35).

See also Chicago, R.I. & P. R. v. U.S., §2, n. 17; §3(4), n. 41.

136. Admissibility, in general.—[Vols. 7, 9, 11-19].—Defendants' objection to certain of complainant's cost evidence which was determined with use of electronic computer equipment, overruled; underlying data and working papers used by the cost analyst were made available to defendants for purpose of verifying end results of his recomputation thereof, and the cost analyst was available for cross-examination. As defendants were given time to prepare rebuttal cost data, any deficiencies in the study due to improper costing procedures or incorrect data could be determined by them and would go to weight of that evidence rather than its admissibility.—American Colloid Co. v. Akron, C. & Y. R. Co., 321 I.C.C. 91 (93).

Objection to certain evidence concerning cost of ownership and operation of refrigerator cars, on ground that witness relied on figures furnished by others not available for cross-examination, and that underlying data were not of record, overruled. Witness is an executive assistant of carline company, and his duties include budgetary and cost control; objection goes more to weight to be accorded his evidence.—Fresh Vegetables from Tex., Calif., Ariz., and N. Mex., 319 I.C.C. 141 (144).

Admission in evidence of notarized communications from paper company officials, a trade association official, and an engineering consultant, stressing importance of complainant's rotary kiln in operation of sulphate paper mills, also letter from superintendent of carriers' weighing & inspection bureau expressing agreement with witness's interpretation of considered tariff item, was not error; witnesses introducing the letters were available for cross-examination as to whether they had received them, whether they could independently testify as to truth of factual matter in the letters, and whether the writers were qualified to express opinions on the subjects dealt with; weight to be given the opinions thus expressed can have no bearing on their admissibility.—Traylor Engineering & Mfg. v. Lehigh Valley R. Co., 316 I.C.C. 31 (33-4).

Complainant's objection to certain tonnage evidence submitted by defendants, because underlying work papers were not made available for examination, was properly overruled when defendants had refused to produce such papers in order not to disclose location of their shippers and consignees to competitors. —United States v. Oklahoma City-Ada-Atoka Ry. Co., 316 I.C.C. 731 (753)*.

Examiner's refusal to admit evidence offered in support of complainants' contention that the railroads and other shippers conspired to eliminate competion of complainants' product through improper classification thereof did not deprive complainants of any right to obtain consideration of antitrust issues. The commission has no jurisdiction over shipper claims based on antitrust violations; and damages provided in §10(4) follow conviction in Federal court of the misdemeanors therein set forth. Examiner's ruling sustained.—Copps v. Alabama G.S.R. Co., 319 I.C.C. 192 (196-7).

Defendants' objection to complainants' exhibit based in part on formulas in public statement No. 5-59 of commission's cost finding section, on ground that witness who prepared it was not qualified as a cost expert and was not familiar with elements entering into average unit costs shown in the exhibit, sustained.—Budlong Pickle Co. v. Ann Arbor R. Co., 315 I.C.C. 333 (334).

In its exceptions, complainant constructed a combination rate lower than that previously sought (which was found inapplicable), not in support of an applicability issue, but to show unreasonableness of assailed single-factor rate; such additional "evidence," in nature of a rate comparison, should not have been considered, since under the commission's rules of practice such additional matter may not be embodied in exceptions; prior finding awarding reparation, reversed.—Locarni Marble Corp. v. Missouri Pac. R. Co., 315 I.C.C. 369 (370)*.

140. Official notice.—[Vols. 3, 7, 9, 11-19].—Part II, §204(c), n. 75.

Administrative agents and agencies are not

permitted to take judicial notice of evidentiary material which is not a matter of common knowledge. In an administrative hearing where the facts are adjudicative, disputed, and critical, nothing less than submission through evidence, subject to cross-examination and rebuttal, will normally suffice. Furthermore, the practice of judicially noticing "facts" after reception of evidence is closed is inconsistent with §7(d) of APA, 5 USC §1006(d).—Cook v. Celebrezze, 217 F. Supp. 366 (368). [Not arising hereunder.]

Since an administrative agency may take notice of the kinds of fact which a court notices, it may properly take official notice of a Federal Census Report.—Northern Pac. Ry. Co. Abandonment and Construction, 317 I.C.C. 513 (517)*; the commission takes official notice that 1960 census figures show that population of the 11 mountain-Pacific States increased 205 percent from 1920 to 1960, and that that of California more than doubled between 1940 and 1960.—Akron, C. & Y. R. Co. v. Atchison, T. & S.F. Ry. Co., 321 I.C.C. 17 (53)*.

Official notice is taken of fourth-section order referred to of record, and of verified applications referred to therein.—Farmers Potato Distr. Co., Inc. v. Atchison, T. & S.F. Ry., 318 I.C.C. 415 (416, Note 4)*.

The commission may officially notice that grain rates from central and western Montana, including origins specified in instant investigation, have been reduced once and sometimes twice since institution of the investigation.—Grain from Idaho, Oreg. & Wash. to Ports in Oreg. & Wash., 319 I.C.C. 534 (563)*; also, that subsequent to the hearings the approximate parity in rates from Pacific Northwest and from southern Idaho and Utah to California, which had been almost restored by the reductions under investigation in rates from the Pacific Northwest, was again disturbed by reductions from southern Idaho and Utah, to detriment of the Pacific Northwest.—Id., p. 564.

The commission takes official notice that out-of-pocket costs of water carriers are not less than 85 percent of their fully distributed costs.—Pig Iron, Buffalo, N.Y., to Chicago, Ill., and Gary, Ind., 315 I.C.C. 601 (613)*.

145. Presumptions.—[Vols. 3, 7, 9, 13].—Before the presumption of unreasonableness created by Rule 66(a) of Tariff Circular 20, where charges assessed on basis of the minimum weight published for a larger car furnished for carrier's convenience exceed those based on a lower minimum for a smaller car ordered by shipper, becomes operable it must be established by substantial evidence that (1) the shipper ordered a car of a particular size, (2) the carrier was given sufficient time to furnish the car ordered, and (3) the shipment would have fitted in or upon the car ordered.—Baltimore & O. R. Co. v. United States, 217 F. Supp. 918 (922)*.

It is a long-established rule that, while recitations in a bill of lading concerning quantity and quality of the goods shipped may be considered prima facie evidence of such facts, those relating to the agreement to carry goods via a certain route on a designated car are contractual. Notations as to size of car ordered, which the government relies on to support setoff claimed under Rule 66(a), fit neither the contractual nor the prima facie proof aspects of the bill of lading; though by statute a bill of lading may be prima facie proof of other facts which it recites, no statute has been found that has that effect as to any notation of size of car ordered. Authorities cited indicate that in circumstances like those involved such notations, absent other confirmatory evidence, will not support a finding of such facts, and that absence of notation, in compliance with Rule 66(a)(4), as to the date that certain size cars were allegedly ordered may well constitute a fatal defect in the government's proof.—Id., pp. 924-5.

147. General legal sufficiency of evidence.—[Vols. 3, 7, 19].—Typical evidence rule as to divisions, see §15(6), n. 22 *Sufficiency of evidence.*

148. Competency.—[Vols. 3, 7, 12, 13, 15-19].—Administrative agencies are not bound by rules of evidence relating to competency. The law of evidence was originally developed for jury trials, and the distinction between rules of evidence applicable in actions at law and the more liberal practice prevailing in equity is recognized in Rule 43(a) of Federal Rules of Civil Procedure, providing that all evidence shall be admitted which was formerly admissible in suits in equity. Moreover, the

courts have not imposed on administrative agencies any rigid requirement that they must exclude all evidence that would not be admitted at a trial before a judicial tribunal; admission of evidence objected to as incompetent presents an entirely different question from an agency's exclusion of evidence that should have been admitted.—United States v. I.C.C., 221 F. Supp. 584 (588-9)*.

Affidavits from an officer of each of 10 complainants to effect that the officer had personal knowledge of all shipments made by his company and that his company paid and bore charges on attached list of shipments were properly exclude on ground that the officers were not present for cross-examination and their statements therefore could not be considered as evidence.—B. G. Anderson & Co. v. Atlantic Coast Line R. Co., 319 I.C.C. 224 (225).

Informal opinion of commission's Bureau of Traffic as to applicability of a tariff description to complainant's shipments, based entirely on complainant's representations, is not binding on the commission in a formal proceeding.—Firestone Tire & Rubber Co. v. Atchison, T. & S. F. Ry. Co., 318 I.C.C. 107 (109).

149.——Hearsay.—[Vols. 3, 7, 9, 15-19].—Letters from shippers to defendants or rate bureau are not admissible, over objections, because of their hearsay character and inability of opposing parties to cross-examine persons who made statements set out in such documents.—Firestone Tire & Rubber Co. v. Atchison, T. & S.F. Ry Co., 318 I.C.C. 107 (109).

151.——Admissions.—[Vols, 3, 7, 9, 13-16, 19].—While defendant's admission that assailed rate was published in error is not controlling, that fact, as well as its subsequent establishment of a reduced rate the same as that applicable in reverse direction during period of movement, are relevant factors and have probative value to support complaint.—Arkansas Plant Food Co. v. St. Louis S.W. Ry. Co., 315 I.C.C. 680 (681-2).

See also Tractors—T.L. & W.T.L. Territories to S.W. & W.T.L. Ter., §15(7), n. 50

155. Relevancy.—[Vols. 3, 7, 9, 12-15, 17-19].—Evidence showing tax expenditures of the citizens of Freeport, Tex., to develop their port, and the loss they would experience if lack or rate parity would prevent completion of a truly competitive port, is irrelevant to the issues of port preference and prejudice properly under consideration, and should not have been admitted or given weight. Nevertheless, it cannot be ignored that the combined difference in rates and transit arrangements was the cause of Freeport's inability to attract those collateral facilities which would allow it a competitive standing beside the other Gulf ports.—Atchison, T. & S.F. Ry. Co. v. United States, 231 Supp. 422 (431)*.

Although in rejecting as irrelevant transcontinental western lines' proffered evidence relative to traffic not subject to 1955 agreement of midwestern and eastern railroads to accept the Docket 28277 basis of divisions, the commission intended to narrow the issues to official-w.t.l. divisions between the eastern and plaintiff transcontinental western lines only, pleadings in the proceedings were never amended to reflect that fact. Plaintiffs' exhibits, offered to show that the 28277 scale was greatly beneficial to midwestern lines, would have gone to very heart of the issue of whether the midwestern carriers' voluntary adoption thereof was "conduct of lines in like situations" within precedent in 31 ICC 673; such evidence was not only put in issue by original pleadings but was the type of evidence necessary to establish a basis for the commission's test of comparison in prescribing the same divisions schedule for plaintiffs' traffic; hence it cannot be called irrelevant.—Atchison, T. & S.F. Ry. Co. v. United States, 225 F. Supp. 584 (588, 602-3)*.

Copy of counsel's request for a declaratory order in a suspension proceeding involving rates on like traffic was properly excluded as immaterial and irrelevant in complaint proceeding.—B. G. Anderson & Co. v. Atlantic Coast Line R. Co., 319 I.C.C. 224 (225).

Commercial conditions, and the close commercial relationship between the ports of Freeport and Houston, Tex., are relevant factors in the consideration of port groupings.—Brazos River Harbor Nav. Dist. v. Abilene & S. Ry. Co., 319 I.C.C. 54 (56-7, 67)*.

Since the principal issue in investigation is whether promiscuous loading privilege should be extended to shippers, evidence respecting

promiscuous loading by carriers is relevant to determination thereof.—Loading of Freight by Shippers at Eastern Points, 316 I.C.C. 179 (180)*.

160. Expert opinion.—[Vols. 3, 9, 12, 13, 16, 17, 19].—Objection to testimony of assistant freight traffic manager who handles rate adjustments and related matters for one of defendant railroads, on ground that it is opinion evdence from a witness unqualified to testify regarding chemical matters, overruled. Complainant does not challenge witness's expertise in his field, and any opinions expressed by him were offered as those of a rate expert, not as those of a chemist.—R. M. Hollingshead Corp. v. Alton & S. R., 319 I.C.C. 86 (87).

166. Parol or extrinsic evidence; proceedings before the commission.—[Vols. 3, 7, 15, 17, 19].—Though the Government objected to the commission's admission of a transcript of testimony of several witnesses in two earlier proceedings, the United States was also a party in those cases and government counsel had opportunity to cross-examine the witnesses, and in overruling the objection the commission indicated that government counsel would have a right to call those witnesses and cross-examine them in the hearing then pending. Argument that because different government departments were involved in the earlier and the instant proceedings the parties were not the same is untenable: the United States is a single entity. In any case, there was no reversible error in the commission's admission of the transcript, since its own rules specifically provide for admission of transcripts of evidence in other proceedings, subject to certain safeguards and limitations.—United States v. I.C.C., 221 F. Supp. 584 (589)*.

While it would not constitute error in and of itself for the commission to incorporate evidence from another docket, this practice could in certain circumstances create unjustified prejudice. In determining that existing basis of dividing joint interterritorial rates between eastern carriers and transcontinental western lines was unlawful, the commission asserted that data respecting rates applicable to plaintiffs was available to it in Docket 28277; however, that proceeding dealt with traffic interchanged with the eastern lines which originated or terminated on only six midwestern railroads, and the data antedated World War II. That data is not before the court, and the court cannot determine whether it is not outdated, whether is is representative, whether it is substantial, or whether it is applicable to plaintiffs at all.—Atchison, T. & S.F. Ry. Co. v. United States, 225 F. Supp. 584 (599-600)*.

167.——Papers on file with the commission.—[Vols, 3, 7, 9, 14, 16].—Governing freight classification, tariffs, and supplements thereto, were duly published and filed with the commission and were in effect at all times pertinent to railroad's suit against shipper to collect alleged undercharges; and photostatic copies thereof, in whole or in part, may be admitted into evidence without further proof of their authenticy, as fully as if they were certified by the Secretary of the Commission.—Louisiana & A. Ry. Co. v. Export Drum Co., 228 F. Supp. 89 (90)*.

170. Exhibits.—[Vols. 3, 7, 9, 11, 15-18].—No prejudicial error is shown in examiner's requiring complainant to cross-examine defendant's witness on basis of an IBM tabulation of shipments during a 14-month period, and denying its request for that document to be made part of the record. Under authority granted, pursuant to subpena issued at complainant's request, for photocopying and filing copies of the monthly reports of oil clearinghouse on which that tabulation was based, complainant was authorized to file copies of that underlying data as a late-filed exhibit.—Denver Oil Co. v. Platte Pipe Line Co., 319 I.C.C. 725 (726, 728)*.

185. Weight accorded evidence.—[Vols. 3, 7, 9, 11, 13-17, 19].—Testimony of complainant's traffic manager that commodity shipped was plastic sheeting, not "sheets" within tariff description, is a mere conclusion which is entitled to little weight without some evidence as to how that conclusion was reached.—Firestone Tire & Rubber Co. v. Atchison, T. & S.F. Ry. Co., 318 I.C.C. 107 (109).

See also Kansas Intrastate Freight Rates and Charges. §13(4), n. 58.

Argument

191. Oral argument.—[Vols. 3, 15, 16, 17].—There is nothing in the Interstate Com-

merce Act, the Administrative Procedure Act, the commission's General Rules of Practice, or Article V of the Constitution which entitles plaintiffs (defendants to complaint assailing divisions of joint jates) to oral argument before the commission in addition to written argument. Section 15(6) states only that the commission "after a full hearing upon complaint" may prescribe just, reasonable, and equitable divisions; and the commission has construed Rule 1.98 of its Rules of Practice, which provides for oral argument, to mean that granting of a request therefor in complaint proceedings is discretionary.—Boston & M. R. Co. v. United States, 208 F. Supp. 661 (669)*.

The exhaustive briefs filed by plaintiffs with the commission before the challenged order was entered disclose that they fully exploited the ample opportunities granted them to present, in writing, all their arguments in support of their own views and in opposition to complainants' claims, and counsel for plaintiffs admitted that it was doubtful if anything could have been said orally that was not thus stated in writing. In the circumstances, granting of opportunity for oral argument was within the commission's discretion, and denial of plaintiffs' request did not deprive them of a full hearing or render the commission's order invalid.—Id., pp. 668, 669-70.

Proposed Reports

207. Exceptions; time and manner of making exceptions.—[Vols. 3, 9, 19].—Complainant's reply to defendants' exceptions included exceptions to the examiner's report and recommended order which were not filed within the 30-day period specified by Rule 1.96(b) of the Rules of Practice; therefore, to the extent that complainant's reply constitutes exceptions to examiner's report, defendants' motion to strike that part of the reply to their exceptions is granted.—Middlewest Motor Freight Bureau v. Great Northern Ry., 316 I.C.C. 443 (444).

Modified Procedure

215. In general.—[Vols. 3, 7, 13-19].—Appendix to complainant's reply statement in proceeding handled under modified procedure, consisting of a rate comparison and an affidavit of an official of complainant as to necessity to reduce price of considered commodity to meet competition of lower-rated origins, embodies new matter which is not in the nature of rebuttal of defendant's statement; motion to strike, granted.—Anderson-Prichard Oil Corp. v. Alton & S. R., 315 I.C.C. 59 (60).

An affidavit is defined as a sworn statement in writing, especially one made on oath before an authorized officer; and the affidavit is the entire statement, not just the verification. Statement of facts by complainant's sales manager affirmatively states that he is personally familiar with considered shipments and personally handled bids which developed them; statement of another witness, who is associated with complainant's general traffic manager and handles its office and rate matters in same area, states that he is familiar with the rates and tariffs involved and with correspondence covered by exhibits attached to his statement; affidavits of those two witnesses clearly indicate that they have personal knowledge of the matters to which they testified, and thus substantially comply with Rule 1.50 of Rules of Practice.—Van Waters & Rodgers, Inc. v. Western Pac. R. Co., 315 I.C.C. 743 (744).

Conference Plan

226. Prehearing conference.—[Vols. 11, 13, 15, 17, 19].—Request for a prehearing conference of all parties in rule-making proceeding, denied; questions raised can best be considered following submission of written statements, and prehearing conference at this time would serve no useful purpose.—Rules to Govern Assembling & Presenting Cost Evidence, 321 I.C.C. 238 (243).

Section 13. (2) Complaints by State commissions; inquiry on commission's own motion; expenses of State commissions.—[Unchanged. See vol. 9. p. 7625, amendment, vol. 11, p. 9261.]

Amendments, see footnotes, vol. 3 p. 1825; historical note, p. 1825.

Historical Note

Rates and fares of railroads within the Alaska Railroad Act, jurisdiction of the commission, see Historical Note concerning Executive Order 11107 following §13(1).

Notes of Decisions

Volume 3—p. 1826; Volume 7—p. 5470; Volume 9—p. 7625; Volume 11—p. 9261; Volume 12—p. 10303; Volume 13—p. 11011; Volume 15—p. 12093; Volume 17—p. 13418; Volume 18—p. 14172; Volume 19—p. 15336.

2. Inquiry on commission's own motion.—[Vols. 3, 7, 9, 11, 15, 19].—Discontinuance, see Iron and Steel Articles—Eastern Motor Carriers, §204(c), n. 250.

Although order instituting investigation on the commission's own motion made no reference to §15(1), which is the source of its power to prescribe minimum rates, subsequent modifying order stated that investigation was confined to justness and reasonableness of the described rates under §1, which embraces rates that are unlawful because less than minimum reasonable rates as well as those that exceed maximum reasonableness; therefore, if a determination of unlawfulness is made in the investigation, under §15(1) the commission may implement that finding by exercising its authority to prescribe lawful rates. [See 335 US 573.] Failure to state the source of that power in orders instituting instant investigation in no way prejudices the respective parties.—Fresh Vegetables from Tex., Calif., Ariz., and N. Mex., 319 I.C.C. 141 (156).

Moreover, under §13(2) the commission, in an investigation instituted on own motion, is invested with power and authority like that in a complaint case, and therefore has authority to enter an order affecting rates established subsequent to institution of the investigation. —Id., p. 157.

4.——Subjects of inquiry.—[Vol. 3].—It was not intended that adoption of the 15 cost studies by commissions's cost finding section, listed in appendix to notice of rule-making proceeding as published, should permit carriers to put those studies in evidence instead of evidence of their own costs, thereby shifting the burden of going forward with the evidence to protestants. Those studies are ancillary to purposes of the proceeding, which is concerned with propriety of methods of estimating costs, and which can as well be accomplished through adoption of cost formulas alone. Withdrawal of the studies (which are dependent on validity of the cost section's formulas used to obtain the cost scales set out therein) will not affect consideration of the formulas, and does not reflect approval or disapproval of those cost studies or the underlying formulas.—Rules to Govern Assembling & Presenting Cost Evidence, 321 I.C.C. 238 (240-1). [But see dissent.]

6.——Parties; bringing in new defendants.—[Vol. 3].—It would conduce to more thorough and useful review of cost formulas considered for adoption if the commission's cost finding section were to present its views of presentations of parties to rule-making proceeding, and the parties in turn were given opportunity for rebuttal. Request for participation of the cost finding section granted to extent indicated.—Rules to Govern Assembling & Presenting Cost Evidence, 321 I.C.C. 238 (243).

8.——Procedure.[Vols. 3, 12].—Since rates in issue were in effect when investigation was instituted, the burden of proof does not rest on respondents, and examiner properly directed protestants to proceed first with introduction of their evidence.—Export Grain from Texas to Texas Points, 319 I.C.C. 16 (18).

Although respondents do not have the burden of proving lawfulness of rates in effect before investigation was instituted, rail respondents failed to adduce any evidence of their actual costs to overcome the prima facie showing of Bureau of Inquiry and Compliance that considered rates are unreasonable because substantially below out-of-pocket costs, and thus have failed to sustain their burden of going forward.—Petroleum and Products from Oklahoma to Illinois, 318 I.C.C. 425 (428).

10.——Orders and enforcement thereof.—[Vol. 3].—Trial court did not abuse its discretion in denying the [Federal Trade] commission's petition for leave to inspect and copy certain evidence given before grand juries, which had returned indictments against certain corporations for violations of the Antitrust Acts, in connection with its investigation of possible violations of the commission's cease-and-desist orders previously issued against eight of those corporations. Such a petition is addressed to the sound discretion of the trial judge, to be dealt with by him in light of particular facts and circumstances of the particular case; that discretion should be exercised favorably to disclosure only when it is persuasively shown that the ends of justice require it. Trial judge's action on such a petition may not be disturbed absent a clear abuse of discretion.—Grand Jury Proceedings, In re, 309 F. 2d 440 (442, 444). [Not arising hereunder.]

Proceedings before a grand jury are protected against disclosure by the common law policy of secrecy, which policy is continued in rule 6(e) of Federal Rules of Criminal Procedure; "attorneys for the government" in that rule is restrictive and does not include attorneys for administrative agencies. The commission does not seek grand jury evidence for use in any judicial proceeding; it seeks private disclosure in aid of an administrative investigation which is not preliminary to or in connection with judicial proceeding within intendment of that rule. While disclosure of the evidence might facilitate the commission's investigation and serve the convenience of the agency, more is required to outweigh the traditional policy of secrecy of matters occurring before a grand jury.—Id., pp. 443-4.

14. Complaint not dismissed, absence of direct damage to complainant.—[Vols. 3, 7, 9, 12, 17, 18].—Since §13(2) provides that no complaint shall be dismissed because of absence of direct damage to complainant, the commission had jurisdiction to consider complaint by oil marketing company alleging discrimination in pipeline's refusal to accept certain shipments of crude oil for transmission in its "asphalt sour stream" even though prospective buyer, which would have been both consignor and consignee, never made a request for shipment.—Denver Oil Co. v. Platte Pipe Line Co., 316 I.C.C. 599 (601-2)*.

Section 13. (3) Investigation involving State regulations; conference of State and interstate commissions.—[Unchanged. See vol. 9, p. 7626, vol. 11, p. 9261.]

Historical note, vol. 3, p. 1830.

Notes of Decisions

Volume 3—p. 1831; Volume 7—p. 5472; Volume 9—p. 7626; Volume 11—p. 9261; Volume 12—p. 10304; Volume 13—p. 11011; Volume 14—p. 11514; Volume 16—p. 12736; Volume 18—p. 14172; Volume 19—p. 15337.

2. Investigation; on petition of carrier concerned.—[Vol. 3].—Motion of Oklahoma comission to strike all allegations of respondents' petition concerning its refusal to grant intrastate increases equivalent to those authorized in ex parte proceedings prior to Ex Parte No. 223, on ground that respondents' failure to file petition with Interstate Commerce Commission following each such denial or partial denial constituted laches, denied.

While the carriers may have been somewhat remiss in not appealing to ICC immediately after denial of their requests by the Oklahoma commission, there is not statutory requirement that they take immediate action. Moreover, laches is an equitable doctrine and cannot be upheld in an administrative proceeding; it is a valid defense only where delay in enforcing a claim works a disadvantage to the other party; but, instead of a disadvantage, respondents' delay in petitioning for relief under §13(4) gave Oklahoma shippers the advantage, for a considerable period, of lower rates than they would otherwise have enjoyed.—Oklahoma Instrastate Freight Rates and Charges, 321 I.C.C. 186 (207)*.

6. "Made or imposed by authority of any State."—[Vols. 3, 7, 11, 18, 19].—While reasonableness of intrastate fares is primarily a matter for determination by the State commission, because of Texas law limiting passenger fares on all railroads in that State to 3 cents a mile the Texas commission lacks jurisdiction to determine reasonableness of proposed increased coach fares exceeding that amount. However, the commission is not bound by an such limitation, and would be remiss in its duty and responsibility under the act, especially§13, if it failed to make a determination as to lawfulness of the proposed fares.—Texas Intrastate Passenger Coach Fares, 318 I.C.C. 151 (152, 155)*.

On further hearing, though Missouri Pacific and Texas & Pacific request an order under §13 requiring them to maintain reserved seat charges for certain intrastate passenger service similar to those charged interstate passengers (on ground that those charges plus the basic coach fares they seek would exceed the Texas statutory limitation), nothing indicates that such charges would or should be construed as embraced within the Texas maximum fare limitation, and both the State and the State commission point out that Texas authorities do not construe the Texas statute as controlling, but view the matter as one for handling by the State commission, which apparently has not been approached by respondents on the matter.—Id., 321 I.C.C. 569 (577)*.

Section 13. (4) Duty of commission where State regulations result in discrimination.—[Unchanged. See vol. 18, p. 14172.]

Historical note, vol. 3, p. 1830

Notes of Decisions

Volume 3—p. 1840; Volume 7—p. 5474; Volume 9—p. 7627; Volume 11—p. 9262; Volume 12—p. 10304; Volume 13—p. 11011; Volume 14—p. 11515; Volume 15—p. 12094; Volume 16—p. 12736; Volume 17—p. 13418; Volume 18—p. 14173; Volume 19—p. 15337.

3. Construction, generally.—[Vols. 3, 7, 9, 11-13, 15-19].—In finding the Kansas commission's intrastate rates on certain commodities to be unjust, unreasonable, and an undue burden on interstate commerce, the commission applied the correct rule of law to the problem before it. It is clear from examination of §13(4) and the entire record that whether the rates imposed by the State commission have created an unreasonable or unjust discrimination against interstate commerce is determined primarily by criteria pertaining to the overall profitable operation in interstate commerce of the railroads involved; another factor that may be considered is the likelihood, if any, that an increase in the intrastate rates may cause diversion of rail traffic in the involved commodities to truck carriers. In the final analysis it is systemwide experience that warrants the greatest consideration, because in that way the purposes of the act, to "promote safe, adequate, economical, and efficient service and foster sound economic conditions in transportation," can best be effectuated.—State Corporation Com'n of State of Kansas v. United States, 216 F. Supp. 376 (380)*.

In addition, the specific provision of §13(4)

that the commission may find without a separation of interstate and intrastate property, revenues, and expenses, and without considering in totality the operations and results thereof of any carrier or group of carriers wholly within any State, requires further emphasis on the necessary profitable operation of the interstate carriers; and provisions of §13(4) as last amended permit admission in evidence of opinions offered by the railroads' traffic experts as to effect of an increase in intrastate rates. In the circumstances, previous cases which considered the revenue from various commodities separately, and considered effect of an intrastate rate increase on the railroad's intrastate traffic in that commodity, are not controlling. A conclusion of the commission, based on supporting data, including estimates of experience railroad traffic men, that the probability of increased revenue was great enough to make rate increases a reasonable exercise of sound managerial judgment is sufficient to meet requirements of the statute. —Id., p. 380.

Subjects Covered by Provisions of Paragraph

22. Charges, other than rates and fares, generally.—[Vol. 3].—Though Missouri Pacific and Texas & Pacific request an order under §13 requiring them to maintain reserved seat charges for intrastate coach passengers on certain trains within Texas, corresponding to those applicable between Texas and out-of-State points, record does not disclose whether other trains making same runs allow passengers regular coach fares, and reserved seat service of those respondents does not now apply on intrastate traffic. There is therefore no discrimination against interstate commerce, since application of the reserved seat service to interstate and not to intrastate commerce was a matter of respondents' own choosing. Mere existence of a lesser service at a lower charge is no bar to publication of a more complete service at a higher charge.—Texas Intrastate Passenger Coach Fares, 321 I.C.C. 569 (577-8)*.

And though examiner found that Southern Pacific's practice of assessing interstate passengers a reserved coach seat charge while at same time and under like circumstances reserving coach seats for intrastate passengers without charge was unjustly discriminatory in violation of §13, investigation of practice of reserving seats for coach passengers in Texas embraces only services of Missouri Pacific and Texas & Pacific. Since Southern Pacific has not been made subject to that investigation, an order could not properly be directed against it, even assuming that the practice actually exists to extent indicated by the examiner. Moreover, only limited mention of Southern Pacific's practice, which is not in issue, was made at hearing, and in the circumstances no finding a to lawfulness thereof is made. However, it is expected that Souther Pacific and the Texas commission will not allow the failure to make a specific finding to preclude elimination of any unlawfulness that may in fact exist.—Id., p. 578

Prohibited Discriminations and Prejudices

41. Classes of——alternative application of prohibition.—[Vols. 3, 7].—Since §13(4) is couched in alternative phrasing, the commission's order in a proceeding thereunder may be based on either a finding of (1) undue preference or prejudice as between persons or localities in intrastate commerce on one hand and interstate on the other, or of (2) undue, unreasonable, or unjust discrimination against, or undue burden on, interstate commerce. Therefore, there was no requirement that the order requiring certain Oklahoma intrastate rates and charges be increased to the interstate level contain a finding as to both (1) and (2); order in issue being based on the (2) alternative, the other alternative is not involved.—Oklahoma Corporation Commission v. United States, 235 F. Supp. 803 (807-8)*.

45. Prejudicial or discriminatory relation, interstate and State——propriety of interstate rate or practice to be established.—[Vols. 3, 7, 9, 12, 13, 15, 16, 18, 19].—Prior decision required a parity in interstate and Texas intrastate coach fares as of that time but, since it did not require parity as to subsequent interstate fare increases, a disparity therein subsequently occurred. Considering respondents' substantial passenger deficits and need for revenue on their passenger service, present interstate coach fares of 3.676 cents a mile are

not in excess of a reasonable maximum; interstate and intrastate passengers are generally afforded the same service; corresponding Texas intrastate fares required to be increased to same basis as present interstate coach fares between points in that State.—Texas Intrastate Passenger Coach Fares, 321 I.C.C. 569 (571, 579)*.

Undue, Unreasonable or Unjust Discrimination Against Interstate or Foreign Commerce

50. Revenue discriminations.—[Vols. 3, 7, 9, 11-13, 15-19].—General increases authorized in Ex Parte Nos. 162 through 223 were based on needs of railroads generally, including respondents, for additional revenues to meet increased operating expenses incurred in intrastate as well as interstate transportation. Combined increase in operating expenses, including employee compensation, prices of materials, supplies, and fuel, taxes, and rents, 1960 over 1946, of class I railroads operating in Oklahoma is almost 100 percent, and costs of new equipment increased by 194 to 223 percent. Respondents have clearly shown their need of additional revenues and that intrastate rates on most of the commodities involved are lower than corresponding interstate rates, which, including authorized increases, do not exceed reasonable maxima. Operating conditions affecting the intrastate traffic concerned are no more favorable than those incident to interstate transportation thereof, and the local movements in some instances involve additional expense. Oklahoma intrastate traffic should make a reasonable contribution to respondents' increased expenses.—Oklahoma Intrastate Freight Rates and Charges, 321 I.C.C. 186 (195-7, 208)*.

Informed judgment of respondents' traffic officials as to revenue gains from increases sought on commodities moving in substantial volume is entitled to great weight. Oklahoma intrastate rates on grain, grain products, and commodities taking same rates, on sand (except industrial sand) and gravel, on broken, ground, and crushed stone and rock and related articles, on clay or shale cinders, on agricultural or crushed limestone, line, and asphalt rock and related articles, are abnormally low and unjustly discriminate agains interstate commerce. Such unlawfulness should be removed by increasing those rates to level of rates maintained by respondents on like traffic between Oklahoma and adjoining States. Such increases should result in substantial net gain in revenue, and protestants have not shown that they would be disadvantaged thereby.—Id., pp. 208, 209-10.

But, in view of the competition between coal and other fuels and decline in use of coal, likelihood of increased revenue from increase in considered intrastate rates thereon is not so great as to warrant risk of further diversion of that traffic; and increasing motor competition for transportation of industrial sand and cement impels conclusion that increases sought on those commodities would increase such diversion to an extent offsetting any benefits therefrom. And the small amount of intrastate l.c.l. traffic handled by respondents under existing minimum charge and at minimum rate on shipments accorded pickup and delivery imposes no undue burden on interstate commerce; nor is any necessity shown for increased minimum charge per car on the heavy loading aggregates, in view of rate increases prescribed thereon. Application of the ex parte increases sought to those intrastate rates and charges is not warranted.—Id., p. 208.

General increases authorized in Ex Parte Nos. 206 and 212 were based on need of railroads generally, including respondents, for additional revenue to meet increased expenses incurred on intrastate as well as interstate traffic; intrastate operating conditions in Kansas are no less favorable than for like interstate traffic, and Kansas intrastate traffic should make a revenue contribution to those operating expenses more nearly proportionate to that made prior to such authorized increases; therefore, Kansas intrastate rates on specified commodities fail to bear their fair share of increased operating expenses, and unduly burden and discriminate against interstate commerce, to extent they are lower than rates reflecting the Ex Parte 206 and 212 increases; resulting rates will be on no higher level, and in most instances will be lower, than reasonable interstate rates on like traffic, and will make a substantial revenue contribution.—

Kansas Intrastate Freight Rates and Charges, 315 I.C.C. 223 (229-234, 237-40)*.

However, since competition between coal and other fuels, including natural gas, liquid petroleum gas, and fuel oil, is more acute in Kansas than in other areas of the country, no substantial increase in revenue could be expected as result of increase in intrastate rates on bituminous coal to the interstate level; likewise, no increase is warranted in intrastate rates on refractories in absence of any showing of intrastate movements.—Id., pp. 234-7, 240.

Passenger service: [Vol. 17].—Texas intrastate coach fares, on level approximately 6 percent lower than corresponding interstate fares, unjustly discriminate against and unduly burden interstate commerce when they are the only such fares in western district that have not been brought up to the interstate level. Each transportation service should pay its own way so far as is practicable, without burdening other traffic, and record shows that Texas intrastate coach service is not doing so; prescription of 6-percent increase sought, to level of interstate coach fares found just and reasonable in 308 ICC 125, which would make contribution of the Texas coach fares to the total transportation burden commensurate with that of interstate fares to and from Texas, is warranted.—Texas Intrastate Passenger Coach Fares, 318 I.C.C. 151 (153-4, 155)*.

While future revenue effects can only be estimated from all the evidence, it does not appear that the modest increase sought will adversely affect respondents' revenues; rather, it is reasonable to believe that it will have little effect on quantum of intrastate passenger patronage. Considering that respondents' passenger operations, both interstate and intrastate, are conducted at a loss, and that additional revenue contributions are sorely needed to enable them to render adequate and efficient service, the 6-percent increase in intrastate coach fares cannot be regarded as to insubstantial to warrant the relief sought.—Id., p. 154.

And though protestants contend that increase prescribed in prior report has not increased respondents' revenues, review of such revenues by respondents over a much longer period indicates that fluctuations therein are due to many factors, including public use of rail passenger service, competition from other transportation modes, and general economic condition of the country. Implication in protestants' position that further increase sought to parity with present interstate fares reflecting two subsequent increases, one of 5 percent and one of 10 percent which supplanted former excise tax without actual increase to passengers, would in itself cause diversion of enough traffic to offset any anticipated gain, is unsupported. Respondents' evidence, based on considerable study by their officials, is convincing that proposed modest increase in fares, plus the excise tax previously in effect, will result in substantial increase in revenue and at the very least aid in arresting the downward trend in intrastate passenger revenues. Further increase sought prescribed for reasons stated in prior report.—Id., 321 I.C.C. 569 (571, 576)*.

Investigation—Procedure

56. Full hearing, requisites.—[Vols. 3, 7, 9, 12, 13, 16, 17].—Notice and hearing were not prerequisites to entry of the commission's amended order which simply makes clear the scope of its findings in a proceeding involving Oklahoma intrastate freight rates and charges; the clarifying order states explicitly what is implicit in the previous order and decision. Under §16(6) the commission may suspend or modify its orders upon such notice and in the manner it deems proper, and §17(3) gives it the power to correct inadvertent errors; however, since the order in question made no substantive change in the previous order, there is no legal basis for holding that notice and a hearing are necessary to due process.—Oklahoma Corporation Commission v. United States, 235 F. Supp. 803 (807)*.

58. Quantum and character of evidence.—[Vols. 3, 7, 9, 11-13, 15-19].—Since it is the commission, not the reviewing court, that judges the weight of the evidence, all pertinent evidence bearing on the issues in a commission proceeding under §13(4) should be submitted to it in the first instance and should not be received by the court in a suit to set aside and enjoin enforcement of the commission's order as though it were conducting a

trial de novo.—Oklahoma Corporation Commission v. United States, 235 F. Supp. 803 (806-7)*.

Evidence on which the commission based its conclusion that an increase in Kansas intrastate rates on certain commodities would not divert traffic from the railroads, but would increase railroad revenues without appreciable increase in expenses, is both documentary and direct. Exhibit presented by manager of Statistical Bureau of Western Traffic Assn. shows that any traffic diversion resulting from progressively higher rates during the 13-year period it covered was not enough to defeat purpose of the increases, i.e., production of greater revenues; that presentation was supplemented by exhibits and testimony of experienced traffic officials of five major Kansas railroads who, representing the Kansas railroad system and familiar with rates and revenues of the various companies, testified that while there might be some diversion of traffic the net result of the increases would be substantially increased revenues. Opinions of railroad traffic experts in judging effect of an increase in intrastate rates are admissible, and are substantial evidence of value.—State Corporation Com'n of State of Kansas v. United States, 216 F. Supp. 376 (381-4)*.

The question of weight of the evidence was for the commission and not for the court, and its findings of fact, supported by substantial evidence, are not subject to review; its conclusion, based on supporting data including estimates of railroad traffic experts, that probability of increased revenue was great enough to make rate increases a reasonable exercise of sound managerial judgment is sufficient to meet requirements of the statute.The commission had before it all evidence necessary for it to make a proper decision in accordance with the criteria which must be considered; consequently, its judgment must be affirmed. —Id., pp. 380, 384.

Respondents have established by convincing proof, which meets the "high standard of certainty" required by 356 US 421, that the present low level of Texas intrastate coach fares unjustly discriminates against, and casts an undue burden upon, interstate commerce; the Texas coach fares are the only such fares in the western district that have not been brought up to level of the interstate fares, and there is no indication of any substantial difference in transportation conditions within Texas and those within other western States or those affecting interstate coach traffic in that district, which would justify the difference in level of fares.—Texas Intrastate Passenger Coach Fares, 318 I.C.C. 151 (154)*.

At the further hearing the Director of rate division of the Texas commission testified and introduced three exhibits, in opposition to the intrastate fare increase sought, which testimony primarily concerns relation between the fare increases and the passenger revenues; there being some confusion in the transcript concerning admission of that evidence, the examiner concluded it might be placed in the brief to be filed subsequently, to which ruling protestants (who offered the evidence) properly excepted but they did reproduce tthe exhibits in their brief. Though much of such evidence is duplicative of that received at the original hearing, the exhibits contain matter clearly relevant to the issue on further hearing of parity with subsequent interstate increases; witness's statement explaining the exhibits is also relevant, and though certain argumentative statements therein properly belong in the brief, their inclusion in the transcript is insignificant and is insufficient reason for excluding the statement as a whole. Examiner's ruling, to extent it may be construed as excluding such evidence, reversed; the statement and accompanying exhibits received in evidence.—Id., 321 I.C.C. 569 (573-4)*.

Though examiner indicated that he gave considerable weight to fact that respondents were unable to prove that any increase in revenue resulted from 5-percent increase in Texas intrastate coach fares established in October 1962 pursuant to order in prior report, at time of further hearing in March 1963 the 1962 annual reports were not available and the first quarter of 1963 was not yet completed; respondents thus had no reportable period with which to deal. Furthermore, calculation of revenue for latter period, even if possible, would be of no material significance because the period is too short.—Id., p. 577.

Protestants' objections to certain statements of railroad officials regarding their opinion that increases sought in Kansas in-

trastate rates would result in greater revenue are based on generality of such statements, thus bear on weight to be accorded them, not their admissibility. Informed judgment of respondents' traffic officials on whether considered commodities can sustain proposed increases and thus provide substantial additional revenue is entitled to considerable weight, and witnesses' statements are supported by data showing that revenues generally have increased following application of authorized rate increases.—Kansas Intrastate Freight Rates and Charges, 315 I.C.C. 223 (225-6, 240)*.

61. Findings as to discrimination or prejudice.—[Vols. 3, 7, 12-19].—See Texas Intrastate Passenger Coach Fares, n. 22 above.

62. Order prescribing intrastate rate or practice.—[Vols, 3, 7, 9, 12, 13, 15-19].—In prescribing increases in intrastate rates corresponding to general revenue increases approved for interstate rates, to remove an undue burden on interstate commerce, the commission is not obliged to consider reasonableness of each individual rate before carrying into effect the necessary increased schedule; it may provide in its order for modification of the general order in specific situations where the general order might not be justly applicable; such provision was made in the order under review.—State Corporation Com'n of State of Kansas v. United States, 216 F. Supp. 376 (384)*.

Although, when affirmative findings and orders are issued respecting revenue increases in intrastate rates under §13(4), rates reflecting the authorized ex parte increases are generally prescribed as minima, in view of lack of uniformity with which respondents propose to apply the various ex parte increases sought in Oklahoma intrastate rates on described commodities, it is more appropriate to prescribe the increased intrastate rates as maxima; respondents may then, in exercise of their managerial discretion, apply the increases to extent deemed necessary in light of prevailing competitive conditions.—Oklahoma Intrastate Freight Rates and Charges, 321 I.C.C. 186 (209)*.

See also Texas Intrastate Passenger Coach Fares, n. 22, above.

67. Observance of order.—[Vols, 3, 7, 9, 15].—Orders of the commission apply only to carriers and do not control the action of city officials on city property.—United States v. City of Jackson, Miss., 206 F. Supp. 45 (49).

71. Province of commission and of courts.—[Vols. 3, 7, 9, 13, 15, 16, 18].—An order of the commission carries a strong presumption of validity which is not weakened by the fact that it has been challenged in court. Such orders are not to be overturned on judicial review unless based on a mistake of law, made without a hearing, exceed constitutional limits, are unsupported by evidence, or for some other reason amount to an abuse of power; the court may not substitute its own judgment for that of the administrative agency. Applying those rules, and after a complete examination of the record in the light of the commission's statutory power to require States to increase their intrastate rates, the court concludes that the commission applied the correct rule of law in deciding that certain Oklahoma intrastate rates and charges must be increased to the interstate level, and that substantial evidence supports that decision; sustained.—Oklahoma Corporation Commission v. United States, 235 F. Supp. 803 (806, 808-10)*.

The question of weight of the evidence is for the commission, not the courts. The commission was created to function as a body which, from its special character, would be best fitted to determine, among other things, whether on the facts in a given case there is unjust discrimination against interstate commerce, including the prohibited discrimination produced by intrastate rates. In such a situation, where the commission exercises its authority after hearing and proper application of rules of law, its findings of fact supported by substantial evidence are not subject to review; the court may not substitute its judgment for that of the commission.—State Corporation Com'n of State of Kansas v. United States, 216 F. Supp. 376 (384)*.

Section 13a. Discontinuance or change of certain operations or services.—[Unchanged. See vol. 18, p. 14183.]

Notes of Decisions

Vol. 18—p. 14185; Vol. 19—p. 15343.

1. Constitutionality.—[Vols. 18, 19].—There can be no question of Congress's power to legislate concerning the operation or discontinuance of trains engaged in interstate commerce; its power to authorize abandonment of an unprofitable branch line within a State was upheld in 271 US 153 as a necessary incident of freeing interstate commerce from unreasonable burdens. Such exercise of federal power is not an invasion of a field reserved to the State, because the State's power over intrastate commerce may not be exercised to the prejudice of interstate commerce, and the railroad's obligation to provide intrastate service on every part of its line within the State is subordinate to its federal duty efficiently to render transportation services in interstate commerce; because the same instrumentality serves both, Congress has power to assume control insofar as interstate commerce is involved.—Sludden v. United States, 211 F. Supp. 150 (155)*.

It was specifically held in 315 US 110 that States cannot constitutionally thwart the regulatory power of Congress when it is exercised with respect to intrastate commerce. Power to determine the manner and extent of subordination of intrastate service to the end of adequate interstate service is inherent in the United States as an incident of its power over interstate commerce; §13a(1) is constitutional and deprives neither the State nor any individual of any right guaranteed by the Constitution.—Id., p. 156.

The court adheres to its conclusion in 168 F. Supp. 324, affirmed 359 US 27, that §13a(1) is constitutional and deprives neither the State nor any individual of any right which the Constitution of the United States guarantees. —Pennsylvania R. Co. v. Sharfsin, 240 F. Supp. 233 (235-6)*.

On defendants' motion to dismiss, and taking judicial notice of decision in 211 F. Supp. 150 which held §13a(1) to be constitutional, railroad's action to restrain Pennsylvania Public Service Commission, and the members thereof individually, from enforcing unappealed State agency decision denying the railroad authority to discontinue operation of passenger trains within the State cannot be said not to set forth a cause of action; trains in question had been discontinued pursuant to §13a(1), without an investigation by the commission, prior to issuance of the decision in issue; motion to dismiss denied.—Pennsylvania R. Co. v. Sharfsin, 215 F. Supp. 493 (494, 497).

Though carrier contends that any order issued under authority of §13a requiring continuance of operations after effective date of discontinuance notice would contravene the Fifth Amendment, a Federal agency charged with administration of a Federal statute has no jurisdiction to question constitutionality of that statute.—Chicago & N.W. Ry. Co. Discontinuance, 320 I.C.C. 85 (87)*.

The court, not the commission, is the proper tribunal for determining constitutionality of §13a(1) and (2) or any other provision of the act.—Pennsylvania R. Co. Discontinuance of Passenger Service, 317 I.C.C. 111 (120).

2. Construction and interpretation.—[Vols. 18, 19].—The statutory scheme which Congress embodied in §13a prescribes precisely the same substantive standard to govern discontinuance of either interstate or intrastate operations. All that need properly be considered under this standard, as both the language and history of §13a(2) make abundantly clear, is what effect the discontinuance of the specific train or service in question will have upon public convenience and necessity and upon interstate operations or commerce; the commission correctly summed up the matter in 312 ICC 631.—Southern Ry. Co. v. North Carolina, 376 U.S. 93 (103-4)*.

Although §13a(2) was enacted at the same

time that §13(4) was amended to permit the commission to act in intrastate rate proceedings "without a separation of interstate and intrastate property, revenues, and expenses, and without considering in totality the operations or results thereof of any carrier. . .wholly within any state," and no similar language was included in §13a(2), there is no reason to assume that Congress regarded the new language as embodying a standard which had to be specifically incorporated into every statute to which it was intended to apply. In amending §13(4) as a result of decisions in 355 US 300 and 356 US 421, Congress was simply reaffirming what it conceived as the original intent thereof.—Id., pp. 98-100.

Legislative history clearly indicates that Congress, in enacting §13a(2), was addressing itself to a problem quite distinct from that reflected by overall unprofitable operation of an entire segment of railroad line; it was primarily concerned with problems posed by passenger services for which there was no longer significant public demand and which were consistently deficit-producing, thus forcing carriers to subsidize such operation out of freight profits. Holding of the lower court, that it was erroneous as a matter of law for the commission to order discontinuance of considered intrastate passenger trains without taking into account the profits from freight operations on the same line, reversed; remanded with instructions to reinstate the commission's report and order.—Id., pp. 96-7, 100-1, 105-6.

Section 13a(1) applies to any train "operating from a point in one State to a point in any other Sate," and §13a(2) applies to any train "operated wholly within the boundaries of a single State"; as appellee's passenger trains between Butler and Susquehanna Transfer operate wholly within the State of New Jersey, the statute on its face requires that in seeking to discontinue those trains it follow the procedure set forth in §13a(2). That appelle's passengers cross a State line by other conveyance (bus service into New York City operated under contract with the railroad) does not alter that conclusion; the statute speaks not of interstate commerce but of the physical limits of a train's or ferry's operations, and makes no mention of "bus."—New Jersey v. New York, S. & W. R. Co., 372 U.S. 1 (2, 4, 5 Note)*.

Any doubt as to this construction of the statute is dispelled by examination of its legislative history, which makes clear that Congress intended to, and did, leave jurisdiction over trains operating wholly within a single State with the State regulatory commissions. In setting aside the commission's order dismissing discontinuance notice filed by appellee under §13a(1) for want of jurisdiction, the district court disregarded the plain words of the statute and the pertinent legislative history; while the purpose of the statute was, as that court observed, remedial, it was conditioned by a desire to protect State jurisdiction over local operations. To ignore this was error; judgment of the lower court reversed.—Id., pp. 5, 8-9.

The purpose of Congress in enacting §13a was remedial; and, since under the statute a railroad is free to discontinue a passenger train operation or service absent an order of the commission requiring such train to be continued in operation or service "in whole or in part," apparently Congress intended to grant the commission authority to order a partial continuance even though the railroad sought to discontinue an entire run from its origin to the point of termination. Such has been the commission's interpretation in prior cases and, as it is charged with administration of §13a, its interpretation is entitled to great weight. Furthermore, neither the statute nor its legislative history suggest that the commission is limited to discontinuance sought in the original notice and cannot order continuance of part of the service. In effect, the commission required continuance "in part" of passenger train operations between Buffalo, N.Y., and Baltimore, Md., sought to be discontinued, when it ordered continuance of operations between Baltimore and Harrisburg, Pa., and, at the same time, permitted discontinuance thereof between Harrisburg and Buffalo; sustained.—City of Williamsport v. United States, 282 F. Supp. 46 (48-9)*.

Legislative history of §13a indicates that it was designed to permit railroads, at their option, to have the commission, rather than State commissions, pass on discontinuances or changes in operation or service of passen-

ger trains; however, there is nothing to suggest that Congress intended to deny judicial review of passenger discontinuances. And, agreeing with decision in 269 F. Supp. 80, the court fails to find convincing evidence that Congress intended the unusual and concededly unfair result of granting judicial review of the commission's determination solely to railroads, and not to opposing parties. Thus, as the court had jurisdiction to review the commission's action in considered §13a proceeding, District Judge could properly restrain the railroad from discontinuing the trains pending a final commission order; railroad's motion to dissolve temporary restraining order, because of lack of judicial review authority, denied.—City of Williamsport v. United States, 273 F. Supp. 899 (901-3)*.

In action to set aside the commission's order authorizing discontinuance of passenger train service within the State, it is not the function of the court to determine what effect proposed discontinuance may have on public convenience and necessity and upon interstate commerce; Congress has placed that responsibility upon the commission. The court is limited to determining whether the commission's findings are supported by substantial evidence; record is sufficient to support the commission's conclusions; sustained. —State of Montana v. United States, 202 F. Supp. 660 (662)*.

Congress did not intend to limit application of §13a to operations which, in themselves, were deficit-producing; it clearly contemplated that continuation of a service might "unduly burden" interstate commerce, even though a net loss would not result. The statute was deliberately drawn in broad flexible terms; and whether continuance of a train will unduly burden interstate commerce is a broad inquiry which excludes no relevant consideration. Where service provided by train to be discontinued will be replaced by adding to equipment, and revising schedule, of another train operating over same route and serving same points, amount of savings from such train consolidation reflects a burden which will be imposed on commerce if the consolidation is not permitted. Thus, the commission may ground its conclusion, that continuation of an operation under §13a(1) would unduly burden interstate commerce, upon the savings from train consolidation that results from the discontinuance, although the continuation would not result in net loss to carrier; complaint dismissed.—People of State of California v. United States, 258 F. Supp. 950 (952, 954-5)*.

In action to enjoin and set aside, or remand, the commission's decision permitting discontinuance of interstate passenger trains, the court must determine whether proper statutory standards were applied. The difference in language between §13a(1) and §13a(2) suggests that Congress intended separate standards, and that in case of interstate operations either a finding of undue burden or that the service not required by public convenience would support the commission's refusal to interfere with the discontinuance; however, in 376 US 93 (which involved intrastate discontinuances), the Supreme Court declared that the standards are the same. In case under review, both findings were made; however, in any case, as a practical matter, factors affecting undue burden must also be weighed in determining whether the service is required by public convenience and necessity.—State of Vermont v. Boston and Maine Corp., 269 F. Supp. 80 (84-5)*.

By §13a(1) Congress has vested exclusive dominion in the commission over proposed discontinuances of interstate trains, and it is implicit in the act that the commission has the right to act definitively by mere inaction. Unless the commission acts, the carrier may discontinue or change the service in accordance with the notice, the laws or constitution of any State, or the decision or order of, or pendency of any proceeding before, any court or State authority to the contrary notwithstanding. The commission's action in concluding not to institute an investigation into a proposed discontinuance is thus committed to its exclusive discretion and is not subject to judicial review.—Pennsylvania R. Co. v. Sharfsin, 240 F. Supp. 233 (236)*.

Carrier's authority under §13a(1) to discontinue passenger service is subject only to a discretionary power given the commission to investigate proposed service reductions and to order service continued for a year if it is found to be needed; no specific approval of

service cutbacks is ever required; and whether or not the commission will even investigate a proposed discontinuance is left to its absolute discretion. After conducting an investigation the commission has only two choices, (1) it may do nothing, in which case the carrier puts the service reductions into effect, or (2) it may make appropriate findings and order the service continued.—State of Minnesota v. United States, 238 F. Supp. 107 (111-12)*.

Primary purpose of a hearing under §13a(1) is to give the commission enough information to enable it to reach a sound judgment as to whether it should interfere with proposed cutbacks. While its findings and conclusion that service should be continued would be reviewable by the courts, if it decides not to interfere with service cutbacks, then it takes no action beyond terminating the investigation; and its decision to take no action is not reviewable. The commission's order terminating the investigation into considered train discontinuances (after concluding that value of the service was outweighed by burden on the railroad) is not an appealable order within meaning of 28 USC §1336; complaint dismissed.—Id., pp. 110, 112-13.

Section 13a(1) merely permits railroads at their option to have the commission, rather than State commissions, pass upon discontinuance or change in operation of any train or ferry not located wholly in the same State; and the commission is limited to 30 days within which it is empowered to institute an investigation and thereby acquire jurisdiction over the proposed discontinuance. Unless the commission acts within that time, the carrier may discontinue or change the service in accordance with the prescribed notice, notwithstanding the laws or constitution of any State or the decision or order of, or pendency of proceedings before, any court or State authority.—Sludden v. United States, 211 F. Supp. 150 (152-3)*.

In light of the legislative history of §13a indicating that one of its purposes was to expedite discontinuance of train service to alleviate the losses incurred in railroad passenger service, and that the intrastate portion of the service involved is an integral part of a movement in interstate commerce, discontinuance of passenger train service between Harrisburg, Pa., and Hagerstown, Md., entailing discontinuance of intrastate service between Harrisburg and the Maryland-Pennsylvania State line, was clearly within scope of §13a(1). Moreover, in view of the undisputed interstate character of the service involved, the commission's exclusive dominion of the matter is demonstrated in 271 US 153.—Id., pp. 155, 156.

The commission's action concluding not to investigate a proposed train discontinuance is committed ot its exclusive discretion and is not subject to judicial review; the court has no jurisdiction to require it to institute an investigation of a proposed discontinuance, and plaintiffs have no constitutional or statutory right to a hearing before the commission decides not to enter upon such investigation.—Id., p. 153-4.

Furthermore, §13a(1) is self-implementing: the commission, having failed to take affirmative investigatory action within the 30-day period, lost all authority to take such action and the carrier was thereupon vested with plenary power to effect the noticed discontinuance. Any order of the commission after expiration of the 30-day period would be completely gratuitous and of no consequence. —Id., p. 154.

When carrier sought discontinuance of all passenger service in §13a(1) proceeding, but at hearing counterproposed renumbering, rescheduling and continuing two pairs of trains, the commission, having jurisdiction over the matter, found continuance of considered trains, as proposed, was required; however, so far as purposes of discontinuance proceeding are concerned, scheduling, stations to be served, and numbers assigned to trains not permitted to be discontinued are matters within the discretion of management so long as the changes in scheduling and in the stations to be served do not substantially change the service being offered by the involved trains.—St. Louis-S. F. Ry. Co. Discontinuance, 327 I.C.C. 433 (434, 454, 463-5).

Although protesting labor union argues that the §13a(1) proceeding, seeking to discontinue all passenger service, was conceived and time to defeat protestants' [train porters] right to be nondiscriminatorily classified (presently being litigated in Federal Court class action)

and that, by permitting discontinuance of all passenger service, the commission would in effect ratify and approve the carrier's discriminatory policies, the cases cited in support thereof do not apply to railroad employees and do not concern the fields of fair employment practices or labor relations. No source from which the commission can derive jurisdiction over employment practices is suggested; that jurisdiction, and responsibility for enforcement of laws relating thereto, lies elsewhere. However, the position and contentions of the porters are duly considered in connection with the overall adverse effect upon employees which, of course, is a factor to be considered in determining public convenience and necessity in a §13a(1) proceeding.—Id., pp. 456-9, 465.

The provision of the 1958 amendment to the act, conferring jurisdiction on the commission to approve discontinuance of passenger trains, recognizes no distinction on basis of financial stature of the carrier requesting such relief.—Union Pac. R. Co. Discontinuance, 320 I.C.C. 493 (522)*.

Though protestants contend that prospective savings due to change in operation of one pair of trains, for which deficit operations are not shown, as result of consolidation therewith of another pair which would be discontinued, are not valid considerations in passing on a proposed discontinuance required to eliminate operating deficits, and that unless "savings" relate to actual "deficits" there can be no finding of undue burden on interstate commerce, every delegatory provision of §13a refers by specific language to the discontinuance "or change" of the "operation or service" of any train; denial of opportunity to realize appreciable savings, which would seriously prejudice public convenience and necessity, would unreasonably sanction continuance of an "undue burden," contrary to intent of the statute.—Id., p. 523.

Although a prior order of the commission required continuance of considered interstate trains for 1 year, upon expiration of that period the commission's jurisdiction expired and applicability of State law was restored. As §13a(1) makes plain, interstate trains may be discontinued in whole or part pursuant to laws of the affected States without a proceeding before the commission.—Soo Line R. Co. Discontinuance, 320 I.C.C. 337 (340).

The purpose of §13a(1) is to alleviate the financial difficulties of the railroad industry and strengthen the national transportation system by removing obstacles that railroads face in attempting to achieve economies and efficiencies through discontinuance of uneconomic and duplicative services.—Chicago & N.W. Ry. Co. Discontinuance, 320 I.C.C. 648 (656).

While the statute contemplates a prerogative in carrier management to institute a discontinuance and to effectuate it unless governmental action is interposed, it also contemplates, where the carrier invokes the commission's jurisdiction under §13a(1), that the commission shall make certain public interest findings. Therefore, since the commission is not free to decide such public issues on the basis of legalistic procedural rules, railroad's argument that protestants failed to meet their burden of proving that continued operation of considered trains was required by public convenience and necessity, which is tantamount to a contention that the investigation be discontinued and that the commission's order be predicated upon the default of protestants, is most inappropriate.—New York, N.H. & H. R. Co. Discontinuance, 320 I.C.C. 544 (546-7).

If no material disadvantage to the carrier is to be eliminated through proposed train discontinuance, the commission's decision must turn upon the effect thereof on the traveling public; and issues to be determined are (1) whether continued operation of the trains in question will constitute an unjust and undue burden on the carrier's interstate operations or upon interstate commerce, and (2) whether present or future public convenience and necessity permit the proposed discontinuance of service. Under §13a(1) the commission is required to protect interstate commerce from onerous burdens which may affect the carrier's ability to render efficient service to the public; and factors to be considered by the commission, no one of which is itself decisive or controlling, include not only financial results obtained by the carrier in providing the service proposed to be discontinued, but populations of the communities served, the use

made by the public of the service, and other means of transportation available in the areas. —New York, N.H. & H. R. Co. Discontinuance, 320 I.C.C. 466 (486).

Language of §13a(1) is clear and unambiguous as to conditions under which railroads may discontinue trains, and there is no warrant in the law for imposition of additional conditions or restrictions by the commission. Thus, discontinuance of considered trains cannot be conditioned on a requirement that carrier stop another pair of trains at a city which would be left without any rail passenger service should those trains be discontinued.—Chicago, R.I. & P. R. Co. Discontinuance of Trains, 317 I.C.C. 601 (611-12).

The commission's jurisdiction under §13a(1) over proposed discontinuance or change of train service is limited to that specifically set forth in the notice, notwithstanding services of other trains may be altered as result thereof. Thus, while proposed discontinuance of carrier's Overland passenger trains and continuance of the service by its City trains between same termini requires it to submit all facts relating to both sets of trains, furnishing of such information cannot be construed as attempt to invoke the commission's jurisdiction over the City trains; and there is no merit to argument that the commission may not make the necessary findings to permit the discontinuance subject to its jurisdiction if other trains not so subject would continue the service.—Southern Pac. Co. Discontinuance of Passenger Trains, 317 I.C.C. 519 (522-3).

Though the commission may rely on carrier's representations as to service to be rendered by the City trains in future, it may not impose any conditions on operation of those trains to ensure performance of such service. However, if it appears that such an unenforceable representation would not fully assure continuance, in whole or part, of services which should properly be continued, the commission may take appropriate action respecting the proposed discontinuance of the trains subject to its jurisdiction.—Id., p. 523.

Legislative history of §13a(1) reveals intent of Congress to supersede State jurisdiction in order to afford railroads a means of obtaining relief which it considered otherwise unobtainable. The statute being in derogation of State laws, it is incumbent on those wishing to invoke its provisions to comply strictly with its requirements, since they constitute the safeguards intended by Congress to ensure that the superseding of State authority would be pursuant to due process of law; it follows that failure to comply strictly with those requirements results neither in invoking provisions of §13a(1) nor in superseding State law. Therefore, although mere filing of discontinuance notice gives the commission authority to institute an investigation under §13a(1), it is clear from language of the statute and its legislative history that where, upon investigation, it appears that its provisions have not been effectively invoked, the commission has no power to consider or dispose of the proposal on its merits.—Chicago, M., St. P. & P. R. Co. Discontinuance, 317 I.C.C. 761 (772).

Requirement of §13a(1) that carrier post a copy of discontinuance notice at every station served by the trains is intended as one of the safeguards of due process, and language of the statute makes clear that effective invocation of its provisions requires carrier as a prerequisite to post notice at every station then being served by the trains "involved" in the proposal, and that such requirement is not fully met where posting is confined to stations in the area where service is to be discontinued. This is apparent since passengers at all points on the line may be equally affected by discontinuance of any portion of the operation of the trains. And requirement of rule 43.5(j) of commission's regulations under §13a for posting of notice at each station "involved" likewise includes every station served by the trains. As in instant proceeding carrier has not fully complied with the posting requirements, there is no pending proposal over which the commission has power to act. —Id., p. 773.

The commission's authority in a §13a(1) proceeding to require continuance or restoration of operation or service of a train is limited to the proposal described in the notice filed with it by the carrier. Upon proper invocation of that section, the authority of the States involved to act in connection with the trains in question is superseded for periods specified in the statute only to extent that operation of or

service rendered on such trains is embraced in the proposal specified in the notice filed; and the commission's jurisdiction over the operation or service involved is limited to a period of 1 year from date of order requiring continuance of such operation or service in whole or in part; at expiration of that period, the jurisdiction of any State is no longer superseded unless the procedure provided by §13a(1) is again invoked by the carrier.—Id., pp. 769-70.

Even though carrier failed fully to comply with terms of the commission's order in earlier proceeding authorizing discontinuance of its Chicago-Tacoma trains west of Butte, Mont., but requiring continuance thereof between Minneapolis and Butte, upon expiration of the 1-year period the commission lost its statutory power to exercise authority over operation of those trains and the jurisdiction of the involved States was restored. It follows that the commission has no power to order restoration of the operations and services of those trains east of Butte which were discontinued, eliminated, or modified shortly after issuance of the prior order.—Id., p. 771.

State's motion to dismiss discontinuance proceeding on ground that discontinuance of carrier's only remaining passenger service over routes described and within the State would in effect be a complete abandonment of passenger operations in the State, which would require authorization under provisions of §1(18-20), denied. Section 1(18) confers no jurisdiction over partial discontinuance of railroad service, including passenger service, and enactment of §13a did not broaden the commission's jurisdiction under §1(18), but rather made express provisions concerning discontinuance of passenger trains under the act.—Chicago & N.W. Ry. Co. Discontinuance, 320 I.C.C. 85 (86-7)*.

Contention that proposal to discontinue operation of passenger trains only between two points in a State should have been filed under §13a(2) is without merit. Where trains physically operate from a point in one State to a point in another, and equipment and passengers thereon move through from one State to a point in another without change of train at an intermediate point, the trains are interstate trains and discontinuance of any portion thereof is subject to provisions of §13a(1), nothwithstanding the fact that the portion to be discontinued is solely within the boundaries of a single State.—Missouri Pac. R. Co. Discontinuance, 320 I.C.C. 383 (385-6).

Nothing in the act requires any carrier to proceed under either §13a(1) or §13a(2) to obtain authority to discontinue any of its trains; carriers may elect to disregard both sections and rely solely on the appropriate State commission for authority to discontinue certain interstate or intrastate trains; however, if a carrier elects to rely on the State commissions for a portion of the relief desired, and on the commission for additional relief under provisions of §13a(1), the commission's jurisdiction is restricted to consideration of the specific proposals in the proceeding filed with it, and does not extend to trains not included therein.—Pennsylvania R. Co., Discontinuance, 317 I.C.C. 111 (116, 119).

But there is no merit to contention that, once having exercised election to proceed before the State body and not having received all the relief requested, the carrier cannot subsequently seek the same relief from the commission; §13a(1) accords the carrier an unrestricted right to seek relief from the commission in connection with its interstate trains, and it matters not that relief was previously sought from the State commission also exercising jurisdiction over such trains. To interpret §13a(1) as contended would negate one of the principal purposes of the statute, namely, to insure the absolute right of interstate carriers to seek relief from the commission when it could not otherwise be obtained from State regulatory commissions.—Id., pp. 117-8.

Nor is there merit to motion to dismiss petition for authority to discontinue a group of intrastate trains, on ground that Congress intended §13a(2) to apply only to discontinuance of a single intrastate train, and to reserve to State regulatory bodies the power to determine need for continuance of any group of trains. Since §13a(1) and (2) each use the words "any train" in specifying matters over which the commission is given jurisdiction, the ruling in 307 ICC 239 as to meaning of that language in a §13a(1) proceeding is applicable to instant §13a(2) proceeding. Nor does §13a(2) limit the commission's jurisdiction to

instances where the carrier's operations extend into more than one State and it seeks to discontinue trains operated exclusively in one State; language of the section is unambiguous as to jurisdiction accorded the commission in such instances.—Id., pp. 117-8.

But §13a(2) provides no alternative method of seeking authority to discontinue intrastate trains such as is provided by §13a(1) for interstate trains; the State retains original jurisdiction to authorize discontinuance, in whole or part, of trains operated solely within its boundaries, and carriers must first seek relief from the State regulatory body before petitioning the commission for relief to discontinue intrastate trains. The carrier may act on authority granted by the State body, notwithstanding its intention to invoke the commission's jurisdiction as to portions of its application that are denied by the State; carriers involved, having obtained authority from New Jersey board to discontinue certain intrastate trains, were not obligated to retain that service as a condition precedent to seeking authority from the commission to discontinue trains which the State board required them to continued.—Id., pp. 119, 120.

Railroad's presentation of its proposals respecting the remaining group of intrastate trains to the State board, and the board's denial thereof, created the precise condition on which the commission's jurisdiction under §13a(2) depends, and instant proceeding does not involve issues differing so substantially from those considered by the board as to deprive the commission of jurisdiction to consider the proposal on its merits. Moreover, though protestants argue that the board's order was a nullity because the proposals before it included one over which it had no jurisdiction, the board confined its order solely to discontinuance of the trains, over which it had jurisdiction; thus, State board's order was not a nullity and issue of discontinuance of considered trains is properly before the commission.—Id., pp. 119, 120.

Examiner's statement that, since carrier has invoked the commission's jurisdiction under §13a(2), it is doubtful whether considered intrastate trains may be discontinued without commission approval, did not imply that State authority was permanently superseded by filing of that petition. Language of §13a(2) establishes that determination of a railroad's application to discontinue or change service of an intrastate train continues to reside with the State; that the commission's jurisdiction may be invoked only after the State has failed to grant such application within 120 days; and that, although jurisdiction once acquired is not lost by subsequent State action, such action could conceivably render the §13a(2) proceeding moot.—Pennsylvania R. Co. Discontinuance of Service, 317 I.C.C. 5 (13).

Removal of one sleeping car, as opposed to removal of entire sleeping car service, does not constitute a discontinuance or change of the operation or service of a train of nature contemplated by §13a(2); and, since it is the exclusive province of the Post Office Department to determine the amount of mail service to be provided and the manner of providing it in any given area, the State commission would have no jurisdiction over removal of mail cars from a train; in absence of any objection by the Post Office Department, such action is within scope of carrier's managerial discretion. Neither commission nor State authority is necessary when a carrier wishes to make changes which are merely quantitative, rather than changes in type, on a particular train.—Pennsylvania R. Co. Discontinuance, 317 I.C.C. 737 (740-1, 744)*.

Therefore, although carrier, subsequent to the State commission's denial of authority to discontinue its Philadelphia-Harrisburg intrastate train, reduced the consist thereof by diverting one sleeping car and all head-end cars to other trains, the train whose discontinuance it now asks the commission to authorize is identical in all material respects with that considered by the Pennsylvania commission, within limits of its jurisdiction, and is subject to the commission's jurisdiction under §13a(2).—Id., pp. 740, 741.

And carrier's "ghost" trains between Philadelphia and Pittsburgh are not merely intrastate portions of interstate trains and therefore subject to §13a(1), since they connect with interstate trains of same name and number at Pittsburgh. Although "ghost" trains' passengers destined to points beyond Pittsburgh are transported in interstate commerce, to con-

strue the ultimate nature of their transportation as defining the interstate or intrastate character of the trains would broaden the commission's authority over discontinuance of intrastate trains beyond the intent of Congress in enacting §13a. The statute speaks of the physical limits of a train's operation, not of interstate commerce, and operation of the "ghost" trains is confined within boundaries of Pennsylvania; thus, under decision in 372 US 1, those trains were, at time the application was filed, and remain intrastate trains subject to provisions of §13a(2).—Id., pp. 741-2.

However, discontinuance of the Philadelphia-Pittsburgh trains may not be authorized under §13a(2) in absence of a definite and conclusive showing that the jurisdictional requirements thereof respecting State authority have been met. Their nature has been completely changed since the State commission denied authority for discontinuance of the original trains; from portions of long-haul interstate trains they have been converted to comparatively short-haul intrastate trains, differing in equipment, traffic, revenue, system feeder value, and general attractiveness to the public. The commission may not properly consider the instant proposal for their discontinuance, because it differs materially from that previously presented to the State commission. Petition under §13a(2) dismissed as to those trains for lack of jurisdiction.—Id., pp. 742-3.

If it appears that a carrier willfully downgraded service in order to justify discontinuance of a train without regard for the needs of the public, and has thereby deprived the public of a necessary and well-patronized service, it is within the commission's discretion to deny carrier's petition filed under §13a(2), on ground that public convenience and necessity do not permit the discontinuance. However, the factual situation presented does not warrant such a determination as to carrier's Philadelphia-Harrisburg train when proposed discontinuance and other changes in service are part of a consolidation plan for realization of savings in operating expenses without significant losses of traffic or revenue. Removal of one sleeping-car from that train was designed to promote efficiency of passenger operation by eliminating an unneeded duplicate service; and removal of head-end cars is asserted, without challenge, to have in furtherance of the Post Office Department's desire to have mail move on exclusive mail-express trains.—Id., 320 I.C.C. 319 (322, 323)*.

15. Procedure; notice; hearings.—[Vol. 19].—In suit to set aside the commission's order terminating investigation into railroad's proposed discontinuance of certain passenger trains, thereby allowing carrier to put the service reductions into effect, fact that the commission reached a contrary conclusion on similar evidence one year earlier is of no importance. The commission has power to change its mind as to weight to be accorded particular policies or facts so long as substantial evidence of record supports its conclusions. Moreover, force of the prior finding having expired at the end of a year, the commission was free to approach the problem anew. New evidence was introduced at the second hearing which showed persistent decline in patronage and revenue since the hearing in the former proceeding; and, there being no hope of improvement, discontinuance was permitted. Complaint dismissed.—State of Minnesota v. United States, 238 F. Supp. 107 (113)*.

After investigation and hearing in defendant railroad's proposal to discontinue operation of two passenger trains between Buffalo, N.Y., and Baltimore, Md., pursuant to its posted notices, the commission ordered continued operation of the trains between Baltimore and Harrisburg, Pa., for one year and, at the same time, allowed discontinuance thereof between Harrisburg and Buffalo; thus, the commission's action, in effect, required continuance "in part" of the operation sought to be discontinued. Plaintiff's contention that the commission is restricted to discontinuance sought in the original notice and cannot order a partial continuance is untenable, since such a limitation would not accord with the statutory purpose and is not suggested by the language, or the legislative history, of the law. Moreover, plaintiffs cannot assert prejudice as they were afforded ample opportunity to oppose the partial discontinuance. Accordingly, there being warrant in the law and the facts for the commission's findings

and conclusions, the complaint is dismissed. —City of Williamsport v. United States, 282 F. Supp. 46 (48-9)*.

Statutory requirement that notice of hearing in train discontinuance proceedings be given to the Governor of State concerned is to ensure due consideration of local interests; that purpose was fully accomplished when actual notice was received and the appropriate State agency appeared before the commission and thoroughly presented the State's position. The commission's finding that formal notice was given is supported by documentary evidence in the official record, though not recited in the transcript. In any event, actual notice was received, and formal notice, which like personal service is subject to waiver, was waived.—State of Montana v. United States, 202 F. Supp. 660 (662)*.

Failure of §13a(1) to condition a train discontinuance upon a hearing and finding that the intrastate portion of the operation is a burden on interstate commerce is not a denial of due process; plaintiffs had no constitutional or statutory right to a hearing before the commission decided not to investigate proposed discontinuance.—Sludden v. United States, 211 F. Supp. 150 (154, 156)*; and where the interstate character of the train proposed to be discontinued was undisputed, hearing to determine jurisdiction was unnecessary.—Id., p. 155.

Protestants' motion to dismiss the "applications" in §13a(1) proceeding is inappropriate, since carrier does not file an application for authority to discontinue passenger service; rather, it is required to post and file notice and submit the required statement, which allows the commission to institute an investigation. Only after hearing and appropriate findings can the commission order continuance or restoration of service or, in the alternative, discontinuance of the investigation. Grounds for the motion treated as argument of protestants that continuance of the trains should be required.—St. Louis-S. F. Ry. Co. Discontinuance, 327 I.C.C. 433 (435-6).

Protestants were not denied due process at hearing on proposed consolidation of trains. Manner in which questioned unit costs were used in the evidence was fully tested on cross-examination by each protestant desiring to do so, and, despite absence of opportunity to cross-examine the author of the underlying unit costs which were developed from basic records regularly maintained in normal course of the carrier's business, protestants' rights were fully protected. Absence of specific testimony regarding the determination by employees ultimately responsible to the departments whose chief staff members testified does not make the unit costs any less reliable; at most, protestants only suggested areas where they would substitute judgments which they prefer. No fault appears in the examiner's rulings or the development of the record. —Union Pac. R. Co. Discontinuance, 320 I.C.C. 493 (505)*.

Motion to dismiss for failure to post notice at all stations between St. Louis and Little Rock, Ark. where through service is available, denied. Since the trains to be discontinued operate only between Little Rock and Lake Charles, La. (where notices were duly filed), and through service is available on trains bearing different numbers which do not operate over the line served by trains sought to be discontinued, posting is only required at those facilities served by the specific trains involved.—Missouri Pac. R. Co. Discontinuance, 320 I.C.C. 383 (385).

Although at outset of hearings the examiner ruled, within his authority, that in view of lack of response to his inquiry as to whether any party wished to challenge carrier's assertions respecting compliance with notice and posting requirements of §13a(1) he would not entertain any questions on that issue, evidence concerning extent of carrier's compliance was admitted and near close of hearings certain protestants moved to strike the discontinuance notice from the commission's records on ground that it lacked jurisdiction because of carrier's failure to comply fully with those requirements. Even had evidence on the matter not been presented, and notwithstanding the examiner's ruling, protestants have the right to present that issue, since a jurisdictional issue may be raised at any stage of the proceedings. And since the true import of protestant's motion to strike is to question carrier's compliance with requirements of §13a(1), its substance rather than its form is considered.—Chicago, M., St. P. & P.

R. Co. Discontinuance, 317 I.C.C. 761 (764-5).

Mere filing of notice of proposed discontinuance of operation between Aberdeen, S. Dak., and Deer Lodge, Mont., of carrier's trains currently operating between Minneapolis and Deer Lodge did not confer authority on the commission to dispose of the proposal on its merits; such authority continued to depend on carrier's full compliance with all conditions prescribed in the statute. Carrier failed to comply full with posting requirements thereof when it posted notice only at stations between Aberdeen and Deer Lodge instead of at every station served by the trains; such notice is necessary because passengers at all points of the line might be equally affected by discontinuance of any portion of operation of the trains, and those east of Aberdeen might be more seriously affected by discontinuance of the Aberdeen-Deer Lodge service than those located between those points. Investigation discontinued for lack of jurisdiction.—Id., pp. 772, 773.

Posting of notice of proposed discontinuance of two trains was made during May 29-31, 1961, and it is immaterial that such notice was not found at certain facilities by an investigator of the State commission after July 2, since that proposed discontinuance date had been voided by the commission's order of June 19 instituting an investigation of such discontinuance.—Soo Line R. Co. Discontinuance, 312 I.C.C. 729 (732).

While carrier contends that, because considered trains were consolidated with a second pair between points following merger, expenses to be avoided by proposed discontinuance cannot be determined without knowing effect thereof on the second pair (for which complete financial data were not available), the information required to be filed with notice of a proposed discontinuance pertains to the particular train or service to be discontinued. Carrier should have filed with its proposal the required data for considered trains from the earliest date from which records were available, instead of only for the period when similar records were kept for the consolidated trains. However, in compliance with commission regulations, carrier has furnished an explanation for its failure to submit such information, and at the hearing furnished additional exhibits showing income, expenses, and loss in connection with the trains to be discontinued, for the proper periods. As protestants have not been prejudiced by its failure to file such data initially, dismissal of the proceeding is not warranted.—Id., pp. 731-2.

Protestant's motion to dismiss notice of discontinuance on ground that modified plan presented by carrier at hearing failed to comply with requirement of §13a(1) denied. All trains proposed to be discontinued in the notice would be so discontinued; and, so far as purposes of discontinuance proceeding are concerned, matters within management's discretion, such as addition and extensions of trains, addition of a flag stop and minute schedule changes in departure times which in no way affect the quantity of service available to the public, are lawful without any action by the commission.—Chicago South Shore & S.B.R. Discontinuance, 320 I.C.C. 440 (441-2, 445-7).

Railroad's contention that protestants to proposed discontinuance have the burden of proof under §7(c) of APA, and that they failed to prove that continued operation of considered trains is required by public convenience and necessity and operation thereof will not unduly burden interstate and foreign commerce, is tantamount to contending that the investigation be discontinued and the commission's order be predicated upon protestants' default; and that seems most inappropriate. The statute contemplates that the commission shall make certain public interst findings, in proceedings where a carrier invokes its jurisdiction under §13a(1), and it cannot be argued that the commission is free to decide such public issues on the basis of legalistic procedural rules without a record sufficient to form a substantive foundation for its findings. Moreover, record in instant case is adequate to yield the statutory findings on public convenience and necessity and on burden to interstate commerce; and without regard to questions of procedural obligations.—New York, N.H. & H. R. Co. Discontinuance, 320 I.C.C. 544 (546-7).

Although proposed discontinuance of carrier's only passenger trains between Washington, D.C., and Cleveland, Ohio, would entail

abandonment of all operation under trackage rights whereby it enters Cleveland Union Terminal, it has not applied for abandonment authority under §1(18); and though under §13a(1) the commission may not, without appropriate findings, require operation of those trains for more than 4 months from date provided in discontinuance notice, discontinuance after expiration of that period but before determination of an appropriate application under §1(18) could result in unlawful abandonment. However, the commission would still be authorized, upon making the requisite findings, to order restoration of the train service for not over 1 year; therefore, in absence of any proper basis for determining the abandonment issue, final disposition of the discontinuance proceeding is deferred pending filing and determination of abandonment application.—Baltimore & O. R. Co. Discontinuance of Service, 317 I.C.C. 371 (388-9)*.

Since petition filed by employee brotherhoods in proceeding under §13a(2) involving the same trains carrier now seeks to discontinue under §13a(1), requesting determination that an issue of general transportation importance is involved, was timely filed under regulations then in effect, due consideration thereof is warranted; the commission concludes that matters in the proceeding pertaining to application of §13a(2) and also, upon its own motion, that matters in embraced case pertaining to application of §13a(1) involve issues of general transportation importance.—Pennsylvania R. Co. Discontinuance, 317 I.C.C. 737 (738)*.

Examiner's denial of State commission's motion to dismiss carrier's petition to discontinue certain intrastate trains on ground of unconstitutionality of §13a(2), because determination of that question is the function of the courts, not the commission, affirmed. Though one protestant objects to any ruling on that motion by the hearing examiner as improper and prejudicial to protestants' right to present the question to the courts at the proper time, upon the question being raised by protestants the examiner acted properly in ruling thereon.—Denver & R.G.W. R. Co. Discontinuance of Passenger Serv., 317 I.C.C. 722 (723).

No inference should be drawn from carrier's failure to request designation of considered intrastate trains as essential by State highway department; testimony presented by it, together with agreement between it and the highway department, show that the trains were excluded by the department from the approved or essential classification solely by determination of the State Highway Commission after due consideration; that agreement, although it excluded the trains from the approved classification, expressly does not permit their removal from service without authority from the State regulatory body; accordingly, there is no basis for suggestion in recommended report that in absence of instant proceeding the operation of considered trains would have ceased on termination date of carrier's agreement with the State highway department.—Pennsylvania R. Co. Discontinuance of Service, 317 I.C.C. 5 (12).

20. Showing required and burden of proof. —[Vols. 18, 19].—The court has long recognized that the commission may properly give varying weights to overall prosperity of a carrier in differing situations which require balancing public convenience and necessity against undue burdens on interstate commerce. In many cases, the extent of the traffic, degree of dependence on the particular transportation means, and other attendant conditions, are such that the carrier may not justly be required to bear the necessary financial loss resulting from the operation; but in some cases the situation involves serious injury to directly affected communities while continued operation would impose a relatively light burden on a prosperous carrier [271 US 153]. In cases falling within latter category, such as those involving vital commuter services in metropolitan areas, the commission would err if it did not give great weight to the carrier's ability to absorb even large deficits resulting from such services.—Southern Ry. Co. v. North Carolina, 376 U.S. 93, (104-5)*.

However, in ordering discontinuance of considered intrastate trains, the commission's findings make clear that the demands of public convenience and necessity are slight, and that the situation is one falling within first category noted in the case cited; thus, it is equally proper for the commission to give little weight to factor of the carrier's overall pros-

perity in determining existence of an undue burden on interstate commerce. Action of the lower court in setting aside the commission's order, based upon its conclusion that the commission's failure to take into account carrier's profits from freight operations on the same line constituted error, reversed; proceeding remanded with instructions to reinstate the commission's report and order.—Id., pp. 105-6.

See also People of State of California v. U.S., 28 USC §2325, n. 13.

Use of considered trains by passengers has been very small and were it not for the use of such trains for movement of mail and express, losses to carrier would be staggering. However, on the basis of over a year's planning, REA has rerouted its express to other transportation companies so that the need for the trains to move express is nullified, and instituting all-rail mail service is beyond the commission's jurisdiction; therefore, on the record it would be wholly inequitable to require carrier to maintain these trains.—Chicago Great Western Ry. Co. Discontinuance, 328 I.C.C. 664 (675-6).

In view of the statutory duty placed on a common carrier railroad to transport mail as required by the Postmaster General, letter from the Post Office Department, received in evidence over protestant's objection, which stated that adequate mail replacement service would be provided if considered trains were discontinued, but did not indicate any intention to divert mail from those trains if their operation was continued, is given consideration only to show that the Department had notice of and made no objection to the proposed discontinuance.—St. Louis-S.F. Ry. Co. Discontinuance of Service, 312 I.C.C. 713 (723).

Although carrier represents that area between Glenwood, Minn., and Twin Cities will receive service from trains Nos. 9 and 10 after discontinuance of its only remaining trains between St. Paul and Portal, N. Dak., via Glenwood, the commission takes official notice that when it approved discontinuance of carrier's daylight trains between Minneapolis and Enderlin, N. Dak., about half the distance to Portal, carrier represented that communities between those points would still receive passenger and express service from trains now proposed to be discontinued. In view of those representations, and carrier's efforts before State commission to secure discontinuance of Nos. 9 and 10, no weight can be given to claim that the area between Glenwood and Twin Cities will continue to be served by those trains.—Soo Line R. Co. Discontinuance of Passenger Trains, 312 I.C.C. 729 (739).

Depreciation of property values in a community affected by proposed discontinuance is not of controlling importance in such proceedings; any conclusion that discontinuance would hinder economic growth and depreciate values in the community is largely a matter of speculation.—Pennsylvania R. Co. Discontinuance of Service, 317 I.C.C. 5 (12).

While there is doubtless room for improvement in carrier's passenger train service, evidence is not convincing that it is deliberately downgrading considered trains in order to discourage the public from using them; thus the rule announced in 79 N.E. 2d 71, cited as a precedent for rejecting a discontinuance proposal in such circumstances, is not applicable. —Chicago & N. W. Ry. Co. Discontinuance of Passenger Trains, 317 I.C.C. 21 (29).

In view of territory served, competing service available by air, rail, and bus, and development of interstate highway system between Kansas City and Minneapolis, neither advertising, different schedules, nor new equipment would increase use of carrier's only trains between those points to extent necessary to run them profitably. Carrier experimented with shorter schedules for a 4-year period without success, and any significant change in present schedules would upset arrangement which contributes about 75 percent of total revenue generated by those trains. In view of advantages offered by competing railroad between same terminals of streamlined trains operating in interterritorial service over a shorter route and affording superior accommodations, any advertising would be wasteful. And in light of present patronage of the trains, carrier believes that expense of new equipment could not be recovered. Discontinuance authorized.—Chicago Great Western Ry. Co. Discontinuance of Service, 317 I.C.C. 99 (108-9).

Although the Pennsylvania and Seashore Lines sustained substantial out-of-pocket losses during 1959-60 from operation of their joint passenger trains and Seashore's intrastate trains between Philadelphia-Camden area and southern New Jersey, those losses were incurred prior to New Jersey board's authorization of reduction of the interstate service by about 26 percent and elimination of some 45 percent of Seashore's intrastate trains, and issues in instant proceedings are not determined by unprofitableness of such previous operations. In affording the carriers some relief from financial burdens of the passenger service, while requiring continuance of an overall service which would satisfy needs of passenger traffic, particularly commuters, the State board created a new type of service involving new operational conditions; therefore the determination required in instant proceedings is whether the service as it now exists imposes any undue burden on the carriers or on interstate commerce.—Pennsylvania R. Co. Discontinuance of Passenger Service, 317 I.C.C. 111 (116, 125, 130-1).

Exhibits dealing with traffic volume, revenues, and expenses for May and June 1961 do not support carriers' contention that the burden still exists; for reasons stated, that portion of exhibits dealing with carriers' wintertime schedules cannot be considered as reflecting any particular trend in traffic volume. —Id., pp. 131-2; nor do carriers' comparisons of traffic volume on summertime trains in 1960 with that handled on same trains on 1961 establish any downward trend. As summer schedules do not become effective until about June 15, no acceptable traffic trend could be established by comparison of July 1960 averages with those for May 1961.—Id., p. 132.

In view of testimony of witness presenting them, considered exhibits do not support carriers' claim that, notwithstanding the reduction authorized by the State board, passenger service on Seashore's lines is still conducted at an out-of-pocket loss. Because of numerous deficiencies in the exhibits, they cannot be considered as providing any reliable indication of operating results on considered trains, and no other evidence to establish such results was presented.—Id., pp. 132-4.

In filing instant proceedings immediately following effective date of the State board's order requiring continuance of the involved trains, carriers did not afford themselves time to determine effect of the reduction in service on volume of traffic, or whether the reduced service could be provided without substantial loss, but based their proposals on alleged lack of substantial public need therefor and on alleged losses incurred therein, which are not established by the evidence. There is adequate evidence of existing substantial public need for transportation between points served by considered trains, and substantial use is being made of most of them; thus it is not shown that their continued operation creates an undue financial burden on either of the carriers or imposes any undue burden on interstate commerce.—Id., pp. 134, 135.

Since in a former proceeding service of the same pair of trains was ordered continued between Kansas City and Fort Worth, protestants claim they are entitled to look at entire operations of those trains rather than merely the service proposed to be discontinued between Wichita and Fort Worth. But though result of operating the entire route is relevant in determining whether operation over involved segment should be discontinued, admission of such evidence would not vary the conclusion. Prior proceeding showed a marginal operation at best for entire run, and present record shows decreased use of the trains over segment involved and that in 1961 on out-of-pocket basis the ratio of expenses to revenues was slightly higher than carrier's system passenger operating ratio and compares unfavorably with ratios for operations in Kansas. Discontinuance authorized.—Chicago, R. I. & P. R. Co. Discontinuance of Trains, 317 I.C.C. 601 (612-13).

In arriving at conclusion that continuance of certain passenger trains would unduly burden interstate commerce, the commission gave consideration to any probable effect that recent elimination of the 10-percent Federal tax on railroad fares might have on savings to be realized from the discontinuance.—Baltimore & O. R. Co. Discontinuance of Passenger Trains, 317 I.C.C. 673 (682)*.

Though it is not disputed that involved intrastate trains are operated at a loss, and the commission has never agreed with protes-

tants' contention that freight revenues from the line should be considered in determining whether continuance of the passenger service would unduly burden interstate commerce, carrier conceded that discontinuance of the trains would have little effect on its net income from interstate operations, and that it has never anticipated an appreciable profit from passenger service. Moreover, it has managed to operate the trains for the past 15 years despite the deficits incurred, and no unusually large increase in losses is indicated in periods for which financial data were presented. In view of lack of adequate alternative service, isolation of the territory, and carrier's present strong financial condition, resulting inconvenience to the tributary territory would outweigh the benefit to carrier from the proposed discontinuance. Carrier has not met its burden of proof.—Denver & R.G.W. R. Co. Discontinuance of Passenger Serv., 317 I.C.C. 722 (726, 727).

No preconceived plan on part of Nickel Plate to discourage public use of considered trains as a basis for their discontinuance is indicated. It asserts that all company personnel, including freight solicitors, attempt to sell its passenger service, that decline of travel by train is merely one stage in evolution of passenger transportation, and that lack of results from passenger service advertising campaigns of other carriers indicate inadvisability of a similar campaign by it. It does not appear that such an endeavor would materially alter the unfavorable financial results of operating the involved trains.—New York, C. & St. L. R. Co. Discontinuance, 317 I.C.C. 775 (780-1).

In determining whether continued operation of carrier's day trains between Buffalo and Chicago would unduly burden interstate commerce, estimated losses of $275,000 to $325,000 a year from their operation should be considered in relation to public need for the service. Even though carrier is relatively prosperous, it is incompatible with public interest and the national transportation policy to require it to sustain losses of that magnitude indefinitely in absence of more compelling circumstances than are shown to exist. Considering those substantial losses, the public's decreasing use of the trains and resultant dwindling of revenues, and existence of abundance of alternative service at most points, discontinuance should be authorized.—Id., pp. 785, 786.

Carrier's proposal to discontinue its Overland trains between Oakland, Calif., and Ogden, Utah, and continue all their local and through service in its City trains operating between those termini, requires consideration of both local and through service, needs during peak and off-peak seasons, consists of trains to be operated following the discontinuance, and financial results likely to be realized. No significant volume of local passengers travels in long-haul movements between the termini, or in local movements between intermediate points; local points desiring continuance of the Overland trains are unable or unwilling to afford them sufficient revenues to meet cost of providing the service; and it does not appear that through passengers will receive any less service when provided by the City trains. That there is need for improvement in carrier's system of reservation lists, has no bearing on fact that as a rule the Overland trains are not being used to capacity.—Southern Pac. Co. Discontinuance of Passenger Trains, 317 I.C.C. 519 (532, 544, 545-6).

Contrary to criticism of opposing parties that the carrier is not attempting to sell its passenger service to the public, and aside from the fact that the public has no real need for service which it must be importuned to utilize, the record shows that carrier does advertise its rail services, though on a company basis and not specifically as to passenger or freight operations, and that in case of another passenger service it sought to discontinue it spent upwards of $8,500 over a 3-week period in an effort to attract passengers, without success. Moreover, the service is certainly well-known to the public at local points on the line, and any experienced continental traveler interested in rail travel from the East to San Francisco must know of it.—Id., p. 545.

Carrier's computation of number of spaces available for pullman accommodations during a given period on its Overland and City trains out of Ogden, taken from actual records maintained by pullman conductors and porters on the trains, is entitled to greater weight than testimony of telegrapher who transmit-

ted reports prepared by ticket agent at Ogden, and may properly be relied on.—Id., p. 532.

There is little if any need for continued operation of carrier's intrastate train between Philadelphia and Harrisburg, Pa., as now constituted. Issues presented in regard to changes in consist of trains and the related revenue questions must be resolved on basis of operations lawfully existing at time the discontinuance proposal was made, rather than on previous operations. Patronage of the train is very light, it is now operated at a deficit, and all of its service can be adequately performed by other trains; continued operation is not justified.—Pennsylvania R. Co. Discontinuance, 317 I.C.C. 737 (743-4)*; quality of passenger service offered between Philadelphia and Pittsburgh will remain virtually unchanged as result of the discontinuance; although one point will not receive adequate alternate rail service, the few passengers entraining at that point do not warrant continued operation of two trains from Philadelphia to Harrisburg when a single train can otherwise provide the service required by the public.—Id., 320 I.C.C. 319 (323)*.

For reasons expressed in 307 ICC 59 and 254 ICC 745, the commission rejects contention that, before operation of certain intrastate passenger trains may be found to constitute an undue burden on interstate commerce, it must be shown that petitioner's system operations as a whole are unprofitable or that it is not receiving a fair return on a systemwide basis, considering both freight and passenger traffic.—Southern Pac. Co. Discontinuance, 320 I.C.C. 59 (80).

In presentation of public testimony, and in defining limits of cross-examination of petitioner's witnesses, the examiner properly ruled inadmissible any specific testimony concerning petitioner's trains other than the three intrastate pairs sought to be discontinued; while such testimony might have had some relevance, those rulings were clearly not erroneous in the circumstances in which made.—Id., p. 77.

Continued operation and maintenance of rail equipment and schedules for which no public convenience and necessity exists and which manifestly tends to weaken stability of a railroad necessarily constitutes an undue burden on interstate commerce. Passenger patronage on petitioner's "West Coast" trains between Los Angeles and Sacramento, its "El Dorado" trains between Oakland and Sacramento, and its evening pair between San Francisco and San Jose has declined in recent years and all three pairs have been operated at substantial deficits, notwithstanding its efforts to attract additional business by advertising and modifying its operations and service and use of modern cars adequately maintained; and no evidence is offered of any propsects of future increase in passenger patronage of those trains. Considering the two peninsula trains as an integral part of the San Francisco commuter service, their present operations constitute an unnecessary drain not only on that service but also on carrier's overall operations. As present users of considered trains would not be seriously inconvenience or left without satisfactory alternative means of travel, discontinuance is authorized.—Id., pp. 74, 78, 79-80.

While record establishes that the public has made substantial use of carrier's only remaining pairs of passenger trains between Chicago and Minneapolis and between Chicago and Mankato, Minn., it also demonstrates an overall, persistent downward trend in operating revenues and number of revenue passengers over the past 6 years. Considering carrier's financial condition, its overall losses from operations as well as from operation of those four trains, and fact that savings from proposed discontinuance would probably result in a profitable system operation, together with availability of alternate passenger service reasonably adequate to meet needs of the traveling public, conclusion is warranted that continued operation of those trains is not required and would unduly burden interstate commerce; discontinuance authorized.—Chicago & N.W. Ry. Co. Discontinuance, 320 I.C.C. 85 (95-6, 99, 104)*.

Although protestants rely on decision in 210 F. Supp. 675 to support contention that profit or loss and burden on interstate commerce must be determined by overall operations on involved lines, including freight revenues, that decision is not controlling because (1) appeal therefrom has not been decided by the Supreme Court, (2) it involved discontinuance

of an intrastate service under §13a(2), whereas instant case concerns an interstate operation subject to §13a(1), and (3) it involved a carrier with a profitable system operation, whereas instant proceeding involves a deficit or at best marginal system operation.—Id., p. 102.

Cases cited by protestants to support their contention that the impact of deficit passenger operations on freight rates does not justify proposed discontinuance of passenger service sustained the principle that in general freight-rate increase cases the commission may consider passenger deficits in adjusting freight charges, and are not persuasive under provisions of §13a(1), although carrier's overall system financial condition is a factor to be considered.—Id., p. 101.

In absence of convincing evidence that carrier is deliberately downgrading service of trains it seeks to discontinue, in order to discourage the public from using them, rule announced in 79 N.E. 2d 71 is not applicable.—Id., p. 101.

Population of communities served and the public's use of the service sought to be discontinued are factors to be considered in a §13a(1) proceeding. All categories of traffic handled by Soo Line's St. Paul-Portal, N. Dak., trains have been declining, and number of passengers per train-mile has decreased to approximately that of the crew. Though, following discontinuance of Canadian trains formerly connecting at Portal, tourist traffic and Canadian mail and express formerly handled by considered trains were diverted to other trains operating over same line between St. Paul and Glenwood, Minn., such diversion appears to have been dictated by sound managerial discretion. Area served is sparsely populated, and though upon discontinuance a 232-mile stretch between Glenwood and Carrington, N. Dak., would lack direct passenger service, the daily average of only 5 or 6 passengers originating on that segment would not justify the financial burden of operating the trains such a distance.—Soo Line R. Co. Discontinuance, 320 I.C.C. 337 (349, 350, 353, 356).

Among reasons urged against discontinuance, anticipated industrial growth is not a new factor but a continuing part of the area's economic development, which, though it has been in progress for some time, has not checked the decline in passenger or express revenues. Transportation needs of elderly residents and their visitors are meager, and any patronage generated thereby would not be enough to justify the burden on carrier of continued operation of the trains. Alleged needs of national defense industries and military installations are not substantiated by representations by military or other officials concerned; in event of increased national defense need, rail service in the area could be expanded. Considering all the evidence, including the overall showing of reasonably adequate alternative means of transportation, proposed discontinuance should be permitted.—Id., pp. 344, 356, 357.

Although conditions evoking complaints of inconvenience to passengers resulting from manner in which considered trains are operated reflect no credit on carrier's management, and indicate indifference to well-being of its patrons, the commission has no statutory authority to penalize carrier for its lack of consideration for the public's comfort; what is pertinent to proposed discontinuance is whether and to what extent the declining use of those trains is due to factors within carrier's control. During 1962 less than 100 passengers boarded the westbound train at each of 34 communities, or the eastbound at each of 32 communities, and there were at least 265 days when no-one boarded them at those points; the evidence does not indicate that this statistical picture would have been materially different had carrier been more attentive to passenger comfort.—Id., pp. 342, 351.

Whether carrier's assurances that, coincidentally with discontinuance of the Portal trains, it would inaugurate a tri-weekly mixed-train service between Portal and Glenwood (where those trains are now consolidated with others) constitute a definite commitment, or whether protestants are correct in contending that if it failed to provide such substitute service there would be no legal means of compelling it to do so, is not controlling on admissibility of evidence concerning that proposal. Such evidence is relevant as pertaining to adequacy of service available if the present trains are discontinued; its materiality and

probative value are governed by whether the record jsutifies finding that the mixed-train service would in fact be instituted as proposed. Protestants' objection to that evidence goes to its weight, not its admissibility; examiner's denial of motion to strike all such evidence, sustained.—Id., pp. 345-6.

Although none of numerous public witnesses urging continued operation of considered intercity trains were daily users of the service, their evidence shows that the trains are necessary to them for business, pleasure, religious, and educational reasons and that continued use thereof by patrons for those purposes is assured. While statistics presented did not show a population growth in involved area commensurate with the rest of the country, a decline in patronage of less than 1 percent from 1960 to 1961 does not demonstrate that the public has deserted the service; and though a larger decline was reported as between the year 1961 and the first 6 months of 1962, a comparison of unlike periods is inconclusive. Evidence as a whole shows a substantial public need for continuance of the service provided by considered trains.—Missouri Pac. R. Co. Discontinuance, 320 I.C.C. 1 (12).

Motion to strike exhibits dealing with revenue statistics and headcounts on individual trains, on ground that they were hearsay and not based on any business records prepared under supervison of witness who testified concerning them, was properly overruled; the exhibits were prepared under witness's supervision and contained the sort of information which might reasonably be expected to come to him in his official capacity as carrier's passenger traffic manager.—Boston & M.R. Discontinuance of Passenger Service, 317 I.C.C. 165 (171).

Although State agency created to study mass transportation problems in Boston metropolitan area presented testimony of its transportation analyst based on interviews with passengers using companion Boston-Albany trains proposed to be discontinued, no prepared question form was presented and no tabulation of results of his interviews was offered in evidence, nor was any inquiry made to determine if the riders were revenue passengers, or if they had purchased continuing transportation. The witness's study, though certainly a constructive undertaking, therefore cannot be given much weight in establishing facts pertaining to need for continuance of those trains.—New York Central R. Co. Discontinuance, 320 I.C.C. 364 (373-4).

Prospective passengers who must be coaxed to use a particular train service have no urgent need for it; neither carrier's failure to solicit business not its lack of adequate station facilities sustains contention that it has deliberately discouraged use of trains it proposes to discontinue; and since witnesses who use the trains indicated satisfaction with their present schedules, it is doubtful whether a change in schedules would increase patronage.—Louisiana & A. Ry. Co. Discontinuance of Service, 317 I.C.C. 155 (162).

Evidence as a whole is convincing that discontinuance of one pair of Union Pacific's trains between Los Angeles and Ogden, Utah, could eliminate direct operating deficits of over $60,000 annually, plus avoidable terminal costs of about $25,000, and that consolidation of present service of those trains with another pair, taking into consideration the probable loss of some of present patronage as well as possible loss of some eastbound mail revenue and extra expense for adding cars and other equipment to the consolidated trains, would probably result in out-of-pocket savings of some $1.37 million annually, or over $110,000 a month. Proposed rearrangement of the trains should have no appreciable adverse consequences on the traveling public, as costs to passengers would be no higher, and only minor inconveniences from schedule changes would result. On that basis, continuance of the pair sought to be discontinued and failure to institute the train consolidation would constitute a drain on carrier's financial resources which would impose an unnecessary and undue burden on interstate commerce.—Union Pac. R. Co. Discontinuance, 320 I.C.C. 493 (519, 521)*.

The situation is not altered merely because Union Pacific currently enjoys an overall satisfactory level of railroad operating profits, since, despite its financially sound condition, it has experienced continuous passenger operating deficits which are reported annually to the commission. Morevoer, it is possible that,

as result of benefits of the instant proposal, it could begin to find solutions for some of the deficiencies in its passenger train and terminal service that protestants' witnesses have criticized. However, carrier should not expect to increase the elapsed time en route and change the hour of serving particular stations without some loss of patronage; a small fraction of regular riders would be obliged to seek other transportation, and it is reasonable to believe that some passengers who regularly travel to or from Chicago or St. Louis would do likewise; it is therefore conceivable that as much as $15,000 a year of present revenues of the two pairs of trains might be lost.—Id., pp. 519, 522.

Union Pacific's present attitude of providing high quality passenger service responsive to needs of the public should not suffer by consequence of the relief afforded. While the prospective schedule disadvantage of the consolidated trains compared to the competitive transcontinental trains of the Santa Fe would be worsened in degree, the factors that now attract passengers to Union Pacific's trains despite their slower schedules would be essentially unchanged. And since offpeak periods average about 265 days a year and there is no reason to believe that substantial extra expense for added equipment would occur other than infrequently, annual out-of-pocket cost of operation of the consolidated trains should not be more than about 10 percent higher than carrier's estimate of $2.7 million. Discontinuance and change in service authorized.—Id., pp. 516, 521.

See also St. Louis-S. F. Ry. Co. Discontinuance case, n. 2 above.

The essential question in §13a(1) proceedings is what effect disctoninuance of the particular train or service will have on public convenience and necessity and on interstate operations or commerce, and principal factors to be considered are populations of the communities served, the public's use of the service involved and degree of dependence thereon, availability of other transportation services in the area, losses suffered by the carrier in providing the service, and impact of continuance thereof on its general financial condition; however, none of those factors by itself is decisive or in any way controlling. And before continuance of involved service or any part of it may be ordered, it must be found to be required by public convenience and necessity and not to unduly burden interstate commerce. Since the decision must be designed to protect interstate commerce from onerous burdens which may affect carrier's ability to provide efficient service to the public generally, needs of the entire public, as distinguished from the relatively few, must be considered.—Chicago & N. W. Ry. Co. Discontinuance, 320 I.C.C. 648 (656).

The North Western's proposed discontinuance of its overnight passenger services between Chicago and northern Wisconsin, including its seasonal trains to and from Land O' Lakes, amounting to a net discontinuance of a pair of trains between Chicago and Ashland and a pair between Milwaukee and Green Bay, is justified by the public's decreasing use of those trains, with consequent dwindling of revenues derived therefrom, resulting in substantial annual operating deficits. While protestants criticize the service provided, passenger equipment used is some of the best owned by the carrier, and operation of the sleeping cars is within jurisdiction of the Pullman Co.; some minor mechanical failures of type complained of may reasonably be expected in a run of some 450 miles. Record as a whole does not sustain allegation that carrier has deliberately tried to discourage patronage of those trains by the public.—Id., pp. 650, 664, 667.

Though protestants contend that carrier has failed to promote additional traffic for the trains, it is not incumbent on carrier to coax passengers to ride its trains: people who must be coaxed to use a carrier's services have little real need thereof. And though considered trains are principally mail and express trains, handling of mail and express is the responsibility of the Post Office Department and Railway Exp. Agency, respectively, and carrier has very little if any control over such traffic. Operation of the trains shows a declining trend in volume of mail and express, with possibility of even less mail; schedules of the trains have not been fully satisfactory to the Post Office Department, which demanded very early morning arrivals at Chicago and certain other points that carrier concluded

would not be feasible because of adverse impact on passenger traffic.—Id., pp. 650, 655, 664-5.

While vacationing and tourism are the most important industries of the northern Wisconsin area served, and economy of the entire area depends largely on continuance and expansion of those activities, carrier's determination to discontinue its overnight service to Green Bay was based on investigation which revealed that more people depend on the day trains than the overnight trains in reaching that area. Advent of the private automobile and airplane, improved highways, and scheduled airline services have so changed passenger travel that there is now only a nominal increase in train patronage during the summer months. Seasonal operation of considered trains would not be feasible because equipment would have to be provided and maintained for entire year, while depreciation and amortization thereon would be based on fewer trips provided by the limited service. Hearings did not contemplate protestants' proposal for later departure time for the daytime trains, so the record does not permit definitive comment thereon, but resulting delayed arrivals could well inconvenience patrons, particularly women and children, who now use the daytime trains; nevertheless, the suggestion is commended to carrier's managerial consideration.—Id., pp. 660, 662, 666-7.

Contention of some protestants that instant proceeding is merely the initial step in a plan to discontinue carrier's entire passenger service, with possible exception of commuter service at Chicago, is refuted by the carrier. Moreover, before any regularly scheduled through passenger train or trains may be discontinued in the future, appropriate regulatory authority from either the commission or the State having jurisdiction must first be obtained.—Id., p. 665.

A carrier subject to regulation by the commission is expected to aid in the disposition of proceedings to which it is a party by making available all pertinent facts within its knowledge, regardless of where the burden of poof lies. The Commission cannot decide public issues without a record well enough developed to form a foundation of substance to base its findings upon, without regard to questions of procedural obligations.—New York, N.H. & H.R. Co. Discontinuance, 320 I.C.C. 714 (717-8).

Both present deficiencies of the highway system between New London, Conn., and Providence, R.I., and the New Haven's financial predicament as a carrier in reorganization are factors which warrant consideration in passing upon its disposal to discontinue a set of commuter trains between those points; while neither alone would be controlling, both are considered together with all other evidence presented.—Id., p. 729

Factors to be considered in a §13a (1) proceeding, are: (1(population of the communities served, (2) the use by the public of the service sought to be discontinued, (3) other available transportation in the affected area, (4) general financial condition of the railroad, and (5) losses suffered by the railroad in providing the service. None of these factors by itself is decisive or controlling since, before commission may order continuation of the service or any part thereof, it must find from the record that it is required by the public convenience and necessity and that such continuation will not unduly burden interstate commerce.—New York, N.H. & H.R. Co. discontinuance, 320 I.C.C. 544(547,548)

Although in determining the question, the commission employs tests which have become part of due process standard, such tests are not absolute; the problem is one of balancing public need against undue burdens on commerce; in instant proceeding the carrier's lack of prosperity is a dominant factor. Evidence leaves no doubt that considered trains constitute a heavy and undue burden on interstate commerce and, in light of carrier's financial condition, savings in expense through discontinuance over loss of revenue are important; there is substantial alternate means of transportation to serve the general needs of the people in the area through existing railroad service, bus service and good highways. Operation of considered trains found not required by public convenience and necessity.Id., pp. 559-60.

In §13a(1) proceeding in which carrier sought to discontinue operation of two passenger trains between Alexandria and Lake Charles, La., the submission into evidence of

the financial results of that portion of the operation only, and not of the entire operation of those trains between Little Rock, Ark., and Lake Charles, did not inhibit the commission's disposition of the proceeding; and, since costs of operating considered trains between the Louisiana points greatly exceeded the benefits derived by the public from the operation and the savings in expenses outweighed any resulting inconvenience, discontinuance is approved.—Missouri Pac. R. Co. Discontinuance, 320 I.C.C. 383 (398-9, 400).

In view of systems losses, large and increasing losses of trains in question, the declining patronage, the abundance of adequate alternate common carrier service, continued operation of trains sought to be discontinued is not required by public convenience and necessity and would unduly burden interstate commerce and foreign commerce. In determining whether continued operation of a train or trains will constitute an undue burden upon interstate commerce it is necessary to consider the losses in relation to the need which may exist for continued operation thereof; and poor financial condition of the system is undisputed. Even though a carrier were relatively prosperous it would not be compatible with the public interest and the national transportation policy to require it indefinitely to sustain loss of the magnitude indicated in the absence of more compelling circumstances. New York Central Railroad Co. Discontinuance, 320 I.C.C. 526 (537, 540).

The problem is that of weighing the inconvenience that proposed discontinuance would cause patrons who travel between certain points served by considered trains, not only against carrier's need to be relieved of unprofitable operations, but also against the interest of the general public in maintenance of transportation services which result in uneconomical expenditures; and, burden on railroad's facilities, carrier's need to end uneconomic operation and the public's interest in efficient transportation outweigh the convenience afforded those passengers by the railroad. Furthermore, residents of the Chesterton-Porter area can be served into Chicago by two other railroads and, as shown by the evidence, the general public in area served by considered trains uses other forms of transportation. Investigation discontinued.—Id., pp. 538-9, 542.

21. Other service available.[Vol. 19].—Adequacy of alternative service is important in determining whether continued operation is required by public convenience and necessity. Though carrier's proposed inauguration, upon discontinuance of its St. Paul-Portal, N. Dak., trains, of a tri-weekly mixed-train service between Portal and Glenwood, Minn., where the present trains are consolidated with others, would not alone afford reasonably adequate service, worth of such substitute service must be evaluated in light of other alternative service available and of the area's demonstrated minuscule demand for passenger service. While a 232-mile stretch would be left without direct passenger service, that segment is nearly paralleled by another railroad; population of the area is sparse, private automobile ownership is widespread, and all towns affected are located on all-weather roads; residents of those communities would be able to travel by bus, bus-rail, bus-air, or private conveyance to nearby common-carrier stations. Overall showing is that reasonably adequate passenger service would still be available.—Soo Line R. Co. Discontinuance, 320 I.C.C. 337 (346, 354-5).

Primary importance of the Portal trains to people in the area is in their express and mail service; but Railway Exp. Agency is obligated as a common carrier to serve the affected area and is capable of doing so adequately without the trains. Though express via the mixed train would be a 2-day rather than the present 1-day or overnight service, adequacy thereof must be measured in conjunction with the express agency's ability to utilize other carriers or its own highway equipment. Evidence as a whole warrants conclusion that alternative service available for express will be as dependable, as economical to shipper, and in many cases as expeditious as that now afforded by the trains, and that from an overall standpoint proposed discontinuance will have but insignificant effect on convenience and necessity of express customers.—Id., pp. 346, 353, 357.

Responsibility for adequacy of mail service is not the railroad's burden, but rests on the Post Office Department. It is not for the commission to determine, in train-discontinu-

ance proceedings, what constitutes adequate mail service for any particular community; rather, its function is to ascertain whether continued operation of the train is required to enable the Post Office Department to discharge its duty as to the affected communities. When one of two subpoenaed officials of that department stated that it is department policy to provide equal or better mail service whenever a train is discontinued, and both expressed belief that discontinuance of involved trains would not result in inadequate mail service from the department's standpoint, conclusion is warranted that the department would provide adequate mail service to the affected communities.—Id., p. 352.

Discontinuance of one pair of North Western's passenger trains between Chicago and Ashland, Wis., its seasonal trains between Chicago and Land O' Lakes, and its train from Chicago to Green Bay, Wis., will not leave the area without service. Carrier intends to inaugurate a new train from Chicago to Milwaukee on a schedule comparable to that of the Green Bay train, also two new trains between Milwaukee and Green Bay via Sheboygan and Manitowoc, for a period of at least one year on an experimental basis, which will soften the hardship always felt by some whenever train service is discontinued or curtailed. This will leave four trains daily both northbound and southbound between Chicago and Green Bay, and scheduling of the new trains will improve North Western's service. In addition, availability of trains of the Milwaukee and the Soo Line, plus existing bus and air services, will continue to provide the Chicago-Green Bay area with ample service; and the area north of Green Bay will continue to be adequately served by North Western's daily daytime streamliner trains.—Chicago & N.W. Ry. Co. Discontinuance, 320 I.C.C. 648((656-9).

Ample passenger service in area between Minneapolis and Kansas City will remain after discontinuance of the Great Western's only trains between those termini; the Rock Island operates two trains daily in each direction, which serve Des Moines directly and other cities within reasonable driving distance of communities served by the Great Western, and also operates a daily pair of trains between Minneapolis and St. Louis; an airline provides 8 to 10 flights daily in each direction, some of which stop at intermediate points; abundant bus service is available; thus common-carrier service will be available to most of the affected communities either directly, or indirectly after a reasonable automobile trip. —Chicago Great Western Ry. Co. Discontinuance of Service, 317 I.C.C. 99 (105-6).

Remaining service of two northbound and two southbound trains on carrier's Connecticut River line, also common carrier bus service in the area, will fulfill the public's need for passenger service now provided by trains to be discontinued between Springfield, Mass., and Brattleboro or Windsor, Vt.; despite population growth in that area, considered trains are lightly patronized except for occasional movement of groups of students attending colleges along Connecticut River, and the railroad has offered to operate a Friday southbound and a Sunday northbound train at whatever time would suit convenience of the colleges, most of which are within a few miles of Springfield, where continuing service of another railroad into New York is available; in addition, the busline's willingness to expand its service both on a regular basis and on any special basis to meet the needs of the schools is supported by its action in adding to its service following a recent passenger train curtailment.—Boston & M.R. Discontinuance of Passenger Service, 317 I.C.C. 165 (174, 175).

Discontinuance of Baltimore & Ohio's only passenger trains between Washington, D.C., and Cleveland, Ohio, is warranted to eliminate continuing losses from operation when, in view of the adequate competing service available to Cleveland passengers by air, bus, other railroads, and private transportation over superhighways, it is apparent that neither schedule changes, different equipment, nor extensive public relation campaigns would materially increase use of those trains; passengers now using the trains between Washington and Akron, Ohio, would still have abailable adequate service by other B&O trains, and adequate facilities for transportation of mail to points east of Akron have been provided.—Baltimore & O. R. Co. Discontinuance of Service, 317 I.C.C. 509 (511)*.

Most of revenues from trains to be discontinued between Hope, Ark., and Shreveport, La., are derived from mail and express, for which adequate replacement service will be provided by truck; as little need is shown for the passenger service, and patronage is mostly local in character and comes primarily from area between Springhill, La., and Shreveport, service between those points by two common carrier buslines interchanging at Minden will be a reasonably adequate substitute.—Louisiana & A. Ry. Co. Discontinuance of Service, 317 I.C.C. 155 (163).

After discontinuance of its Overland trains between Oakland, Calif., and Ogden, Utah, carrier proposes to continue the same service with its City trains. While improvement in its reservation system appears to be required, careful consideration of its evidence and protestants' shows that it should, during normal off-peak periods, have ample space on the City trains to accommodate the needs of the traveling public; though consists of the City trains would be increased, they would be adequately powered and the more frequent stops required should not adversely affect on-time performance. However, relief granted to discontinue the Overland trains during other than peak periods is predicated on expectation that carrier will at all times adhere to its firm representation that at any time during the off-peak season when the consist of a City train reaches 24 cars and it has reservations for another car it will split the train.—Southern Pac. Co. Discontinuance of Passenger Trains, 317 I.C.C. 519 (532-3, 546).

Adequate service between Baltimore, Washington, and Pittsburgh will be available after discontinuance of Baltimore & Ohio's all-coach Speedliner trains, since it operates 3 other trains daily in each direction as part of its service to Chicago and the West, and 2 daily between Baltimore and Cumberland, Md., as part of its St. Louis service; also, upon discontinuance of its Cleveland trains it will operate a daily train between Cumberland and Washington. Another railroad operates 3 daily pairs of trains between the involved cities, and 2 transcontinental bus systems provide numerous daily trips, some faster than the train service. In view of losses from their operation, to require continuance of the Speedliners to accommodate a speculative increase in passengers following discontinuance of the Cleveland trains would be unreasonable; moreover, passengers can make convenient connections to and from Cleveland at Pittsburgh as well as at Washington for Florida and other points.—Baltimore & O. R. Co. Discontinuance of Passenger Trains, 317 I.C.C. 673 (679-80, 681)*.

Although certain areas west of Butte, Mont., are served exclusively by the Milwaukee's Chicago-Tacoma trains, most points on that portion of its line are served directly by the Northern Pacific or the Great Northern, or both, or are relatively short distances from points where other common-carrier passenger service is available. Only slight use is being made by the public of the service provided west of Butte, and none of the larger cities in that area except Tacoma showed interest in continued operation of the trains. Not only does Northern Pacific's service generally duplicate the Milwaukee's in that area, but its service and Great Northern's compete directly with the Milwaukee's transcontinental passenger service between Chicago and Northwest coast points, and all three provide convenient and expeditious service over their respective lines. Thus it cannot be found that public convenience and necessity require continued operation of the trains west of Butte.—Chicago, M., St. P. & P. R. Co. Discontinuance, 317 I.C.C. 691 (704, 715).

Territory between Buffalo and Chicago is amply provided with alternative means of transportation and none of communities now served by Nickel Plate's day trains will be entirely deprived of rail passenger service upon their discontinuance. While a large shipper of turkey poults may be somewhat inconvenienced by loss of parcel-post service provided with the trains, other mail service is available or will be provided, and any inconvenience to the general public is outweighed by reduction made possible in carrier's substantial losses from operation of those trains.—New York, C. & St. L. R. Co. Discontinuance of Trains, 317 I.C.C. 775 (785).

There are no adequate alternatives to service of carrier's intrastate trains between Denver and Craig, Colo. Carrier's Denver-Salt Lake City trains do not afford service to the

Bond-Craig segment of that line, and stop only at three intermediate points on the Denver-Bond segment; and since the highway does not parallel a considerable part of the line, localities on those portions are not served by busline operating in the territory. Owing to steep grades and possibility of ground blizzards, ice, and snow and rock slides on highway which provides practically the only motor access to the area west of the Continental Divide, passenger travel between the tributary territory and the rest of the State would be dependent on an extremely tenuous route if left solely to the highway.—Denver & R.G.W. R. Co. Discontinuance of Passenger Serv., 317 I.C.C. 722 (726-7).

22. Continued service needed.—[Vol. 19].—While a common carrier has a duty to provide service even at a loss, that duty is commensurate with the public's need for the service, and before continuance thereof may be ordered it must be found on basis of the evidence submitted that it is required by public convenience and necessity and that such continuance will not unduly burden interstate or foreign commerce. Where, as in case of considered trains, patronage has decreased to point where the number of passengers per train-mile barely exceeds the crew, it is obvious that public need for the trains has all but disappeared.—Soo Line R. Co. Discontinuance, 320 I.C.C. 337 (356).

Though under some circumstances a real need for a particular service may justify its continuance even at a loss to the carrier, in determining public convenience and necessity the needs of the entire public, as distinguished from the relatively few, must be the governing consideration.—Pennsylvania R. Co. Discontinuance of Service, 317 I.C.C. 5 (11).

Where the only significant use of considered intrastate trains is by students who ride on special reduced fares and have no alternative public transportation, inconvenience that discontinuance would cause that group must be weighed, not only against carrier's need to be relieved of burden of an unprofitable operation, but also against interest of the general public in maintenance of transportation services which do not result in uneconomical expenditures; record does not justify requiring continuance of considered trains at substantial loss for benefit of those students when it cannot be assumed that arrangements for alternative transportation will not be made by school authorities and the students' families.—Id., pp. 11-12.

In view of slight use made of considered trains between Wichita and Fort Worth, they do not fill any substantial public need in the territory. Few persons ride regularly and other reasonably adequate means of travel are available; carrier can hardly be expected to continue operations at a loss to provide standby service for sporadic users or for occasional use by funeral directors. Though certain communities will be deprived of rail passenger service, the majority of the public apparently prefer to use private automobiles, and it would be unfair to require continuance of service important to a relative few but little used generally.—Chicago, R.I. & P.R. Co. Discontinuance of Trains, 317 I.C.C. 601 (613, 614).

Except for slight changes in number of schedules offered by alternative modes of transportation and possibility of increase in available bus service between some points if carrier's only remaining Kansas City-Omaha trains were discontinued, the situation respecting adequacy of available substitute services remains the same as when discontinuance of same trains was disapproved in 312 ICC 765. The number of public witnesses showing interest in continued operation of those trains and the substantial use made thereof support conclusion that they meet a specific need of the traveling public which cannot be satisfactorily met by available alternative services; continued operation required for 1 year from date of report.—Missouri Pac. R. Co. Discontinuance, 320 I.C.C. 1 (10, 12).

Although continuance of certain trains of the North Western between Chicago and Ashland and between Milwaukee and Green Bay is found not to be required by public convenience and necessity, due solely to the timing as tolled by the statute their services may be discontinued during the vacation and tourist season. As the northern Wisconsin area served is a famous recreational and vacation area, and in view of the confusion that could result from discontinuance at such an inopportune time, it is hoped that the North Western will

see fit to continue its present summer schedule in order to avoid disruption of vacationers' plans. The goodwill and favorable public reaction thereto should compensate for the financial loss resulting from such continuance.—Chicago & N.W. Ry. Co. Discontinuance, 320 I.C.C. 648 (660, 667).

The commission has recognized the duty of the trustees of the New Haven to initiate procedures (which they have begun) to divest the carrier of those operations which show little promise for the future and encumber its conversion into a viable agency of public service, since long years of staggering and unabated deficits have sapped the carrier's strength and the integrity of this essential transportation facility is at stake. Goal toward which the trustees must strive is preservation and rehabilitation of the system as a whole, and the commission will examine with extreme care, and from a fresh viewpoint, all salutary measures proposed, and refrain from interposing technical rules evolved in more normal circumstances. The New Haven, under its huge overall deficit, no longer constitutes a normal rail operation and its problems no longer are amenable to solution by application of normal criteria; therefore, the commission's primary concern at this time and on this record, is, will the proposed discontinuance be beneficial to the New Haven.—New York, N.H. & R. Co. Discontinuance, 320 I.C.C. 466 (478, 479).

But evidence is not persuasive that passenger service provided on considered branch line constitutes an undue burden on interstate commerce. Carrier should fully explore all aspects of partial discontinuance (feasibility of such approach to the problem cannot now be determined from the record) before recourse is had to total discontinuance. Considering minimal nature of the service in issue, public use thereof is not insubstantial; public witnesses' testimony on the whole shows continuing need for the service and, as alternate public transportation is unavailable or inadequate at some points, public convenience and necessity require continuance thereof. However, in view of carrier's precarious financial condition, continuance of service for only 6 months, rather than statutory one year period permitted, is required. If, within that period, carrier can show that partial discontinuance would afford the relief needed, the commission will consider a petition to modify its order. On the other hand, if present appraisal of the prospects is more optimistic than is justified, carrier can again exercise its right to file a discontinuance notice.—Id., pp. 486-8.

Immediate discontinuance of New York Central's daily Boston-Albany trains is not warranted when together they are fairly well patronized despite recent decreases in number of passengers handled annually. By a concerted effort Central could improve their service in terms of greater reliability and more efficient use of equipment and personnel, to the end of attracting additional passengers, with probably little or no additional operating costs. The relatively small operating deficits of that pair of trains in past 20 months are not convincing that there is insufficient public need for their operation; financial results presented by Central are based almost entirely on limited statistical data which may not produce precise calculations, and totals shown include effect of operating decisions involving costs that could have been avoided in whole or part. Consideration of entire record is convincing that continuance of the trains should be required for at least 1 year, and that their operation, with voluntary institution of reasonable measures to improve service, will not unduly harm Central.—New York Central R. Co. Discontinuance, 320 I.C.C. 364 (375, 376).

Contrary to the general downward trend in volume of revenue passengers, patronage of the New Haven's commuter trains between New London, Conn., and Providence, R.I., has increased in the past few years despite a fare increase, and it is reasonable to anticipate that use of those trains will continue to grow. If they were discontinued, 8 of the 12 communities served would be without rail passenger service; available bus service does not satisfy commuters' requirements, and existing highway system is inadequate. Discontinuance of the morning train in particular would have profound adverse effect on a number of persons using it. But while public convenience and necessity require commuter train service to and from Providence at least for the present, it is manifest that the financial drain on the carrier must be kept at a mini-

mum until it can be determined whether the anticipated growth in traffic and greater contribution toward expenses will in fact be attained.—New York, N.H. & H.R. Co. Discontinuance, 320 I.C.C. 714 (728-30).

The hard core of the involved traffic is between Westerly, R.I., and Providence, and that traffic is on the increase. Except at one point, no adequate alternative means of travel, public or private, is available on that segment. Consideration of all pertinent factors is convincing that continuance of the commuter train service between Westerly and Providence for the statutory 1-year period is needed and will not unduly burden the carrier. And while it is incumbent on inhabitants of the communities concerned to support the trains by continuing to use them, carrier has an obligation to employ every reasonable means to limit the costs of their operation; it should explore possibility of adjustments in time schedules of its through trains to accommodate commuters and thus achieve desirable economies while preserving essential service. —Id., pp. 732-3.

However, the test week data show that less than 5 percent of passengers using the subject trains board or detrain at points in Connecticut; no Connecticut community entered an appearance at hearing, and while the State appeared and participated in cross-examination of carrier's witnesses, it offered no witnesses of its own. Carrier's other trains between New London and Providence, while not suitable for morning commuters, appear adequate for needs manifested by intermediate communities, considering the short highway distances to New London or Westerly and availability of some local bus service. That a few individuals would be inconvenienced by discontinuance of the commuter trains does not warrant a finding of need for their continued service at Connecticut points. Nor does public convenience and necessity require continuance of any Saturday service by those trains, since no witness testified to using the Saturday trains or expressed support for their continuance.—Id., pp. 731-2.

Though carrier bases proposed discontinuance of the only passenger trains on its river division between Memphis and St. Louis on alleged decline in patronage, and over a period of years the number of passengers transported and revenues received from those trains steadily declined, the decline was halted in 1959; evidence of public witnesses justifies conclusion that (1) a substantial number of passengers are still riding the trains, (2) a considerable quantity of mail and express is being handled thereon, and (3) the public demand and need for the service cannot be satisfied by substitute services; continued operation of the trains is therefore required. —St. Louis-S.F. Ry. Co. Discontinuance of Service, 312 I.C.C. 713 (727).

Discontinuance of carrier's only through trains between St. Paul and Portal, N. Dak., would deprive many towns on that 561-mile route of their only passenger-train service; some are connected only by dirt or gravel roads and have no other public transportation; proposed discontinuance would mean their complete isolation, especially during winter months. As to the remaining towns, area between Glenwood, Minn., and Twin Cities is now served by a pair of trains which carrier is seeking authority from the State commission to discontinue, and duration of that service is therefore uncertain; service afforded by other railroads between Glenwood and Portal is not an adequate substitute for considered trains, nor does available airline or common-carrier bus service meet the public need in that area; continuance of the subject trains, even at some loss, is therefore required by public convenience and necessity.—Soo Line R. Co. Discontinuance of Passenger Trains, 312 I.C.C. 729 (739, 740-1).

Discontinuance of carrier's only passenger trains between Kansas City and Omaha would leave almost all intermediate cities served without passenger train service, as parallel route of the Burlington lies east of Missouri River and serves only one of them; no adequate substitute service is available, as none of such intermediate cities has airline service, no one motor passenger carrier serves all of them and only a few are directly connected by busline, and bus schedules and routes do not permit ready connections. Considered trains are well patronized, and indication that increasing use by the public—over 18 percent increase in 1959-60—will continue is borne out by testimony of a carrier witness as to in-

creased patronage in first half of 1961; thus there is definite and substantial need for their continuance.—Missouri Pac. R. Co. Discontinuance of Passenger Trains, 312 I.C.C. 765 (774, 776).

Although in proceedings involving discontinuance of other passenger trains of the North Western it was found that combination of its remaining service with that of other railroads, buslines, and airlines would provide ample passenger facilities in the affected area, that is not true where considered trains between Chicago and Minneapolis and between Chicago and Mankato, Minn., are its only remaining trains providing service between Milwaukee and Madison, Wis., on one hand, and Minneapolis and Mankato, on the other, and without its service only four points on its lines west of Madison would have rail passenger service; particularly, discontinuance of those trains would work considerable hardship on patients of Mayo Clinic at Rochester, Minn., who depend on them for transportation.—Chicago & N.W. Ry. Co. Discontinuance of Passenger Trains, 317 I.C.C. 21 (27, 29).

Record shows that the traveling public has made substantial use of considered trains and that such use may even increase in the foreseeable future; fact that daily averages for first 5 months of 1961 are somewhat smaller than for the full year 1960 does not indicate a decrease in public use of the trains, since patronage in winter months is relatively lighter than in summer, and passenger revenues on the trains for first 10 months of 1961 indicate that the entire year will be as good if not better than 1960; the relatively large number of public witnesses evidencing an interest in continued operation of the trains, and their substantial use by the public, demonstrates a relatively large public need for the service they afford, and that substitute services are inadequate to satisfy that need; continued operation ordered for a period of 1 year.—Id., pp. 29,30.

Adequate evidence established substantial public need for continued operation of joint interstate passenger trains of the Pennsylvania and Seashore Lines and of latter's remaining intrastate trains between Philadelphia-Camden area and southern New Jersey points; no adequate substitute service is available, since bus service entails longer transit time and is subject to traffic delays during peak periods which make it unacceptable to commuters; it is conclusively shown that commuters are making regular and substantial use of the basic morning and evening trains involved, and that service of the other trains meets existing needs of the communities concerned; discontinuance of those trains would leave that New Jersey area without any adequate public transportation service; in the circumstances, order requiring continued operation of considered trains for 1 year is warranted.—Pennsylvania R. Co. Discontinuance of Passenger Service, 317 I.C.C. 111 (124, 129, 134, 135).

Though for all practical purposes services proposed to be provided by carrier's City trains between Oakland, Calif., and Ogden, Utah, after discontinuance of its overland trains would not differ in any material respect from present operation of the latter, carrier anticipates that it would be necessary, during the summer and Christmas peak periods, to split the trains. However it would not do so if in its judgment a second section was not required; and when running the eastbound City train in two sections it would be necessary for each section to be broken at Ogden and the cars moving through to Chicago and Kansas City separated and switched. Therefore, carrier is required to continue daily operation of the Overland trains during the periods June 14 through Labor Day and December 22 through January 2, for 1 year from date of order, with a consist as specified, and with schedules adjusted to coordinate movement of through cars with connecting lines at Ogden.—Southern Pac. Co. Discontinuance of Passenger Trains, 317 I.C.C. 519 (534, 547).

Continued service of the Milwaukee's Chicago-Tacoma passenger trains is needed between Minneapolis and Butte, Mont.; use thereof has been fairly substantial considering sparsely populated areas involved, and discontinuance would deprive the public of train service throughout most of that vast area, would leave some points without any form of common-carrier passenger service, and would make it difficult for many travelers to obtain adequate service; would also deprive the pub-

lic of convenient and expeditious mail and express service and adversely affect economic well-being of many communities. Continuance of that service would enable the Milwaukee to retain its rather substantial volume of traffic between Chicago and points east of Butte and also to coordinate its operations with Northern Pacific's to provide convenient connections or through-car service to and from west coast points. Public convenience and necessity requires continued operation between Minneapolis and Butte for 1 year from date of order.—Chicago, M., St. P. & P.R. Co. Discontinuance, 317 I.C.C. 691 (715-6). [See also Chicago, M., St. P. & P.R. Co. Discontinuance, 317 I.C.C. 761, n. 2 and 35 hereunder.].

Service provided by carrier's intrastate passenger trains between Denver and Craig, Colo., is not a mere standby service for use when residents of the territory do not wish to drive their automobiles; highway which provides the only motor access to the area west of the Continental Divide affords an extremely tenuous route through that mountainous territory, and service of the trains is of equal importance in preventing its reversion to the state of isolation prevailing prior to construction of the Denver-Craig line. That the territory served is sparsely populated is insufficient reason for permitting discontinuance of the trains: residents of such regions are as much in need of transportation as those of regions of denser population; inconvenience imposed on the tributary territory by proposed discontinuance would outweigh the benefit carrier would gain thereby.—Denver & R.G.W. R. Co. Discontinuance of Passenger Serv., 317 I.C.C. 722 (727).

—Feeder value:[Vol. 19].—In considering proposed discontinuance of considered Boston-Albany trains, one area of unresolved doubt concerns public need for, and value to New York Central of, their service as part of available through passenger service between Boston and points west of Albany. But though it would be unrealistic to include any arbitrary proportion of revenues produced by other trains as part of revenues assignable to the trains involved, particularly as Central's total passenger operations have consistently incurred annual losses under accepted methods of computation, resolution of that doubt in favor of Central's contentions does not alter the ultimate conclusion that continued operation of the trains for at least 1 year is required. That at least half the riders of those trains patronize continuing trains of Central is an important facet of existing public need, and mere expectation that present patrons would use Central's Boston-Chicago trains, regardless of time of day they arrive and depart, does not warrant finding that public convenience would be satisfactorily protected.—New York Central R. Co. Discontinuance, 320 I.C.C. 364 (375-6).

25. Losses from operation.—[Vols. 18,19].—Carrier's computation of losses from operation of trains it proposes to discontinue reflects methods used by it in prior discontinuance proceedings and accepted by the commission; those figures show that, even with disallowance of certain items, its net loss before interest or return on investment approximates $1 million annually. And though, since enactment of the Transportation Act of 1958, carrier has discontinued some 70 trains under provisions of §13a, thereby substantially reducing its passenger deficit and greatly improving its overall financial position, its net income for the previous year was aided more directly by a $10 million Federal income tax refund. Carrier should not be required to disburse the benefits of that refund by assuming the losses produced by continuance of the involved trains.—Chicago & N.W. Ry. Co. Discontinuance, 320 I.C.C. 648 (653, 665).

And though protestants suggest that those losses could be eliminated by a fare increase, carrier's experience indicates that such increases do not always produce additional passenger traffic. Fares on considered trains would have to be tripled to overcome the deficits now incurred in their operations; accordingly, a fare increase of magnitude needed to obliterate present operating deficits would not be feasible. Discontinuance authorized.—Id., p. 665.

Notwithstanding that substantial use has been made of Baltimore & Ohio's Speedliner all-coach trains between Baltimore, Washington, and Pittsburgh, and that it has made considerable effort to increase patronage, it has incurred substantial out-of-pocket losses in

their operation and there is no indication that patronage will increase or the losses be reduced, whereas discontinuance of those trains and rescheduling of one of its local trains from Baltimore to Washington will effect considerable savings and promote efficiency in its operations. Such losses and savings are of major importance to the carrier in view of its steady decline in net income since 1956; as adequate alternative services are available, and cost of operating the Speedliners greatly exceeds benefits derived by the traveling public and communities served by them, discontinuance is authorized.—Baltimore & O. R. Co. Discontinuance of Passenger Trains, 317 I.C.C. 673 (681-2)*.

Where financial losses from operation of considered trains have been relatively heavy and their use has been insubstantial over an extended period, their continued operation would constitute an unnecessary and wasteful service and impose an undue burden on interstate commerce; aggregate of actual costs shown, alone, for each of three specified periods was over four times the passenger revenues for corresponding periods and exceeded total revenues from passengers, mail, and express carried on involved trains; in the circumstances, profitableness of carrier's system operations is not controlling. Discontinuance authorized.—Louisiana & A. Ry. Co. Discontinuance of Service, 317 I.C.C. 155 (161, 162, 163).

Carrier has sustained substantial losses from operation of considered passenger trains, and if the service were continued further severe financial losses would be certain. Those trains have had little public support and, in view of the overall showing of reasonably adequate alternative transportation service, carrier's improved financial condition loses what significance it might otherwise have. Cost of operating the trains greatly exceeds any benefits derived by the public, and financial burden of continued operation would result in injury to carrier far outweighing the minimal adverse effect on the few who would be inconvenienced by discontinuance. In the circumstances there is no warrant for imposing such a heavy economic burden on carrier, especially in view of the almost listless response to service offered in the past and the negligible prospect of any significant increase in public need or use of the trains. Continued operation would constitute an unnecessary and wasteful drain on carrier's resources; discontinuance authorized.—Soo Line R. Co. Discontinuance, 320 I.C.C. 337 (357).

Carrier's average net system loss for 1957-62 (excluding gains from sale of lands and other one-time non-operating credits) is shown to be $1,065,667, whereas its estimated annual savings (supported by the record) from discontinuance of considered four trains would be $1,158,790 based on 1961 operations, which if spread over those 6 years would have shown average annual net income of $93,123; and on the 1961 basis those trains operated at an average daily out-of-pocket loss of $3,175. Record indicates that fare increases did not improve financial results of operation and may well have had an opposite effect; and carrier's management, acting within its responsibility, decided that advertising or other promotion efforts on the small budget it considered sound would not attract enough passengers to reduce its losses.—Chicago & N.W. Ry. Co. Discontinuance, 320 I.C.C. 85 (92, 99, 100, 102-3)*.

Though one protestant criticizes carrier for expenditures to purchase stock of another railroad, for failing to use that money and gains from sale of real estate for maintenance, additions, and betterments, and for not borrowing for those purposes under a revolving credit arrangement with a group of banks, record shows that substantial dividends were received on the stock and that use of proceeds from real estate sales was restricted by terms of mortgage thereon; those decisions were within carrier's managerial discretion under all existing circumstances, including its financial condition and outstanding debt obligations. Moreover, there is no claim that adoption of protestants various suggestions would have produced a profitable operation or, even with severe downgrading of service, would have reduced out-of-pocket loss from operation of considered trains below $597,790; conclusion is warranted that their continued operation would unduly burden interstate commerce.—Id., pp. 102, 103.

Inability of carrier's trains between Kansas City and Minneapolis to operate at a profit is

due to intense competition in the area from private automobiles, buses, airlines, and another railroad; discontinuance will permit minimum annual savings of nearly $100,000, and savings might well be substantially greater because carrier would probably retain some of the mail, express, and passenger traffic on its other trains between Minneapolis and Hayfield, Minn.; considering all circumstances, discontinuance is warranted.—Chicago Great Western Ry. Co. Discontinuance of Service, 317 I.C.C. 99 (105).

After elimination of expenses which the commission has previously held not to be avoidable out-of-pocket costs, out-of-pocket losses for 1961 from operation of carrier's Overland trains between Oakland, Calif., and Ogden, Utah, are shown to be $953,000. By providing the same service with its City trains after discontinuance of the Overland trains, substantial savings can be achieved during off-peak periods, resulting in an approximate net gain of $28,559 for a comparable year, although no savings can be expected from operation of second sections during peak travel periods (about 112 days). While such computations are not exact, conclusion is warranted that continuance of the Overland trains during other than peak periods would unduly burden interstate commerce when the same service can be continued by the City trains with substantial savings and possibly a profit.—Southern Pac. Co. Discontinuance of Passenger Trains, 317 I.C.C. 519 (539-40, 546-7).

Carrier's transfer of the through cars of the Overland trains to the City trains during a prior period of about 4 months is not shown to have had any material effect on the decline in traffic and losses in operation suffered by the Overland trains. The through car service continued unabated, and it is highly conjectural whether the increase of about an hour in arrival and departure times at Ogden caused any loss in traffic; and since the local cars remained with the Overland trains, that traffic could not have been adversely affected by removal of the through cars.—Id., pp. 543, 545.

And contention of the city of Sacramento that, since it has engaged in developments to increase carrier's freight traffic, carrier should be willing to continue passenger service of the Overland trains at a loss is an unsound basis for continuing that service.—Id., pp. 541, 546.

Baltimore & Ohio is incurring losses both in its overall passenger operations and in continuance of its trains between Washington, D.C., and Cleveland, Ohio, and though its estimate of about $304,000 net out-of-pocket savings annually from discontinuance of those trains appears somewhat overstated, savings realized would substantially exceed annual losses from that service; such losses, when weighed against the inconvenience to some 30 passengers per train per day who would not have alternate B&O service available, warrant approval of proposed discontinuance.—Baltimore & O. R. Co. Discontinuance of Service, 317 I.C.C. 509 (511)*.

Boston & Maine's proposed discontinuance of three northbound and three southbound passenger trains on its Connecticut River line between Springfield, Mass., and Brattleboro or Windsor, Vt., with resulting annual savings of at least $69,664, is warranted when, with a depleted cash position and a deficit in net working capital, it is apparent that orderly operations cannot be financially maintained; notwithstanding heavy population concentration along the line in Massachusetts, considered trains have been only lightly patronized and are operated at substantial out-of-pocket loss, and with declining patronage their continuance would only result in growth of such loss; considering the size of carrier's total deficit in net income in recent years, its financial condition requires that this drain on its resources be eliminated.—Boston & M. R. Discontinuance of Passenger Service, 317 I.C.C. 165 (172, 175).

Even if the most extreme position advocated by the State of Rhode Island in opposition to the New Haven's proposed discontinuance of a set of commuter trains between New London, Conn., and Providence were adopted, there would still be an excess of expenses over revenues. Although such excess is not great compared with carrier's annual losses in its New York City commuter operations, the State's contention that the subject operations place no burden on interstate commerce is without merit: clearly they contribute to car-

rier's overall unsound financial condition. And contention of one community, based on opinion of carrier's comptroller that it could never conduct passenger service without a public subsidy, that if the morning train is discontinued now its passengers will never receive benefit of such a subsidy, must be discounted; the matter of future public subsidy for New Haven's passenger service is much too speculative a basis for requiring continuance of the involved trains in face of the losses shown. However, discontinuance is found justified only between New London and Westerly, R.I.—New York, N.H. & H. R. Co. Discontinuance, 320 I.C.C. 714 (727, 734).

Discontinuance of carrier's only passenger trains between Red Bank and Trenton, N.J., is warranted when their operation is highly unprofitable, annual expenses including essential car costs being at least four times revenues therefrom; discontinuance will permit savings of at least $50,000 annually, as well as economies amounting to some $60,000 through simplification and elimination of signals and excess personnel; the very slight increase in patronage during 1958-60 cannot be considered indicative of any significant increase in future use, considering population growth of area served during same period; moreover, carrier sustained a systemwide passenger deficit of at least $34,000,000 in each of 10 consecutive years through 1959, and an overall deficit of $7,819,112 in 1960; in the circumstances, carrier's need to end an uneconomic operation and interest of the general public in efficient transportation outweigh convenience of the service to patrons. —Pennsylvania R. Co. Discontinuance of Service, 317 I.C.C. 5 (11, 12, 13).

See also Pennsylvania R. Co. case (317 ICC 111), n. 20, above.

The three pairs of intrastate trains carrier proposes to discontinue are at present lightly patronized, and changes in service made to effect economies have been ineffective to avert substantial losses, which in 1958 resulted in a total deficit before income taxes of approximately $587,000. The modifications of operations and service criticized by the State were instituted with specific approval or general acquiescence of the State commission, and there is no probative evidence that if the new services suggested were instituted any additional riders would have used those trains; it cannot be found that any increased expense of those items could reasonably be expected to be offset by equal or greater added revenues. And though the record warrants conclusion that carrier has made no special effort to encourage passenger travel and some of its actions may have served to discourage traffic, it cannot be found in view of the competition that a different approach would assure profitable operation of the trains involved. Discontinuance authorized.—Southern Pac. Co. Discontinuance, 320 I.C.C. 59 (76-7, 80).

Legislative history of §13a makes clear that Congress did not intend the commission to permit discontinuance of trains merely on a showing that their operation results in a loss to the carrier. Although fact that losses are being incurred is important in determining whether continued operation will unduly burden interstate commerce, magnitude of the losses must be considered in relation to need for the service and their effect on carrier's ability to continue adequate and efficient service. Evidence shows that results of operating carrier's only remaining pair of trains between Kansas City and Omaha have improved, and its passenger train operating ration had declined from 150.87 in 1958 to 118.61 in 1961. Considering the substantial public need shown for continued operation of those trains, together with economies possible through elimination of little-used parlor- and dining-car services thereon, the out-of-pocket losses from their operation do not appear so substantial as to constitute an undue burden on interstate commerce.—Missouri Pac. R. Co. Discontinuance, 320 I.C.C. 1 (10-11, 12).

Neither length of trip nor scheduling of involved trains appears to require parlor- and dining-car services to attract passengers, and those services have not been well patronized; their elimination would substantially decrease net operating losses. Reflecting discontinuance of those services, eliminating overhead and traffic expenses reported as savable, and considering increased feeder value based on the 50-percent formula and loss of revenue from the dining and parlor cars, maximum

out-of-pocket losses from operation of the trains would be $223,000 for 1960, $179,000 for 1961, and $145,000 for first 6 months of 1962; and those losses must be further reduced to reflect undeterminable amounts for depreciation and repairs on parlor car, a portion of claimed savable expenses for maintenance of way and structures, and some portion of discrepancy in feeder value now shown for 1960 and that shown in earlier proceeding involving same trains.—Id., pp. 9-10.

Carrier has sustained substantial losses in operation of its Chicago-Tacoma trains west of Minneapolis, which have had adverse effect on its system earnings, and it would continue to sustain substantial losses if operations were continued over entire run between Minneapolis and Tacoma. However, while it should be accorded some relief, solution of the problem by elimination of all service west of Minneapolis appears doubtful; though such discontinuance would eliminate most operating expenses for that service and result in some other savings, carrier would lose all revenues accruing from passengers handled over that portion of the line, a majority of whom are through travelers between Minneapolis or points beyond and northwest coast points, and would doubtless lose considerable revenues from passengers handled in its other trains between Minneapolis and Chicago. Complete elimination of the trains west of Minneapolis might thus afford only slight relief instead of substantial savings anticipated, and burden on interstate commerce would not be substantially alleviated. Discontinuance authorized between Butte, Mont., and Tacoma, Wash., only.—Chicago, M., St. P. & P. R. Co. Discontinuance, 317 I.C.C. 691 (714-5).

But while service is required to be continued for 1 year between Minneapolis and Butte, a railroad cannot continue operations at a loss indefinitely, for when such losses are substantial they are bound to affect interstate commerce adversely and if continued long enough might eventually result in carrier's insolvency. The public should be aware that if, during the 1-year period, carrier continues to experience reduced earnings from the trains and substantial losses from their operation, it may be necessary to authorize the complete discontinuance sought.—Id., pp. 714, 717.

While record clearly shows that, on a fully allocated basis, passenger operations on considered branch line are a deficit operation, the fully allocated deficit resulting from operation of a particular passenger service is not indicative of the amount of money that would be saved if the service were discontinued; whether or not proposed discontinuance would be beneficial to the carrier depends on whether expenses to be saved would exceed revenues to be lost. In §13a cases, out-of-pocket costs of operating trains in question are of primary importance; therefore, while no error can be found in carrier's estimate of revenues that would be lost by discontinuance of service on considered branch line, it is necessary to examine certain out-of-pocket expenses which it claims would be savable expenses.—New York, N.H. & H. R. Co. Discontinuance, 320 I.C.C. 466 (479).

Record is not persuasive, in the absence of probative evidence, that the loss of an average of 13 passengers per trip on each New York train connecting with branch-line train sought to be discontinued would generate savings as claimed by carrier; so far as appears on record, crew and consist of New York trains would be unchanged and no suggestion appears of any economy on main line resulting from proposed discontinuance of passenger service on the branch line.—Id., p. 483.

Dominant factor is that evidence does not establish that passenger service provided on the branch constitutes an undue burden on interstate commerce or to be more precise that discontinuance of service would remove such a burden; based on expenses found to be savable and carrier's estimate of revenues that would be lost through discontinuance, there is reason to find that the carrier's annual operating results, would at least approach the breakeven point, although this is not to say that the passenger operations on the branch would be conducted at a profit or near profit. The commission is simply recognizing that the financial posture of the carrier would differ little as a result of the proposed discontinuance from what it would be if the trains continued in operation.—Id., pp. 485-6.

While carrier has incurred out-of-pocket

losses in operation of considered trains between Chicago and Minneapolis and between Chicago and Mankato, Minn., such losses are not so substantial as to unduly burden interstate or foreign commerce, and could be reduced substantially if carrier would increase its fares to level charged by competing railroads; proposed discontinuance is not warranted at present.—Chicago & N.W. Ry. Co. Discontinuance of Passenger Trains, 317 I.C.C. 21 (30).

Although extent of the deficit is conjectural, carrier's financial data warrant conclusion that operation of considered trains has resulted in financial deficit. Burden thereby imposed on carrier and on interstate commerce must be considered in direct relation to public need for the service proposed to be discontinued, since a substantial need for the line might warrant continuance of service even at a loss; this doctrine gains importance where a "last train off" proposal is involved. Discontinuance of considered trains would deprive many towns on a 561-mile line of their only public passenger service, and service to the remainder would be inadequate; in the circumstances, financial losses incurred in their continued operation will not unduly burden interstate commerce.—Soo Line R. Co. Discontinuance of Passenger Trains, 312 I.C.C. 729 (737, 740-1).

Amount saved from discontinuance of carrier's day trains between Buffalo and Chicago would probably be somewhat less than net loss claimed by it from their operation. It is not established that amounts included for general overhead expense would be saved, expenses for locomotive repairs would be lessened by reason of new locomotives in use, and no expense would be chargeable for closed East Cleveland station; also, recent 10-percent fare increase should reduce losses by $40,000 to $50,000 a year. But though large portions of expense of joint use of terminals would probably be shifted to other trains using those facilities, this might be partly offset by increased travel on such trains as result of elimination of those discontinued.—New York, C. & St. L. R. Co. Discontinuance, 317 I.C.C. 775 (783, 784).

As considered trains are well patronized and, excluding considerations of monetary loss, their continued operation is shown to be required by public need, discontinuance should not be permitted unless operating losses which would be eliminated are of such magnitude as to outweigh the benefits from continued operation and thus unduly burden interstate commerce. Annual out-of-pocket loss which would be saved would not exceed, and would probably be somewhat less than, $168,000; as removal of those trains would leave almost all intermediate cities without passenger-train or other adequate service, and there is indication that present substantial public use of those trains will increase, the financial loss incurred in their continued operation will not unduly burden interstate commerce.—Missouri Pac. R. Co. Discontinuance of Passenger Trains, 312 I.C.C. 765 (771, 773-4, 776).

Any operating losses from considered trains are not so substantial that continued operation would unduly burden interstate commerce. In estimating savings from discontinuance no effect was given to loss of revenue that would result; in absence of showing of extent to which any of the revenues would be retained, it must be concluded that all revenues accruing from their operation would be lost; deducting amount of previous year's revenues from carrier's estimate of savings, and excluding amount claimed for joint terminal expenses, would leave carrier with a net loss as result of proposed discontinuance.—St. Louis-S.F. Ry. Co. Discontinuance of Service, 312 I.C.C. 713 (722, 727).

—Computation; out-of-pocket costs: [Vol. 19].—Where discontinuance of trains as proposed would have effect of eliminating expense of maintaining passenger station based on use, such use now required by state law so long as carrier enters city, it constitutes a savable, out-of-pocket expense; passenger station is expensive to maintain and carrier is in poor position to secure better terms. Attempts to have the law repealed or amended so as to permit the use by the carrier of less-expensive freight house as a passenger station have been uniformly unsuccessful.—New York, N.H. & H. R. Co. Discontinuance, 320 I.C.C. 466 (485).

Depreciation (including depreciation on Budd cars) is a proper out-of-pocket expense

which may be included as a savable expense upon discontinuance of trains; and a savings, reflected by item of depreciation on equipment, will be allowed where record shows that the equipment assets from trains to be discontinued may replace equipment assets being worn out elsewhere in the system or may forestall needed investment in new equipment and in maintenance for other parts of the system.—Id., pp. 480, 481; Id., 320 I.C.C. 544 (544-5).

Also, expenses related to earning dependent revenues is allowed as savable expense upon proposed discontinuance where the carrier will effect a commensurate reduction in off-branch expenses; and the commission, in a number of passenger discontinuances, has applied an arbitrary formula wherein 50-percent of the dependent revenues is taken as the system's savable beyond-the-branch expense incident to that revenue. Record is convincing that, with proposed reduction in dependent revenues, carrier will effect commensurate reduction in off-branch expenses equal to at least the amount provided by the 50-percent formula; expenses related to earning dependent revenues, allowed.—Id., 320 I.C.C. p. 566; 320 I.C.C. p. 484.

And freight train overtime is found to be a savable out-of-pocket expense where uncontroverted evidence established that that item is a direct result of operation of considered trains, and that carrier has made concerted efforts to so schedule the freight service to eliminate train delays, to no avail. In addition to delay and resulting expense to freight service which would be avoided subsequent to the discontinuance, speed and efficiency of the freight trains would be increased by the assurance that no passenger trains would be met. But where details are not of record, the commission cannot conclude that amounts shown under freight train overtime are a savable out-of-pocket expense, nor can it compute what amounts of such overtime costs, if any, may be so classified.—Id., 320 I.C.C. p. 481; 320 I.C.C. p. 557.

However, interest on investment has not been accepted as an item of savable cost in either line abandonment or train discontinuance cases although it has been characterized as a benefit that would accrue to the railroad if a branch line were abandoned, and as an indicium of additional burden on the railroad and on interstate commerce if branch is not abandoned. Return on investment is a factor used in arriving at a proper rate level, and has been classified as a cost item to be recovered in operations under the rate; but it does not follow that it is a cost which railroad will save by not operating a particular train, especially where for a long time there has been no net return from the train operation. Record is not convincing that interest on investment in Budd cars constitutes a savable out-of-pocket expense flowing from proposed discontinuance of considered passenger trains.—Id., 320 I.C.C. p. 480; 320 I.C.C. p. 555.

In consolidated proceeding wherein carrier seeks to discontinue operation of its two remaining passenger trains under §13a(1) and to abandon operations over trackage of two other carriers under §1(18), expenses for use of joint facilities were savable where the use would be completely abandoned, but not where movement of freight service would continue at the facilities.—Chicago Great Western Ry. Co. Discontinuance, 328 I.C.C. 664 (665-6, 670-1).

Only directly related expenses which may be eliminated by discontinuance of the trains in question should be included in out-of-pocket costs of providing the service. Expenses for maintenance of way and structures are not properly includible in such costs, and same conclusion is warranted as to general and traffic expenses, since little if any actual savings in such items would result from discontinuance of particular trains.—Chicago & N.W. Ry. Co. Discontinuance, 320 I.C.C. 648 (652).

In computing operating costs for purpose of showing losses from operation of particular trains, the savable costs, not allocated costs as such, should be used. Unless a particular cost will be avoided as a direct result of proposed discontinuance and not merely be reallocated and added on to other service units, it must be disregarded as immaterial. As no injuries to persons are shown to be attributable to operations between involved termini during the period studied, cost shown therefor is merely an allocation of a system expense, without any proof that elimination of consid-

ered trains would avoid any cost in that category.—New York, N.H. & H.R. Co. Discontinuance, 320 I.C.C. 714 (718-9); and as those trains operate over carrier's main line, in absence of specific evidence showing how discontinuance of one round trip a day could effect a savings on maintenance-of-way expenses, amount claimed therefor is likewise disallowed.—Id., p. 719.

The 50-percent formula for computing cost of handling passengers beyond a branch was adopted as a means of estimating savable costs associated with feeder revenues where a reasonable accurate ascertainment is not feasible and it is apparent that some perceptible saving in such expenses will necessarily follow the discontinuance; but where there is no indication that a noticeable diminution in service equipment, or personnel beyond the branch is likely to ensue, the formula would have no relation to reality. As any loss of beyond-the-segment passengers after discontinuance of carrier's commuter service between New London and Providence would not save any significant costs of continued operation of one train from Providence to Boston, unless the change in number were enough to warrant change in amount of equipment needed, use of the formula is not justified.—Id., p. 721.

Depreciation may properly be considered an avoidable expense when equipment is sold or used to release other equipment from service. While carrier admits that immediately after discontinuance the involved Budd cars would be used in the Boston-Providence service, it contends that experience shows that it will soon find other services in which to use them. It would be unrealistic to take the short-range view that use of those cars would not be immediately affected by the discontinuance; great weight must be accorded carrier's experience as testified to by its comptroller, particularly since opposing witness made no study of carrier's equipment problems. Following 320 ICC 466 and 544, depreciation expense on the Budd cars is treated as savable.—Id., pp. 722-3; and as the portion of repair expenses of the Budd cars attributable to time rather than use has much the same character as depreciation expense, that also is treated as savable—Id., p. 723.

As the cars are serviced after each arrival at New London or Boston, carrier computed unit enginehouse expenses by averaging such costs and multiplying by number of trips, and train supplies and expenses by multiplying average cost per Budd-car mile by number of miles for the subject trains, thus including part of the costs incurred to Boston. While actual avoidable costs cannot be determined, owing to nature of the operations and accounting therefor, the costs at New London would be largely avoided, and possibly some part of the Boston costs also, but it is unlikely that the amount of service, and consequently the avoidable cost, would be reduced in direct proportion to the mileage reduction. However, any overstatement of these costs due to the method used is too small to affect the conclusion as to probable savings.—Id., pp. 723-4.

Carrier's computation of revenues from the involved trains was based on two seasonal weeks in preceding year, designed to reflect savings in a representative future period. Greater weight should be given more recent experience over that of a remoter period; had more test weeks been used, the results would have had a greater degree of probability, but carrier's presentation is founded on methods recognized as furnishing reasonably reliable results. And while the revenue data are understated in making no provision for increase in number of revenue passengers in the last 2 years, any adjustment would not alter the showing that more would be saved in expenses than would be lost in revenues as result of the discontinuance.—Id., pp. 725-6.

Use of estimated unit costs in determining applicable costs of passenger car repairs, without presence of witness who devised the formulas or exercised necessary judgments to make such determinations, was not improper. Cross-examination of carrier's witnesses disclosed that the unit costs applied in each case cover only the type of power units and cars operated on the trains in question and vary accordingly; the results are admittedly approximations arrived at by reliable methods accepted in the industry, and any errors could as well be understatements as otherwise. The persons responsible for preparation of the unit factors prepare monthly studies of such

costs as part of their regular functions, and those data provide bases for information included in carrier's reports to the commission and appropriate State agencies, thus are subject to official review and criticism.—Union Pac. R. Co. Discontinuance, 320 I.C.C. 493 (504-5)*.

Actual costs of train repairs, supplies, and expenses need not be shown in discontinuance proceedings where equipment used may be interchanged with like equipment belonging to the system; computation of the various items categorized under car costs by multiplying the average rate per car-mile in same general area for the type of service considered by the number of car-miles operated each year by involved trains conforms with methods approved in other discontinuance proceedings; in same area at the time, carrier operated at least three gas-electric cars which could be and were used in considered operation, and car costs so determined are not excessive.—Pennsylvania R. Co. Discontinuance of Service, 317 I.C.C. 5 (8).

Use of representative 1-week periods in 1958 and 1960 to compute an average rate per passenger provides a reasonable approximation of actual revenues from considered trains when applied to actual passenger count for each year.—Id., p. 7.

Economies resulting from simplification and elimination of signal and crossing expenses peculiar to passenger operations are acceptable as additional savings from proposed discontinuance of only passenger trains operated on considered line; though not all of amount of wages of block operators is attributable to the passenger operation, and wages of crossing watchmen, though savable, must be somewhat offset by cost of installing new crossing devices, evidence shows that additional savings of at least $60,000 annually would be realized through simplification and elimination of existing signal and crossing facilities.—Id., p. 9.

Since petitioner is a wholly owned subsidiary of Kansas City Southern, both carriers operate in same general area, and functions and facilities of both are to a large extent closely integrated, system average costs based on combined operational costs of both are reasonably accurate and realistic for computing costs related directly to locomotive and passenger car expenses of considered trains.—Louisiana & A. Ry. Co. Discontinuance of Service, 317 I.C.C. 155 (161).

Amount of loss from operation of considered trains should not be reduced by a percentage equivalent to income tax saving which resulted therefrom; since the loss was actually incurred, it cannot reasonably be considered less because carrier's total income tax may have been less than if it had not been incurred.—Id., p. 162.

Amount for depreciation on equipment, based on evidence that the service requires ownership of two Budd cars that would otherwise not be required, was properly included in cost of operating trains proposed to be discontinued; unrefuted evidence that two units devoted to that service can be retired is further supported by fact that carrier owns 108 such cars, of which 10 or 12 are in storage, and is negotiating to sell some 25 of them.—Boston & M.R. Discontinuance of Passenger Service, 317 I.C.C. 165 (172).

While discontinuance of considered trains would, by reducing the number of cars moved in and out of Washington Union Terminal, increase the unit cost per car thereafter assessed for carrier's use of the terminal facilities, resulting increase in terminal costs was not included as an offset to estimated savings from discontinuance; however, even with such increase, carrier would still realize savings substantially exceeding annual losses from continued operation of the trains. And though discontinuance would not only shift the terminal expenses to carrier's trains still using the Washington terminal, but would also require redistribution of expense among other user carriers, such redistribution would not impose an undue burden on interstate commerce.—Baltimore & O. R. Co. Discontinuance of Service, 317 I.C.C. 371 (380)*.

Inclusion in estimate of savings from proposed discontinuance of actual amount paid for use of union station facilities at Kansas City was proper when carrier has no other passenger trains using those facilities, and as its present proportion of user charges is less than 1 percent of the total, redistribution of expense among the remaining carriers would not unduly burden interstate commerce;

moreover, any burden might be somewhat offset by some of the remaining carriers obtaining all or part of the mail, express, and passenger revenues earned by considered trains. However, joint facility expenses at Minneapolis and St. Paul terminals would not be saved, since other trains of carrier would continue to use those facilities.—Chicago Great Western Ry. Co. Discontinuance of Service, 317 I.C.C. 99 (104-5).

Joint passenger terminal expenses consisting of payments made strictly on a use basis measured by percentage of carrier's ticket sales in the terminal to total ticket sales of all carriers using the terminal are properly included in estimated savings from train discontinuance when involved trains are carrier's only trains using that terminal.—Chicago & N.W. Ry. Co. Discontinuance, 320 I.C.C. 85 (92)*.

When, in response to prior criticism of carrier's use of system average costs including both through-train passenger service and suburban service, it separated the accounts and arrived at system averages more appropriately based on through-train equipment only, computation of expenses of considered trains on such system averages is acceptable as a reasonably close approximation of actual expenses incurred in operation of those trains.—Id., pp. 93-4.

As provision of standby equipment is a proper and necessary practice in conduct of orderly and dependable passenger service, cost thereof is a proper expense item.—Id., pp. 94-5.

Since, as result of elimination of connecting Canadian trains, tourist traffic and Canadian mail and express formerly handled by carrier's St. Paul-Portal, N. Dak., trains have been moving by other trains for some 2 years, revenues produced by such traffic can no longer properly be regarded as revenues of the Portal trains. Also, for purposes of calculating the financial burden, revenues from express moving between St. Paul and Glenwood, Minn., need not be considered, since upon discontinuance of the Portal trains such traffic would move on carrier's other trains between those points.—Soo Line R. Co. Discontinuance, 320 I.C.C. 337 (349).

Although petitioner charged no expenses to considered intrastate trains for handling of free passengers, the State contends that they should be credited with constructive revenues for providing free transportation of persons engaged in petitioner's freight service. Validity of such allocation is doubtful, and should be considered an incidental effect of proposed changes in service, when not more than 5 percent of pass riders are traveling on official railroad business; upon discontinuance of those trains no noticeable new expense would be incurred for accommodation of nonrevenue passengers on other trains; and it is unlikely that any substantial number of pass riders would have used those trains if required to pay tariff fares. Any benefits which the freight service might indirectly derive from that type of transportation are too remotely connected with the issue involved and too insignificant for consideration.—Southern Pac. Co. Discontinuance, 320 I.C.C. 59 (71, 79).

And any benefits to other segments of petitioner's operations through removal of interference of considered trains with freight and other services, also savings from reduction in required operation of switch engines and yard and work trains, from earlier scheduling of freight train departures, and from reduction of time freight trains are held on branch lines to accommodate the passenger train schedules, are savings too remote and too speculative for consideration in determining whether individual trains should be discontinued.—Id., p. 69.

Evidence offered by petitioner and by the State is so contradictory, due to difference in their methods of approach, that in most instances the differences cannot be reconciled; however, determination of which method is superior is unnecessary since, even if full credit is accorded all adjustments of operating expenses proposed by the State (except the constructive fares), annual losses from the three pairs of trains involved have been large; under either method of computation, the trains are shown to have been operated at substantial deficits. But such conclusions are not to be construed as approval of every element used by either party in developing operating expenses of the trains.—Id., p. 74.

While applicant's method of computing losses claimed from operation of considered

trains differs from those approved in other discontinuance proceedings, its motion that the financial data submitted be referred to commission's cost section for analysis is denied. Irrespective of propriety of that suggestion, questions before the commission in a discontinuance proceeding are basically different from those involving cost accounting theories pertinent to rate formulation, and such a referral would not produce a sufficiently meaningful analysis or serve any useful purpose.—Missouri Pac. R. Co. Discontinuance, 320 I.C.C. 1 (5).

Apportionments of overhead expenses which include indirect labor charges and other administrative and general expenses do not constitute avoidable costs to the carrier; statistics submitted, although showing some relation between service rendered and those expenses, must be considered in light of existing competitive situation in the railroad industry, which requires the carrier to make every effort to reduce overhead expenses in the normal course of business; it is highly improbable that such expenses as administrative salaries and expenses would decrease solely as result of discontinuance of one pair of trains. —Id., pp. 7-8.

Traffic costs, like overhead, are composed of expenses not directly related to operation of individual trains. Though a portion of advertising expense incurred is applicable solely to service of the subject trains, it does not appear to be a repetitive charge, and in absence of a showing of continuing expenditures of that nature and that the individual expenditures apply to the subject service, traffic expenses are not considered. Moreover, carrier's statistics for that category tend to show a pattern similar to its passenger revenues, and decline of approximately $2 million in passenger revenue between 1956 and 1961 would dictate reduction of that class of expense.—Id., p. 8.

Expenses for maintenance of way and structures, previously not considered as savable, could vary with amount and type of service offered. Line used by considered Kansas City-Omaha trains must now be maintained for comfort and safety of high-speed passenger service, and while wear and tear of way facilities is caused by both passenger and freight service, the impact is more pronounced at high passenger speeds than at lower freight speeds. In addition, because the subject trains provide the last passenger service on the line, discontinuance would permit abandonment of passenger platforms and waiting rooms, ticket office equipment, and baggage, mail, and express equipment, maintenance of which is in the maintenance-of-way expense category. However, maintenance of bridges, trestles, and culverts are not properly includible as a savable maintenance-of-way expense.—Id., p. 8.

Although carrier asserts that use of the 50-percent formula for determining cost of handling traffic on other lines of the railroad, as previously accepted by the commission in computing results of branch-line freight operations, is unrealistic when consideration is given its passenger operating ratio and its estimate of savings, it makes no allegations regarding savings on connecting trains if those involved are discontinued; in absence of such a showing, its computations in that respect cannot be accepted as accurate.—Id., p. 9; and although certain of carrier's computations have a particular pertinence to managerial decisions and in some respects are entitled to consideration, the final results should not be accepted as accurately reflecting actual savings which would be effected by the discontinuance.—Id., p. 9.

While record is convincing that overall operation of considered trains is being conducted at substantial loss, it does not permit determination of amount thereof; fully distributed costs shown essentially represent a breakdown of the system passenger deficit determined by formulas approved for separation of costs between freight and passenger service for application to individual trains, and as such include substantial amounts of allocated expenses which would not be saved if the trains were discontinued.—Chicago & N.W. Ry. Co. Discontinuance of Passenger Trains, 317 I.C.C. 21 (24, 27).

Where all of carrier's passenger equipment is used interchangeably on all of its trains, computation of depreciation accruals for equipment on particular trains by use of applicable system average unit costs gives reasonably accurate results; however, such is not

the case where the carrier, in addition to the subject trains and similar trains operating on other routes, also operates extensively in commuter services requiring a different and more expensive type of car, which is operated over shorter routes.—Id., p. 26.

While equipment used in considered trains and depreciation accruals thereon have remained relatively constant since 1957, system average unit costs have increased more than 74 percent per locomotive-mile, and more than 106 percent per passenger-car mile, during 1957-60, apparently because of a large increase in depreciation bases, due to addition of relatively expensive equipment, and a large decrease in miles operated, due to discontinuance of passenger trains under §13a(1); thus, savings in depreciation charges from discontinuance of considered trains as shown in carrier's exhibits are grossly overstated.—Id., p. 26.

Joint facility rents may properly be included in savings from discontinuance of train service where those facilities would not be utilized by any other trains of the carrier.—Id., p. 26.

It is doubtful that any appreciable saving in joint facility expenses would result from discontinuance of one set of trains; amounts specified therefor are not savable expenses which must be considered in passing on proposed discontinuance of certain trains, as that expense would merely be shifted to other trains using the terminal and the total burden on interstate commerce would not be materially lessened.—St. Louis-S.F. Ry. Co. Discontinuance of Service, 312 I.C.C. 713 (721).

Carrier's computations involving use of formula designed to show the portion of terminal expense varying with volume of cars handled do not sustain its claim of savings; results obtained are susceptible to fluctuations depending on the base period selected, and use of the formula disregards variations in prevailing levels of employment, type of facilities provided, and number of units of equipment operated in the terminal at various periods, as well as any wage increases during period covered by the computation—all factors bearing directly on basic costs of terminal operation which usually are not affected by discontinuance of one or more trains.—Id., pp. 721-2.

Assuming use of sound and realistic ratios for the proportion of expenses which vary with traffic, it may be that use of the commission's Rail Form G formula for determining costs of passenger service will produce a reasonable approximation of expenses which would be avoided as result of abandonment of all passenger service over a given railroad; but while that formula, which allocates all system expenses associated with passenger service (both solely related and apportioned) to particular trains, is useful in appraising relative contribution of individual trains to the system, costs so allocated may not necessarily correspond to actual savings which would result from elimination of those trains; projected savings thus arrived at are too conjectural to be accepted in a discontinuance proceeding.—Missouri Pac. R. Co. Discontinuance of Passenger Trains, 312 I.C.C. 765 (771).

In absence of a showing with reasonable certainty that proposed discontinuance would reduce general expenses, including salaries and expenses of general officers and expenses for maintenance of way and structures, no amounts therefor should be included in determining out-of-pocket costs of operating particular trains; nor should amounts for return on investment in either road or equipment be included in computing operating losses.—Id., p. 772.

—Feeder value: [Vol. 19].—In determining out-of-pocket loss from operation of considered trains, credit for feeder revenue accruing to carrier's system should not be excluded; carrier concedes that annual revenues accrue to the system from transportation on other lines of passengers who ride the subject trains; undoubtedly, a major portion if not all of such revenue would be lost if they were discontinued. Cost of transporting such passengers on its other trains would not exceed, and probably would be substantially less than, 50 percent of revenue attributable to them—the factor generally approved in determining feeder value of lines proposed to be abandoned; use of that factor would reduce carrier's claimed out-of-pocket loss.—Missouri

Pac. R. Co. Discontinuance of Passenger Trains, 312 I.C.C. 765 (773).

Originally developed for use in abandonment proceedings under §1(18), the 50-percent formula has been applied in discontinuance cases also and the distinction between abandonment and discontinuance cases in this respect is one of degree only. It is an arbitrary means of establishing a cost in the absence of specific cost evidence affording a means of establishing a more accurate allocation of the cost of handling on other portions of a railroad's lines the traffic originating or terminating on a branch proposed to be abandoned, and it necessarily assumes the existence and substantiality of such costs.—New York, N.H. & R. Co. Discontinuance, 320 I.C.C. 466 (482).

However, findings in instant proceeding are not intended as a rejection of the 50-percent formula which has been followed in numerous cases where there was a transfer of equipment or of a substantial number of passengers, and the issue was not to determine the existence of avoidable expenses chargeable to that traffic but to determine a reasonable estimate thereof. Record in the instant proceeding fails to show that the handling of so few branch passengers on the main line represents an expense that discontinuance of considered trains would avoid; the 50-percent formula will continue to be applied whenever facts and circumstances warrant its use in the future.—Id., pp. 484-5.

Expenses related to dependent revenues based on 50-percent of the dependent revenues are not shown to be savable, out-of-pocket expenses in connection with proposed discontinuance; although carrier attempts to show the worth to the system of trains proposed to be discontinued relying on the 50-percent formula, finding is warranted that, from standpoint of avoidability, the cost of handling passengers who alight from branch lines and board main-line trains and vice versa and occupy seats that would otherwise be empty is very small; while a cumulative effect may be anticipated, and it is conceivable that, in conjunction with other discontinuance proceedings, a measurable effect may ultimately be had on carrier's expense of operating its remaining trains, no such effect is shown in connection with the instant proposal.—Id., p. 484.

Use of mileage prorates in computation of revenues received from passengers traveling between points on routes of trains proposed to be discontinued and points beyond does not give adequate consideration to feeder value of the trains; though such feeder value to the system is not reflected in carrier's exhibits, and amount thereof is not ascertainable from the record, savings shown should be reduced somewhat to allow for feeder value. —Chicago & N.W. Ry. Co. Discontinuance of Passenger Trains, 317 I.C.C. 21 (25).

Estimate of savings which would result from discontinuance of the Pennsylvania's and Seashore Lines' joint interstate trains between Philadelphia and southern New Jersey does not reflect any revenue losses from diversion of feeder traffic now handled by the Pennsylvania on connecting trains; latter's assumption that passengers originating west of Harrisburg, Pa., and south of Washington, D.C., would continue to use its trains as far as Philadelphia in traveling to and from New Jersey is not warranted when evidence shows that over the years large numbers of passengers have traveled on scheduled, special, or excursion trains over its main lines and Seashore's lines to or from New Jersey seashore points; elimination of all passenger service on Seashore's lines would directly affect the number of passengers handled by the Pennsylvania to and from Philadelphia, thereby depriving it of substantial revenues it now enjoys and reducing net savings from discontinuance of Seashore's passenger service.—Pennsylvania R. Co. Discontinuance of Passenger Service, 317 I.C.C. 111 (122-3).

30. Employees.—[Vols. 18, 19].—The commission has no authority to impose conditions for protection of employees who may be adversely affected as a result of a discontinuance of passenger service under §13a(1).—Soo Line R. Co. Discontinuance of Passenger Trains, 312 I.C.C. 729 (730); Missouri Pac. R. Co. Discontinuance of Passenger Trains, 312 I.C.C. 765 (767); however, the interests of railroad employees are given consideration as part of the public interest.—Southern Pac. Co. Discontinuance, 317 I.C.C. 519 (542-3); New York, N.H. & H. R. Co. Discontinu-

ance, 320 I.C.C. 466 (467); Id., 320 I.C.C. 544 (547).

Although many employees of carrier's passenger department would be adversely affected by proposed consolidation of two pairs of trains, since numerous individuals with least seniority would lose work opportunities or become unemployed, and an important factor to be weighed in discontinuance or change-of-service proposals is their consequence to the railroad's employees, the adverse effect on employees of proposed change in service would not be so drastic as to overshadow the anticipated advantages to the carrier and the public generally. Resulting elimination of job opportunities does not justify the commission's invoking of procedures to prohibit or postpone the elimination of recurring operating deficits and consolidation of the trains to achieve substantial savings.—Union Pac. R. Co. Discontinuance, 320 I.C.C. 493 (522)*.

The commission is not empowered by the provisions of §13a(1) to impose employee protective conditions as sought; labor association misconstrued the commission's action in 307 ICC 257 upon which it relies, and in which the commission, rather than imposing such a condition on a proposed train discontinuance as claimed, continued, in part, operation of specified trains which was found required by the public convenience and necessity and described the continued service to be rendered. Additionally, while the number of employees to be adversely affected by proposed discontinuance is shown on the record, the probable adverse effect upon those employees when considered with other factors does not justify the findings which commission is required to make before it may order continuation of the operations.—New York Central Railroad Co. Discontinuance, 320 I.C.C. 526 (540, 542).

While the commission has no authority under §13a(1) to impose conditions for protection of employees who may be adversely affected by a discontinuance of passenger service, such probable effects are a factor to be considered in determining whether public convenience and necessity permit the discontinuance. Although 60 employees are employed on considered trains, in the seniority rosters for their groups there are 80 between the permissive and compulsory retirement ages, and it is expected that some of them would retire voluntarily rather than take a less desirable assignment through exercise of seniority rights, materially reducing the number of affected employees. Thus, when considered with other factors discussed, probable adverse effect on employees of proposed discontinuance does not support the findings required before continued operation of the trains may be required.—Chicago & N.W. Ry. Co. Discontinuance, 320 I.C.C. 85 (103-4)*.

Although the commission is not empowered to impose employee-protective conditions in proceedings under §13a(1), a probable adverse effect on employees is a factor to be considered in reaching an ultimate determination. In view of anticipated retirements and fact that carrier is now hiring train and engine service, any loss of employment that might result from proposed discontinuance after employees have exercised their seniority rights would be of minor impact and does not warrant an unfavorable finding.—Chicago Great Western Ry. Co. Discontinuance of Service, 317 I.C.C. 99 (109).

Though the commission has no authority under §13a(1) to impose terms and conditions on a carrier to protect employees adversely affected by a passenger-train discontinuance, consideration should be given to such effects in determining whether operation of the trains is required by public convenience and necessity. But while elimination of carrier's only remaining passenger trains in area involved would cause substantial changes in job assignments and might result in some employees being furloughed or placed on the extra board, the actual adverse effects cannot be measured, and in absence of a showing of public need for the service the commission may not require operations to be conducted merely to continue employment.—Chicago, M., St. P. & P. R. Co. Discontinuance of Service, 317 I.C.C. 691 (713-4, 715).

Probable effect of proposed train discontinuance on carrier's employees is a factor to be considered in connection with public convenience and necessity. Unless saved by attrition in the work force due to other causes, discontinuance of commuter trains between New

London, Conn., and Providence, R.I., would result in elimination of one 4-man train crew, and five mechanical department employees are also involved, although it is likely that they would be assigned to other productive work. This, together with needs of the public using the trains, warrants their continuance between Westerly, R.I., and Providence.—New York, N.H. & H.R. Co. Discontinuance, 320 I.C.C. 714 (730-2).

Since no employees work on the tracks over which operation is sought to be abandoned or in or around the Omaha terminal except those required to operate the considered trains, any adverse effect on employees would result from the discontinuance, and not the abandonment of operation; and, since the commission has no authority to impose employee protective conditions in a discontinuance proceeding, no conditions are imposed.—Chicago Great Western Ry. Co. Discontinuance, 328 I.C.C. 664 (677-8).

Although the commission has no authority under §13a(1) to impose employee protective conditions in a train-discontinuance proceeding, and adverse effect on employees of discontinuance of Baltimore & Ohio's only through passenger trains between Washington, D.C., and Cleveland, Ohio, is not shown to be such as to warrant requirement of continued operation, proposed discontinuance entails abandonment of operation under trackage rights whereby the carrier enters Cleveland Union Terminal, and under §1(18) the commission may impose protective conditions in related abandonment proceeding; Burlington conditions (257 ICC 700) imposed for protection of employees who may be adversely affected by such abandonment.—Baltimore & O. R. Co. Discontinuance of Service, 317 I.C.C. 509 (512)*.

35. Orders of the commission.—[Vol. 19].—When, after investigation into railroad's proposed passenger train discontinuances, the commission decided not to interfere with the service cutbacks and to terminate the investigation, its decision to take no action is not reviewable by the courts; thus, the commission's order discontinuing the investigation is not an appealable order within meaning of 28 USC §1336; complaint dismissed.—State of Minnesota v. United States, 238 F. Supp. 107 (112-13)*.

In action seeking to enjoin and set aside, or to remand for further consideration, reports and orders of the commission permitting discontinuance of four passenger trains, function of the reviewing court is limited to determining whether those orders have support in the law and the record. Evidence concerning number of passengers using those trains, particularly at stations on considered railroad segment, and the other passenger service available in the area, supports the commission's finding that operation of considered trains was not required by public convenience and necessity; and evidence of the railroad's precarious financial condition, and of substantial cash savings that would result from discontinuance of the trains, supports its finding that their continued operation would unduly burden interstate or foreign commerce. Therefore, intent of the statute being relief of a carrier whose maintenance of uneconomic services threatens its survival and ability to provide essential services, the commission's decision to allow the discontinuance should be upheld. Orders sustained and injunction denied.—State of Vermont v. Boston and Maine Corp., 269 F. Supp. 80 (84-5, 89, 90)*.

Since the Milwaukee's notice of proposed discontinuance of its Chicago-Tacoma trains west of Minneapolis disclosed no intention to discontinue their operation east thereof or to eliminate, modify, or change any services provided thereon, the commission's authority over the trains was limited to their operation west of Minneapolis; order in 317 ICC 691 requiring continued operation between Minneapolis and Butte, Mont., for 1 year therefore made no reference to operation between Minneapolis and Chicago or to services that carrier would continue to provide on the trains. However, the commission was authorized to consider that their operation west of Minneapolis embraced service then extending to and from Chicago, with provision of specific types of service and facilities, and real import of that report and order was to permit discontinuance west of Butte, but to require continued operation east thereof for 1 year in same manner as on day notice was filed.—

Chicago, M., St. P. & P. R. Co. Discontinuance, 317 I.C.C. 761 (770).

In the circumstances, carrier cannot validly contend that, the order being silent as to matters not embraced in that proceeding, it was thereby authorized to discontinue operation of the trains between Minneapolis and Chicago and make substantial changes in type of service provided between Minneapolis and Butte, for which it obtained no authority under any of the applicable State statutes. Since it obtained no authority under §13a(1) to effect such discontinuance or changes, its action, a few days after issuance of that order, in discontinuing through service between Chicago and Butte via Minneapolis and making the described changes denied the public the service and facilities that had been found to be required by public convenience and necessity, and thereby placed it in noncompliance with terms of that order. However, since the commission's jurisdiction in that proceeding expired with expiration of the 1-year period specified in the order, it has no power to order restoration of the operations or services thus discontinued, eliminated, or modified.—Id., pp. 763, 770-1.

Section 14. Reports and decisions of commission—(1) Reports of investigation by commission.—[Unchanged. See vol. 9, p. 7636.]

Amendments, see footnotes, vol. 3, p. 1858; historical note, p. 1858.

Notes of Decisions

Volume 3—p. 1858; Volume 7—p. 5497; Volume 9—p. 7636; Volume 11—p. 9263; Volume 12—p. 10308; Volume 13—p. 11014; Volume 14—p. 11515; Volume 15—p. 12099; Volume 16—p. 12743; Volume 17—p. 13428; Volume 18—p. 14188; Volume 19—p. 15367.

1. The report; requisites.—[Vols. 3, 7, 9, 11-19].—Part II, §204(d), n. 1. See also APA, 5 USC, Reports of Commission.

A report of the commission must contain, in addition to a finding in language of the applicable statute, those basic findings essential to support the order, i.e., basic findings essential to the commission's authority to promulgate the rule or enter the order in question; basic findings required will vary with statutory authority invoked and context of situation presented. Suggestion that the commission's findings under §3 are exempt from the "basic finding" requirement is not supported by any logical reason for an exemption or by cited decisions relied on. In its reports, the commission must make the ultimate finding required by the statute in question, it must employ a correct legal test in reaching that finding, and it must make sufficiently explicit its supporting findings.—Atchison, T. & S.F. Ry. Co. v. United States, 218 F. Supp. 359 (363-6)*.

A finding of "substantial similarity of transportation conditions" is a basic one required to support the commission's ultimate finding of a §3 violation, since it is essential to the authority to so find. Although, in its report finding assailed rates unduly prejudicial and preferential, the commission made no specific supporting finding that the rate disparity existed under substantially similar transportation conditions, it considered and ruled on issues of dissimilarity involved and found that the dissimilarities relied on by the railroads were not sufficient to justify the rate disparity; sustained.—Id., pp. 366-9.

The statute does not require the commission to make detailed findings of fact except in cases where damages are awarded; it only requires the commission to file a report stating its conclusions, together with its decision and order. In other words, the commission is required only to set out ultimate, not evidentiary, facts. Inasmuch as its decision under consideration not only sets out ultimate findings but also summarizes the evidence relied on to sustain those findings, the commission has met the statutory requirements.—General

Motors Corp. v. United States, 207 F. Supp. 641 (646-7)*.

While the commission is not required to make as detailed a finding of fact as a trial court, it is not relieved of the duty to make basic or quasi-jurisdictional findings essential to validity of its order; something more than the ultimate finding that carrier failed to sustain its burden of proof is required. Grounds on which an administrative order must be judged are those on which the record discloses that the action was based.—Missouri Pac. R. Co. v. United States, 203 F. Supp. 629 (632)*.

An order of the commission which is subject to judicial review cannot be sustained unless it is supported by essential basic facts particularly stated.—Boston & M. R. v. United States, 202 F. Supp. 830 (834)*.

In view of what are at best latent ambiguities, and at worst errors of law and conclusions unsupported by or in conflict with the undisputed evidence, in the commission's report and order requiring parity of rates on import iron ore from Baltimore and Philadelphia to 17 interior points, the case is remanded for further proceedings to determine and consider (in addition to matters specified in remand of same proceeding by another district court in 207 F. Supp. 483) the probable total tonnage of such ore that will move through each port with and without parity, also the Pennsylvania's unloading and terminal costs on such traffic at Philadelphia, for comparison with amount paid by it for services at Baltimore.—Baltimore & O. R. Co. v. United States, 212 F. Supp. 13 (18, 19, 21)*.

It is not enough that some suggestion of a reason for the commission's conclusions should "lurk" in its report; reviewing court cannot uphold an order on a ground which the report has not made sufficiently plain so that the court can be sure the commission meant to act uhon it and had a factual basis for doing so. Remanded for further proceedings consistent with the court's opinion.—New York Central R. Co. v. United States, 207 F. Supp. 483 (496, 498)*.

3. Necessity for formal and precise findings in order.—[Vols. 3, 9].—In granting certificate to appellee to cure a deficiency in service due to trunkline motor carriers' refusal, under union pressure, to interchange traffic with appellee's carrier stockholders, rather than issuing a cease-and-desist order, the commission made no findings specifically directed to its choice between two vastly different remedies with vastly different consequences to the carriers and the public, nor did it articulate any rational connection between the facts found and the choice made. It addressed itself neither to the possible shortcomings of §204 procedures, to advantages of certification, nor to the serious objections to the latter, which are particularly important in the present context. Grant of the certificate was an improvident exercise of the commission's discretion.—Burlington Truck Lines, Inc. v. United States, 371 U.S. 156 (165, 167-8)*.

Section 14. (2).—[Unchanged. See vol. 9, p. 7639.]

Section 15. Determination of rates, routes, etc.; routing of traffic; disclosures, etc.—(1) Commission empowered to determine and prescribe rates, classifications, etc.—[Unchanged. See vol. 9, p. 7640, vol. 11, p. 9265.]

Amendments, see footnotes, vol. 3, p. 1864, vol. 7, p. 5500; historical notes, vol. 3, p. 1865, vol. 9, p. 7640, vol. 13, p. 11015.

Historical Note

By Executive Order 11107, Administration of Alaska Railroads, dated April 25, 1963, the Interstate Commerce Commission is given jurisdiction "to fix, change, or modify rates for the transportation of passengers and property" under the authority set forth in the Alaska Railroad Act, 38 Stat. 305, which jurisdiction had been given to the Secretary of the Interior by Executive Order No. 3861 of June 8, 1923; latter order superseded. (28 FR 4225, April 30, 1963)

Executive Order 11107 codified as Title 49, Chapter II, Part 1200 — Administration of Alaska Railroads (49 CFR §§ 1200.1 - 1200.4), 28 FR 12278, Nov. 20, 1963.

Notes of Decisions

Volume 3—p. 1869; Volume 7—p. 5501; Volume 9—p. 7641; Vol. 11—p. 9265; Volume 12—p. 10309; Volume 13—p. 11015; Volume 14—p. 11517; Volume 15—p. 12099; Volume 16—p. 12745; Volume 17—p. 13429; Volume 18—p. 14189; Volume 19—p. 15368.

Nature of Commission's Functions

28. Investigations on commission's own motion.—[Vol. 3].—Although §15(1) is the source of the commission's power to prescribe minimum reasonable rates, failure to cite §15(1) in order entered under §13(2), instituting investigation on the commission's own motion to determine lawfulness of certain rates under §1, does not bar the commission, if such unlawfulness be found, from implementing that finding by exercising its authority under §15(1) to prescribe lawful rates.—Fresh Vegetables from Tex., Calif., Ariz., and N. Mex., 319 I.C.C. 141 (156).

35. Maximum, minimum, or precise rates may be prescribed.—[Vols. 3, 7].—The commission has the power, on proper findings, to prescribe as too low a rate which, although covering long term out-of-pocket costs, fails to meet fully distributed ones; some traffic must pay for nonvariable portion of operating expenses and property taxes and meet deficits occasioned by traffic that does not pay its way. If the commission thinks a carrier should not haul particular traffic at a rate which will not contribute to such expenses, that is a judgment competent for it to make. However, it is no answer that an individual carrier will be better off with the traffic than without it; the entire transportation system must be considered and the commission may, on proper showing, utilize the minimum rate power to maximize profits for the system, so long as it does not require more than what would be a reasonable maximum rate.—New York Central R. Co. v. United States, 207 F. Supp. 483 (495)*.

41. Construction of statute.—[Vols. 3, 7].—See Arrow Transp. Co. v. Southern Ry. Co., 28 USC §2325, n. 43.

48. Jurisdiction statutory.—[Vols. 3, 7, 11, 19].—See All States Freight, Inc. v. New York, N.H. & H. R. Co., §1(6), n. 126.

Basis for Determination by Commission

72. Minimum rates.—[Vols. 3, 7, 9, 11, 13, 14, 19].—Under its statutory power to fix minimum rates, the commission can disapprove rates and thus prevent rate wars or destructive competition.—Missouri Pac. R. Co. v. United States, 203 F. Supp. 629 (635)*.

Mere threat of a rate war is not enough to support a minimum rate order if the commission ought to prevent the war; but should the commission not think it proper to prohibit a retaliatory reduction, for either lack of power or lack of good reason, it may properly fix a minimum rate in the first instance in order to ward off developments that would only result in reinstatement of existing differentials at a lower level. The commission's order requiring cancellation of reduction in rates on import ore from New York to rates the same as those from Philadelphia and Baltimore cannot be affirmed when its report goes into fear about a rate war without saying why it could not, or would not choose to, prevent one. Merely saying a rate war is possible or probable is not a sufficient answer why; an adequately supported statement that the commission would not feel able to prevent one would be.—New York Central R. Co. v. United States, 207 F. Supp. 483 (496-8)*.

While the commission has authority under §15(1) to issue a minimum-rate order in an

investigation on its own motion into lawfulness of rates under §1, it has used its minimum ratemaking power sparingly, and usually where it was necessary to prevent or stop destructive rate wars or to protect shippers and localities against unjust discrimination or undue prejudice. To use it otherwise, when cost evidence in instant investigation does not establish that involved rates on fresh vegetables are noncompensatory and therefore less than minimum reasonable, would restrain some respondents from meeting intermodal competition and benefit others who are not faced with such competition; under the circumstances there is no sufficient reason for exercising that power.—Fresh Vegetables from Tex., Calif., Ariz., and N. Mex., 319 I.C.C. 141 (159).

The Order

89. Formal requisites of order; removal of discrimination.—[Vols. 3, 7, 9, 13-15].—The commission's determination that the lowest division accepted by the railroads out of joint rail rates on grain, for movement beyond the river ports to the South, measured the discrimination found to exist against like shipments of ex-barge grain, did not require rates set at level of the divisions existing before determination of discrimination, but at any level acceptable to the railroads, so long as the same measure applied to ex-barge traffic from same port to same destination. And argument that imposition of flat rates from the ports, in effort to comply with the commission's order, discriminates against the inbound railroads ignores the commission's finding that costs of movement to the interchange point—the additional costs claimed to justify higher compensation for the outbound movement of ex-barge grain—had not been substantiated, as related to the division of the outbound carrier. Any inequity results as much from maintenance of the previous rail rate structure as from the commission's order; the commission is not required to frame its findings so as to preserve the rail rate system intact.—Chicago, R.I. & P. R. Co. v. United States, 233 F. Supp. 381 (387)*.

Argument that divisions of joint all-rail rates received on ex-rail grain from designated Tennessee River and lower Mississippi River ports to destinations in the South and in Arkansas and western Louisiana are an inappropriate basis for determining nondiscriminatory rates on ex-barge traffic is part and parcel of argument that relief sought by the bargelines would destroy the traditional grain-rate structure, which the Supreme Court emphatically rejected in 330 US 567; and in 176 F. Supp. 411, affirmed 361 US 353, the court held that in absence of a demonstrated cost differential a rail carrier from a port is entitled to no more compensation on ex-barge than on ex-rail traffic moving from transit at that port to same destination. To look to the rail haul which is displaced by the barge haul and apply ratemaking standards to determine the ex-barge rates would be futile so long as lower divisions applied on ex-rail traffic.—American Barge Line Co. v. Alabama G.S. R. Co., 316 I.C.C. 759 (771)*.

But though defendants have not overcome complainants' prima facie showing of discrimination resulting from the difference between their divisions of the joint rail rates and present rates on ex-barge traffic from same ports, the southern divisions are not in issue per se and there is no evidence of nature required by §15(6) for prescribing changes therein. Order will therefore require elimination of the existing discrimination against connecting for-hire bargelines and shippers at those ports who receive their grain by for-hire barge, without prescribing the exact method of removing it; but if divisions are used as basis of nondiscriminatory ex-barge rates, such rates from Tennessee River ports other than Chattanooga must reflect the same percentage of corresponding first-class rates as the lowest division from Chattanooga to same destination. In establishing rates pursuant to the findings, defendants may require the furnishing of a certificate showing origin area of the inbound grain or products, but no other conditions should be attached to application of the outbound rates on ex-barge traffic that do not apply to corresponding all-rail traffic.—Id., pp. 773, 774-5.

Section 15. (2) Orders of commission.—[Unchanged. See vol. 9. p. 7649.]

Amendments, see footnotes, vol. 3, p. 1901; historical note, p. 1901.

Historical Note

Rates and fares of railroads within the Alaska Railroad Act, jurisdiction of the commission, see Historical Note concerning Executive Order 11107 following §15(1).

Vol. 3—p. 1901; Volume 7—p. 5514; Volume 9—p. 7649; Volume 11—p. 9267; Volume 13—p. 11017; Volume 14—p. 11519; Volume 16—p. 12747; Volume 17—p. 13430.

Section 15. (3) Establishment of through routes, joint classifications, joint rates, fares, etc.— [Unchanged. See vol. 11, p. 9267.]

Amendments, see footnotes, vol. 3, p. 1905, vol. 11, pp. 9267-9268; historical notes vol. 3, p. 1906, vol. 9 p. 7651.

Historical Notes

The commission recommends that parts I, II, and III be amended to authorize the commission, after investigation and hearing, when necessary and desirable in the public interest, to require establishment of through routes and joint rates between motor common carriers of property and between those carriers and carriers by rail, express, and water.—Annual Report, 1962, p. 201; renewed, Annual Report, 1963, p. 19, Annual Report, 1964, p. 69.

Rates and fares of railroads within the Alaska Railroad Act, jurisdiction of the Commission, see Historical Note concerning Executive Order 11107 following §15(1).

Notes of Decisions

Volume 3—p. 1907; Volume 7—p. 5516; Volume 9—p. 7651; Volume 11—p. 9268; Volume 12—p. 10310; Volume 13—p. 11017; Volume 14—p. 11520; Volume 15—p. 12101; Volume 16—p. 12747; Volume 17—p. 13431; Volume 18—p. 14190; Volume 19—p. 15370.

7. [Relation to]—§3(4).—[Vols. 3, 9, 18, 19].—See Western Pac. R. Co. v. United States, §3(4), n. 3.

11.—To Motor Carrier Act.—[Vol. 9].—See New York Central R. Co. v. United States, §216(c), n. 3.

20. Through routes defined.—[Vols. 3, 9, 11, 15-19].—When Southern Ry. no longer held itself out as offering through transportation service on coal over considered routes, the through routes were closed; and fact that shipments could continue to move over same route at higher combination rates would not suffice to convert the sum of the routes into through routes.—Atlantic Coast Line R. Co. v. United States, 205 F. Supp. 360 (364)*.

Whether or not a through route exists within meaning of §15(3) and (4) is a question of fact, and the test is whether the participating carriers hold themselves out as offering a through transportation service (citing 343 US 549 and 351 US 321). Through routes formerly available for movement of cotton traffic at joint rates from Mississippi Valley origins to southern territory destinations, which were restricted against application of revised joint rates by defendant's tariff provisions, were closed under §15 when the revised rates and the specific through routes retained took effect; since that date there has been no holding out by defendant as a participant in the restricted routes, such as is required to meet the test of a through route applied by the Supreme Court.—Atlantic Coast Line R. Co. v. Southern Ry. Co., 321 I.C.C. 314 (324-5)*.

Similarly, defendant's cancellation of prior joint rates on paper over certain routes is clear evidence of its intention no longer to participate in those routes on that traffic; and in face of that affirmative action the commis-

sion may not interpret as indicating a contrary intention such inferential matters as fact that those routes were still used for transportation of other commodities and that defendant did not publish any schedules specifically closing those routes, but merely prohibited application of the reduced joint paper rates thereover.—Id., 321 I.C.C. 282 (288-9)*.

Existence of combination rates on various commodities over certain routes of petitioners and Soo Line or its predecessors does not necessarily indicate that those routes were commercially open within contemplation of condition imposed on Soo Line's merger. Failure of the combination rates to move any traffic prior to the merger impels conclusion that those routes were commercially closed, particularly in case of combination rate on explosives over lines of the Milwaukee and a Soo Line predecessor, when latter's tariff contained a restriction against movement of that traffic via its interchange with the Milwaukee; in that case carrier's course of business negatives existence of a through route.—Rates, Various Commodities—Canada, Midwest, and East, 318 I.C.C. 522 (525).

22. Joint rates, fares, and charges.—[Vols. 3, 7, 9, 13-15, 17, 18].—Although Secretary of Agriculture requests prescription of through barge-rail routes and joint rates on grain moving through Tennessee and Mississippi River ports to the South, complainant bargelines do not seek such routes and evidence is insufficient for their prescription. Moreover, prescription of rates equivalent to the barge rates to the ports and defendants' divisions out of all-rail rates beyond would necessitate filing of tariffs of all barge rates not now filed, such transportation being otherwise exempt under §303(b); problems of differences in bargeload and c.l. minima, etc., would also arise.—American Barge Line Co. v. Alabama G.S. R. Co., 316 IC.C. 759 (770, 772)*.

35. Necessity or desirability in public interest.—[Vols. 3, 7, 9, 11-19].—In a proceeding under §15(3) and (7), the questions before the commission were whether closing of considered routes was consistent with public interest and whether schedules effecting the cancellations were just and reasonable. Findings of fact that rates or charges as distinguished from schedules closing the routes were just and reasonable were not required; since the routes were closed, no question was left as to rates. The commission's findings as to the questions before it were sufficient to support its order.—Atlantic Coast Line R. Co. v. United States, 205 F. Supp. 360 (364)*.

See also Western Pac. R. Co. v. United States, §15(4), n. 32.

Though §15(3) places on proponent carrier the burden of proving that closing of through routes by tariff publication is consistent with public interest, once routes are closed the burden is on the party seeking their reestablishment. Evidence that Southern Ry. tariff removing certain industries at High Point, N.C., from list of those for which reciprocal switching would be performed, thereby effectually closing through routes with complainant and its connections, required shippers and receivers to resort to truck delivery or pay Southern's switching charge, that reciprocal switching for all industries having private or assigned sidings has some value from a selling standpoint, and that competition between the carriers would be desirable, is not sufficient to meet that burden.—Absorption of Switching to or from High Point, N.C., 319 I.C.C. 522 (527).

As defendants are not shown ever to have held themselves out as ready and willing, in normal course of their businesses, to accept shipments for movement over route composed of the Pennsylvania from Pittsburgh to New York Central's float bridge at New York City, thence Central to stations within the city, and a single shipment routed thereover because of clearance difficulties does not indicate the contrary, nor is there any indication of probable future need for that route, there is no basis for a public-interest finding such as is required by §15(3) for prescription of through routes and joint rates not already in existence.—Westinghouse Electric Corp. v. Pennsylvania R. Co., 318 I.C.C. 460 (464).

36. Determination of fact by commission.—[Vols. 3, 7, 18, 19].—While §1(4) makes it the duty of every common carrier to establish reasonable through routes and just and reasonable rates with other such carriers, burden was on Southern Ry. to establish those facts in its complaint assailing Louisville & N.R.'s failure to establish with it the same joint rates

on fine coal from L&N mines to Krannert, Ga., as it had with Central of Georgia. But Southern's evidence (1) that, though L&N-Southern distances are much less than L&N-Central's, L&N-Southern rates are well above those of L&N-Central and thus unreasonably high compared with the latter, and (2) that revenues from L&N-Southern at same rates as over L&N-Central would appreciably exceed returns from latter connection, did not require the commission to make a factual determination of unjustness and unreasonableness. Refusal to accord the evidence that weight was well within range of commission judgment and thus conclusive. The commission's order dismissing Southern's complaint, sustained.—Southern Ry. Co. v. United States, 217 F. Supp. 159 (161)*.

50. Cancellation of through routes; joint rates.—[Vols. 12, 14, 15, 17-19].—The commission's findings that cancellation of certain through routes was consistent with public interest, and that schedules closing those routes were just and reasonable, were appropriate and sufficient in scope, were based on substantial evidence, and warranted in fact and law; sustained.—Atlantic Coast Line R. Co. v. United States, 205 F. Supp. 360 (364)*.

Cancellation of single-factor through rates on corn and products from certain Illinois and Indiana origins on Chicago & E.I.R. and New York Central to eastern destinations on Central and Wabash R. via Danville, Ill., and establishment of combinations of local rates to Danville and proportionals beyond on same level as combinations on Chicago under rate-break adjustment, is a change in form rather than amount of the rates and will reestablish former parity of Danville with Chicago on direct movements to the East. While establishment of single-factor rates equal to the Chicago combinations would give Danville rate equality, combinations of separate factors provide more flexibility to meet competition in origin areas; proposed rates are compensatory and otherwise lawful; approved.—Corn and Corn Products from Ill. and Ind. to the East, 319 I.C.C. 605 (609-11, 614, 618).

Although proposed cancellation of reciprocal switching to and from specified industries on respondent's tracks at Richmond, Va., on traffic on which it does not receive a line haul, would effectually close competing routes to those industries, absence of any manifest shipper interest precludes finding the routes thus closed to be needed in public interest; on the contrary, it is strong indication that their closing is consistent with public interest.—Switching at Richmond, Va., on Richmond, R. & P. R. Co., 316 I.C.C. 786 (793).

Proponent met burden of proof placed on it by §15(3) when its cost evidence shows that present rate on brick and related articles over routes proposed to be eliminated are below out-of-pocket cost for the service over such routes; noncompensatory rates cast an undue burden on other traffic, and unjust and unreasonable; rates and routes which have such and effect are not in public interest. Proposed restriction of considered rates to apply over routes in southern territory, thus eliminating application thereof at intermediate points in official territory over joint routes in which proponent participates, found lawful.—Routing—Brick—from North Carolina to Ohio, 315 I.C.C. 645 (647, 648).

Under conditions imposed on its merger, Soo Line is prohibited from doing anything that will have effect of closing, commercially or otherwise, any route which existed at time of the merger, without the commission's authorization. Through routes composed of petitioners' lines and those of Soo Line or its predecessors over which joint rates applied prior to the merger were open in contemplation of the parties, and Soo Line's failure to publish reduced rates on certain commodities, established over routes with other connecting railroads, to apply also over specified routes with the Milwaukee has effect of commercially closing latter routes in violation of the merger conditions. Soo Line should promptly comply with those conditions and advise the commission within 60 days from service of report of the action taken.—Rates, Various Commodities—Canada, Midwest, and East, 318 I.C.C. 522 (525-6).

But where prior to the merger the joint rate on pulpwood between points named did not apply via the North Western, latter has no ground for its request that such rate be applied over its lines; and other routes with petitioners were commercially closed at time of the merger when prior thereto no traffic had

moved thereover under applicable combination rates; thus Soo Line's failure to establish the reduced rates sought over those routes is not shown to violate the merger conditions.—Id., pp. 525, 526.

Seaboard Air Line's attempted justification of proposed cancellation of joint export rates on rubber tires over certain routes from Gadsden and Tuscaloosa, Ala., to Miami, and from Gadsden to Port Everglades, Fla., on ground that those rates, which were published solely to maintain long-established port relations, are mere paper rates because there is no export movement from those origins through those ports, does not meet proof requirements of §15(3); such justification has no more application to those routes than to others that would be continued, and proposal would shift the long haul from Southern as initial line-haul carrier to Seaboard as delivering carrier.—City of Wilmington v. Alabama G.S. R. Co., 316 I.C.C. 709 (721)*.

Section 15. (4) Through routes to embrace entire length of railroad; temporary through routes.—[Unchanged. See vol. 11, p. 9269.]

Amendments, see footnotes, vol. 3, 1924, vol. 11, pp. 9269-9270; historical notes, vol. 3, p. 1924, vol. 9, p. 7659, vol. 16, p. 12748

Historical Note

Rates and fares of railroads within the Alaska Railroad Act, jurisdiction of the commission, see Historical Note concerning Executive Order 11107 following §15(1).

Notes of Decisions

Volume 3—p. 1925; Volume 7—p. 5521; Volume 9—p. 7659; Volume 11—p. 9270; Volume 12—p. 10311; Volume 13—p. 11018; Volume 14—p. 11521; Volume 15—p. 12103; Volume 16—p. 12749; Volume 17—p. 13434; Volume 18—p. 14197; Volume 19—p. 15376.

Relation to Other Sections

4. Generally.—[vols. 3, 7, 19].—Under §15(4) a carrier may not be required to turn traffic over to a connecting line when to do so would require it to participate in a through route embracing less than the entire length of its line between given points, even if the route is to be established to assist a carrier to meet its financial needs; nor should the use of a route whose establishment could not be required by the commission under §15(4) be prescribed as mandatory for movement of certain commodities in a proceeding under §5(2). Requested condition on approval of agreement for continued operation of Peoria & E. Ry. as a part of New York Central system, requiring routing of certain traffic via the Pennsylvania to secure move favorable divisions to the Peoria, thereby short-hauling Central, denied.—Cleveland, C., C. & St. L. Ry. Co.—Operating Agreement, 320 I.C.C. 430 (435-6).

Though condition imposed on merger approval under §5(2) requiring survivor to establish through routes with Southern Ry. and its affiliates on Florida traffic through Jacksonville gateway at joint rates no higher than via any other gateway may require survivor to short-haul itself on some traffic originated on its lines, that condition is necessary and desirable to safeguard the overall public interest and is therefore not inconsistent with provisions of §15(4).—Seaboard Air Line R. Co.—Merger—Atlantic Coast Line, 320 I.C.C. 122 (182, 209)*.

9. Sec. 3(1).—[Vols. 3, 7, 14-17, 19].—Section 15(4), which recognizes the right of a carrier to its long haul, is by its express terms subordinate to provisions of §3, and protective provisions of §15(4) are withheld when a carrier's refusal to establish port equalization results in undue preference and prejudice forbidden by §3. Defendant effectively controls the rates to all of considered ports, and fact that establishment of rate parity of the prejudiced with the preferred ports would deprive it of up to 73 miles of haul, compared

with average total hauls of about 800 miles, does not preclude a finding of violation of §3. —Standard Milling Co. v. Illinois Central R. Co., 321 I.C.C. 252 (254, 260-1).

Applicability

30. Voluntary short-hauling.—[Vols. 3, 7, 9].—There is nothing unlawful about a carrier short-hauling itself on a voluntary basis, and by merely becoming a party to a tariff the carrier does not subject itself, nor hold itself out, to participate in unreasonable routes. In fact, the commission can require a carrier to short haul itself in instances where inclusion of a longer route would be unreasonable in light of the existence of another more practical and available through route.—Hygrade Food Products Corp. v. New York Central R. Co., 266 F. Supp. 946 (952)*.

32. Existing routes.—[Vols. 3, 7, 9, 12, 14, 16, 18].—As the Court noted in 382 US 237, railroads' suit alleging discrimination by defendant railroads in refusing to establish through routes between points on their lines and California points served by plaintiffs, via Portland, Oreg., on same basis as routes defendants maintain with other railroads through Portland, is not a case for the commission to decide under §15(3), (4) whether in the public interest defendants should be required to establish such routes, but whether under §3(4) they should be required to eliminate any discriminatory treatment of plaintiffs. Commission decision that public interest did not require establishment of the through routes, since they would short-haul connecting carriers without their consent and record indicated adequacy of numerous existing through routes, was based on a test quite different from, and far more favorable to defendants, than the test stated by the Supreme Court; also, record does not show that dissimilar operating conditions over considered routes, found by the commission, are such as to substantially affect defendants. Case remanded for further commission proceedings consistent with the court's opinion.—Western Pac. R. Co. v. United States, 263 F. Supp. 140 (143-5, 152)*.

34. Reestablishment of canceled routes.—[Vols. 3, 9, 18, 19].—As retained routes over which reduced joint rates on paper apply are not materially longer than those closed by defendant's restrictive routing provisions, and there is no indication that the closed routes are needed to provide adequate and more efficient or economical transportation, there is no ground for requiring defendant to short-haul itself on that traffic. Nor is there any shipper support for a finding that the routes sought to be restored are needed in the public interest or that the routing restrictions unduly prejudice shippers in violation of §3(1). As the routes over which the reduced joint rates apply appear wholly adequate to meet needs of the shipping public, there is no sound basis for a requirement under §15 that the closed routes be reopened.—Atlantic Coast Line R. Co. v. Southern Ry. Co., 321 I.C.C. 283 (289-90)*.

As certain through routes closed to cotton traffic by routing restrictions in defendant's tariff were not used extensively prior to effective date of such restrictions, the retained through routes between same points are not unreasonably long compared with those closed, and there is no shipper testimony or other indication that the retained routes are not sufficient to meet the needs of the shipping public, or that the closed routes are required to provide more efficient or economical service, there is no foundation for requiring the reopening of such closed routes under §15.—Atlantic Coast Line R. Co. v. Southern Ry. Co., 321 I.C.C. 314 (326)*.

Section 15. (5) Transportation of livestock in carload lots; services included. —[Unchanged. See vol. 9, p. 7664.]

Constitutionality

4. Fixing divisions a legislative function.—[Vols. 3, 9].—The prescribing of divisions is a legislative function, and the commission's exercise of that power is conditioned upon its finding after a full hearing that the divisions then in force do not, or in the future will not, comply with the specified standards.—Boston & M. R. Co. v. United States, 208 F. Supp. 661 (674)*.

Construction

7. In general.—[Vols. 3, 7, 9, 12-17, 19].—In prescribing divisions of joint rail rates, the commission must give due consideration, "among other things," to the five factors listed in §15(6), i.e., (1) efficiency of carriers' operation, (2) amount of revenue required to pay their respective operating expenses, taxes, and a fair return on railway property, (3) importance to the public of carriers' services, (4) whether a participating carrier is an originating, intermediate, or delivering line, and (5) any other fact or circumstance entitling one carrier to a greater or less proportion than another of the joint rate. In prescribing new divisions of joint rates on transcontinental traffic, the commission found that none of contending groups of carriers were operated either more or less efficiently than another, and that services of all three groups were equally important to the public.—Atchison, T. & S. F. Ry. Co. v. United States, 238 F. Supp. 528 (531)*.

While the commission has broad discretion as to facts it considers in arriving at conclusions on those factors, and in evidence necessary to establish factors deemed relevant in making new divisions, the law demands that such divisions be just and reasonable. As to revenue needs of carriers concerned, the mandate of §15(6) requires a finding in terms of dollars ("amount"); and the commission must also find the dollar amount of return to the carriers resulting from the new divisions, in order to make the required determination as to whether such divisions are "just, reasonable, and equitable." Divisions made on the basis of "rate of return" are not equivalent to divisions in terms of dollars; and divisions in rates of return do not satisfy the statutory requirement.—Id., pp. 535, 539.

The court is not required to determine what evidence the commission must consider and weigh in complying with each requirement for prescribing new divisions, nor can it substitute its fact appraisal for the commission's, but once the necessary factors are determined there must be findings which show that the commission considered the financial effect of

any new divisions as to each carrier involved; §15(6) requires the finding of amount of revenue necessary to pay operating expenses, etc., "of such carriers." And the "typical evidence rule" does not operate to excuse failure to find that the divisions are just, reasonable, and equitable not only between groups of carriers involved but also as to each individual carrier in each division. Furthermore, the statute requires that the commission's findings show that it has considered carriers' revenue needs for all transportation services, including those represented by passenger deficits. By reason of insufficiency of the commission's findings, as stated, the cause is remanded to it for further proceedings consistent with the court's opinion.—Id., pp. 535-7, 539-40.

The commission's findings that assailed primary divisions of joint class and commodity rates between southern border points and official territory are and will be unjust, unreasonable, and inequitable, and prescribing just, reasonable, and equitable divisions for the future, met requirements of the language of §15(6); since the only divisions in issue were those between L & N and Coast Line, on one hand, and plaintiff northern railroads, on the other, those findings can be given no other reasonable meaning than that the present divisions are and will be unreasonable "as between the carriers parties thereto," and that the prescribed divisions are the primary divisions to be received by the L & N or Coast Line and by the northern carrier or carriers participating in transportation of the same traffic to or from points in official territory.—Boston & M. R. v. United States, 208 F. Supp. 661 (674)*.

The commission's conclusion that the fact that only two carriers of the few serving the border points were complainants was not controlling cannot reasonably be held erroneous in absence of any showing of nature and extent of interest of southern carriers not parties to the proceeding; failure of such carriers to join in the complaint did not preclude L & N and Coast Line from asserting their claim for relief; the commission's order is directed to those two and the northern railroads and does not purport to affect the division of rates between any other southern carrier and the northern lines.—Id., pp. 678-9.

In requiring that due consideration be given matters going to cost of service, the statute does not establish cost of service or any other factor as the primary criterion of fair divisions; "due consideration" is not the equivalent of "primary consideration"; the importance of any of the factors enumerated in the statute necessarily depends on the case under consideration, and evaluation of importance of the various factors in any given case is peculiarly the function of the commission.—Id., pp. 674-5.

While the commission correctly insists that there is no single test that can be applied to all divisions, §15(6) provides a series of tests, and though no one of those factors is controlling, the act requires more than lip service to be paid each of them. And though error as to weight to be given financial needs, operating costs, or other material facts is not a misconstruction of the act, and evaluation of importance of the various factors in any given case is peculiarly the function of the commission, the commission may not seize on one factor and ignore the rest.—Atchison, T. & S.F. Ry. Co. v. United States, 225 F. Supp. 584 (604)*.

In proceedings to determine and prescribe divisions the commission is not required or authorized to determine whether the joint rates are reasonable or confiscatory; its compliance with requirements of the act does not depend on level of the rates or amounts of revenue to be divided; purpose of §15(6) is to empower and require it to make divisions that colloquially are fair.—Akron, C. & Y. R. Co. v. Atchison, T. & S.F. Ry. Co., 316 I.C.C. 351 (358)*.

8. "Full hearing."—[Vols. 3, 7].—The commission's refusal to grant plaintiffs' request for oral argument did not deny them a full hearing when they were accorded full opportunity to present their defense by oral and documentary evidence, to submit rebuttal evidence, and to cross-examine witnesses; voluminous evidence was presented, and plaintiffs' briefs on exceptions and their subsequent petitions fully exploited the ample opportunities granted them to present all their arguments in writing.—Boston & M. R. v. United States, 208 F. Supp. 661 (667-8, 670)*.

10. "Among other things."—[Vol. 3].—In prescribing divisions of joint interterritorial rates as between eastern carriers and transcontinental western lines, the commission may properly consider the 1955 agreement of midwestern railroads to accept the basis prescribed in 269 ICC 765. The statute plainly empowers the commission to inquire into justification of existing divisions, whether established by commission order or by voluntary agreement, and draws a clear distinction between its evaluation of existing divisional scales and of those to be prescribed. The Supreme Court in 276 US 104 did not hold that the commission may not consider agreed divisions when prescribing a new scale, but rather that it must look, not only to the agreement and its surrounding circumstances, but also to other factors listed in §15(6). Under the very wording of the act the commission has a duty to consider a broad spectrum of factors when prescribing new divisions, and it would be unduly restrictive for the courts, in view of the plain statement by Congress that the commission shall look to many facts and circumstances, to say that one fact—an agreement of the parties—may not be considered. —Atchison, T. & S.F. Ry. Co. v. United States, 225 F. Supp. 584 (601-2)*.

The act lays down the tests of relative efficiency, public interest, terminal costs, revenue needs, and any other facts which, without regard to length of haul, would entitle one carrier to a greater or lesser proportion of the joint rate. And among the "other facts" which may be considered is cost of service of the participating carriers, which issue may be entirely different from the issue of revenue needs.—Id., p. 604.

Prescription of Divisions

22. Mode and basis of establishment affecting power to change.—[Vols. 3, 7, 9, 14-16].—Although the parties have assumed that any prescribed readjustment of primary official-transcontinental divisions would be based on use of integer scales employed during past 30 years in other interterritorial divisions cases, the transcontinental class and commodity rates, applying over maximum distances between the East and the West, are broadly grouped in both territories, and there is no practical reason for divisions reflecting 50-mile blocks for such interterritorial application, which might prove inconsistent with the rate grouping. Present group basis of divisions, observed since 1887 and last revised in 1922, is highly desirable in light of competitive conditions affecting routing of transcontinental traffic. Accordingly, the same general plan, with certain modifications in both eastern and western groups, is followed in prescribing specific primary divisions.—Akson, C. & Y. R. Co. v. Atchison, T. & S.F. Ry. Co., 321 I.C.C. 17 (26, 72, 73-4)*.

But although broad groups are now employed in divisions of rates between defined midwestern and transcontinental territories, they are less well defined than those observed in the east-west divisions and in numerous instances appear improperly related to distance; divisional scales afford an appropriate means of adjusting those intraterritorial western divisions. However, scale proposed by the midwestern lines, based on Docket 28277 scale, would not only give those complainants too large a share of revenue in light of evidence concerning cost and revenue needs, but is a technically unsound basis since the 28277 scale applies only to territory east of Rocky Mountains, in which class rates are on the Docket 28300 basis. Consistent with prescription of a higher class-rate level for mountain-Pacific territory than east thereof, a higher scale of divisional factors for that territory, but not over 10 percent higher, is justified.—Id., pp. 73, 76-7.

And special divisions resulting from agreements between midwestern and transcontinental lines, covering certain traffic subject to transit arrangements and reconsignment involving unusual out-of-line or backhaul service, may properly be excepted from the divisional basis prescribed, since they do not affect the proportions accruing to eastern railroads.—Id., p. 77-8.

—Sufficiency of evidence:—Evidence typical of carriers as a group may be accepted as prima facie evidence bearing on the proper division for each joint rate of each carrier in the group (261 US 184); and in considering divisions of numerous joint rates on traffic

passing through gateways between different territories, the commission may establish the basis for divisions between groups of carriers in the respective territories on evidence which it may reasonably deem typical and of sufficient probative weight to justify the necessary findings and the order in respect of each rate (282 US 74).—Boston & M. R. v. United States, 208 F. Supp. 661 (677)*.

There was evidence, typical in character and sufficient in quantity, of the nature of the traffic and operating conditions, and of the joint rates and bases of divisions, of complainants L & N and Coast Line on one hand, and of participating northern railroads on the other, to support the commission's prescription of the challenged basis of primary divisions of joint rates on traffic between southern border points and official territory, without the necessity of requiring specific evidence and separate adjudication in respect to each division of the joint rates between each of the two southern railroads and each northern plaintiff.—Id., p. 678.

The typical evidence rule in cases involving divisions of joint rates requires the commission to have before it, to consider, and to some extent rely on representative evidence relating to particular rates and divisions of particular carriers; it has general applicability, and has consistently required (1) information concerning individual joint rates and (2) information concerning divisions of those rates; and that rule has not been overruled, sub silencio or otherwise. [Citing 261 US 184, 265 US 274, 276 US 104, and 282 US 84.] Even when the evidence is based merely on a representative sample of all relevant traffic moving during a given period, it must relate to particular rates and divisions of particular carriers. However, the rule does not have to do with individual shipments handled by particular carriers; evidence showing volume and type of traffic moving subject to representative rates, though highly probative, is not absolutely required by that rule.—Atchison, T. & S. F. Ry. Co. v. United States, 225 F. Supp. 584 (592, 593, 597)*.

Requirement that evidence bearing on justification of each division of each rate of every carrier be before the commission deals with adequacy of information the commission is obliged to consider before issuing its order. Once the typical evidence requirement is met, the commission may use evidence of aggregate or average impact of a divisions schedule on a group of railroads as a group as a basis for its order; it properly should consider aggregate results, but it may not rely wholly or exclusively on average or aggregate data. Before it relies on such data it must make sure that the divisions formula under consideration, though seemingly just and equitable when viewed in terms of its group impact, is not so construed that its impact on any particular division of any particular rate of any particular carrier is unjust.—Id., pp. 594-5.

Requirements of the rule are manifestly not met when the commission relies wholly on evidence relative to the aggregate impact of a divisions schedule on groups of railroads as groups; such evidence, whether based on all traffic moving during a given period or only on a representative sample thereof, conceals effect which imposition of a divisions schedule may have on individual carriers which make up the group. While evidence showing the aggregate impact of a divisions formula on a group of railroads as such may be accorded some weight, it is fatally defective to accept it as a substitute for evidence representative of particular rates and divisions which could justify prescription of each division of each rate of every carrier. "Typical" does not mean "tending to show the general situation," it means "fairly representative of each rate of every carrier."—Id., pp. 592, 594.

In condemning the 500-A divisional scale as unlawful for dividing joint official-w.t.l. interterritorial rates between plaintiff transcontinental western lines and eastern railroads, the commission gave disproportionate weight to the aggregate consequence and to what to it was an apparent injustice in the aggregate. While the commission asserted that data respecting rates applicable to plaintiffs was available to it in Docket 28277, that data is not before the court; thus it cannot be accepted as fairly representative of current divisions between plaintiffs and the eastern lines. The record is devoid of any substantial evidence which would show the reviewing court that divisions applicable to plaintiffs under the 500-A schedule were unlawful; and there is no

substantial evidence showing that the commission considered evidence of any specific rates and divisions. In view of its erroneous conclusion that is was not obliged to consider evidence of specific rates, the court is not warranted in assuming that it did so.—Id., pp. 594, 599-600.

In the aggregate the impact of the 500-A schedule may indeed be unjust, but the commission did not make the required comparison of aggregate traffic evidence leading to that conclusion with evidence representative of particular divisions of particular rates which would warrant the court's endorsement of its action in declaring that divisional schedule unlawful. Order set aside and cause remanded for further proceedings consistent with the court's opinion.—Id., pp. 600, 607.

Complainant's final restatement of costs reflects relative operating conditions and, everything else being substantially equal, is sufficiently reliable for determining fair divisions on involved coal traffic. Assignment of all car costs to terminal services is proper when hauls are relatively short and weighted-average distances over the respective lines vary but little; because of conditions peculiar to coal mining, idle time is properly included in turnaround time; as complainant furnishes all cars used, use of reproduction costs, on which defendant's per diem charges are based, places both on equal footing and warrants departure from Rail Form A; use of 108.6-percent empty return ratio is proper since it specifically and directly affects complainant's costs for considered movement; and as a single commodity and limited origin area are involved, weighted-average distances used relate more accurately to actual transportation performed than simple averages, which represent hypothetical conditions.—Louisville & N.R. Co. v. Southern Ry. Co., 319 I.C.C. 639 (646-7, 653-5)*.

Complainant eastern lines' study of their costs for transportation of traffic moving to and from defined transcontinental territory, based on a single test period for October, 1953, obscures seasonal characteristics inherent in such a study, particularly in movement of perishables. Use of costs of the eastern district only, excluding the Pocahontas region, seems likely to have increased their costs somewhat; there was inconsistency in including costs of New England railroads, whose share in the traffic was only about 2 percent, while excluding the Pocahontas lines whose share was 5 percent.—Akron, C. & Y. R. Co. v. Atchison, T. & S.F. Ry. Co., 321 I.C.C. 17 (31-2)*.

Where relationship of one territory to another is of critical importance, it is requisite that any special studies be made on a comparable basis in each territory. In determining empty return ratios for boxcars in mountain-Pacific territory, defendants substituted figures developed from their own experience for those published in Rail Form A, and based their ratios for the Midwest only on data for the midwestern portions of four transcontinental lines; as no data for the East were available to them, they also used the midwestern ratios for that territory. Therefore, in order to obtain comparable data, empty return ratios shown in Rail Form A based on commission's 7-day study by territories are used in restatement of defendants' cost study.—Id., pp. 35-7; the 7-day studies, made under a commission order and based on uniform instructions to all railroads as to how they should be made, afford a more reliable basis of comparison among territories than defendants' studies.—Id., 322 I.C.C. 491 (494)*.

In lieu of Rail Form A method of computing constant costs for maintenance of way and structures and return on road-running facilities, which vary among the railroad groups when reduced to a track-mile basis, defendants used for all three territories a constant expense and return per track-mile the same as average for all miles of running track in United States. However, evidence indicates that expense per mile increases as traffic density increases, and use of United States averages per track-mile tends to overstate those constant costs in midwestern territory because of its lower-than-average density and to understate them in the other two territories because of their higher-than-average density. While defendants' underlying principle of relating constant costs to track-miles is not condemned, use of United States averages for those items ignores or even gives a reverse effect to differences in cost among the

various territories. Therefore, in the restatement those costs are computed by the Rail Form A method.—Id., 321 I.C.C., pp. 37-42.

The general principle in computing roadway costs is that, although constant cost does not vary with individual units of output, a given actual amount (body) of constant cost is valid only at a particular level of output and for a specific size of plant facility, and that when either changes substantially the actual amount of constant will be different and relation between out-of-pocket and constant costs should be analyzed for each level (density) of traffic. Information from abandonment dockets and light-density class II roads shows a definite relation between density and constant cost per mile of track, and that latter is different for each density group, the constant for the lower-density groups being smaller than for the higher-density groups.—Id., 322 I.C.C., p. 496.

Defendants' application of a uniform average expense for locomotive repairs, supplies, depreciation, and return on investment, computed on basis of locomotive-unit miles, to all three territories does not appear sound in an effort to discover territorial cost differences. Testimony for complainants indicates that locomotive-unit mile costs are substantially higher in eastern territory than in western, due partly to larger engine districts in the West, which have effect of increasing locomotive miles per day. Therefore, locomotive costs are restated on basis of the gross ton-mile method as applied in Rail Form A separately for each territory, which produces proper and more equitable results among the territories.—Id., 321 I.C.C., pp. 41-2.

On theory that differences in car-mile costs among territories are unrelated to handling of interterritorial traffic, defendants used same amount per service unit for group I costs (repairs, depreciation, etc.) in all three territories. Rail Form A, by including per diem settlements, adjusts those costs from a cars-owned basis to basis of cars serving on the road, which can result in substantial differences in dollars paid out and received; and defendants' sample of official-transcontinental traffic indicates a greater use of eastern cars in western district than the reverse. Territorial differences in car-mile costs are shown to result from actual operations and to be due mainly to geographical differences and application of same per diem rate to territorial carrier groups having different degrees of car utilization; and resulting cost differences are related to and partially caused by the traffic at issue. Differences in car-mile costs among the three territories should not be concealed by using the same cost for all; therefore, Rail Form A car-mile cost applicable to each territory is used in restatement. Id., pp. 42-4.

Though defendants limited their computation of branch-line costs on a solely related basis to branches "on which 50 percent or more of cars originated or terminated are related to transcontinental traffic," a proportion of 50 percent of such traffic on a branch cannot be accepted as indicating such a degree of dependence thereon as to support defendants' differentiation. And taking into account the broader category of commodities actually included in their car count is inconsistent with conception of a branch line used exclusively for a given purpose. Amount of such "solely related" cost is deleted in the restatement, in order to place all three territories on a comparable out-of-pocket basis.—Id., pp. 44-5; application of the "solely related" concept requires that the facilities be used and expenses incurred exclusively for the particular traffic or service and that they would be eliminated with disappearance thereof; transcontinental lines' "solely related" branch and short lines do not meet those conditions.—Id., 322 I.C.C., p. 497.

In arriving at allowance for return on investment in transportation property, consideration must be given to the proper investment base, the rate of return, and treatment of Federal income taxes, of which the first is the most important. While there is indication that long-term cost of capital is not less than the 6-percent used by defendants, that fact is principally relevant to total revenue needs; the commission's cost finding section has computed return at 4 percent after income taxes, which for many years has represented the average for class I line-haul railroads as a whole and may be regarded as proper for present purpose of cost ascertainment. And principle in rate proceedings that Federal income taxes are a proper charge to operations

and deductible as such in arriving at a fair return must be applied to divisions. Therefore, for purpose of comparison among territories, Rail Form A out-of-pocket costs reflecting a 4-percent return on elements of value are used in the restatement.—Id., 321 I.C.C., pp. 45-6.

Comparisons of net railway operating income alone are not entirely reliable in judging significance of rates of return on investment because of distortions in incidence of Federal income tax. That tax applies to nonoperating as well as operating income, and defendant mountain-Pacific roads have larger portions of "other" income than eastern or midwestern groups. Another complication is due to tax savings from accelerated amortization of cost of defense projects completed before 1956; Federal income taxes were deferred for 5 years after completion of such projects through higher-than-normal tax credits, and the tax burden will probably be increased correspondingly for the remaining life of the property. Western railroads principally received defense-project certifications, which thus indirectly tended to overstate their net income. However, adjustments to allow for such distortions can readily be made.—Id., p. 60.

But although defendants' cost studies understate costs in eastern and midwestern territories in the foregoing respects, adjustments of all other refinements to and departures from Rail Form A costs therein would have but negligible effect and would not be justified, on basis of cost data of record, in a proceeding involving such a large and varied body of traffic. Defendants' gathering studies, in particular, are a measurement of specific services rendered cars originated in the gathering areas, involving a greater than average amount of service handling, and more closely approach actual cost incurred by those cars than system average costs produced by unadjusted Rail Form A.—Id., pp. 47-9.

Although defendants contend that rejection of six components of their cost studies imposed on them an unjust burden of proof, and that the complaints should have been dismissed or their opponents ordered to produce data thought to bear on those matters, it is not clear whether the commission could lawfully or properly follow the latter course in adversary proceedings on formal complaints. While such action has occasionally been taken in investigations on the commission's own motion where it appeared necessary to assume some responsibility for the record, defendants opposed institution of an overall investigation in instant cases. Record as a whole shows existing divisions to be unreasonable and inequitable, and dismissal of the complaints would not serve justice; nor is any basis apparent for assuming that complainants withheld vital evidence merely because they had different conceptions of the nature and extent of facts to be developed. The commission's substitutions for the rejected adjustments closely reflect the record, and the restated costs are based on the cost evidence alone; defendants' cost evidence as presented could not justly be given the weight claimed by them.—Id., 322 I.C.C., pp. 493, 498.

24. Retroactive adjustment.—[Vols. 3, 7, 9, 11, 12, 14, 15, 17, 19].—Complainant seeks retroactive adjustment of assailed divisions of joint rates on lump coal, claiming that to extent those rates are on basis prescribed in 270 ICC 291 they were not removed from category of prescribed or approved rates by subsequently authorized general increases. However, language of §15(6) is plain that retroactive adjustment of divisions can be compelled only as to joint rates established "pursuant to a finding or order of the commission." Since existing rates on lump coal result from numerous general increases, application of which was expressly made merely permissive, they do not fall within that requirement; furthermore, the formal findings and order in case cited did not deal specifically with most of the movements now at issue. Assailed divisional basis has been in effect by agreement of the parties for over 40 years; since no valid grounds are shown for requiring retroactive adjustment thereof, it is denied.—Louisville & N.R. Co. v. Southern Ry. Co., 319 I.C.C. 639 (662)*.

26. Discretion of commission.—[Vols. 3, 7, 9, 12].—While the commission's discretion in matters pertaining to divisions is broad, an agency's discretionary order must be upheld,

if at all, on the same basis given by the agency. In prescribing challenged schedule of divisions of joint official-w.t.l. rates for application to eastern-transcontinental interterritorial traffic, the commission invoked only the grounds that eastern lines needed additional revenue but the scale sought by them was not a proper one. Under §8 of Administrative Procedure Act, all agency decisions must include a statement of findings and conclusions, with reasons or basis therefor, on all material issues of fact, law, or discretion presented on the record; and the Supreme Court has emphasized that this section was intended to have teeth. That strict requirement should not be relaxed; for the court to determine whether the commission exercised its discretion within the bounds of "due consideration" expressed in §15(6), it must disclose the basis of its order and indicate basis on which it exercised that discretion.—Atchison, T. & S. F. Ry. Co. v. United States, 225 F. Supp. 584 (606-7)*.

However, even had the commission presented findings and analyses based on substantial evidence, its order would still be defective for failure to consider all the standards enumerated in §15(6); it failed to consider terminal costs, assumed equality of efficiency and public interest, found relative costs of service "unhelpful," and made no finding based on revenue needs which would justify its action. Prescription of divisional scale in issue for eastern-transcontinental traffic was unlawful because of the commission's failure to observe standards of §15(6) and of §8(b) of APA. Order set aside and cause remanded for further proceedings consistent with the court's opinion.—Id., pp. 606, 607.

Question of whether divisions of joint rail rates on transcontinental traffic in issue are just, reasonable, and equitable is for the commission, not the court; however, in prescribing those divisions, the commission's minimum duty is to give due consideration to the five factors listed in §15(6). Also, while the commission has broad discretion in such matters, its discretion can never substitute for the "findings and conclusions, as well as the reasons or basis therefor," or for the clarity of findings, required by the Administrative Procedure Act. The justness of the divisions is for the commission in the first place, but the reviewing court must be able to determine from the commission's findings, conclusions, and orders whether the mandate of the statute has been met; due to described insufficiency of the findings and conclusions, case is remanded to the commission for further proceedings consistent with the court's opinion.—Atchison, T. & S.F. Ry. Co. v. United States, 238 F. Supp. 528 (543-5, 540)*.

In determining and prescribing divisions of joint rates, the weight to be given any of the factors enumerated in §15(6) necessarily depends on the facts under consideration, and evaluation of importance of the various factors is peculiarly within purview of the commission, since the question of divisions involves the making of practical judgments rather than the solving of a problem with mathematical precision.—Louisville & N. R. Co. v. Southern Ry. Co., 319 I.C.C. 639 (657, 658)*.

32. Burden of proof.—[Vols. 3, 9, 15, 16].—Plaintiffs' argument that, since the burden in proceeding before the commission was on complainant assailing divisions of rates between southern border points and official territory to produce evidence of relative costs of handling the traffic involved, and it did introduce in evidence its own actual costs, it was also complainant's burden to adjust the average costs presented by plaintiff northern lines (defendants therein), is untenable when data necessary to make such adjustments were not available to complainant and could only be produced by plaintiffs themselves.—Boston & M. R. v. United States, 208 F. Supp. 661 (676)*.

Although eastern lines' complaint covered divisions of rates to and from intermountain territory, including eastern portion of mountain-Pacific territory not embraced in transcontinental territory as defined, there is no evidence relating specifically to intermountain divisions other than to and from Montana, and none bearing on divisions over routes through southern territory; therefore those divisions (except of rates to and from Montana, which are included in divisional basis prescribed for midwestern lines), are excluded from the findings. Interested carriers should be able to agree on modification of

such divisions in light of the findings.—Akron, C. & Y. R. Co. v. Atchison, T. & S.F. Ry. Co., 321 I.C.C. 17 (76)*.

34. The order.—[Vols. 3, 7, 9, 12, 14, 16].—Although transcontinental lines seek withdrawal of order clarifying findings and original order prescribing divisions of joint rates between transcontinental and eastern and midwestern territories, but without changing effective date thereof, claiming that the later order is invalid for failure to give the 30 days' notice required by §15(2), that order was intended merely to clarify matters discussed in original report and an additional 30 days' notice was therefore deemed not to be required. However, recognizing that omission of more specific language in the original order has caused disagreement as to effect of the clarifying order, and as several changes are being made in specific divisions, it is deemed advisable to set forth the entire findings on reconsideration and to enter a new order with an appropriate effective date, combining all divisions as originally prescribed and as now amended or supplemented. Such order does not change effective date or any other provision of the original order, but expiration thereof will be provided for upon compliance by the parties with the order now entered.—Akron, C. & Y. R. Co. v. Atchison, T. & S.F. Ry. Co., 322 I.C.C. 491 (511-2)*.

Reasonableness

In general

1. Jurisdiction of courts in preventing change of rates.—[Vols. 3, 7, 17-19].—See also Humble Oil & Refining Co. v. Great Northern Ry. Co., 28 USC §2325, n. 7.

That a reduced rate which was become effective upon expiration of the statutory 7-months suspension period may ultimately be found unreasonably low in violation of the national transportation policy furnishes no authority to the courts to extend the suspension period in face of the clear mandate of the statute that, if the proceeding has not been concluded and an order made by end of that period, the proposed change shall go into effect. In essence, suit to enjoin application of rates under investigation in proceeding still pending before the commission asks the court to declare that the 7-months period is inadequate; however, Congress has fixed 7 months as the maximum period of suspension, and for the courts to extend that period would in effect be amending the statute, which is beyond their power. District court's denial of appellants' motion for preliminary injunction, affirmed.—Arrow Transp. Co. v. Southern Ry. Co., 308 F. 2d 181 (186)*.

Although, during pendency of court action to set aside the commission's order approving certain reduced all-rail rates, the railroads filed new reduced rates on the same commodity between two of the same points, the commission's refusal to suspend the rates most

recently filed was a matter exclusively within its sound discretion and is not susceptible of review by the district court.—Seatrain Lines, Inc. v. United States, 233 F. Supp. 40 (47).

Authorities are divided on the question of jurisdiction of the courts to review suspension orders. However, as held in 193 F. Supp. 795, while it cannot be said that under no circumstances may a court have jurisdiction over an action to enjoin a suspension order, a suit to enjoin such an order may be entered if, but only if, complaint shows that the suspension is plainly without statutory authority or violates a clear statutory command, and that complaining party has no other available remedy. Also, it is this court's opinion that, where a prima facie case of "gross abuse" of discretion on the commission's part is presented, there would be a power to review. In instant case, plaintiff is not without available remedy; there was no gross abuse of authority, and the commission acted within its statutory power and did not violate a clear statutory command; therefore, action to enjoin order of Division 2 vacating suspension order of the Suspension Board, and to require suspension of proposed increased rate on crude oil, is dismissed.—Naph-Sol Refining Co. v. United States, 269 F. Supp. 530 (531-2)*.

When proposed rates on their face violate §4 and interim relief has been denied but the commission has not taken final action on application for permanent relief, the court may order "suspension" of the rates pending the commission's final determination, even though the maximum suspension period authorized by §15(7) has expired.—Wirthmore Feeds, Inc. v. Baltimore & O. R. Co., 221 F. Supp. 745 (747).

2. Breadth of investigation and suspension powers of commission.—[Vols. 3, 7, 9, 11, 12, 14-19].—Review of the commission's power to suspend proposed rate changes, and the legislative history of grant thereof, indicates that Congress meant to vest in the commission sole and exclusive power to suspend, and to withdraw from the judiciary any pre-existing power to grant injunctive relief. The close nexus between the suspension power and the commission's recognized primary jurisdiction to determine lawfulness and reasonableness of rates suggests that it would be anomalous if Congress which created the commission's suspension power nevertheless meant the judicial remedy to survive; Congress meant to foreclose judicial power to interfere with timing of rate changes which would be out of harmony with the uniformity of rate levels fostered by the doctrine of primary jurisdiction. And omission by Congress of express reference to interests of competing carriers and their customers does not warrant a different result; injunctive remedy is not available to petitioners.—Arrow Transp. Co. v. Southern Ry. Co., 372 U.S. 658 (662-9)*.

Moreover, undesirable consequences would necessarily attend survival of the injunction remedy; any necessary consideration by the court of applicant's claim that proposed rates are unreasonable, in disposing of an application for injunctive relief, would create the hazard of forbidden intrusion into the administrative domain. Such considerations explain why courts consistently decline to suspend rates when the commission has refused to do so, or to set aside an interim suspension order.—Id., pp. 669-70.

Section 15(7) contemplates summary action by the commission after summary hearing; and provisions of the Administrative Procedure Act do not require the commission to hold a hearing or set forth detailed reasons for refusing to suspend a proposed tariff and initiate an investigation, whether such action is that of the Board of Suspension or of Division of the commission on appeal. The commission had before it sufficient information, in the nature of briefs, financial statements and affidavits, to justify its action; and reasons set forth in the order of Div. 2 (acting as an appellate division), which vacated the Board's suspension of proposed increased rate on crude oil, are sufficient to support the commission's action. Therefore, suit to enjoin the Div. 2 order, and to require suspension of proposed rate schedule in accordance with suspension order entered by the Board, is dismissed.—Naph-Sol Refining Co. v. United States, 269 F. Supp. 530 (531-3)*.

The commission's conclusion that proposed multiple-car rates on grain from Ohio and Mississippi River crossings to the South, subject to a 240-cent minimum on movements

under 346 miles, would violate §3(1) is invalid because not predicated on basic findings supported by substantial evidence; and its finding that the level of proposed rates, with the unlawful discrimination removed, would not be adequately compensatory and thus would violate §1(5) is likewise invalid because based largely on the invalid finding under §3(1). Also, the commission's conclusion that the proposed rates must be increased in order to avoid unfair and destructive competition in violation of the national transportation policy is invalid because it violates §15a(3); it exceeds the statutory authority of the commission, and is not supported by substantial evidence; the order set aside.—Cincinnati, N.O. & T.P. Ry. Co. v. United States, 229 F. Supp. 572 (577, 579-80)*.

4. Transportation subjects which may be considered; in general.—[Vols. 3, 7, 9].—While the commission's determination that proposed reduced rate was not essential to railroads' retention of the traffic involved a prediction as to future action of shippers, it does not follow that the finding is unsupported or that the commission was without jurisdiction to make it. The commission is not to be stripped of its power to determine lawfulness of a rate because a forecast as to the future is a factor which it, in the exercise of its expert judgment, is required to consider. Atlantic Coast Line R. Co. v. United States, 209 F. Supp. 157 (159)*.

6. Considerations determining whether suspension warranted.—[Vols. 3, 7, 9, 19].—See Arrow Transp. Co. v. Southern Ry. Co., 28 USC §2325, n. 43.

7. Latitude of managerial discretion.—[Vols. 3, 7, 9, 19].—Instead of making proposed multiple-car rates on soybean cake and meal apply as through rates from country origins under a single-car origination rule notwithstanding movement of soybeans into the transit point is in single carloads, respondents could have achieved the same result by traditional ratemaking methods, such as establishing multiple-car proportional rates from the transit points; however, they chose not to do so and, in passing on lawfulness of the proposed rates, the commission is not concerned with whether the method employed by respondents to meet the situation confronting them is sound from a managerial standpoint. —Vol. Rates on Processed Meal—Midwest to Ports, 322 I.C.C. 456 (459-60).

Though from the practical viewpoint of inducing investment in grain storage and milling facilities at Pittsburgh it is impossible to discern much merit or logic in use of McGraham formula (47 ICC 409) to develop proposed rates to trunkline and New England base points, and respondents could have easily developed a more practical and consistent pattern of rates from Pittsburgh properly related to distance and to present rates from Buffalo, their choosing not to do so was within their managerial discretion and is not a matter of concern to the commission in judging lawfulness of the proposed rates.—Grain from Pittsburgh, Pa. to Eastern Base Points, 322 I.C.C. 218 (224)*.

Carriers have a right to initiate lawful rate adjustments to obtain or retain desired traffic. —Resin Plasticizers, East St. Louis-St. Louis and Chicago, 321 I.C.C. 401 (403)*.

In the face of a substantial annual deficit from express transportation of cut flowers at present rates, and considering the special service and preferred handling required on such shipments, it is within Express Agency's managerial discretion to choose the method it will use to minimize its losses and conserve its resources. Evidence is persuasive that it can improve its financial condition under proposed increased rates, and as there is no sound basis for finding that those rates exceed a maximum reasonable level for the service performed, the commission is not inclined to interfere with a course of action considered necessary by respondent to alleviate its financial difficulties. Proposed rates approved.—Cut Flowers—Throughout Continental United States, 319 I.C.C. 202 (217, 218).

That rates are published for a complete service does not prevent a carrier from offering a lesser service at a lower rate. Though proposed reduced rates on grain in multiple-car shipments in jumbo hopper cars do not apply on products, do not authorize transit or absorption of switching charges (as do the higher single-car rates), and are subject to special demurrage rules, they are published to meet unregulated truck competition and privi-

leges accorded under the single-car rates have no relation to them. Those restrictions are primarily matters of managerial discretion and are lawful.—Grain in Multiple-Car Shipments—River Crossings to So., 318 I.C.C. 641 (644, 689)*.

8. "Suspend the operation of such schedule."—[Vols. 3, 7, 14, 16, 17].—Since it is elementary that power to prescribe rates to be charged in the future is a legislative function, it would seem equally clear that the power to suspend or not suspend proposed rates involves a determination of what the rates shall be during the suspension period and is itself a legislative function.—Arrow Transp. Co. v. Southern Ry. Co., 308 F. 2d 181 (184)*.

In the process of establishing new rates, some irreparable injury to proponents or competing carriers and to portions of the public, as result of the statutory suspension provisions, appears unavoidable. Though the commission may require refunds of increases found unjustified, that power by itself has proved an inadequate remedy, and even that remedy is unavailable in case of reductions. While an unreasonably low rate found to be in violation of the national transportation policy would give rise to an action for damages under §8, that such a finding may ultimately be reached after full hearing furnishes no authority to the courts to extend the statutory 7-month period.—Id., pp. 184, 186.

Suspension Period

12. Resuspension.—[Vols. 3, 12, 14].—Upon expiration of the maximum statutory period of suspension, the court lacks jurisdiction to further suspend proposed rates in proceedings under §15(7) pending the final action of the commission. [372 US 658.]—Wirthmore Feeds, Inc. v. Baltimore & O. R. Co., 221 F. Supp. 745 (746).

13. Automatic effect given rates at end of period.—[Vols. 3, 11].—See Arrow Transp. Co. v. Southern Ry. Co., 28 USC §1337, n. 1.

14. Accounting order when rates automatically effective.—[Vol. 3].—See Flores case, §8, n. 133.

Parties

21. Respondents.—[Vols. 3, 9, 15, 17, 19].—Motion to strike portions of respondents' brief on ground of misrepresentation as to which carriers are respondents in related investigations, overruled. Rail carriers parties to the proceedings can be correctly ascertained from the record, and any misstatement on brief by any party can have no effect on the record as made.—Export Grain from Texas Points, 319 I.C.C. 16 (18).

Although it is urged that order of investigation be interpreted to include as respondents the more than 100 rail carriers participating in proportional rates on corn from Chicago to the East, the proceeding arose from independent action of Chicago & E.I.R. and the Milwaukee in canceling their participation in joint through rates from two Illinois and Indiana origin groups; it is the lawfulness of resulting combinations of their reduced local rates to Chicago and the proportionals beyond that is under investigation, and only they are properly respondents.—Corn and Corn Products from Ill. and Ind. to the East, 319 I.C.C. 568 (570).

And although interveners request prescription over other routes of reduced joint rates on same level as the combinations in issue, and respondents are willing to join in such rates on a reasonable divisional basis, concurrence of the eastern railroads would be a prerequisite. Respondents cannot compel the connecting lines to join in such reductions and, as latter are not parties to the investigation proceeding, no order may be entered requiring their concurrence.—Id., p. 572.

On reconsideration of proposed proportional rates (initial factors of combination rail-water-rail rates) on sulphur from Texas origins to Galveston, Houston, and Texas City for coastwise movement beyond, protestant Seatrain requests that certain eastern railroads be required to join in an application of the Ex Parte Nos. 162 and 166 general increases similar to respondents' application thereof in computing proposed rate on crude sulphur. However, since eastern carriers are not parties to the proceeding, a single-factor through rate cannot be prescribed.—Sulphur—

—Tex. to Tex. Ports—Coastwise Movement Beyond, 318 I.C.C. 625 (626-7)*.

Procedure

25. Issues in the investigation; in general.—[Vols. 3, 7, 9, 11, 13, 15, 19].—Carriers may, within the zone of reasonableness, adjust rates to meet competition; in cases involving rates voluntarily published by carriers to meet competition pursuant to §15(7), the issue to be decided is whether proposed rates are lawful. —Boston & M. R. v. United States, 202 F. Supp. 830 (837)*.

District court's setting aside of challenged fourth-section orders having rendered involved rates unlawful because of fourth-section departures, the court ordered their suspension; but, even assuming validity of protestant Seatrain's contention that the suspended rates discriminate against it within meaning of §3(4), mere formal designation of the remanded proceeding as one of "Investigation and Suspension" does not of itself bring into issue the substantive provisions of every section of the act, especially as such designation emanated solely in obedience to a temporary restraining order of a court. Where the issue arises under §4 the only necessary parties are the petitioning carriers and not protestant.—Iron or Steel Articles from the East to the Southwest, 321 I.C.C. 419 (422)*. [But see dissent.]

It was settled by report in I. & S. Docket No. 7768, wherein respondents proposed to cancel certain transit privileges on furfural residue, that protestant's privilege of processing such residue in transit at Verdon, Nebr., should be continued, and that question is not subject to relitigation in present proceeding on proposed increase in transcontinental rates on furfural residue further processed than screened and restriction of present rates to residue not further processed than screened. —Transit of Furfural Residue at Various Points, 322 I.C.C. 794 (805).

See also Rail-Water, Grain in Bulk, from Mo., Ill., & Ind. to Buffalo, n. 50, below.

Though both beet sugar producers supporting, and cane sugar producers opposing, proposed reduced rates on sugar from western origins to central territory complain of each other's sales practices, and latter intimate that the major portion of any increase in absorption of freight rates or diminution of net return on beet sugar is passed on to the grower, the commission has no jurisdiction over such matters; relations between sugar beet growers and processors are subject to regulation by the Secretary of Agriculture.—Sugar from the West to Central Territory, 319 I.C.C. 686 (706); and though protestants contend that alleged deficit incurred by western railroads in hauling the beets to the processing plant should be included in costs assignable to the beet sugar traffic, that issue concerns rates not involved in the investigation.—Id., p. 705; also, request that instant proceeding be held in abeyance pending decision on reconsideration in investigation of reduced sugar rates from gulf and south Atlantic ports to Ohio River crossings and Indiana is denied, since issues therein relate largely to intermodal competition, whereas issues in instant proceeding concern chiefly market and intramodal competition.—Id., p. 707.

Although protestant claims that rates from Buffalo and related origins to midwestern points, made the same as combinations to more distant points which include reduced rates from those origins to Chicago, will be on lower levels than rates from Keokuk, Iowa, to the same intermediate points, the Keokuk rates are not in issue and their levels may not be considered.—Pig Iron, Buffalo, N.Y., to Chicago, Ill., and Gary, Ind., 315 I.C.C. 601 (606)*.

Since considered TOFC rates on brass, bronze, and copper articles had been canceled before report in 314 ICC 363 was adopted, issue as to such rates had become moot; discussion and findings concerning those rates in prior report should be regarded as stricken.—Machinery and Brass, Bronze, Copper Articles from East to Tex. and La., 316 I.C.C. 557*.

27. Particular issues; reasonableness.—[Vols. 3, 7, 9, 12, 14, 16, 17, 19].—In intermode competitive rate cases, the issue of minimum reasonableness of proposed reduced rates involves two primary questions: first, whether the proposed rates are reasonably compensatory, and second, whether, if they are compensatory, they constitute destructive

competition within meaning of the act. In addition, all other relevant criteria of minimum reasonableness provided in §15a(2) and (3) should be considered in light of the facts and circumstances surrounding the proposed rates.—Reduced Transcontinental Lumber Rates, 1961, 318 I.C.C. 815 (840).

28.—Preference or prejudice.—[Vols. 3, 7, 9, 11, 19].—Since order of investigation stated that it would include "all matters and issues with respect to the lawfulness of said rates," and it is well settled that a rate may be reasonable and yet result in undue prejudice, issue of undue prejudice raised by protestants was properly before the commission notwithstanding proposed rates were shown to be well within the zone of reasonableness.—Fresh Meats, Ill., Ind., Ky., Ohio & Mo. to Points in Fla., 318 I.C.C. 5 (10).

Although restrictions on reduced rates established on grain from country origins to Twin Cities and Twin Ports, against transit and against their use as factors of through combinations to destinations beyond, were canceled or allowed to expire and the same level of rates continued with full transit privileges at Minneapolis and Duluth, issues of undue prejudice and unjust discrimination resulting from such restrictions are not rendered moot, since the restrictive rules will govern determination of charges on grain shipped from origins prior to their cancellation and subsequent thereto moved beyond those rate-break markets, and that condition will obtain for the authorized transit time of 2 years.—Wheat, Rye, and Flaxseed to Duluth and Minneapolis, 315 I.C.C. 89 (95).

See also Pennsylvania R. Co. v. United States, 216 F. Supp. 199, §13(1), n. 29.

Proposed reduced rates on iron and steel articles from points in adjacent States to Iowa destinations violate §3(1) when evidence establishes that receivers at Sioux Falls, S. Dak., and shippers at Kokomo, Ind., and Granite City, Ill., are in keen competition with shippers and receivers at points embraced in proposed adjustment, and that the proposed rates would cause a disparity to disadvantage of the former which is not justified by transportation standards. Not approved.—Iron and Steel from Ill., Ind., Kans., and Mo. to Iowa, 315 I.C.C. 403 (410).

Proposed reduction of rates from Pine Bluff, Ark., would disrupt existing rate relations with four competing origins and unduly prejudice shippers at latter points in competing in eastern markets; not approved.—Oak Flooring—Pine Bluff, Ark., to Mich., N.Y., Ohio & Pa., 315 I.C.C. 77 (78, 79).

35. Burden of proof upon the hearing; in general.—[Vols. 3, 7, 9, 11-19].—Part II, §216(g), n. 5.

Burden was upon plaintiffs (respondents in the commission proceeding) to show that proposed reduced export-import rates, which would restore equality of through ocean-rail charges that existed prior to equalization of the ocean rates in 1935, were just and reasonable within §1(5), and that they did not violate §§2 and 3 (1).—Boston & M. R. v. United States, 202 F. Supp. 830 (833, 834)*.

Railroads had burden of proving that proposed reduced ratings and rates on agricultural implements and road-making equipment would be compensatory; burden sustained when evidence showed that they would receive compensatory revenues from those rates.—Missouri Pac. R. Co. v. United States, 203 F. Supp. 629 (635)*.

Prior to enactment of §15(7) in 1910, although the commission had held that an increase in rates long maintained on traffic that was large, important, and constantly increasing would be held unjust unless satisfactorily explained, it was the general rule that the burden of showing a changed rate to be unlawful was on complainant rather than the proponent; and on its face §15(7) shifts this burden only to the proponent of rate changes, as distinguished from initial rates published for the first time for particular movement.—Animal Feed, Miss. and Tenn. to Midwest and Southwest, 319 I.C.C. 257 (259)*. [See also concurrences.]

While §15(7) places the burden of proof on respondent to show that a proposed changed rule, regulation, or practice is just and reasonable, and in most cases such a finding cannot be made unless the related rates and charges are shown to be reasonably compensatory, respondent has shown that proposed addition of Milwaukee to Chicago group on TOFC traffic to and from Kansas City is just and reasonable even though it has not shown com-

pensativeness of existing and related rates and charges. Though the rates to and from Milwaukee will no longer be determined under intermediate rule by reference to the Chicago rates, they remain unchanged, and to find that the proposed change in method of determining the applicable rates is unjust and unreasonable would benefit no-one and would deny to respondent and its shippers whatever benefit they might derive from this step in direction of tariff simplification.—Addition of Milwaukee to Chicago Group Rates—K. C., 318 I.C.C. 755 (759).

Although order instituting investigation into proposed plan II TOFC proportional rate on dairy products from Twin Cities to Chicago was entered after schedules of three respondents became effective, their becoming effective without suspension resulted from protestant motor carrier bureau's submission of incorrect information as to their effective date. Hence, though examiner was technically incorrect in stating that the commission declined to suspend those schedules, the end result is the same and burden of showing their unlawfulness is still on protestant bureau.—Dairy Products from Twin Cities to Chicago, 321 I.C.C. 720 (721).

Joint rail-water rates published by water carrier on bulk commodity: see Rail-Water, Grain in Bulk case, §307(g), n. 10.

Respondents have no burden to show lawfulness of existing rate on beer from St. Louis to Chicago, which was reduced to meet threat of private-carrier competition; and protestant submitted no evidence of unlawfulness of that rate or of like rates published to Aurora and Arlington Heights, Ill., to restore parity with Chicago, whereas respondents submitted evidence showing that all three are compensatory and no lower than necessary to meet the private competition. Approved.—Beer, in Containers, St. Louis to Arlington Heights, Ill., 316 I.C.C. 812 (815, 818, 819).

Examiner properly denied protestants' motion to dismiss suspension proceeding on ground that respondents had failed to present a prima facie case; under Rule 1.70 of Rules of Practice a hearing officer has no authority to terminate a proceeding merely on basis of a motion. Concerning the merits, the commission is not a court of law bound by strict and technical rules; record as a whole is adequate for determination of the issues.—Corn and Corn Products from Ill. and Ind. to the East, 319 I.C.C. 605 (607).

While incorporation of general increases into basic rates is highly desirable, in an investigation and suspension proceeding the burden is on respondent to prove the justness and reasonableness of the proposed rate. Respondents' only evidence in support of proportional rate on ground or refined sulphur, increased by percentages authorized in ex parte proceedings without regard to maximum holddowns is that, since there is no movement between the points concerned, there was no basing point which could be used in arriving at a rate to destination ports; such showing is inadequate support for a finding of justness and reasonableness; not approved.—Sulphur—Tex. Tex. Ports—Coastwise Movement Beyond, 315 I.C.C. 415 (417)*.

Respondent has not shown proposed multiple-car rate on fine coal from Sherwood and points in Fulton County, Ill.,to Twin Cities and Black Dog, Minn., to be reasonably compensatory when from Sherwood to Black Dog it fails to meet out-of-pocket costs by at least 17 cents, and to St. Paul exceeds such costs by only 4.5 cents; though no adequate showing of costs to Minneapolis is made, in view of the very small margin between the St. Paul out-of-pocket costs and the proposed rate it is likely that the out-of-pocket costs to Minneapolis over a greater distance and with additional handling and switching would substantially exceed the proposed rate. Not approved.—Coal from Fulton County, Ill., to Minnesota, 315 I.C.C. 627 (632).

Burden of proving justness and reasonableness of proposed increases is on respondents; proposed proportional rates on crude sulphur and salt from interior Louisiana points to Louisiana ports for coastwise movement beyond to eastern destinations, which incorporate full general increases, including maximum increases, through and including Ex Parte No. 223, result in increases in present combination rail-water-rail rates for which no justification is offered; not approved.—Sulphur from Chacahoula, La., to New Orleans, La., 315 I.C.C. 657 (658, 659).

36.——Rates increased after Jan. 1, 1910; or proposed rates.—[Vols. 3, 7, 9, 12-15].—See Increased Ratings on Plastic Games—All Territories, §1(6), n. 144.

37.——Justification of reductions.—[Vols. 3, 7, 11-13, 17-19].—Respondent has failed to meet its burden of justifying proposed reduced rate when it introduced to evidence to show compensativeness thereof—a minimum requirement in any matter involving changed rates.—Resin Plasticizers, East St. Louis-St. Louis and Chicago, 321 I.C.C. 401 (404)*.

Considering that no competitive necessity now exists for proposed reduced rates on citrus fruits and juices from Florida in view of subsequent increase in motor-water-motor rates they were designed to meet, the rail carriers now rely on the record as justification for their rates only to extent that they are not less than the corresponding Sea-Land rates, that the reduced rates are substantially lower than present rates of competing motor carriers and Sea-Land, and that the railroads have the burden of justifying them, the proposed rates cannot be found just and reasonable.—Frozen Juice and Fruit from Florida to the North, 319 I.C.C. 577 (596-7).

Reduced rates on pig iron from Lake Erie ports of Buffalo and Erie to Chicago area, and related rates from Jackson, Ohio, and Niagara Falls area, measured by common-carrier water costs shown, are lower than necessary to meet existing water competition. And though reduced rates from Neville Island and Sharpsburg, Pa., are no more than a modification of paper rates (none of the traffic having moved from those origins to considered destinations), they are made in relation to the rates from Buffalo and Jackson and should be accorded the same treatment. Cancellation ordered.—Pig Iron, Buffalo, N. Y., to Chicago, Ill., and Gary, Ind., 315 I.C.C. 601 (613-5)*.

And since proposed reduced rate on pig iron from Buffalo to Chicago was found to be unlawful because competitively destructive, maintenance of related reduced rates on a level little above out-of-pocket costs would result in unwarranted dissipation of revenue. Lacking independent justification, reduced rates published from other origins merely to meet the Buffalo rates are unduly low and therefore unjust and unreasonable.—Id., 321 I.C.C. 121 (130)*.

See also Alcoholic Liquors from N.H. and N.Y. to Tex. and La., NTP, n. 5 *reduced rates*.

Respondents proposing rate reductions to meet increased barge competition must show that the prospect of intensified competition is reasonably probable and not a mere remote possibility; however, in meeting prospective competition, carriers are not required to withhold counter-action until diversion actually takes place. Testimony of shipper of iron and steel bars from Lemont, Ill., shows that construction of improved barge-loading facilities which would necessarily increase its use of barge service is feasible and would materially reduce cost of that service; and reductions proposed from other origins, some of which also have barge service, is necessary to maintain existing rate relations and afford the competing producers equal marketing opportunities with the Lemont shipper at destinations involved. Proposed rates are amply compensatory and no lower than necessary to meet the barge competition; approved.—Steel Bars, Lemont, Ill., to Iowa, Kans., Mo., Minn., & Nebr., 319 I.C.C. 292 (302-3).

In showing that its reduced rates on grain in multiple-car shipments in jumbo hopper cars, minimum 450 tons, from Ohio and Mississippi River crossings to the South are compensatory and necessary to meet unregulated truck competition, Southern Ry. has made a prima facie case of lawfulness which protestants have not overcome; rates on that minimum approved.—Grain in Multiple-Car Shipments —River Crossings to So., 318 I.C.C. 641 (687, 688, 690)*.

Though revenues from transportation of lumber and forest products are vitally important to railroads serving Pacific coast, that being about the most important commodity group in eastbound transcontinental traffic, under present rates shippers have no incentive to optimum loading; average per-car loads have decreased substantially in past 10 years, and not even smaller cars are being loaded to capacity. Proposed reduced alternative rates from mountain-Pacific States to points on and east of a line from western boundary of the Dakotas to El Paso, Tex., will encourage heavier loading, with savings

to both carriers and shippers, as have similar incentive rates on other commodities and on lumber in other areas, since shippers apparently should have no difficulty in meeting the increased minima. Proposed rates, being compensatory and otherwise lawful, approved.—Reduced Transcontinental Lumber Rates, 1961, 318 I.C.C. 815 (821-5, 841, 847).

See also Reduced Handling Charges on Iron Ore, Marquette, Mich., §1(5), n. 664.

38.—When rates or charges increased or reduced.—[Vols. 3, 7, 11, 12, 14, 19].—In determining whether increases or reductions result from proposed rates on automobile body parts, minimum 15,000 pounds, which for distances under 360 miles are 1 to 7 cents higher than, and for longer distances the same as, rates on that minimum that were canceled July 14, 1962, revenues at the proposed rates should be compared with those yielded by present rates on 20,000-pound minimum, on which the traffic moved after July 15, 1962. On that basis the proposed rates result in reduced c.1. revenues and must be considered as reductions; and the fact that the rates were in effect at some time in the past does not change this conclusion.—Automobile Body Parts, Official & Southern Territories, 323 I.C.C. 149 (152).

42.——Shifting of burden to protestant.—[Vols. 3, 9, 19].—Motor carrier protestants, claiming detrimental effect of proposed reduced rail rates on their business, need to show not only proposed or actual harm to their income, but that they deserve protection by virtue of their being the low cost transportation mode. When protestants failed to make such showing, rail rates which were just and reasonable should not hve been canceled as being "destructive" or as precipitating a destructive rate war.—Missouri Pac. R. Co. v. United States, 203 F. Supp. 629 (635)*.

Railroads proposing rate reductions to meet motor competition do not have the burden of proving that they have any relative inherent cost advantage; if carriers show a proposed rate to be just and reasonable from standpoint of their own revenue requirements, protestants who rely on a claim of inherent cost advantage must bear the burden of persuading the commission of existence of that advantage.—Cement within Southern Terr. & from Hagerstown to So., 319 I.C.C. 465 (480); Steel Bars, Lemont, Ill., to Iowa, Kans., Mo., Minn., & Nebr., 319 I.C.C. 292 (303).

See also Terminal Charge on Order Bills of Lading Shipments, §216(g), n. 5.

50. Evidence; generally.—[Vols. , 7, 11, 15-19].—Subject to provisions of §7(d) of Administrative Procedure Act, the commission takes official notice of establishment by all respondents, after the prior report (318 ICC 641), of point-to-point single-car rates on grain from Ohio and Mississippi River crossings, also from Tennessee River ports, to southeastern destinations, made 120 percent of multiple-car rates approved therein for Southern Ry. on 450-ton minimum and subject to same restrictive rules; and, also, of subsequent establishment in lieu thereof, by railroads other than Southern, of a scale of rates reflecting generally 120 percent of the multiple-car rates, to apply between all points in southern territory. Both sets of single-car rates will be considered together in investigation in docket No. 34271.—Grain in Multiple-Car Shipments—River Crossings to So., 321 I.C.C. 582 (613-4)*.

The inadequate rates of return on the railroads in recent years are common knowledge. —Guaranteed Rates, Sault Ste. Marie, Ontario, to Chicago, 315 I.C.C. 311 (317).

Protestants' evidence concerning possible extension to other interior grain centers of proposed method of making combination rates on Danville, Ill., on corn from Illinois and Indiana origins to the East was tendered to show alleged harmful effect of the proposals on present flow of grain through Chicago market; such evidence was within scope of the proceeding and is not subject to objection on ground that it is not material; moreover, the opposition had opportunity for rebuttal.—Corn and Corn Products from Ill. and Ind. to the East, 319 I.C.C. 605 (607); and protestants' objection to interveners' evidence in support of respondents as improper rebuttal is likewise overruled; interveners were proper parties, and admission of their evidence in no way prejudiced protestants.—Id., p. 607.

Statements in respondent's reply concerning reciprocal switching practices of other railroads, general denial that certain restricted

industires are open to reciprocal switching under its present tariff, and exhibits showing number of inbound cars line-hauled by respondent to restricted industries and number switched for other railroads, are relevant to proposed cancellation of reciprocal switching at certain idustries and team tracks and are in rebuttal of protestants' testimony; motion to strike overruled.—Switching at Richmond, Va., on Richmond, F. & P. R. Co., 316 I.C.C. 786 (787).

However, protestants' motion to strike exhibits concerning respondent's nonparticipation in joint rates and routes with Chesapeake & Ohio because of past action by that line is granted; such matters are not before the commission in instant proceeding and could have no important bearing on issues raised.—Id., p. 788.

And motion to strike letters from 13 restricted industries, apparently solicited by respondent, is also granted when, since they were filed in respondent's reply statement, protestants were foreclosed from comment and request for cross-examination, in contravention of Rule 1.53 of the Rules of Practice.—Id., p. 788.

The commission's cost statements are public documents prepared from carriers' annual reports and do not purport to represent exact costs of any particular carrier, but are issued to provide general average-cost information which may be useful to carriers and others in establishment of rates; respondents' use of those studies as a guide in determining compensativeness of proposed rates is one of the purposes for which they are made availabe to the public. Witnesses using such statements are not required to have personal knowledge of the cost data set forth therein; the commission has long accepted cost studies based thereon and accorded them whatever weight the circumstances warranted. Examiner's rejection of exhibits based on data taken from such cost statements, overruled.—Steel Bars, Lemont, Ill., to Iowa, Kans., Mo., Minn., & Nebr., 319 I.C.C. 292 (302).

Objections to admission of respondent's cost exhibit on ground that various deficiencies made it unreliable and that its witness was not qualified as a cost expert go to weight rather than admissibility of the evidence.—Radios, Televisions, Talking Machines from Bloomington, 318 I.C.C. 221 (222).

Statement that shipper informed respondent that the involved traffic is now moving in private carriage is not inadmissible as hearsay when it was made by respondent's assistant general freight agent, and is in nature of information which such an official would normally obtain during course of his official duties.—Id., p. 222.

Respondent's cost studies based on selected data from records kept in regular course of business were properly admitted. Other studies objected to because persons who actually made them were not present for cross-examination were admissible when witness who testified concerning them was a cost analyst on respondent's staff and the computations were made at his direction; while actual timing or checking was done by different employees at pertinent locations on the rail line, relating and applying those service factors was the job of the witness, who had primary responsibility for computing costs. In addition, the underlying data were studied by protestant after close of the direct testimony, and it was afforded ample time to request presence of specific persons for cross-examination.—Beer, in Containers, St. Louis to Arlington Heights, Ill., 316 I.C.C. 812 (813-4).

Respondent's testimony concerning its future traffic and revenue therefrom, based in part on monthly forecasts by shippers, was properly received as an exception to the hearsay rule. Although protestants object that the shippers were not available for cross-examination and the underlying data not of record, respondent receives these reports in the regular course of its business, and the witness whose duty it is to maintain records of the reports was cross-examined by protestants.—Pipeline Rates on Propane from Southwest to Midwest, 318 I.C.C. 615 (616).

Motion to strike statement of Louisville & Nashville's chief clerk that "any testimony given by me for the L&N and other respondents is the same as would be given if an oral hearing were had," on ground that he was neither empowered nor qualified to testify on behalf of other respondents, overruled; Lousville & Nashvilee, as chairman of committee of respondent railroads, was authorized by

other respondents to prepare respondents' statement of facts and witness had access to all facts presented by him in ordinary course of his employment.—Iron and Steel Articles between Atlanta and St. Louis, 318 I.C.C. 80 (81).

Testimony of chief clerk of traffic department of railroad relating to the reasons for publishing proposed rates is admissible since the witness in course of his employment is familiar with circumstances surrounding the publication of these rates.—Sheet Steel from Chicago, Ill., to Simpsonplle, Ky., 316 I.C.C. 105 (106).

Testimony of shipper's witness that studies extending over several years comparing cost of production at Tracy, Calif., plus transportation to eastern markets, with cost at its eastern factories and movement to same markets indicate that with availability of considered reduced rate it might be able to continue expansion at Tracy, is relevant; motion to strike on ground that witness refused to present production-cost data developed in the studies relates to weight to be accorded that evidence; overruled.—Canned Goods from Pacific Coast to Eastern Points, 315 I.C.C. 769 (775).

Motion to strike testimony of respondent's witness who is an employee of supporting shipper, on ground that he was not qualified to make statements concerning shipping policy of his company, denied when respondent filed affidavit by that company's traffic manager adopting the witness's statements as his own. —Agricultural Insecticides—Heyden, N.J., to Houston, Tex., 315 I.C.C. 623*.

Motion to strike respondents' testimony relative to intention to correct certain errors in suspended schedules which would result in violations of §4, as beyond scope of suspension proceeding, overruled; protestants' position is not impaired by testimony objected to; where errors are discovered in published schedules which may cause violations of law, carriers may offer to amend, and the commission can require cancellation of any such schedules without prejudice.—Grain—K.C., Omaha & Related Origins to Lawrenceburg, 315 I.C.C. 83 (84).

Motion to strike part of protestants' exceptions and an appendix thereto on ground that they present evidentiary matters which were not seasonably filed, granted.—Corn and Corn Products, Iowa, Nebr., Minn., S. Dak. to Ill., 318 I.C.C. 291 (292).

Motion to strike protestant's statement of facts and argument on ground that respondents were served with a copy thereof 9 days after the due date and were thereby denied opportunity to reply, denied; statement was timely filed with commission in accordance with Rules of Practice and on date of transmittal a copy was mailed to respondents' attorney by first-class mail prepaid.—Clay Products, West and Southwest to Pac. Coast Ports, 315 I.C.C. 571 (572).

Exhibits submitted by one shipper, purporting to show cost of moving pig iron in its own vessels from Buffalo to Chicago, were properly excluded when witness tendering them had no personal knowledge of the underlying facts, and feasibility of that shipper's use of private carriage could not be determined. But data submitted by another shipper, showing probable cost of moving pig iron from Cleveland to Chicago in its vessel, were presented by a competent witness; though its vessel has not been used for that movement, it has carried pig iron between other Great Lakes ports, and costs shown, based on operations conducted over a long period, appear to reflect cost of considered movement with sufficient accuracy.—Pig Iron, Buffalo, N.Y., to Chicago, Ill., and Gary, Ind., 321 I.C.C. 121 (122-3)*.

Evidence concerning direct movements of imported iron ore to or from private piers of steel companies at Fairless, Pa., and Sparrows Point, Md., is irrelevant to issues of lawfulness of reduced import rates on ores from the ports of Baltimore and Philadelphia to 17 destinations in western Pennsylvania, Ohio, and West Virginia.—Iron Ore from Eastern Ports to C.F.A. Points, 321 I.C.C. 473 (477)*.; and evidence concerning "split" cargoes discharged at Baltimore, most of which tonnage went into ground storage, from which some of it may have moved to points west of involved destinations taking lower rates from Baltimore than from Philadelphia, lacks probative force as bearing on results of requiring parity of rates from those ports to the 17 points.—Id., p. 480; likewise, evidence concerning

similar split cargoes discharged at Philadelphia is remote from the issue of port parity when none of the tonnage is shown to have moved to the 17 points.—Id., p. 481.

Examiner properly excluded testimony offered to show extent of motor and barge movements of bulk cement prior to 1961, as shown by underlying work papers of 1960 edition of Bureau of Mines' Mineral Yearbook, since no witness familiar with such working papers was available for cross-examination.—Cement within Southern Terr. & from Hagetstown to So., 319 I.C.C. 465 (473).

Objections to rejection of a report of Standing Rate Committee of Western Trunk Line Committee concerning proposal of certain railroads, including respondents, to establish TOFC rates on tractors substantially similar to those in issue, on ground that matter contained therein was admissible as an admission against interest, overruled. Under the §5a agreement, right of independent action is reserved to all members and action by a rate committee is not binding on its members; therefore, no conclusion by such a committee may be construed as an admission against interest.—Tractors—T.L. & W.T.L. Territories to S.W. & W.T.L. Ter., 319 I.C.C. 758 (759).

An evidence of decline over a 5-month period in respective percentages of one tractor manufacturer's total traffic transported by rail and for-hire motor carriers from Detroit to all points in United States, and of concurrent proportionate increase in private carriage, has little probative value to show a "trend" to private carriage of tractors individually weighing 6,200 pounds or less from Detroit to the five destinations concerned, especially when during 3-month period preceding the hearing that shipper transported only 15 shipments in private to only two of those destinations.—Id., pp. 761-2, 764.

Evidence concerning amounts of divisions to be received by the participating carriers under proposed joint rail-water rates on grain, which shipper protestant seeks subpena to require, is not relevant to determination of lawfulness of the proposed rates. The divisions of a joint rate are of no concern to shippers, since the mere fact that they may be less than carriers' local rates for their respective portions of the through service does not result in unlawful discrimination, preference, or prejudice as between shippers.—Rail-Water, Grain in Bulk, from Mo., Ill., & Ind. to Buffalo, 319 I.C.C. 123 (126-7)*.

Evidence of changes contemplated by respondents in rules governing the proposed rates and establishment concurrently therewith of rates slightly higher than those under suspension, to meet objections of one shipper, was properly admitted. Such prospective changes in no way modify or change the issues in instant proceeding, which are limited to lawfulness of the suspended rates; nevertheless, scope of investigation is not limited to the degree that evidence of subsequent intention to change application of proposed rates to meet objections of particular shippers must be excluded as immaterial and irrelevant.—Id., p. 127.

And it was not improper to allow rail protestants to introduce a portion of record in another proceeding embracing testimony and exhibits by a witness for instant respondent; such a proffer is authorized by Rule 1.82 of Rules of Practice. Stated purpose of such evidence was to show inconsistencies in that witness' testimony in different proceedings, and it was proper cross-examination.—Id., p. 127.

Examiner properly rejected evidence comparing divisions of lumber rates from the South to official territory with divisions of rates from Portland, Oreg., to same destinations; divisions have no bearing on lawfulness of rates separately established for shippers, and alleged shipper discrimination is not comparable to discrimination between connecting carriers under §3(4).—Reduced Transcontinental Lumber Rates, 1961, 318 I.C.C. 815 (819); and evidence dealing with production costs of lumber in areas involved is not relevant or material in determining lawfulness of proposed rates, since the commission has no power to adjust rates from competing territories to equalize manufacturing costs.—Id., p. 820; evidence concerning 1939 selling price of lumber, taken from books of witness' predecessor company, was inadmissible when such books were not made available for inspection at hearing.—Id., p. 820; and though examiner rejected exhibits showing

cost of loading lumber into rail cars because underlying studies are not presented, such cost is otherwise sufficiently substantiated of record.—Id., p. 821.

But the examiner improperly excluded true copies of selected excerpts from transcript and verified statements appearing in Ex Parte No. 206, offered as admissions against interest, on ground that opposing parties objected and refused to stipulate those excerpts into the record. Requirement of Rule 1.82 of Rules of Practice with respect to stipulations applies only where the party proffering the testimony from another proceeding fails to furnish a true copy for the record and copies for the other parties.—Id., pp. 819-20; and water carriers' objection to admission of respondents' excerpts from cost exhibits presented in another proceeding, on ground that the sponsoring witness had not prepared the figures, had no knowledge concerning them, and presented no underlying data showing their development, is overruled; respondents state that such data were presented in rebuttal to cost data introduced by a water carrier protestant, which were also taken from that case and received in evidence as an admission against interest.—Id., p. 821.

Evidence based on commission's 1960 1-percent waybill sample was also properly received. There is no statutory prohibition against making such waybills available to competing carriers where it appears to be warranted, and allowing access to such records by a representative of a competing water carrier did not violate §§15(11) and 20(5) of the act or the Federal Reports Act of 1942.—Id., p. 819.

Cost data and evidence relating to car-mile allowances on tank cars furnished by shippers were properly excluded. Adequacy of car-mile allowances is not a subject for consideration in investigation of lawfulness of proposed rates; moreover, respondents' only expenses relating to tank-car allowances are those published in their present tariffs.—Liquefied Petroleum Gas in Jumbo Tank Cars—S.W.F.B., 319 I.C.C. 31 (32).

Excerpts of testimony of bargeline officials and others before congressional committees were properly rejected as probative evidence of magnitude of water transportation of grain; such matters constituted argument to be pressed on brief.—Grain in Multiple-Car Shipments—River Crossings to So., 318 I.C.C. 641 (646)*; but examiner improperly excluded as immaterial certain opinion testimony of a railroad cost witness concerning bargeline costing methods; such testimony by a qualified witness was proper as rebuttal opinion and comment.—Id., p. 647.

Railroad's objection to bargeline protestants' submission of water and rail costs on a fully distributed basis, and their comparisons thereof, overruled: fully distributed costs are properly a facet of intermode competitive pricing situations under §15a(3) and the national transportation policy. For like reason, documents and testimony intended to demonstrate that "public costs" for such items as public improvement of rivers and harbors should be applied to formulas for determining bargeline costs on grain traffic to Tennessee River ports were properly admitted as bearing on that issue.—Id., pp. 646, 647; and though respondent objected to protestants' numerous counsel exhibits on ground that they were not supported by any witness and no-one was available for cross-examination, all of them stem from working papers of one of respondent's witnesses and consist merely of arithmetical computations designed to show volume of grain chargeable to truck transportation, and examiner correctly ruled that the test was whether there was foundation properly in the record through sworn witnesses.—Id., p. 647.

Although proposed reduced rates on grain to the South have no application to products, evidence as to rates and rules on flour and other products forms the basis of midwestern millers' contention that the reduced rates on wheat would be lower than rates on flour, thereby unduly preferring destination mills; receipt of relevant evidence on that material issue was proper.—Id., p. 647; but examiner's refusal to permit cross-examination as to divisions of joint all-rail rates received for hauling grain from Tennessee River ports was not error; since the proposed rates apply only from Ohio and Mississippi River crossings, and equally on ex-barge, ex-truck, and ex-rail grain, evidence of railroads' divisions on ex-rail grain from the Tennessee River ports is

irrelevant and immaterial, as no rates from those ports are in issue; moreover, receipt of such evidence would presume existence of similar circumstances and conditions surrounding the services performed, which is not the case as to respondent's proposed rates for movement in jumbo hopper cars.—Id., p. 648.

Examiner properly overruled objection of a shipper protestant to testimony of a railroad witness on rebuttal, clarifying purpose and comprehensiveness of a Department of Agriculture study submitted in evidence by protestant, in which that witness participated as an official of the Department, on ground that the critical testimony was not proper rebuttal but should have been presented as part of the railroad's case in chief, particularly since protestants were denied opportuniry for surrebuttal. However, the study was not adverted to or introduced when the witness testified on another matter during the railroad's presentation in chief; since it was introduced as part of protestant's presentation in chief, criticism of it during rebuttal was proper.—Id., p. 649; and though protestants object on similar grounds to testimony by economists concerning cost theory that a private enterprise can increase its profits by pricing its services in light of marginal costs, the examiner viewed that testimony as additional expert opinion, and his ruling admitting it as part of the railroad's rebuttal was not an abuse of his discretion.—Id., p. 648.

Cost data filed in informal proceedings prior to institution of investigations but not introduced in evidence in the formal proceedings may not be considered.—Limestone from Bessemer, Ala., to Mississippi Points, 316 I.C.C. 383 (387).

Before rates may be found reasonably compensatory, they must be shown to cover out-of-pocket cost of the service and to make some contribution to overhead. Respondents' own cost evidence for considered movements shows that out-of-pocket costs exceed reduced TOFC rate in many instances and are barely below it in others; as respondents' costs are somewhat understated, the reduced rate is not compensatory; not approved.—Paper and Paper Articles from Wisconsin to Illinois, 315 I.C.C. 165 (168).

51.——Motive or intention in change.—[Vols. 3, 9, 17].—Even according full credence to respondents' estimates of direct annual losses resulting from restoration of transit privileges on furfural residue pursuant to a commission order, which estimates are found to be unrealistic and speculative, their significance in relation to proposed rate increase on furfural residue further processed than screened and restriction of present through rates to residue not further processed than screened is limited to a showing of respondents' motivation and, in a general way, a comparison of revenues claimed to have been lost with anticipated revenue benefits of the proposed adjustment.—Transit of Furfural Residue at Various Points, 322 I.C.C. 794 (803).

Though protestant cites respondent's joint reply to petitions for suspension as showing that barge rather than truck competition motivated its proposed reduction of grain rates for multiple-car shipments to the Southeast, that reply is not part of the record (see §7(d) of Administrative Procedure Act); and since suspension proceedings, under the commission's Rules of Practice, are informal and based on allegations contained in unsworn pleadings, there can be no substitute for the probative evidence adduced at the hearing. Unregulated motor carriers have increasingly depleted respondent's prospective grain revenues, and no end of the trend is in sight; considering magnitude and effect of such competition, as established of record, it is reasonable to find that the reduced rates are proposed to meet it.—Grain in Multiple-Car Shipments —River Crossings to So., 318 I.C.C. 641 (685-6)*.

Although protestant water carriers contend that proposed reduced rates and increased minimum weights on eastbound transcontinental lumber are lower than necessary to meet intercoastal competition, respondents have shown that they were not designed to meet such competition, but to increase rail revenues by inducing heavier leading. Though intermodal competition for the traffic exists, a significant part of the water carriers' traffic is noncompetitive, due to the considerably heavier weight of certain types of coastal lumber; this weight difference is important in

view of fact that the rail rates, designed to move the relatively lighter inland lumber, are published in cents per 100 pounds, whereas water rates are quoted on basis of footage regardless of weight.—Reduced Transcontinental Lumber Rates, 1961, 318 I.C.C. 815 (822, 842).

60. Cancellation by order of commission.—[Vols. 3, 7, 11, 14, 16, 19].—Although respondents contend that an order requiring cancellation of rates found to violate §3 must afford them reasonable alternatives to correct the undue prejudice, instant proceeding is not a complaint case in which prejudiced parties are seeking removal of undue preference, but an investigation instituted before the rates involved became effective; and since proposed rates have been found unlawful, they are ordered canceled. However, respondents have the right to propose new schedules, free from undue preference and prejudice, in any lawful manner they desire.—Fresh Meats, Ill., Ind., Ky., Ohio & Mo. to Points in Fla., 318 I.C.C. 5 (12).

Particular Justifications for Changes

65. Reasonableness of the proposed rates.—[Vols. 3, 7, 9, 14, 16, 18, 19].—Reasonably accurate cost data are not indispensable in determining reasonableness of proposed rates; where such data are lacking, reasonableness may be determined by other evidence, such as comparison with other rates on same or similar commodities between same or other points in same general territory.—Limestone from Bessemer, Ala., to Mississippi Points, 316 I.C.C. 383 (387).

Proposed reduced rates on packaged wine in boxcars from California and other far-western States to transcontinental groups D through J, the same for single-car shipments as jumbo tankcar rates on higher minimum and 21 cents lower on three-car shipments, are compensatory and necessary to enable California bottlers to remain competitive with midwestern bottlers. While revenue yield of the reduced rates is lower in some instances than that from other transcontinental rates, it is not unduly low or so low as to affect respondents' revenue position adversely. Neither do protestants' comparisons show the proposed rates to be too low when circumstances surrounding maintenance of the compared rates are not shown and major portion of the compared commodities are not shown to have transportation characteristics similar to packaged wine. Proposed reductions will help balance respondents' transcontinental operations, and record does not warrant assumption that they will spread to other commodities. Approved as just and reasonable.—Wine, Pacific Coast to Western, S.W.& Central States, 321 I.C.C. 683 (711-2).

Considering substantial spread between minimum revenue under proposed plan II TOFC rate and the indicated out-of-pocket cost, record is convincing that the rate will yield cost of the service under the proposal; proposed rate compares favorably with other plan II TOFC rates of proponent on beer from same origin to other destinations, and is necessary if considered traffic is to be recaptured from private carriage; approved.—Malt Liquors, East St. Louis and St. Louis to Kenosha, 315 I.C.C. 762 (763-4).

Since rail movement of magazines or periodicals from Miami to Derby, Conn., requires drayage to railhead at Miami, and shipments in boxcars must be blocked and braced, reduced rate which, with those additional costs added, equals protestant Sea-Land's rate on same 40,000-pound minimum, is not unreasonably low from a competitive standpoint, especially as shipper will still require expedited truck service at times and will continue to use Sea-Land service when expedited handling is not necessary. Lower rate proposed for 60,000-pound minimum to encourage heavier loading tends to promote efficiency. As both rates exceed fully distributed costs, they are compensatory; approved.—Magazines or Periodicals, Miami, Fla., to Derby-Shelton, 319 I.C.C. 340.

Proposed reduced rates on beet sugar from points in four origin groups in western States to a 7-State central area, on somewhat lower level than motor-competitive scale on cane sugar from eastern refineries, are compensatory when in all instances they exceed out-of-pocket costs, in most cases by so much as to indicate that they also exceed fully distributed costs, and on proposed 100,000-pound minimum will yield revenues as high or higher

than those on other commodities from and to same areas. The proposed rates generally reflect about the same percentage of first class as the reduced cane-sugar rates and, on the whole, represent an equitable adjustment which tends to restore the historic rate relationship of western processors to eastern refiners that was disrupted by the reduction of rates from the East. However, in view of protestants' assertion that some of the proposed rates may permit free storage or other transit privileges, and respondents' assertion that such is not intended, the reduced rates are approved only to extent that they do not include such privileges.—Sugar from the West to Central Territory, 319 I.C.C. 686 (690, 703, 704-5, 707).

Increase of 46 percent in volume of canned goods traffic handled by three respondents which originate about 80 percent of such traffic moving from Pacific coast to transcontinental group A, and 48 percent in volume handled by one of them, indicates that new (reduced) rate thereon, which is found to be compensatory, is reasonable; such expansion has resulted in a notably larger contribution to overhead expenses and has substantially improved respondents' net revenue position.—Canned Goods from Pacific Coast to Eastern Points, 315 I.C.C. 769 (786).

It is apparent from the wide margin between proponents' out-of-pocket costs and the proposed rates that they would in all likelihood exceed fully developed costs, and that they would return substantially more than cost of performing the service. In view of their highly compensatory nature, proposed reduced rates are above a minimum just and reasonable level, and managerial expectation of increased traffic and revenue is reasonable. Disapproved on other grounds.—Iron and Steel from Ill., Ind., Kans., and Mo. to Iowa, 315 I.C.C. 403 (406).

66.——Comparisons of car-mile and ton-mile earnings.—[Vols. 3, 7, 18, 19].—Proposed TOFC rate on iron or steel plates or sheets is reasonably compensatory for respondents' routes when car-mile revenue of 52.1 cents compares favorably with car-mile revenue yielded by numerous other TOFC rates on iron and steel articles and other commodities transported for comparable distances between same points or points in same general territory; approved.—Iron and Steel Articles between Atlanta and St. Louis, 318 I.C.C. 80 (82).

Showing that earnings under proposed reduced rate compare favorably with those for other commodities to and from various points has insufficient probative value to show that the proposed rate is just and reasonable when there is no showing that circumstances and conditions surrounding establishment of the compared rates compare favorably with those affecting the rate under consideration.—Pulpborad or Fiberboard, Fla., Ga., N.C., S. C.—Edgewater, 315 I.C.C. 434 (438).

67.——Volume of traffic.—[Vols. 3, 7, 19].—Comparisons of volume of rail shipments of lumber from the west coast and from southern pine territory to official, southeastern, southwestern, and w.t.l. territories for 1953 and 1960, but with west coast shipments limited to those from Douglas fir region and excluding shipments of western pine and plywood (which also compete with southern pine in common markets), are insufficient to warrant a finding that western lumber shippers are unable to compete effectively in the common markets at present rates.—Reduced Transcontinental Lumber Rates, 318 I.C.C. 815 (828).

And southern lumber interests' showing of decline in rail shipments from the South and Southwest in past few years, contrasted with claimed increase in rail movements of west coast lumber to same markets in same period, has little probative value when southern and southwestern producers have been trucking increasingly large quantities to markets in those territories; decrease in their rail shipments as result of such marketing practice would not necessarily represent increased competition from west coast lumber.—Id., p. 829.

68.—Rate Comparisons.—[Vols. 3, 7, 9, 15, 19].—Comparison of proposed local rates on grain and products from Pittsburgh, Pa., to trunkline and New England territories with local rates from Buffalo, N.Y., and proportional rates from Chicago and St. Louis are of little value in determinig compensativeness of the rate proposal; proportional rates are generally lower than local rates such as those

under consideration, and respondents themselves recognize that the rates from Buffalo are depressed because of various competitive factors at that point. Under the circumstances, such comparisons cannot be said to justify proposed reduced rates to Boston, Mass., and Rockland, Maine, which are admittedly noncompensatory; on reconsideration, proposed rates to Boston and Rockland found not shown to be just and reasonable.—Grain from Pittsburgh, Pa., to Eastern Base Points, 325 I.C.C. 669 (676-7)*.

Proposed reduced rate on pulpboard from Jacksonville, Fla., to Edgewater, N.J., is not shown to be reasonable merely because it compares favorably with all-rail rate on same commodity from St. Marys, Ga., to destinatins in New York and New Jersey, since competitive conditions as well as origin and destination of instant traffic are different.—Pulpboard or Fiberboard, Fla., Ga., N.C., S.C.—Edgewater, 315 I.C.C. 434 (438).

In absence of cost evidence to the contrary, proposed reduced rates on limestone are not below a minimum reasonable level when they are on same level as other joint-line rates on that commodity from same origin to other destinations and from other origins to same and different destinations, all in same general territory.—Limestome from Bessemer, Ala., to Mississippi Points, 316 I.C.C. 383 (387-8).

Costs of loading and unloading lumber should be considered in comparing total charges via transcontinental rail and intercoastal water routes; it is important to compare like with like, which cannot be done by ignoring incidental costs incurred in all-rail movements while giving full consideration to those incurred via the water route. While the record does not permit precise determination of total water charges in cents per 100 pounds, the best comparison possible shows total rail charges at proposed reduced eastbound rates to exceed comparable water costs by $2.13 to $2.90 at or near northeastern ports; requirement of any greater differential would hobble respondents' ability to transport their existing volume of lumber traffic at lower rates while increasing their net revenue. Proposed rates approved.—Reduced Transcontinental Lumber Rates, 1961, 318 I.C.C. 815 (835-7, 844).

Reduced water-competitive rates on phosphate rock from Florida to the Southwest are compensatory and just and reasonable when they are on same level as rates from same origins to other points in territories east of Rocky Mountains, and earnings thereunder compare favorably, distance considered, with those under water-competitive rates approved to three southwestern points in 298 ICC 353.—Phosphate Rock from Florida to S.W. and W.T.L. Territories, 316 I.C.C. 207 (208, 211).

70.——Cost of service—[Vols. 3, 7, 9, 16-19].—The commission had substantial basis for finding that plaintiffs' (protestants before commission) contention, that proposed rates on grain and products from Pttsburgh, Pa., to trunkline territory would adversely affect net revenues of rail proponents because they would not meet fully distributed costs, was too speculative to warrant disapproval of the rates when they exceeded proponents' out-of-pocket costs, were necessary for movement of the traffic, and would have no harmful effect on any competing carrier. There is no logic in plaintiffs' argument that railroads would fare better under existing depressed ex-lake grain rates from Buffalo than with proposed higher rates from Pittsburgh although, for most destinations, latter yield much higher ratios to out-of-pocket costs; moreover, as most grain milled at Buffalo arrives there by water, all the dire effects predicted from proposed Pittsburgh rates could occur in even greater measure if the new rail rates were not permitted to become effective. Commission decision sustained.—State of New York v. United States, 256 F. Supp. 634 (638)*.

A minimum requirement of respondents' burden of proving lawfulness of proposed reduced rates on automobile body parts is a clear showing that they are compensatory. Respondents' restated costs are substantially understated in that they do not include expense of interchanging the traffic or of returning the special shipping devices used for it, and reflect costs for wages and materials that have increased substantially since the study year. The restatements are also overstated in that switching costs are based on switching time per car, whereas the traffic moves, and is frequently switched, in multiple-car lots, with resulting economies; loss and damage ex-

pense is taken from a commission cost statement for a category of traffic that includes commodities of substantially greater value than automobile parts, on which the loss-and-damage factor would normally be higher; and the restatement ignores economies in billing resulting from fact that the reduced rates are not subject to follow-lot, marriage, maximum charge, and modified mixing rules. As the cost evidence is not detailed enough to permit revision of the restatements, the burden of proving compensativeness is not met; not approved.—Automobile Body Parts, Official & Southern Territories, 323 I.C.C. 149 (153-4).

Evidence presented on further hearing does not provide an adequate basis on which to determine whether proposed reduced rates on export cottonseed oil, minimum 60,000 pounds, are compensatory, though respondents had ample opportunity to submit evidence to meet their burden of proof, In recomputing costs, respondents used distances based on shortest routing authorized in the tariff, whether single- or joint-line; out-of-pocket costs were not developed from all the representative origins; and cost evidence (1) does not include some cost items and (2) reflects average cost of all equipment in the area rather than cost related to characteristics of the movements and equipment involved. Also, evidence is inconclusive with respect to routes over which the traffic moves; proposed rates are not shown to be compensatory; schedules required to be cancelled.—Cottonseed Oil, Shreveport, La., & Texas to Texas Ports, 323 I.C.C. 698 (701-4)*.

While restatements by respondents serving port of New York of their own studies of cost of hauling imported iron ore to Youngstown, Ohio, with substitution of service units taken from studies of actual operations by railroads serving other ports, offer no sound basis for determining actual costs of the New York lines, they demonstrate that the special studies by carriers handling the traffic resulted in lower total costs than would result from use of system averages as was necessarily done by the New York roads, which have not handled that traffic. As restated in appendixes G and H, estimated out-of-pocket costs over routes of both the New York roads are well below level of proposed rate in imported iron ore to 9 destinations in Ohio and western Pennsylvania, and that rate is therefore reasonably compensatory.—Iron Ore from Eastern Ports to C.F.A. Points, 321 I.C.C. 473 (485, 486, 487)*.

In a general adjustment involving commodity rates from and to extensive territories, the fact that a few of the proposed rates might fail to meet out-of-pocket costs would not require disapproval of the entire adjustment. Proposed reduced rates on packaged wine in single-car and three-car shipments from California and other far-western States to transcontinental groups D through J exceed out-of-pocket costs for all movements when due recognition is given overstatements in respondents' cost data; even with the overstatements, the ratio of rates to cost averages 138 percent on single-car and 113 percent on three-car shipments. And while the cost evidence is limited to California origins, rates from other origins reflect the historical pattern of transcontinental groupings and will in all likelihood be equally compensatory, particularly in view of their shorter distances to midwestern destination area. Proposed rates are not unduly low, therefore just and reasonable.—Wine, Pacific Coast to Western, S.W. & Central States, 321 I.C.C. 683 (708, 712).

Although respondents presented no cost data in support of proposed reduced rate on candy from New York City area and intermediate Pennsylvania origins to Texas points, unrebutted cost computations of protestant water carriers indicate that from the New York area the proposed rate would materially exceed, and from the Pennsylvania points would approach, full costs. Full compensativeness of that rate from latter points is apparent from fact that costs for the shorter distances from Pennsylvania must be less than for the longer distances from New York. Proposed rate is thus shown to be amply compensatory; approved.—Candy and Confectionery from N.J., N.Y., & Pa. to Tex., 321 I.C. 154 (158). [But see dissent.]

Respondents' cost studies, discussed in appendix, show that proposed rates on bulk cement, in hopper cars, from New York and Pennsylvania origins to New Jersey and New York destinations are highly compensatory even when unloading, or allowance of 35

cents per net ton to consignee in lieu thereof, is included in the line-haul obligation. Acceptance of protestants' criticisms would not significantly narrow the wide margin between revenues and costs shown; even allowing for some degree of inexactness resulting from possible misuse of destination switching charges, that margin is so great that any such error would not materially affect the favorable revenue-cost relationship. Approved.—Allowance, Unloading Cement, Covered Hopper Cars—East, 319 I.C.C. 711 (714)*.

Based on the commission's restatement of the cost data, as explained in appendix, proposed joint rail-water rates on grain are reasonably compensatory when they exceed out-of-pocket rail costs and direct water costs, including return on investment, in all instances by amounts ranging from 3 to 8 cents, indicating some contribution to overhead; moreover, customary loading in excess of the tariff c.l. minimum of 50 tons, as claimed by respondent railroad, would reduce costs somewhat.—Rail-Water, Grain in Bulk from Mo., Ill., & Ind. to Buffalo, 319 I.C.C. 123 (131)*.

Reduced alternative rate scales proposed on liquefied petroleum gas in jumbo tank cars between points in United States are compensatory on an overall basis. For distances under 600 miles, where competition is chiefly with motor carriers, the rates exceed out-of-pocket costs, including a return on investment, and make a contribution to the railroads' overhead burden; for longer distances, where the principal competition is with pipelines, they generally approximate out-of-pocket costs, including return on investment, although in some instances they fail to do so by 0.5 to 1 cent, and would in all instances cover out-of-pocket costs without return on investment. Moreover, when LPG cars now being constructed with less tare weight are used, the compensatory aspect of the rates will be improved.—Liquefied Petroleum Gas in Jumbo Tank Cars—S.W.F.B., 319 I.C.C. 31 (37-8).

Proposed reduced rates on bulk cement in southern territory are shown generally to be amply compensatory. While for shorter distances, if an interchange switching charge is included in costs as restated in light of protestants' criticisms, the rates would not meet out-of-pocket costs, a large majority of the movements would be single-line without average interchange costs, and even if a full interchange switching charge is added to the costs involved the rates clearly meet out-of-pocket costs for distances over 75 miles and are highly compensatory for distances beyond 100 miles.—Cement within Southern Terr. & from Hagerstown to So., 319 I.C.C. 465 (478).

Proposed barge-competitive rates are amply compensatory when they exceed out-of-pocket cost and in most instances exceed fully distributed costs.—Steel Bars, Lemont, Ill., to Iowa, Kans., Mo., Minn., & Nebr., 319 I.C.C. 292 (303).

Respondent's and protestants' cost data bearing on compensativeness of proposed quantity express rates on wearing apparel are largely conflicting, and evidence respecting rail car-foot-mile line-haul expense (an important factor) is inadequate for determining that issue. Since underlying data for determining that expense have been made available in pending suspension proceeding which involves largely the same parties and similar issues on certain outerwear, consistency demands that the same factor, as determined in that case, be used in determining compensativeness in instant case. Therefore, if the parties are willing to stipulate that the same facts may be used in instant case, action on the proposed rates will be deferred pending final decision in that case; if not, the commission will either decide lawfulness of proposed rates on the present record or consider reopening the proceeding for submission of additional evidence on that issue.—Aggregate Rates on Wearing Apparel—Ry. Exp. Agency, 318 I.C.C. 737 (747-8)*.

While only the original proponent of reduced rates submitted cost evidence, other evidence is convincing that operating conditions are substantially similar for all respondent carriers; as no contradictory cost evidence was submitted, conclusion is warranted that considered reduced rates are reasonably compensatory for all respondents.—Corn and Corn Products, Iowa, Nebr., Minn., S. Dak. to Ill., 318 I.C.C. 291 (293).

Restatement of costs to Southern Ry. on multiple-car shipments of grain in jumbo hopper cars, minimum 450 tons in 5 cars, from

Ohio and Mississippi River crossings to the South (discussed in appendix F) indicates that proposed reduced rates on that minimum are compensatory on an overall basis as returning significantly in excess of out-of-pocket costs. However, no specific cost evidence was offered to show compensativeness of Southern's proposed rates on minima of 900 tons in 10 cars and 1,800 tons in 20 cars; as it does not appear that there would be sufficient loading or unloading facilities or track space to accommodate so many jumbo cars at one time, such movements would involve increased switching costs at origin, destination, and intermediate yards; latter rates not approved.—Grain in Multiple-Car Shipments—River Crossings to So., 318 I.C.C. 641 (678, 684, 691)*.

Proposed through proportional grain rate is compensatory when cost study based on Rail Form A shows that it would exceed fully distributed costs (excluding passenger and l.c.l. deficits) and revenue per car is more than twice respondent's average revenue on all c.l. traffic.—Grain from Kansas City, Mo., to Nebraska and Iowa, 318 I.C.C. 31 (32).

Reduced westbound transcontinental rate on wines would yield, on the average, substantially more than fully distributed cost; respondents' cost evidence based on public statement No. 3-61 of commission's cost finding section, adjusted for type of boxcar to be used and based on average load of 56,000 pounds and actual mileages, indicates that proposed rate exceeds out-of-pocket costs by considerable sums. Even under protestants' data based on ordinary boxcars and using short-line miles plus 13 percent for circuity, proposed rate exceeds out-of-pocket and fully distributed costs by 114 cents from Chicago and 49 cents from New York; approved.—Wine and Champagne—Westbound Transcontinental, 318 I.C.C. 53 (54).

In determining whether a proposed rate is reasonably compensatory, its relation to cost of providing the service should be considered first. While the commission does not ordinarily regard as reasonably compensatory a rate which fails to cover out-of-pocket costs, the compensatory character of rates and charges may be established without showing the fully distributed cost of performing the service involved; and in absence of special circumstances rail out-of-pocket costs may be determined on the long-term basis prescribed by Rail Form A.—Reduced Transcontinental Lumber Rates, 1961, 318 I.C.C. 815 (840).

Proposed reduced alternative transcontinental rates and increased minima on lumber and related articles eastbound are reasonably compensatory when they will produce earnings ranging from 118 to 204 percent of out-of-pocket costs for loads of 70,000 to 80,000 pounds—the weights at which most of the traffic can reasonably be expected to move—at September 1961 wage and price levels, and ratios ranging from 103 to 160 percent for 55,000-pound loads. This range is well above the 100 to 126-percent range produced by incentive lumber rates approved for the west coast in 308 ICC 345; moreover, evidence indicates that a progressively larger share of the traffic will be loaded at and above the higher minimum weights which produce the most favorable ratios of revenue to out-of-pocket costs and that the tail-end tariff minimum of 55,000 pounds will become less important with retirement of the older, low-capacity boxcars.—Id., p. 841.

Respondent's cost estimates, based on Rail Form A formula adjusted to reflect costs more nearly applicable to contemplated multiple-car movement, show that proposed reduced rate on cement in bulk and in bags would yield revenues 24 percent above out-of-pocket costs for a minimum 10-carload shipment consisting of 8 covered hopper cars and 2 boxcars, and 20 percent for a shipment containing the minimum of 8 hopper cars and the maximum of 5 boxcars. Protestants' estimates based on regional averages applying almost wholly to single-car movements are not indicative or probable costs under rate proposed. On a miminum shipment of 8 hopper and 2 boxcars, proposed rate would yield compensatory minimum revenue of $122.17 per car and 90.5 cents a car-mile; approved.—Multiple-Car Rates on Cement, Evansville, Pa., to N.J., 315 I.C.C. 672 (674).

That proposed reduced rate on canned goods from transcontinental group A to mountain-Pacific States returns less than fully distributed costs, while rates from other groups exceed such costs, does not establish

that it is unjust or unreasonable; proposed rate is compensatory when it exceeds out-of-pocket costs by substantial margins; approved.—Canned Goods from Eastern Points to Pacific Coast, 315 I.C.C. 757 (761).

Substantial margin of revenue yielded by new (reduced) rate on canned goods over respondents' out-of-pocket costs as restated in appendix D, including adjustment to reflect January, 1960, wage and price levels, warrants conclusion that it is compensatory.—Canned Goods from Pacific Coast to Eastern Points, 315 I.C.C. 769 (785).

Proposed reduced TOFC rates are not shown to be compensatory when it cannot be determined from the evidence what item of loss and damage expense may properly be used in arriving at respondents' probable operating costs on involved traffic.—Cast Iron Boilers, Boyertown, Pa., to Points in Texas, 319 I.C.C. 319 (321).

Although respondent presented no evidence concerning cost of moving TOFC traffic between Kansas City and Milwaukee, no change in level of rates would result from inclusion of Milwaukee in Chicago rate group except on four specific commodity items, and to that extent there was no need for it to present cost evidence. As to those four items, on which reduced rates are proposed, protestant's cost evidence, though based largely on average costs of class I railroads in western district as developed by commission's cost finding section and therefore not precisely reflecting respondent's actual costs, is the best available. Since certain of those specific commodity rates fail to meet such out-of-pocket costs as restated, those rates are not shown to be just and reasonable and may not be approved.—Addition of Milwaukee to Chicago Group Rates—K.C., 318 I.C.C. 755 (759, 760).

While costs of individual proponent carrier are more appropriate than those based on regional averages, respondent's cost data for considered TOFC service are incomplete in that there is no way of verifying the summary data used in its cost statement. Moreover, costs are computed only for proponent carrier's direct route and, in addition to that route, proposed rate would apply over 13 other routes for distances shown to be substantially longer in some instances; proposed rate is not shown to be compensatory over any authorized route and, therefore, may not be approved.—Glassware, Illinois and Missouri to New Orleans, La., 316 I.C.C. 559 (561-2).

Proposed reduced rate is not shown to be just and reasonable when respondents have submitted no cost data to show its relation to out-of-pocket cost of handling the traffic between the points involved. Not approved.—Pulpboard or Fiberboard, Fla., Ga., N.C., S.C.—Edgewater, 315 I.C.C. 434 (438).

Proposed joint barge-rail rate on coal, in minimum lots of 5,000 net tons, from in cars at Huntington, W. Va., to in cars at points in Chicago district is noncompensatory when weighted-average out-of-pocket cost for the rail movement, as restated to reflect respondent's 1959 annual-report data, exceeds the division the railroad would receive, and that cost, added to out-of-pocket cost for the barge line, plus cost of dumping at Huntington and of transfer to rail cars at Mount Vernon, Ind., produces a through out-of-pocket cost substantially in excess of the proposed rate; not approved.—Barge-Rail Coal, Huntington, W. Va., to Chicago District, 315 I.C.C. 129 (132-3).

Where proposed rates are published as separate proportionals and respondents' revenue on contemplated movements would be provided solely by those rates, the proportionals themselves must be shown to be compensatory; respondents made no such attempt, but based their claim of compensativeness on earnings from the through rates; available evidence indicates that the proposed rates would not be compensatory in the majority of instances; not approved.—Proportional Rates on Grain, Kansas City to Chicago, 315 I.C.C. 249 (252).

71.—Value of service.—[Vols. 3, 7].—See Brandy—West Coast to Eastern Points, §1(5), n. 147.

72. Equalization of rates; as to markets, ports, points of production or consumption.—[Vols. 3, 7, 9, 18, 19].—See also Boston & M. R. v. United States, §1 (5), n. 503.

Nothing short of rate parity will permit railroads serving port of New York to participate in transportation of a bulk commodity such as iron ore in competition with railroads serving

other ports, and there is nothing peculiar to movement of imported iron ore or the rate adjustment thereon which warrants finding that undue preference and prejudice would result from application of equal rates for the longer hauls and consequently higher costs on imported iron ore from New York than from Baltimore and Philadelphia to nine destinations in Ohio and western Pennsylvania. Relative distances from competing ports are only one factor in rate equalization on export and import traffic, and costs of New York railroads on such traffic are relatively no higher than to be expected from the differences in distance; proposed reduced rates from New York are reasonably compensatory over route of each respondent serving that port; approved.—Iron Ore from Eastern Ports to C.F.A. Points, 321 I.C.C. 473 (488, 489-90)*.

Neither possible or probable diversion of traffic from, nor adequacy of existing facilities at, ports presently handling the traffic are valid reasons for denying another port an opportunity to share in the business if it can induce shippers to use its facilities. As the ports of Los Angeles and Long Beach are unable, owing to lack of requisite facilities, to compete with north Pacific coast ports for imported lumber and plywood traffic, proposed absorption of port charges at designated interior California points, when shipments are trucked thereto by shippers for storage and processing prior to rail movement to transcontinental destinations, is lawful since it will merely place the California ports on competitive equality with the north coast ports.—Absorption—Lumber & Plywood—Pac. Coast Interior Orig., 316 I.C.C. 15 (23, 25).

Reduced all-rail export rate on firebrick from midwestern origins to Pacific coast ports, proposed to restore approximate equalization of through rail-ocean transportation costs through those ports to the Far East with those via gulf ports, which had been distrupted by general increases, disapproved when relatively low earnings cast serious doubt on its compensativeness; no pertinent cost data were presented, nor was serious attempt made to show by rate comparisons that it is within zone of reasonableness; reestablishment of port equalization, however desirable in ordinary circumstance, is no substitute for adequate proof that a rate proposed for that purpose would be compensatory.—Clay Products, West and Southwest to Pac. Coast Ports, 315 I.C.C. 571 (575).

74.—Maintenance of rate adjustment.—[Vols. 3, 7, 9, 19].—Every change of a rate schedule, whether voluntary or involuntary, is a disruption pro tanto of the rate structure theretofore prevailing; plainly such a disruption without more is insufficient reason for prohibiting a change.—Liquefied Petroleum Gas in Jumbo Tank Cars—S.W.F.B., 319 I.C.C. 31 (39).

The commission has long recognized the extreme sensitivity of grain to even slight changes in freight charges, and has generally refused to approve broad territorial rate adjustments on a piecemeal basis. Considering drastic nature of Southern Ry's reduced multiple-car rates on grain in jumbo hopper cars, it is even more important not to shatter the competitive balance among carriers, shippers, and receivers of grain in the Southeast, for, though the grain rate structure may be crumbling under force of unregulated competition, it still possesses characteristics of a huge blanket in which a tug at one end is felt at the farthest extremities. It is therefore necessary to temper the disruption of marketing practices and patterns which partial regulation of transportation appears to make inevitable, by permitting other southern railroads to establish equivalent multiple-car rates on 450-ton shipments in standard cars.—Grain in Multiple-Car Shipments—River Crossings to So., 321 I.C.C. 582 (612-3)*.

76.——New method of stating rates.—[Vols. 3, 19].—See also Guaranteed Rates, Sault Ste. Marie, Ontario, to Chicago, §1(5), n. 566a.

Lawfulness of innovations in ratemaking must be determined on basis of the surrounding circumstances and conditions, including material economic as well as physical facts, in particular situations. Though application of proposed multiple-car rates on soybean cake and meal as through rates from country origins under single-car origination rule, notwithstanding movement of the soybeans into the transit point is in single carloads, constitutes a departure from normal conditions restricting multiple-car rates to shipments mov-

ing in multiple-car lots at one time from one origin, to find them unlawful for that reason would completely ignore the practical situation encountered by respondents in movements of soybeans from country elevators to transit points for processing into cake or meal. Application of the multiple-car rates under the single-car origination rule is responsive to the physical manner in which soybeans move from country origins, and considered rates are not unreasonable per se.—Vol. Rates on Processed Meal—Midwest to Ports, 322 I.C.C. 456 (458-60).

However, finding that the proposed multiple-car rates are just, reasonable, and not otherwise unlawful is tantamount to approval of a new form of ratemaking, and such finding on the unusual circumstances involved does not constitute a precedent for indiscriminate use of that form of ratemaking.—Id., p. 478.

Proposed flat rates on corn and sorghum grains from Kansas City and Omaha groups to Lawrenceburg, Ind., without transit privilege and restricted to single shipments of 20 or more carloads, are compensatory and no lower than necessary to meet barge competition; they pose no threat to traditional grain-rate structure, as competing barge lines, which now handle practically all the traffic, already have volume rates and do not provide transit or construct their rates on the rate-break plan.—Grain—K.C., Omaha & Related Origins to Lawrenceburg, 315 I.C.C. 83 (86); nor will the proposed rates cause wholesale distortions by setting up lower combinations, since they would be available for making combinations only in connection with other multiple-car rates to or from points between which they are published, and there is no indication of such a possibility.—Id., p. 86.

77a. [Reasonableness of]—Other practices.—[Vols. 7, 9, 11, 16, 18, 19].—Proposed rule of Chicago, B. & Q. R. providing for inclusion of refrigeration in line-haul rates on fresh meats and packinghouse products from and to certain points in w.t.l. territory whenever charges paid are the highest resulting from use of (1) actual weight of lading, (2) minima of 30,000, 33,000, or 36,000 pounds for cars of specified lengths, or (3) the published minima plus 3,000, 6,000, or 9,000 pounds for cars of those lengths, found just and reasonable; and outstanding orders in 215 ICC 684, 241 ICC 503, and 253 ICC 351 modified accordingly. Resulting charges are compensatory on overall basis, since the few instances in which they do not cover out-of-pocket costs are minimal in amount, and are not competitively destructive since the Burlington's rates on those commodities generally exceed those of competing motor carriers, which include refrigeration.—Refrigeration, Meats & Packinghouse Products—Midwest, 319 I.C.C. 113 (114, 118, 120).

Carrier competition at East St. Louis does not warrant present difference in treatment of East St. Louis and St. Louis elevators with respect to switching charges; the very fact of competition between St. Louis elevator on respondent's line and East St. Louis elevators justifies establishment of competitive practices in connection with the elevator having a rate disability. Grain from origins on respondent's lines or beyond, transited at East St. Louis and destined to points beyond, may be switched back to St. Louis without additional charge; proposed absorption of crosstown switching charges on grain stored at respondent's St. Louis elevator, designed to place that elevator on parity with its East St. Louis competitors, is just and reasonable when resulting rates are shown to be compensatory.—Absorption of Cross-Town Switching charges on Grain, 319 I.C.C. 776 (780, 781)*.

Rule in tariff naming proposed joint rail-water rates on bulk grain from Illinois and Indiana origins to Buffalo, that cargo must be unloaded from the lake vessel by shipper and that any charges therefor shall be for shipper's account, is not shown to be unlawful. Though under unregulated water transportation the vessel is responsible for stevedoring cost of moving the grain from its holds to marine leg of the elevator at Buffalo, power shovels used in moving the grain to the marine leg are owned by the elevator and operated by stevedores who are employees of an independent contractor. Proposed rule is comparable to those in other tariffs governing operation of lake vessels in movement of bulk commodities.—Rail-Water, Grain in Bulk, from Mo., Ill., & Ind. to Buffalo, 319 I.C.C. 123 (128)*.

And proposed modification of that rule to meet protestant's objections, under which water carrier respondent would assume responsibility for moving the grain from the vessel's holds to the marine leg and allow the elevator operator or shipper a fixed amount for use of the required power shovels and electric winches, together with concurrent increase in the proposed rates, appears unobjectionable on present record; however, when and if such modifications are filed they will be subject to procedures provided by §15(7).—Id., p. 128.

And rule in same tariff requiring payment of demurrage for vessel loading and unloading time in excess of free time allowance of 1 hour for each 900,000 pounds loaded and 600,000 pounds per hour for unloading, both computed by consecutive hours including Saturdays and Sundays, is likewise lawful when average unloading rate for Buffalo elevators is shown to exceed one million pounds an hour and shipper is notified 24 hours in advance of arrival of a vessel.—Id., p. 128.

Proposed round-trip rates on motor vehicles on trilevel flatcars, restricted to apply only when consignee of inbound shipment is also consignor of outbound, loading and unloading is at shipper's expense, return shipment is tendered within 48 hours after first 7 a.m. following arrival of inbound shipment, and shipper certifies on outbound billing that the full one-way rate was paid on the inbound shipment, found just and reasonable. Where the same commodity would be shipped in both directions, 48 hours is a reasonable allowance of time for accumulation of a return load; and restriction of proposed rates to require use of same equipment for both movements (as in other return-haul rules) would serve no useful purpose, since cars used are specially designed and will be used only for a return load of motor vehilces from destination of inbound shipments.—Motor Vehicles on Trilevel Flatcars—Chicago, 318 I.C.C. 89 (90, 92).

Railway Exp. Agency's proposed rule governing l.c.l. incentive rates on wearing apparel, providing for consolidation of shipments from one consigner to one or more consignees at one or more destinations, and applying on both prepaid and collect shipments between all express stations in United States except Alaska and Hawaii, meets a very real need of many shippers and is just and reasonable. Provision for only one shipper eliminates evils inherent in ability of carrier to manipulate consolidation to detriment of consignors or consignees, and proposed rule and resultant lower charges are not unlawful merely because freight consolidators can use them. However, though no shipper has complained of REA's practice of accepting portions of such a shipment and treating them as tendered at one time if shipper advises it that entire aggregation can be picked up at its convenience, the rule should be restricted to aggregations tendered and receipted for in a single business day.—Aggregate Rates on Wearing Apparel—Ry. Exp. Agency, 318 I.C.C. 737 (740, 744, 746, 747)*.

Rule in tariff naming proposed TOFC rates on fresh meats and packinghouse products, requiring shippers to certify on bills of lading that they are owners of the property tendered for transportation, is not justified by small shippers' fear that two or more shippers located at same origin might band together to tender two trailers at a lower rate and thus place the small shipper at a disadvantage. No sound basis appears for departure from established principle that a carrier may not make ownership of the property moved the criterion by which its charges for carriage are measured; considered rule ordered canceled from schedules otherwise approved.—Meats, Fruits, Vegetables—TOFC—Transcontinental, 316 I.C.C. 585 (594).

80. Removal of existing or potential violation of law; discrimination between persons.—[Vol. 3].—See All Commodities, New York to Baltimore and Washington, §1(5), n. 495.

81.——Preference or prejudice between localities.—[Vols. 3, 7, 9].—Proposed reduced rates on fresh meats from four Ohio River crossings and St. Louis-East St. Louis to Florida destinations would substantially change existing rate relations to the prejudice of seven competing midwestern origins, without any justifying difference in transportation conditions, since the motor and private carrier competition relied on for proposed reduction of rate level from the preferred points is substantially the same at the seven prejudiced

origins. Not approved.—Fresh Meats, Ill., Ind., Ky., Ohio & Mo. to Points in Fla., 318 I.C.C. 5 (10).

Comparison of present rates on grain and products from Buffalo and Pittsburgh to trunkline and New England territories discloses substantial and competitively disabling rate discrimination in favor of Buffalo. None of the traffic has been moving from Pittsburgh at present rates and removal of the rate barrier is a necessary preliminary to further consideration of contemplated construction of grain storage and milling facilities at that point. Comparisons with rates in effect from other origins constitutes a prima facie showing, which is not rebutted, that the proposed reduced rates from Pittsburgh are comparatively just and reasonable and not unduly prejudicial to Buffalo or other flour milling points; approved.—Grain from Pittsburgh, Pa., to Eastern Base Points, 322 I.C.C. 218 (222, 227, 229-31)*.

92. Matters peculiar to the carriers involved; revenue needs of the carriers.—[Vols. 3, 7, 9, 11, 15, 19].—See also the Cut Flowers case, n. 7, above.

One of the criteria of a reasonable minimum rate is whether the carrier would be better off from a net-revenue standpoint with it than without it. Railroads' critical need for revenue is well known and was made a matter of formal record in 311 ICC 373. Reduction of rates without any indication of prospective net gain results only in needless dissipation of revenues and an accompanying unwarranted burden on other traffic. Proposed plan III TOFC rates on tractors from and to numerous points are not shown to be justified by private-carrier competition, and threaten to cut respondents' revenues from traffic they are now handling in conventional service, since it is unlikely that shippers would pay existing rates when plan III charges for the same quantity are so much lower, even considering cost they would incur to use that service. And in addition to the threat to respondents' net-revenue position, they would incur cost of returning empty trailers at no additional compensation. Not approved.—Tractors—T.L. & W. T. L. Territories to S.W. & W. T. L. Terr., 319 I.C.C. 758 (764-5).

Even without any increase in present rail volume of eastbound lumber traffic, proposed reduced transcontinental rates and increased minimum weights would increase respondents' net revenues by $3, $13.4, or $23.4 millions dependent on whether average loads per car increased to 70,000, 75,000, or 80,000 pounds respectively, and in light of experience of some respondents with similar incentive rates on lumber on the west coast, the proposed rates should improve respondents' net revenues by some $10 million annually. Since, even without additional traffic, respondents will be better off with the reduced rates than with their present higher rates,the reductions will not burden other traffic. Approved.—Reduced Transcontinental Lumber Rates, 1961, 318 I.C.C. 815 (825, 842-3).

Respondents have established need for additional revenue they will receive from proposed general increases of 7 cents on bituminous coal and 4 cents on lignite, for all-rail movements, to offset newly incurred costs of operation during the last several years; though coal is the most important single commodity handled by the railroads as a group, rates there-on have always been on a low level in relation to other traffic, and cumulative increases previously authorized on coal and coke are the lowest on any category except fresh fruits; the small flat increases proposed thus seem fair and appropriate in light of carriers' increased revenue needs.—Increased Rates on Coal and Petroleum Coke, 316 I.C.C. 159 (163-4, 175).

Although railroads in Pocahontas region are in stronger financial condition than those in other areas, coal rates are so constructed that competition between producing areas precludes increases in eastern territory without equivalent increases elsewhere; and exemption of coal originated by Pocahontas lines from approved increases would deprive connecting lines of needed revenues.—Id., pp. 162-3.

94.——Rate wars.—[Vols. 3, 7, 9, 11, 16-19].—See New York Central R. Co. v. United States, §15(1), n. 35.

96.——Competitive desires of particular carriers.—[Vols. 3, 7, 9, 11, 12, 14-17, 19].—See also Guaranteed Rates, Sault Ste. Marie, Ontario, to Chicago, §1(5), n. 514.

Carrier-initiated rates which are compensatory and required by local competition may not be disapproved merely because they depart from an overall structure the perpetuation of which would be harmful to the proponent carriers. Competition for corn traffic from Illinois and Indiana to the East is severe, and respondent north-south lines' cancellation of participation in joint rates from certain origin groups and application of their previously reduced local rates to Chicago, resulting in lower combinations than joint rates over other routes, was a necessary and practical action to counterbalance eastern railroads' reductions in flat rates from contiguous groups; otherwise they could not continue to participate in the traffic and elevator operators on their lines would suffer irreparable loss. Resulting combinations are compensatory and only one is as low as current rates to New York from adjacent groups; there was adequate justification for respondents' action and it was not unreasonable.—Corn and Corn Products from Ill. and Ind. to the East, 319 I.C.C. 568 (571, 572-3).

And counter-reductions by east-west respondents in single-factor rates from origins on their lines in same groups were necessary to meet competition at common or cross-country points in those groups. As distances between cross-country stations on the competing north-south and east-west lines are short and corn can easily be brought to either by truck, elevator operators where reduced rates apply have a definite advantage in bidding for corn, and a rate disparity of more than a few cents is sufficient to divert the traffic to the lower-rated point. The reduced rates are compensatory and on same level as combinations maintained by the north-south lines, and none of the rates under investigation is shown to be unlawful in any respect.—Id., pp. 573-4, 575.

While a carrier need not wait until the traffic is lost before reducing rates to meet proprietary competition, where private carriage is the sole justification advanced for proposed reductions respondent must show that it is indeed real, imminent, or reasonably foreseeable with respect to the traffic involved. To attract the relatively few tractors shown to have moved in other than for-hire service, and from one origin to only two destinations, respondents proposed plan III TOFC rates from and to numerous points, which threaten to cut their revenues from traffic they are now handling in conventional service. Evidence shows clearly that respondents are now obtaining the great bulk of shipper's traffic to the specified destinations and that the volume moving or likely to move in private carriage is insignificant. Considering the lack of evidence of competitive need and the serious threat to respondents' revenues from existing rates, the proposed rates cannot be found just and reasonable; cancellation required.—Tractors—T. L. & W.T.L. Territories to S. W. & W.T.L. Ter., 319 I.C.C. 758 (764, 766).

Motor protestants' fears that proposed reduced rail rates on iron and steel articles might divert so much traffic as to render their remaining operations unprofitable do not warrant disapproval thereof. Some protestants hauling exempt commodities rely on iron and steel traffic merely for added revenue on return movements to balance their exempt operations; however, the commission's rate jurisdiction does not extend to exempt transportation, and the proposed rates may not be disapproved merely to ensure return loads to exempt commodity haulers. Other protestants depend on trip-leasing equipment from owner-drivers after latter have delivered an exempt load; but purchased transportation agreements premised on a percentage of revenue afford no sound basis for determination of cost of their operations. However, proposed rates are disapproved on other grounds.—Iron and Steel from Ill., Ind., Kans., and Mo. to Iowa, 315 I.C.C. 403 (406-7, 408).

Though respondents insist that proposed reduced rates on brandy in packages and in tank cars from Pacific coast to eastern transcontinental groups were necessary to avert further losses to private and common motor carriers, no important motor competition for transcontinental movement is shown; intercoastal water carriers, the only protestants, provide the real competition. While latter publish only package rates on brandy, the tank-car rates discourage intercoastal package traffic; and though protestants serve only the more distant points in groups A and A-1

from the Pacific coast, proposd rates to those groups are the same as to less distant groups B and B-1. Moreover, record is not convincing that present flow of traffic would be materially changed if the rates were approved; proposed reduced rates are not shown to be competitively necessary; not approved.—Brandy—West Coast to Eastern Points—Bulk & Packaged, 315 I.C.C. 21 (22, 24-5).

Section 15. (8) Shipper's choice of route to be observed.—[Unchanged. See vol. 9, p. 7689.]

Amendments, see footnotes, vol. 3, p. 2010; historical note, p. 2010.

Historical Note

Rates and fares of railroads within the Alaska Railroad Act, jurisdiction of the commission, see Historical Note concerning Executive Order 11107 following §15(1).

Notes of Decisions

Volume 3—p. 2011; Volume 7—p. 5568; Volume 9—p. 7689; Volume 11—p. 9278; Volume 12—p. 10317; Volume 13—p. 11020; Volume 14—p. 11525; Volume 15—p.12109; Volume 16—p. 12756; Volume 17—p. 13442; Volume 18—p. 14203; Volume 19—p. 15393.

Right of Shipper to Route

29. Carrier named to participate in line haul.—[Vols. 3, 7, 16].—In absence of shipper routing to the contrary, an initial carrier is entitled to its long haul and is not guilty of misrouting if the shipment is transported over the cheapest available route affording it a line haul. Shipper located on Union Pacific's tracks at Salt Lake City tendered that carrier shipments consigned to Ephrata, Wash., with no routing specified other than Union Pacific, although single-factor rates were available over routes embracing lines of two other carriers from Salt Lake City. In the circumstances, UP was not required to give up its line haul of 886 miles to Spokane, over which route a higher combination applied, in order to route the traffic over one of the lower-rated through routes.—Eaton Metal Products Co. v. Union Pac. R. Co., 321 I.C.C. 340 (341)*.

Duty to Comply with Shipper's Routing

68. Conflict between rate and route.[Vols. 3, 7, 9, 11, 15-19].—The mere fact of a conflict between the rate and route inserted in the bill of lading by shipper places a duty on initial carrier's agent to obtain full and definite instructions from shipper, and if this duty is not performed, initial carrier is required to protect the rate in effect over the cheapest route giving it a line haul. Although rate inserted by complainant did not apply over any route conforming to its routing instructions "Frisco, CB&Q," the Frisco's local agent forwarded shipments over a higher-rated joint route of those carriers without directing shipper's attention to the conflict. As at time of movement the lower rate sought applied over a not unduly circuitous route embracing the Frisco as originating carrier and over which the higher single-factor rate applying over the route of movement did not apply, shipments were misrouted by the Frisco and complainant is entitled to reparation to basis of the lower rate named in the billing.—Producers Cooperative Oil Mill v. St. Louis—S.F. Ry. Co., 322 I.C.C. 267 (268, 269, 271)*.

87. Noncompliance with shipper's routing instructions because of unusual operating conditions.—[Vols. 3, 7].—Shipments of steel plates fabricated in transit at Philadelphia and forwarded to Groton, Conn., over a route over which combination rate on Philadelphia applied, instead of over either the route specified by shipper or one of alternative routes taking the same lower transit rate, were not misrouted when inspection by carrier's agent revealed that dimensions of considered ship-

ments exceeded the maximum clearance above the rail in a tunnel on the primary tariff route named, and also exceeded the maximum clearance allowance under two bridges on each of the alternative routes. Route of movement was the only practicable route, and shipper was promptly notified of result of the inspections and of the change in routing required.—Electric Boat Division v. New York, N.H. & H.R. Co., 319 I.C.C. 83 (84)*.

89. ——Emergency routing.—[Vols. 7, 17].—Emergency routing provision of tariff naming rate applicable over route specified by shipper beyond Philadelphia did not make that rate applicable on shipments of steel plates fabricated at Philadelphia which because of their dimensions and resulting clearance difficulties were necessarily forwarded over a higher-rated route; such difficulties cannot reasonably be interpreted as included in the type of emergencies designated in that provision, such as traffic congestion, washouts, or wrecks.—Electric Boat Division v. New York, N.H. & H.R. Co., 319 I.C.C. 83 (84-5)*.

Section 15. (9), (10) Liability, delivery contrary to routing instructions; direction of unrouted traffic.—[Unchanged. See vol. 9, p. 7695.]

Rates and fares of railroads within the Alaska Railroad Act, jurisdiction of the commission, see Historical Note concerning Executive Order 11107 following §15(1).

Notes of Decisions

Volume 3—p. 2037; Volume 7—p. 5583; Volume 9—p. 7697; Volume 11—p. 9279; Volume 12—p. 10317; Volume 13—p. 11021; Volume 14—p. 11526; Volume 15—p. 12111; Volume 16—p. 12758; Volume 17—p. 13444; Volume 18—p. 14204; Volume 19—p. 15395.

1. Construction, in general.—[Vols. 3, 7, 9, 12, 13, 18].—Section 15(13) is not intended to require allowances unless the service provided by the shipper is within the tariff in use in the instance under consideration.—Cooper-Jarrett, Inc. v. United States, 226 F. Supp. 318 (324)*.

7. "Allowance" construced.—[Vols. 3, 11].—No allowance can be made to shipper for performing a service, avoidance of which is the consideration for a lower rate; thus, rates for plan IV TOFC service, in which shipper furnishes the trailer and flatcar, on a lower level than rates for plan II service, in which carrier provides such equipment, do not constitute an "allowance."—Freight, All Kinds, TOFC, N. J. to Chicago & East St. Louis, 316 I.C.C. 397 (398).

15. Carrier's right and duty to furnish instrumentality and service; in general.—[Vols. 3, 7, 9, 12-14, 16, 17, 19].—The act requires a carrier to hold itself out to furnish the facilities of transportation, but it is not required to furnish facilities to pick up and deliver unless it holds out to do so, and there is no violation of the law if it publishes a lower rate for carrying freight that is brought to it by the shipper, since that is not the rendering of any service under the act connected with the transportation so far as the carrier is concerned; its responsibility as a carrier under §15(13) begins when the lading is delivered to it for transportation.—Cooper-Jarrett, Inc. v. United States, 226 F. Supp. 318 (324)*.

Ordinarily, railroads must furnish cars to transport traffic offered them, and if shipper furnishes special equipment owned or leased by it the railroads must pay a reasonable amount for their use thereof. Collectively, railroads cannot escape this obligation; the law clearly requires that amounts to be retained by railroads rendering service shall reflect their use of cars furnished by others.—Cancellation of Private Car Allowances, 322 I.C.C. 565 (570)*.

Compensation to Owner of Goods

38. Cost of service as measure of allowance.—[Vols. 3, 7, 9, 19].—Although the Burlington's icing studies show that its proposed refrigeration allowances for ice and salt when considered as a single service are substantially below its cost of furnishing such service, the allowances for ice and for salt are published separately and must therefore be considered independently. Average costs to the Burlington substantially exceed its published allowance to shippers who furnish their own ice, but not to those who furnish their own salt; and while amounts paid by shippers for ice are the same as proposed allowances, amounts paid by them for salt are less than the allowance. Since allowances may not exceed the cost to shipper, proposed allowances for ice are no more than just and reasonable, but proposed allowance for salt exceeds a reasonable maximum allowance to extent it exceeds Burlington's average cost of 83 cents per 100 pounds.—Refrigeration Allowances, Midwest, West, and Southwest, 322 I.C.C. 148 (152, 153).

When respondent's cost study shows that performance of spotting services within industry's west plant would cost it an average of $1.35 per loaded car and would cost the industry an average of $1.58 per car in interchange service, proposed allowance to the industry for performing such plant switching of $1.35 per loaded car is a maximum reasonable charge to be paid by respondent; approved.—A. O. Smith Corp. Terminal Allowance, 319 I.C.C. 99 (105-6)*.

39. Allowances must not create discrimination or prejudice.—[Vols. 3, 7, 9, 11, 19].—Aside from amount and propriety of proposed allowance, which are not considered, abandonment applicant's proposal to publish an allowance on all grain trucked for movement through its main-line stations from elevators on abandoned portion of branch line, in order to alleviate any burdens resulting from abandonment, does not of itself constitute unlawful preference, advantage, concession, rebates, or discrimination.—Chicago & N.W. Ry. Co. Abandonment, 317 I.C.C. 207 (216)*.

Allowances for Particular Instrumentalities or Service

49. Privately owned cars.—[Vols. 7, 9, 13-15, 19].—That rates are published for a complete service does not prevent a carrier from offering to perform a lesser service for a low-

er rate. Since allowances are published to adjust rates established for a complete service, the allowance applying when and if the cars are furnished by shipper or consignee, tariffs providing reduced unit train rates on coal, the cars to be supplied by shipper or consignee at no expense to carrier, need not contain allowance provisions and do not, directly or indirectly, contain concealed allowances or rebates.—Natural Gas Pipeline Co. of America v. N.Y.C. R. Co., 323 I.C.C. 75 (79).

Proposal of two Chicago switching lines to cancel provisions for payment of mileage allowances on cars furnished by shippers, and on foreign-line cars subject to the allowance tariff, when moved over their lines as overhead traffic, such allowances to be paid by their parent railroads when receiving a line-haul, would deny payment of allowances for distances mileage cars move over respondents' lines unless interchanged with the parent roads or accorded intra- or interterminal switching. Insofar as the proposal would result in no mileage allowances to car owners, it would reduce compensation for mileage cars and in many instances would require owners to accept lesser compensation for furnishing facilities which respondents are obligated to furnish, or, on leased cars, compel shippers to make larger payments to meet guaranteed minimum rental agreements. The switching lines' proposal is thus in derogation of their obligation to pay mileage allowances, and the practice is violative of §1(6). Not approved.—Cancellation of Private Car Allowances, 322 I.C.C. 565 (570-1)*.

55. Switching and spotting and plant switching.[Vols. 3, 7, 9, 11-14, 16-19].—Respondent is satisfied that it could perform all switching at industry's west plant at its ordinary operating convenience, with continuous movement of cars between plant interchange tracks and loading and unloading spots, and without interference or delay due to any disability or operations of the industry, including operation of motortrucks. Considering changed conditions within the west plant, results of switching test, and other evidence of record, proposed services, measured by principles of Ex Parte No. 104, Part II, as modified in 294 ICC 705, are not in excess of team-track switching which a railroad is obligated to perform under its line-haul rates, and for performance of which by the industry respondent may lawfully pay an allowance.—A. O. Smith Corp. Terminal Allowance, 319 I.C.C. 99 (105)*.

61. Icing, refrigeration.—[Vol. 16].—Since lawfulness of the Burlington's rates on meats and packinghouse products which include refrigeration service was established in 319 ICC 113, and its allowances to shippers for ice are shown to be no more than is just and reasonable, its allowance provisions for ice are lawful; but refrigeration allowances maintained by other railroads operating in w.t.l. territory may not be approved until it is established that services for which they are published are lawfully included in the line-haul rates.—Refrigeration Allowances, Midwest, West, and Southwest, 322 I.C.C. 148 (153).

62. Trailer-on-flatcar service.—[Vols. 17, 18].—Under TOFC plan II a railroad's responsibility begins when it receives the freight at shipper's dock or place of business, and services performed by shipper must be covered by allowances credited against the plan II tariff. But the question of allowances is not pertinent to plan III and IV tariffs: as used in plan III service, trailers are containers rather than instrumentalities of transportation, and carrier's responsibility does not begin until the freight is delivered to it by the shipper; under plan IV the statutory obligation to furnish transportation begins only when the flatcars are delivered to the railroad to be put into the line-haul operation; in both cases the delivery to the carrier is not part of the transportation covered by the act for purposes of §15(13).—Cooper-Jarrett, Inc. v. United States, 226 F. Supp. 318 (322, 324)*.

Section 15. (14) Other powers of commission not excluded.—[Unchanged. See vol. 9, p. 7707.]

Amendments, see footnotes, vol. 3, p. 2070.

Section 15a. (1) Fair return—"Rates" defined.—[Unchanged. See vol. 9, p. 7707.]

Amendments, see footnote, vol. 9, p. 7707; historical notes, vol. 3, p. 2071, vol. 7, p. 5589.

Section 15a. (2) Rule of rate-making.[Unchanged. See vol. 11, p. 9281.]

Amendments, see footnotes, vol. 3, p. 2077, vol. 11, p. 9282; historical notes, vol. 3, p. 2071, vol. 7, p. 5589; vol. 11, p. 9281, vol. 12, p. 10319, vol. 13, p. 11015.

Historical Notes

By Executive Order 11107, Administration of Alaska Railroads, dated April 25, 1963, the Interstate Commerce Commission is given jurisdiction "to fix, change, or modify rates for the transportation of passengers and property" under the authority set forth in the Alaska Railroad Act, 38 Stat. 305, which jurisdiction had been given to the Secretary of the Interior by Executive Order No. 3861 of June 8, 1923; latter order superseded. (28 FR 4225, April 30, 1963)

Executive Order 11107 codified at Title 49, Chapter II, Part 1200—Administration of Alaska Railroads (49 CFR §§1200.1 - 1200.4), 28 CFR 12278, Nov. 20, 1963.

Notes of Decisions

Volume 3—p. 2077; Volume 7—p. 5590; Volume 9—p. 7708; Volume 11—p. 9282; Volume 12—p. 10320; Volume 13—p. 11024; Volume 14—p. 11528; Volume 15—p. 12112; Volume 16—p. 12760; Volume 17—p. 13446; Volume 18—p. 14206; Volume 19—p. 15399.

1. Purpose and interpretation.—[Vols. 9, 11, 13-19].—Without limiting matters which the commission may consider in determining lawfulness of a rate, Congress has specified some of the factors which it must consider; among factors specified in the need of revenue sufficient to enable carriers to provide efficient transportation service. The commission's determination that proposed reduced rate was not just and reasonable in view of the resulting loss in carrier revenue, considered in the light of railroads' critical need for increased revenues, was within its statutory powers. The commission, charged with the duty of carrying out the national transportation policy, was both empowered and justified in making a decision that would not reduce the contribution of considered traffic to plaintiffs' net revenues; sustained.—Atlantic Coast Line R. Co. v. United States, 209 F. Supp. 157 (159-60)*.

Plaintiffs' contention that the commission failed to consider §15a(2) and the national transportation policy, in its approval of Erie-Lackawanna's proposed reduced multiple-car rates on iron ore, is without merit. The commission report shows that factors referred to in §15a(2), being related to those in the national policy, were considered in connection with the contention that proposed rates would threaten the iron ore rate structure and therefore be a destructive competitive practice; and that, based on evidence before it, the commission found the proposal did not constitute a destructive competitive practice. Although cases decided under §15a(2), which plaintiffs cited, might support a commission decision to disapprove the proposed rates, they do not compel such a result; moreover, the commission found that earlier decisions cited were not controlling in that they were distinguishable on their facts.—Baltimore & O. R. Co. v. United States, 249 F. Supp. 712 (718-9)*.

Nor does the record support plaintiffs' second contention, that the commission relied on §15a(3) in making its decision and that, in relying thereon, it treated a statute which was intended to apply to intermodal competition as modifying the law applicable in rail intermode cases. While the commission, in discussing "destructive competitive practice," cited cases involving intermodal competition and the application of §15a(3), that term is one found in the national transportation policy which is specifically applicable to all other provisions of the act; and in that discussion, the commission frankly stated that recent cases dealing with the question primarily involved intermodal competition, but that several criteria had evolved which were relevant to disposition of the proceeding before it.

Record is not convincing that the commission improperly applied §15a(3) to the controversy merely because it discussed the criteria to be considered in determining "destructive competitive practice." The commission's decision is found unlawful in all respects; complaint dismissed.—Id., pp. 719-20.

Defendant's unit train rates on steam coal from Lynnville Mine, Ind., to Hammond, Ind., conditioned on a minimum annual volume, are not shown to have adversely affected revenues of other railroads competing for transportation of coal to consignee's electric generating plant, or to have precipitated a rate war. Competing railroads have submitted no evidence of adverse effects on their traffic, and such a conclusion may not be merely assumed. Moreover, other carriers may make rate reductions, which may or may not be influenced by the assailed rates, without the result necessarily being a rate war unlawful under §15a(2) or (3).—Natural Gas Pipeline Co. of America v. N.Y.C. R. Co., 323 I.C.C. 75 (84).

Effect of §22, see Tennessee Products & Chem. Corp. case, §22(1), n. 2.

2. Effect of rates on movement of traffic.—[Vols. 9, 11-19].—Assuming, without in any way deciding, that (considerations of undue preference and prejudice aside) the commission could lawfully have disapproved proposed grain rates if it found they would adversely affect net revenue of proponent railroads, as plaintiffs urge, the court has grave doubts whether, in empowering the commission to prescribe a rate as unduly low, Congress meant to require it to examine the wisdom of proponents of rates which yield more than out-of-pocket costs when there is no threat of injury to competing carriers, the traffic will not move at higher rates, and when protestants' sole substantial claim is that, because of effect on other traffic, proponents of the rates would be better off if new movements of traffic did not occur; indeed, the implication of §15a(2) is to the contrary. However, since the commission considered and rejected plaintiffs' contention that proposed rates would disadvantage the railroads, and there is substantial basis for its decision, that question need not be specifically decided.—State of New York v. United States, 256 F. Supp. 634 (637-8)*.

Although §15a(2), a part of the rule of ratemaking, concerns the commission's power to prescribe rates, which is not directly involved in determination of lawfulness of proposed multiple-car rates on iron ore, the factors referred to therein are related to those set forth in the national transportation policy and are considered in connection with protestants' contention that the proposal threatens the existing rate structure on that commodity and is therefore a destructive competitive practice prohibited by that policy.—Iron Ore from Cleveland, Ohio, to Ohio and Pennsylvania, 323 I.C.C. 746 (753)*.

4. Honest, economical, and efficient management.—[Vols. 9, 11, 14-19].—See Grain in Multiple-Car Shipments—River Crossings to So., NTP, n. 5 *Competition and ratemaking.*

5. Earnings of carriers; carrier credit.—[Vols. 9, 11-18].—One of the criteria of a reasonable minimum rate is whether carrier would be better off from a net-revenue standpoint with it than without it. Railroads' critical need for revenue is too well known to require discussion, and establishment of lower rates without any indication of prospective net gain results only in needless dissipation of revenues and accompanying unwarranted increase in burden on other traffic.—Tractors—T.L. & W.T.L. Territories to S.W. & W.T.L. Ter., 319 I.C.C. 758 (765).

Future revenue effects cannot be determined with certainty, but must be based on prediction and estimate; the commission must exercise its judgment on all the evidence as to the probable revenue effects of a rate increase.—Texas Intrastate Passenger Coach Fares, 318 I.C.C. 151 (154)*.

Section 15a. (3) Competitive rate-making.—[Unchanged. See vol. 18, p. 14209].

Notes of Decisions

Volume 18—p. 14209; Volume 19—p. 15400.

2. Construction and interpretation.—[Vols. 18, 19].—See also NTP, n. 5 *Destructive competition, Inherent advantages.*

In view of the legislative history of §15a(3), there can be no doubt that purpose of the statute was to permit railroads to respond to competition by asserting whatever inherent advantages of cost and service they possessed. Moreover, Congress did not consciously or inadvertently defeat that purpose when it included therein a reference to the national transportation policy; principal reason for that reference was to emphasize the power of the commission to prevent railroads from destroying or impairing the inherent advantages of other modes of transportation. —I.C.C. v. New York, N.H. & H. R. Co., 372 U.S. 744 (757-8)*.

Congress did not regard the setting of a rate at a particular level to constitute an unfair or destructive competitive practice simply because that rate would divert some or all traffic from a competing mode; such an interpretation would be inconsistent with the mandate of the national policy to preserve inherent advantages of each transportation mode; §15a(3) made it clear that something more than even hard competition must be shown before a particular rate can be deemed unfair or destructive. Reference in the statute to the national policy was to prevent a carrier from impairing or destroying inherent advantages of a competing mode by setting a rate, below its now fully distributed costs, which would force a competitor with a cost advantage on particular transportation to establish an unprofitable rate in order to attract traffic.—Id., p. 759.

The commission's rejection of TOFC rates in issue, which it found to be compensatory, and its requirement of a differential over rates of coastwise carriers is not consistent with the mandate of §15a(3); its insistence that those rates be held up to a particular level to protect coastwise carriers' traffic cannot be justified on basis of the national transportation policy. Decision of the commission is not supported by the record; judgment of the district court vacated, and the cause remanded to the commission for further proceedings consistent with the Court's opinion.—Id., pp. 758-64.

The court having found invalid the commission's conclusion that the level of proposed multiple-car rates on grain from Ohio and Mississippi River crossings to the South would be inadequately compensatory and thus violative of §1(5) if undue prejudice found to result from proposed 240-cent minimum on movements under 346 miles were removed, the commission's conclusion that the proposed rates must therefore be increased 16 percent to avoid unfair and destructive competition in violation of the national transportation policy is likewise invalid and must be set aside because it violates §15a(3), exceeds the commission's statutory authority, and is not supported by substantial evidence in the record.—Cincinnati, N.O. & T.P Ry. Co. v. United States, 229 F. Supp. 572 (577, 578, 580)*.

Decision disapproving compensatory rail rate reduced to meet barge-truck competition could not be held to accord with the law if, by an unjustified use of the "fully distributed" costs of the barge-truck mode as the floor for the reduced rail rate, the commission was holding up the rail rate "to protect the traffic" of another transportation mode in contravention of the objectives and purposes of §15a(3). The court does not mean to imply that there may not be situations where the commission has power, under §15a(3) and the national policy, to prohibit reduced rail rates even though they are compensatory, but it does suggest that Congress has expressed a clear intent that reduced compensatory rates should be allowed; therefore, in disapproving such rates, the commission must state a rational basis for comparing "fully distributed" costs of the two modes to determine which has an

inherent cost advantage and, also, it should set forth adequate reasons to support tis choice of that standard to measure the relative efficiency of the competing carriers in providing considered service.—Louisville & N. R. Co. v. United States, 268 F. Supp. 71 (75-7, 82-3)*. [But see 392 US 571.]

The commission's finding that plaintiffs' all-commodity boxcar rates constitute a destructive competitive practice under §15a(3) is not adequately supported on the record. That term was meant to be applied only in context of competition between different modes of transportation and not for the purpose of supporting the classification provisions of the act, and the differential prohibition of §15a(3) was intended to be qualified only when factors other than normal incidents of fair competition intervene. Issues of the case should never have been framed under §1(6), nor should the meaning of the national policy, referred to in §15a(3), have been distorted to supplement it. The commission's order set aside.—New York, N.H. & H. R. Co. v. United States, 221 F. Supp. 370 (376)*.

Prohibition in §15a(3) against artificial differentials in rates of competing transportation modes may not be nullified merely because it will have an adverse effect on traffic of a competing carrier; "inherent advantage" and "destructive competitive practice" factors of the national transportation policy, not shown to be present, are the only two factors which may justify such an artificial differential. Even though railroad, as the low-cost mode, could afford to lower its rate to such an extent that motor carriers might find themselves priced out of the particular market, that factor alone would not justify qualification of the statutory prohibition, in absence of wrongful and unlawful cutting of rates below reasonable returns.—St. Louis-S.F. Ry. Co. v. United States, 207 F. Supp. 293 (297, 298)*.

The commission's finding that, although compensatory, proposed reduced rail and motor rates on cigars were not just and reasonable and setting of higher rates, with the rail rate 24 cents less than the motor to offset added cost of loading and unloading incidental to use of rail service, was motivated by erroneous concept that it was necessary to establish rates that would enable each mode to share the traffic on equal footing. While in the eyes of defendants and motor carrier intervenors the rates in issue seem most fair and equitable to all, practical effect of the commission's order is to stifle competition, rather than encourage fair competition among the carriers, in derogation of terms of §15a(3); order annulled and set aside.—Id., pp. 295, 298-9.

See also Baltimore & O. R. Co. v. United States, §15a(2), n. 1.

Inasmuch as the commission found that proposed reduced rail ratings on agricultural implements and road-making equipment were compensatory for proponents and that record did not permit determination of the low cost transportation mode for the traffic, its decision and order requiring cancellation of those ratings because they amounted to destructive competition injurious to various motor carriers is erroneous and reflects a misinterpretation of the law as amended by §15a(3). Competition is destructive and unlawful only when rates are so low as to harm proponents thereof, or so low as to deprive a competitor of his inherent advantage of being the low cost mode. In demonstrated absence of any destructive competition, railroads should not be precluded from asserting their inherent advantage of being able to haul increasingly heavy loads at reduced rates; the commission's order set aside.—Missouri Pac. R. Co. v. United States, 203 F. Supp. 629 (632-3, 635, 636)*.

In absence of showing of a destructive competitive practice or whether railroads or barge lines are entitled to an inherent advantage as the low-cost transportation mode, the commission's order requiring artificial increase of proposed all-rail rate on pig iron, published to meet exact cost of barge service and shown to be compensatory, by adding thereto amount of charges for switching and weighing at origin, could not be justified. While those switching and weighing charges are part of total cost of rail-barge movement, they are absorbed by shipper; almost all of considered traffic moves over barge lines and will continue so to move under the order. Under such circumstances, rates of one carrier may not be held up to a particular level to protect traffic of another mode of transporta-

tion; the commission's order set aside.—Pennsylvania R. Co. v. United States, 202 F. Supp. 584 (586)*.

Even before enactment of §15a(3) the commission recognized that a regulated carrier should not be prevented from meeting the major competition of unregulated carriers in order to protect another mode's minor participation in the traffic; and it has since frequently found, where private or unregulated transportation is the predominant competitive mode, that the indirect or incidental competitive injury inflicted by reduced rates upon regulated modes falls short of being destructive within meaning of the act.—Grain in Multiple-Car Shipments—River Crossings to So., 321 I.C.C. 582 (605)*.

Supreme Court's discussion in 372 US 744 of the relation between §15a(3) and the national transportation policy respecting destructive competition is particularly pertinent where by protestant water carriers' own showing rail respondents' proposed rate on candy to Texas, the same as protestants' rate from New York-New Jersey origins and substantially below their rates from Pennsylvania points, materially exceeds full costs from the New York City area and from Pennsylvania origins approaches them; full compensativeness of that rate from latter points is apparent from fact that costs for the shorter rail distances from Pennsylvania must be less than for the longer distances from New York. As the proposed rate is not unprofitable and is not shown genuinely to threaten continued existence of a transportation service uniquely capable of filling a transcendent national defense or other public need, there is no basis in law or fact for prescription of a differential to protect water protestants from the rate competition involved.—Candy and Confectionery from N.J., N.Y., & Pa. to Tex., 321 I.C.C. 154 (159). [But see dissent.]

And since the reduced all-rail rate is reasonable and neither competitively destructive nor discriminatory against the water lines, and rail rates between involved origins and destinations and the ports, though reflecting higher percentages of first class than the reduced rate, are not shown to be unreasonably high, there is no justification for prescription of either reduced proportionals to and from the ports or joint rail-water-rail rates sought by Seatrain Lines. To hold otherwise in the circumstances would constitute "umbrella" ratemaking, unfairly handicapping respondents. —Id., p. 161.

See also Igert v. United States, §4(1), n. 173.

Whether relief should be granted from order in 251 ICC 405 prescribing minimum differentials in ocean-rail under all-rail rates on pipe from official territory to the Southwest must be considered in light of §15a(3), since relation of rates of competing modes is involved, and rate bases required by that order impose a continuing limitation on rail respondents' exercise of their managerial discretion to meet competition where they find it. Even though Seatrain's participation in the traffic may be substantially reduced if the differentials are not continued, that alone does not constitute destructive competition; restated rail and water costs do not indicate which is the low-cost mode for entire origin and destination areas considered, and even if the cost advantage were found to lie generally with Seatrain, it does not appear that mere vacation of the order would unduly impair that advantage.—Wrought Pipe to the Southwest, 319 I.C.C. 310 (317)*.

On the present record, considered in light of 372 US 744, a requirement that all-rail rates on involved traffic be differentially higher than rates in connection with water movements is unsupported by sufficient evidence of cost, service, national defense, or other public need; and in view of changed conditions since the order was entered, to require rail respondents to continue participating in ocean-rail rates that reflect the prescribed minimum differentials would be contrary to §15a(3). Order vacated to extent it requires such differentials.—Id., pp. 317-8.

Proposed reduced barge-competitive rates on iron or steel bars are amply compensatory, and to require respondents to hold their rates at a higher level to protect the water carriers would be contrary to purpose and effect of §15a(3), especially when, owing to lack of adequate bargeline cost data, the bargelines cannot be found to have any inherent advantage that would be impaired or destroyed. [Citing 372 US 744.] At present level, respon-

dents are able to attract only 10 percent—compared with bargelines' 90 percent—of total annual tonnage moving from considered origin, and proposed rates are no lower than necessary to enable them to obtain a greater share of the traffic and increase their reveneus; approved.—Steel Bars, Lemont, Ill., to Iowas, Kans., Mo., Minn., & Nebr., 319 I.C.C. 292 (303-4).

See also All Commodities, New England to Chicago and St. Louis, NTP, n. 5 *Competition and ratemaking.*

Legislative history of §15a(3) makes clear that the purpose thereof was to permit carriers to meet competition by asserting whatever inherent cost and service advantages they possess; also, that reference was made therein to the national transportation policy to prevent carriers from destroying or impairing the inherent advantages of others. [372 US 744.]—Alcoholic Liquors from Md., N.J., N.Y., and Pa. to Fla., 319 I.C.C. 323 (328).

Even though the 70,000-pound rates of both rail respondents and Sea-Land on involved Florida citrus traffic are shown to exceed at least out-of-pocket costs, the record is inadequate to determine their relative cost and service advantages, and neither in opposition to the other has established which is entitled to a rate differential or parity. However, as Sea-Land's recently increased rates are not unreasonably high, and the railroads do not now attempt to justify their reduced rates except to extent that, with refrigeration charges added, they are no lower than corresponding Sea-Land charges, equalization of the rail and Sea-Land rates at that level would appear justified. The reduced rail rates, though not competitively destructive, are substantially lower than present motor or Sea-Land rates and are not shown to be just and reasonable.—Frozen Juice and Fruit from Florida to the North, 319 I.C.C. 577 (595-7).

Under §15a(3) rates may not be held up to any particular level to protect the traffic of any other mode, giving due consideration to objectives of the national policy. Proposed rail incentive class rates on traffic rated class 35 or higher, published to meet private and contract motor carrier competition, are not shown to be competitively destructive when average thereof on shipments rated class 100 and class 45, computed at weights 20 percent in excess of applicable minima of 10,000 and 24,000 pounds, exceeds rates maintained by protestant motor common carriers subsequent to filing of the proposed schedules.—Incentive Class Rates—Between Official & Southern Ter., 319 I.C.C. 448 (455).

Proposed joint rail-water rates on grain, designed to prevent further diversion from rail to unregulated motor or water transportation, need not be related to existing all-rail rates. Though competition between all modes is intense, there is no evidence that the proposed rates constitute a destructive competitive practice by impairing or destroying the inherent advantages of a competing carrier. While the proposed rates may result in lower revenues, they are reasonably compensatory, and are not below a minimum reasonable level when there is no evidence that the carriers would be better off without them than with them.—Rail-Water, Grain in Bulk, from Mo., Ill. & Ind. to Buffalo, 319 I.C.C. 123 (132)*.

Fully distributed costs for rail and water carriers, and comparisons thereof, may properly be considered as a facet of intermode competitive pricing situations under §15a(3) and the national transportation policy.—Grain in Multiple-Car Shipments—River Crossings to So., 318 I.C.C. 641 (646-7)*.

In determining whether a rate is lower han a reasonable minimum, §15a(3) requires consideration of facts and circumstances attending movement of the traffic by respondent. Proposed reduced motor rate, substantially higher than rail boxcar rate, is needed for respondent to attract any of considered traffic even where expedited motor service is desired; approved.—Alcoholic Liquors from Eastern Points to South Dakota, 318 I.C.C. 195 (198).

Since §15a(3) directs the commission to consider the facts and circumstances attending movement of the traffic by the carrier to which the rate is applicable, and cancellation of considered reduced rates on coal to Florida points would compel proponents to forgo the traffic, although it can be handled with advantage in existing southbound trains, and would pose a serious threat to northbound movement of phosphate rock, those rates should not be condemned as less than reasonably

compensatory merely because they fail to produce the return on investment in road and equipment normally considered in computation of out-of-pocket costs.—Coal from Southern Mines to Tampa and Sutton, Fla., 318 I.C.C. 371 (384, 385, 390).

Reduced rail TOFC rate on garden hose on same level as Sea-Land rate between same points is not competitively destructive in contravention of standards of §15a(3) when Sea-Land is not shown to be the low-cost mode, and the proposed rate is compensatory and is not shown to threaten continued existence of a service uniquely capable of filling a transcendent national defense or other public need.—Garden Hose & Electric Cable from N.J. or R.I. to Tex., 319 I.C.C. 227 (228, 229)*.

A reading of the national transportation policy together with §§ 1(5), 15(1), and 15a, especially in conjunction with the declared policy requiring recognition and preservation of inherent advantages, impels conclusion that to find that clearly compensatory TOFC plan III rates, and rail portions of plan V rates, on automobiles are competitively unfair or destructive—the railroads being the low-cost mode for that traffic as compared with motor carriers—would ignore the specific prohibition of §15a(3) that rates of a carrier shall not be held to a particular level to protect the traffic of any other mode; that result would follow whether the level is the same as or different from that of the competing mode. —Motor Vehicles from Kansas City to Ark., La., and Tex., 318 I.C.C. 301 (320).

Assailed TOFC rates which are not shown to be noncompensatory or otherwise unlawful may not be disapproved merely because they are below the level of rates of a competing mode; to do so would be tantamount to finding that they must be increased to a higher level to protect the traffic of another mode of transportation.—Middlewest Motor Freight Bureau v. Great Northern Ry., 316 I.C.C. 443 (447).

Though extent, if any, by which enactment of §15a(3) altered preexisting law is a matter of dispute, Congress did not intend to lessen intermodal competition, and the commission must interpret the general statutory commands and its own precedents in light of new competitive conditions and forces. Thus, in implementing the revised rule of ratemaking on a case-by-case basis, the commission has held that regulated carriers must be allowed considerable leeway in meeting unregulated competition; that failure of proponent of a reduced rate to show its fully distributed costs is not necessarily fatal; and that carriers claiming to be victims of destructive competition have some affirmative responsibility to establish their own costs. An though, in endeavoring to ascertain whether a reduction is proposed primarily to injure competitors or to achieve some commendable economic aim, the subjective intent of carriers can seldom be proven by direct evidence, it is generally possible, in light of all attendant facts and circumstances, to draw reasonable inferences as to whether a particular adjustment is predatory in character.—Meats, Fruits, Vegetables—TOFC—Transcontinental, 316 I.C.C. 585 (593-4).

The only reasonable inference from instant record is that proposed TOFC rates were not designed to destroy competition of regulated motor carriers, but to meet growing competition of private and illegal for-hire carriers and regain traffic lost over the years. Respondents' solution involved investment of millions of dollars in 85-foot flatcars and mechanically refrigerated trailers, and use thereof in a controlled two-way operation to minimize empty mileage; it now appears that they can afford to pass along some of resulting economies to their shippers; thus, proposed rate reduction would have been a rational economic decision even in absence of competition by regulated motor carriers. Moreover, protestants made no effort to show their costs for handling considered traffic, thus it cannot be determined whether or to what extent they could minimize diversion through rate reductions of their own, or whether condemnation of the proposed rates would be in public interest or solely in interest of protecting the high-cost mode of transportation.—Id., pp. 593, 594.

A tariff rule established by one mode of transportation, otherwise lawful and peculiarly adapted to its operating methods, may not be condemned simply because it might result in some competitive disadvantage to another

mode of carriage.—Pipeline Demurrage & Minimum Shipment Rule on Propane, 315 I.C.C. 443 (448).

The commission may not prevent respondents from establishing just and reasonable rates in order to preserve the present division of traffic between the various modes of transportation; otherwise, normal and healthy competition would be eliminated, contrary to intent of §15a(3) and the national transportation policy.—Iron and Steel from Ill, Ind., Kans., and Mo. to Iowa, 315 I.C.C. 403 (408).

Moreover, since the commission's rate jurisdiction does not extend to exempt transportation, it may not prevent establishment of reduced rail rates on iron and steel articles in order to insure a return load to haulers of exempt commodities; such action would encourage expansion of exempt carriage and unduly increase the burden on regulated carriers. Proposed rates disapproved on other grounds.—Id., pp. 408, 410.

In 293 ICC 133, the commission found that, consistent with objective of the national transportation policy to preserve inherent advantages of the respective modes of transportation, a reasonable rate adjustment on manufactured tobacco would be accomplished by establishing and maintaining motor rates no lower than corresponding rail base rates; proposed reduced t.l. rate on cigarettes from and to points in the same area, which would be lower than minimum level prescribed therein, not approved.—Cigarettes from Richmond, Va., to Baltimore, Md., 316 I.C.C. 68 (70).

While §15a(3) provides that a carrier's rates may not be held up "solely" to protect traffic of another mode of transportation, it specifically directs that due consideration be given objectives of the national transportation policy, which include preservation of advantages of each mode, promotion of sound economic conditions among the several carriers, and avoidance of destructive competition; thus, that section does not require approval of reduced rail rates which, though above out-of-pocket costs, are lower than necessary to meet existing water competition and threaten continued existence of the water service.—Pig Iron, Buffalo, N.Y., to Chicago, Ill., and Gary, Ind., 315 I.C.C. 601 (614)*.

On reconsideration, approval of the rate in issue from Cleveland, Ohio, to Chicago, and that from Toledo to Chicago and Gary, Ind., is warranted. However, the reduced rates on pig iron from Erie, Buffalo, and Niagara Falls area to Chicago area may not be approved when they would force protestant lake carrier to establish unprofitable rates to remain competitive and thus would impair or destroy its inherent cost advantage.—Id., 321 I.C.C. 121 (129-30)*.

Similarly, giving due consideration to objectives of the national transportation policy, respondents' contention that they should not be forced to cancel fully compensatory rates reduced to meet competition of unregulated motor carriers is not supported by adequate showing of any substantial diversion of considered traffic to such carriers; on the contrary, evidence is convincing that the reductions would result in destructive competition with intercoastal water carriers.—Brandy—West Coast to Eastern Points—Bulk & Packaged, 315 I.C.C. 21 (22, 25).

2. Enforcement of reparation orders by the courts, in general.—[Vols. 3, 7, 9, 11, 15, 17-19].—While governing statutes are subject to more than one interpretation, a commission order awarding reparations to a shipper is unquestionably reviewable by the courts and, in 337 US 426, similar orders were held reviewable in direct proceedings. A summary of pertinent statutes points out that §16(2) actions for enforcement of reparation orders and §17(9) suits to set aside commission orders are quite distinct proceedings, with different venue restrictions and different procedures; moreover, shipper bringing a §16(2) action has certain procedural advantages that may well be lost or impaired if carriers may attack the reparation order in a §17(9) direct review proceeding. In determining when and in what proceeding a railroad may challenge a commission reparation order, the court holds that carriers may obtain full review by defending shipper's §16(2) action and that policy underlying that section precludes them from obtaining review in a forum other than that chosen by the shipper. But no obstacle is found to carriers' bringing a §17(9) cross-proceeding in the forum shipper selects, should they so desire.—I.C.C. v. Atlantic Coast Line R. Co., 383 U.S. 576 (583-9, 602)*.

In determining where review of the order under attack is to occur, three conclusions are established as guideposts: (1) respondents have ample opportunity to obtain full review of the order through defense of shipper's enforcement action (filed in New York district court and held in abeyance pending outcome of instant case), (2) allowing respondents alternative of bringing direct review proceedings would substantially impair shipper's §16(2) right to select a convenient forum, and (3) limiting review of the order to the enforcement action would not be likely to result in disparity in treatment of shippers. Accordingly, as the reparation order was not accompanied by a cease-and-desist order, respondents may obtain review thereof only in the court where shipper filed its enforcement action—or where the shipper seeks review. Proceeding under review was not brought in the enforcement court; thus, the district court erred in entertaining respondents' §17(9) suit to enjoin and set aside the order and judgment of the Court of Appeals sustaining its decision must be reversed.—Id., pp. 578-9, 602-6.

This statute deals only with a suit brought to enforce payment by a carrier of money which the carrier has been ordered to pay; it is not applicable to a suit brought to recover overcharges on freight shipments.—Montgomery Ward & Co. v. Roy Stone Transfer Corp., 220 F. Supp. 137 (140)*.

In action to enforce order of the commission awarding plaintiff reparations which defendants declined to pay, fact that carriers were prevented from charging and collecting lawful reduced rate during period that injunctive order of the federal court (which the parties agree was erroneous) was in effect does not mean that defendants may retain overcharges which, due to the order, they were required to collect during that period. To permit such retention would result indirectly in establishing a rate by court order for the period in question; courts may not engaged in any semblance of ratemaking whatsoever, either direct or indirect, and have no power to establish rates.—Humble Oil & Refining Co. v. Great Northern Ry. Co., 212 F. Supp. 747 (752-6).

In such action, based on alleged overcharges, it is unnecessary for plaintiff to show damage from collection of higher rate in is-

sue; there is a distinct difference under the statute between a claim for overchages and one for damages. Plaintiff has paid cash out of pocket that should not have been required of it, and there is no question as to its proximate loss. [Citing 245 US 531.]—Id., p. 756.

In shipper's action to enforce reparation order of the commission on shipments from Grand Rapids, Minn., to Des Moines, Iowa, based on finding Des Moines to be an "intermediate point" over two routes from Grand Rapids to Chicago within tariff intermediate rule, the court must conclude that those routes are unreasonable and, therefore, incapable of invoking intermediate point rule. The commission has generally granted reparation in cases involving such a rule if the indirect route is not more than 50 percent circuitous compared with the short-line route; however, in 212 F. 2d 812, that commission test was rejected and reparation denied on ground of unreasonableness of a route involving 35 percent circuity. Accordingly, circuity over the routes in question being 45 and 37 percent, respectively, routing rail traffic from Grand Rapids to Chicago via Des Moines is unreasonable; such unreasonable routing cannot invoke intermediate rule so as to entitle plaintiff to rate sought; thus, the reparation order is contrary to law. Complaint dismissed.—Blandin Paper Co. v. Great Northern Ry. Co., 265 F. Supp. 761 (762-3)*.

3.——Jurisdiction.—[Vols. 3, 7, 11-13, 19].—Scope of judicial review, in shipper's suit to enforce order awarding it reparation and carriers' cross action to set aside the order, is determined by whether the issue presented is within the commission's primary jurisdiction. As the only question presented for review is the propriety of the commission's decision that commodity rates (rather than class rates charged) applied on plaintiff's shipments by virtue of intermediate rule in the commodity tariff, the issue raised is solely a question of tariff construction, and hence one of law. The tariffs involved are not easily comprehended and construed; but the court may not abdicate its responsibility to insure that the commission construes tariffs in accordance with the law merely because the question of construction is difficult to resolve. The court, in the exercise of its independent judicial function, can decide the principal issue involved, i.e., whether the commission's determination to apply the commodity tariff was an unlawful construction of that tariff.—Hygrade Food Products Corp. v. New York Central R. Co., 266 F. Supp. 946 (948-9)*.

4.——Venue.—[Vols. 3, 9].—Shipper has a broad choice of venue in proceeding involving its initial complaint to the commission (alleging unreasonableness of rail rates) which culminates in a §16(2) suit to enforce the commission's order awarding reparations. Under the statute, if carrier fails to comply with the reparation order, shipper has the right to file suit for enforcement thereof in either federal or state court; moreover, Congress has provided certain procedural advantages for the shipper, in such suit, to discourage the carrier's harrassing resistance to the reparation order. Actions under §16(2) for enforcement of reparation awards and §17(9) actions to set aside a commission order are distinct proceedings with different venue restrictions and different procedures; thus, while venue in district courts is determined by 28 USC §1398, restriction therein does not apply to suits commenced under §16(2), as that statute containes its own venue provisions.—I.C.C. v. Atlantic Coast Line R. Co., 383 U.S. 576 (580, 583-6)*.

8. Findings and order of commission prima facie evidence.—[Vols. 3, 7, 9, 11, 12, 15, 18, 19].—In action to enforce the commission's order awarding reparation to plaintiff shipper because of inapplicability of rates charged by defendants, under §16(2), the facts set forth in the commission's findings and order are prima facie evidence of the facts therein stated.There being no dispute thereof, the commission's findings are adopted as properly stating the facts.—Hygrade Food Products Corp. v. New York Central R. Co., 266 F. Supp. 946 (948)*.

12.——Review of evidence by court.—[Vols. 3, 7, 9, 11, 15, 16, 18].—In action to enforce the commission's order awarding plaintiff reparations based on higher rate, rather than lawful reduced rate, which defendants were required to collect during period injunctive order of the Oregon district court was in effect, whether or not facts relied on by defendants with respect to the injunction constitute a

defense is the real issue. Plaintiff's objections to introduction of evidence relative to the injunction are overruled; all evidence submitted will be considered.—Humble Oil & Refining Co. v. Great Northern Ry. Co., 212 F. Supp. 747 (751).

Section 16. (3) Limitation of actions.—[Unchanged. See vol. 18, p. 14210.]

Historical notes, vol. 3, p. 2149, vol. 13, p. 11058.

Notes of Decisions

Volume 3—p. 2151; Volume 7—p. 5620; Volume 9—p. 7727; Volume 11—p. 9291; Volume 12—p. 10322; Volume 13—p. 11026; Volume 14—p. 11532; Volume 15—p. 12116; Volume 16—p. 12766; Volume 17—p. 13451; Volume 18—p. 14212; Volume 19—p. 15405.

2. In general; construction and interpretation.—[Vols. 7, 9, 12, 17-19].—Provision of §16(3) that all actions at law by carriers subject to Part I for recovery of charges must be begun within 3 years from accrual of the cause of action relates only to suits in court for recovery of unpaid charges or undercharges, and cannot possibly apply to an investigation instituted by the commission under §13(3) and (4), upon petition of carriers seeking increases in intrastate rates corresponding to those authorized in interstate rates.—Oklahoma Intrastate Freight Rates and Charges, 321 I.C.C. 186 (207)*.

A statute of limitations does not confer any right of action, but restricts the period within which the right, otherwise unlimited, may be asserted. Such statutes, legislatively enacted, are founded on the general experience of mankind that valid claims are not neglected, and that a lapse of years without any attempt to enforce a demand creates a presumption against its original validity.—Plaswood Corp. v. Alton & S.R., 321 I.C.C. 434 (441).

6. Jurisdictional nature of limitations.—[Vols. 3, 7, 9, 12, 13, 15, 16, 18].—Section 16(3) is not the ordinary statute of limitations, to be invoked or waived as a defendant may elect; in limiting the power of the commission to consideration of claims filed within the periods therein defined, it is jurisdictional, and before an award of reparation may be made it must affirmatively appear that complaint has been seasonably filed. Since the statute therefore need not be pleaded, Rule 1.35 of Rules of Practice is inapplicable and does not foreclose defendants from offering evidence on the matter even though they did not plead the statute as a defense until they filed their brief.—R. M. Hollingshead Corp. v. Alton & S. R., 319 I.C.C. 86 (86-7).

8. Laches.—[Vols. 3, 9, 15].—Although 5 telegraphic informal complaints and one written one were filed within the statutory period, complainants failed to confirm the telegraphic complaints by submission of written complaints accompanied by sufficient copies for service on all defendants, and failed to correct deficiencies in the mailed informal complaint when called to their attention, prior to filing of formal complaint nearly 10 years later, following declination of other informal complaints. Because of failure over such a long period to perfect the 6 specified informal complaints in manner requested by the commission, complainants are estopped by the equitable doctrine of laches from raising issue of unreasonableness of rates charged on shipments covered thereby, which were included in the formal complaint.—Plaswood Corp. v. Alton & S.R., 321 I.C.C. 434 (439-40, 442).

Tolling the Statute

22. Acts sufficient to toll statute, in general.—[Vols. 3, 7, 9, 12, 14, 15, 17-19].—Motion to dismiss complaint on ground that complainant had abandoned its §6 allegation, and that registration of shipments on the special docket did not stay running of the statute as to issues under §§1 and 4 which were raised for the first time in formal complaint, overruled. Registration of the shipments was not under any particular section of the act and was sufficient to

stay running of the statute as provided in Rule 1.25(e) of the Rules of Practice.—Hygrade Food Products Corp. v. Atlantic Coast Line R., 318 I.C.C. 501 (502)*.

26.——Special docket application.—[Vols. 3, 7, 9, 12, 15, 17-19].—Overcharge claim on certain shipments, first made in formal complaint filed 4 years after delivery, is barred by §16(3)(c); special-docket application seeking authority to make reparation on ground of unreasonableness did not include claim of overcharges on those shipments, and no informal complaint was filed. Moreover, while issue of reasonableness ordinarily embraces applicability, the special-docket application referred solely to the rate east of Chicago, whereas the overcharged claim pertains to rates west of Chicago and is directed against carriers performing the transportation east of Chicago, none of which was named as defendant in special-docket application.—Wertheimer Cattle Co., Inc. v. Chicago, B. & Q. R. Co., 318 I.C.C. 167 (168).

Complaints

30. In general.—[Vols. 3, 7, 14, 18].—Even if formal complaint had been filed within 6 months after declination of informal complaint, it did not stop the running of the statute because it did not comply with Rules 17(b), 25(b), and 29 of the commission's Rules of Practice, which require signing and verification by an executive officer of complainant corporation and that formal complaints supply the data required of informal complaints by Rule 25(f); as that complaint was filed some 6 years after shipments moved, it follows that all shipments covered thereby are now barred.—Atlantic Coast Line R. Co. v. United States, 213 F. Supp. 199 (204, 205)*. [But see Thomson Phosphate Co. v. Atlantic Coast Line R. Co., 282 F. Supp. 698, aff'd 434 F. 2d 180.]

Complaint assailing rates on grain shipped on and between March 8, 1956 and Oct. 22, 1958 was filed on Sept. 22, 1959; complainant presented a list of numbers of claims for overcharges filed with defendants, showing date each claim was submitted and disallowed, but failed to identify shipments and delivery dates thereof. As no affirmative evidence is presented showing that the statute has been tolled, the commission's jurisdiction is limited to shipments delivered or tendered for delivery within the statutory period prior to filing of formal complaint provided by §16(3) and 1958 amendment thereof.—Farmers Union Grain Term. Assn. v. Canadian Natl. Rys., 315 I.C.C. 559 (560)*.

32. Definiteness.—[Vols. 3, 7, 9, 15, 17].—The particular shipments sought to be embraced in all of the informal complaints and the pending special docket cannot be determined with definiteness; the 12 proceedings listed by complainant appear to include some duplication of shipments; to extent allegations in the informal complaints and shipments covered thereby are not the same as those in the formal complaint, their consideration is barred.—Lakeland Hide & Leather Co. v. Atlantic Coast Line R., 316 I.C.C. 303 (304).

34. Informal complaints.—[Vols. 3, 7, 9, 11, 12, 15, 17, 18].—Informal complaint which sought reparation on shipments "during the past two years" and did not specify a single shipment by any identifying reference failed to satisfy requirements of Rule 25(b) of the commission's Rules of Practice; thus all shipments allegedly covered thereby are barred.—Atlantic Coast Line R. Co. v. United States, 213 F. Supp. 199 (202, 205)*. [But see Thomson Phosphate Co. v. Atlantic Coast Line R. Co., 282 F. Supp. 698, aff'd 434 F. 2d 180.]

Formal Complaints Based on Informal Proceedings

50. In general.—Vols. 3, 7, 9, 15, 18, 19].—Although payment of reparation to complainant pursuant to special docket order terminated informal complaint as provided by Rule 25(e) of the commission's Rules of Practice, complainant, 2 years later, requested reopening of the informal complaint by letter which contained no additional fact basis as required by Rule 25(f); the commission's perfunctory reopening of the informal complaint was therefore improper, and for that reason subsequently filed formal complaint was likewise barred.—Atlantic Coast Line R. Co. v. United States, 213 F. Supp. 199 (203, 205)*; effect of the commission's letter, stating that the

informal complaint was reopened "as originally filed," could at most be to reopen it only as to shipments prior to March 14, 1946, which is the way it was originally filed; and the commission failed to apply the language of its letter when it accepted formal complaint covering shipments in 1950 and prior years.—Id., pp. 203, 204. [But see Thomson Phosphate Co. v. Atlantic Coast Line R. Co., 282 F. Supp. 698, aff'd 434 F. 2d 180.]

52. Broadening informal complaints.—[Vols. 3, 7, 9, 13, 15-17].—Although overcharge claims and informal complaints tolled the statute as to applicability of assailed rates, they did not do so with respect to any other section of the act; thus, since formal complaints were filed more than 2 years after delivery of shipments, consideration of the allegation of unreasonableness is barred.—Sioux City Foundry & Boiler Co. v. Chicago, B. & Q.R. Co., 318 I.C.C. 13 (14).

54. Filing within six months after informal proceedings closed.—[Vols. 3, 7, 9, 11, 15, 17, 19].—As complainant submitted no additional facts with its request for a second reopening of its informal complaint (made 2 days after the commission's final declination thereof after first reopening) as required by Rule 25(f) of the commission's Rules of Practice, the second reopening and declination by the commission did not comply with Rule 25(f). Therefore, formal complaint covering shipments not embraced in the informal complaint as originally submitted (which was scope of first reopening), filed more than 6 months after the commission's first letter of declination, but within 6 months after its second such letter, was barred by §16(3)(b).—Atlantic Coast Line R. Co. v. United States, 213 F. Supp. 199 (203-4, 205, 206)*. [But see Thomson Phosphate Co. v. Atlantic Coast Line R. Co., 282 F. Supp. 698, aff'd 434 F. 2d 180.]

Claims for Damages Other Than Overcharges—Subparagraph (b)

80. Claims against carriers for damages other than overcharges, in general.—[Vols. 3, 7, 15-17, 19].—Section 16(3)(b) is jurisdictional and limits the commission's power to consider a complaint since it destroys the right as well as the remedy, it must be strictly construed, and it follows that Rule 25 of the commission's Rules of Practice must also be strictly construed. Payment of reparation to complainant in 1950 pursuant to special-docket order terminated informal complaint as provided in Rule 25(e), and formal complaint filed in 1956 covering shipments in 1950 and prior years was therefore barred by §16(3)(b) and the informal complaint did not stay the running of the 2-year limitation period.—Atlantic Coast Line R. Co. v. United States, 213 F. Supp. 199 (204-5)*; formal complaint was also barred by complainant's acceptance of further payment "in full" in 1955, which terminated and compromised whatever might then have been left of the informal complaint, and it could no longer stay the statute of limitations contained in §16(3)(b).—Id., p. 205. [But see Thomson Phosphate Co. v. Atlantic Coast Line R. Co., 282 F. Supp. 698, aff'd 434 F. 2d 180.]

In light of their legislative history, subparagraphs (b) and (d) of §16(3) have consistently been interpreted as providing that, regardless of whether undercharges are collected or action brought by carrier in 2 years or 3 years, shipper may file complaint for reparation on grounds of unreasonableness within 90 days after such charges are paid or action begun.—Foremost Food & Chemical Co. v. Alton & S. R., 318 I.C.C. 35 (38); where no court suit was filed by carrier within 3 years from date shipment was delivered, complainant has no liability for undercharges beyond that period.—Id., p. 38.

Accrual of Cause of Action—Subparagraph (e)

106. Time of accrual of cause of action, in general.—[Vols. 3, 7, 12].—Time periods fixed by §16 are jurisdictional and limit the commission's power to consider complaints thereunder; under §16(3)(b) a claim for recovery of damages not based on overcharges must be filed with the commission within 2 years from date the cause of action accrues upon delivery of tender thereof, and the 2-year period means 2 years from delivery to ultimate destination, not from delivery to consignee. In arguing that unloading of shipments determines the beginning of the limita-

tion period, complainants confuse provisions of §16 with carrier's duty under §1(3) and (4) to provide transportation services. While "transportation" in §1(3) includes delivery, transportation subject to regulation actually begins when the merchandise is placed in carrier's possession, and to constitute valid delivery it is essential that the car be surrendered physically or constructively to consignee at destination at a proper place and time—at industry's siding, public team track, or other agreed place. Under §16(3)(e), the cause of action on involved shipments accrued on dates they were delivered or tendered to consignees.—Plaswood Corp. v. Alton & S.R., 321 I.C.C. 434 (436-7).

Complaint assailing rate charged on Government shipments of crude rubber from port of New York to Pauline, Kans., did not put in issue shipments still in storage at Pauline under §22 transit arrangement, following decision in 166 F. 2d 98 that a carrier's right to sue on a transited shipment did not accrue until 1 year after actual delivery, when applicable rate became known and collectible; applicable rate on complainant's shipments remaining in storage cannot be determined until either complainant reships the rubber from Pauline or the transit privilege, which has been extended to 9 years, expires.—United States v. Atchison, T. & S.F. Ry. Co., 315 I.C.C. 259 (262).

Section 16. (4), (5).—[Unchanged. See vol. 9, p. 7739, vol. 11, p. 9293, vol. 15, p. 12120.]

Amendments, see footnotes, vol. 3, p. 2177; historical note, vol. 3, p. 2135; §16(5), vol. 3, p. 2178, vol. 12, p. 10324, vol. 14, p. 11533.

§16(5): Volume 3—p. 2178; Volume 7—p. 5646; Volume 17—p. 13454.

Section 16. (6)-(11).——[Unchanged. See vol. 9, 7740.]

Amendments, see footnotes, vol. 3, p. 2179; vol. 3, pp. 2182-2185; historical notes, vol. 3, pp. 2183, 2185, 2186.

Notes of Decisions

Volume 3—p. 2179; Volume 7—p. 5647; Volume 9—p. 7740; Volume 11—p. 9293; Volume 16—p. 12768.

§16(8): Vol. 3—p. 2183; §16(6): Vol. 18—p. 14216; Volume 19—p. 15408.

§16(6). 1. In general.—[Vols. 3, 7, 9, 16, 18].—Though plaintiff (who controls carrier to be acquired) urges that the commission, after first disapproving proposed acquisition, lacked power to change its decision or grant extention of time for consummation of the transaction when and as approved, especially over his protest that it should not honor acquiring carrier's application for hearing or relief unless joined in by him, he was not the applicant for §5 approval; acquiring carrier and its controlling stockholder were the applicants. Under the statute, the commission has great latitude respecting rehearing and timeliness; with proceedings pending before commission, district court, and State court, there was every reason why, for protection of plaintiff and all others, time for consummation should be extended until legal rights of parties to the original contract are judicially determined and the transaction either closed or abandoned. Plaintiff's appeal thus fails on its merits.—Walker v. United States, 208 F. Supp. 388 (394-5)*.

§16(6). 2. Necessity of notice to parties.—[Vol. 3].—See Oklahoma Corporation Commission v. United States, §13(4), n. 56.

Regulations of the Commission

32 FR 10794, July 22, 1967, Part 107a: Administrative Collection of Enforcement Claims, new Part 107a, adopting regulations published in 4 CFR Parts 101 trhrough 105, added, effective Aug. 1, 1967.

Section 16. (12) Proceedings to enforce orders other than for payment of money—[Unchanged. See vol. 11, p. 9294.]

Amendments, see footnotes, vol. 3, p. 2186, vol. 11, p. 9294; historical note, p. 2186.

Notes of Decisions

Volume 3—p. 9192; Volume 9—p. 7743; Volume 11—p. 9295; Volume 13—p. 11027: Volume 14—p. 11533; Volume 15—p. 12121; Volume 17—p. 13455; Volume 19—p. 15409.

10. Jurisdiction of Federal courts.—[Vols. 3, 14, 17].—In action to set aside the commission's order dismissing plaintiff's complaint before it, it is not a proper function of the reviewing court to probe mental processes of the decision-making agency; just as a judge cannot be subjected to such scrutiny, integrity of the administrative process must be equally respected. [Citing 304 US 1 and 313 US 409.] Review is upon the record made before the commission; to allow the commission's findings to be attacked or supported in court by new evidence would substitute the court for the administrative tribunal.—Walled Lake Door Co. v. United States, 31 F.R.D. 258 (260).

12. Capacity of commission to sue.—[Vol. 3].—The Attorney General has standing to bring suits to enjoin enforcement of State passenger segregation statutes, to restrain and remove unconstitutional interference with and burden upon interstate commerce; insofar as the actions involve violations of part I and the commission's order in 297 ICC 335 involving rail terminals, either the commission or the Attorney General may maintain the actions under provisions of §16(12).—United States v. Lassiter, 203 F. Supp. 20 (24).

See also United States v. City of Jackson, Miss., n. 16, below.

16. Parties defendant.—[Vols. 3, 13].—Interstate Commerce Act, as amended by the Elkins Act, has behind it the full force of the Commerce Clause giving the statute the broadest possible sweep of Congressional power. The United States has standing, with and without statutory authorization, to bring action against city, city officials, and interstate carriers seeking injunctive relief against racial segregation in passenger terminals in the city. Considering provisions of §§16(12) and 222(b), the Elkins Act, and 28 USC §2322, there is no question as to the Government's and the commission's standing to sue defendant carriers and, by implication, those statutes provide a basis for instant action against noncarrier defendants.—United States v. City of Jackson, Miss., 318 F. 2d 1 (8-10)*.

Statutory power to enforce substantive provisions of the law must carry with it the power to make such enforcement effective; in instant case, enforcement can be made effective only if relief is granted against noncarrier defendants who are causing the carriers to violate the statutes; and, there need be no community of interest between carriers and noncarriers sought to be enjoined. District court's failure to issue injunction against carriers and noncarriers constituted an abuse of judicial discretion; reversed and remanded with instructions that injunction sought be issued.—Id., pp. 10, 17.

42. Order of commission.—[Vols. 3, 9, 14, 17].—In actions involving minimum rental and sale prices for facilities at railroad's food terminal, the order of the commission, which required the railroad to cease and desist from providing space and facilities in the terminal to shippers and receivers of freight at less than a fair rental therefor, was not applied retrospectively. The court considered the situation as it existed on the effective date of the commission's order.—Birmingham Food Terminal, Inc. v. Southern Ry. Co., 205 F. Supp. 640 (642)*.

44. Order of court.—[Vol. 3].—While the court recognizes the merit of railroad's contention that tenants of its food terminal should be compelled to pay the difference between the rent each actually paid and that which the court finds that the railroad is compelled to charge and collect under the commission's order in 308 ICC 609, under the circumstances, and in the exercise of the court's discretion, such tenants are required to pay, and the railroad to collect, the new rents from first of the month in which the judicial decision was made rather than from effective date of the commission's order.—Birmingham Food Terminal, Inc. v. Southern Ry. Co., 205 F. Supp. 640 (645)*.

Section 16. (13) Copies of schedules, tariffs, contracts, etc., kept as public records; evidence.—[Unchanged. See vol. 9, p. 7744.]

Amendments, see footnotes, vol. 3, p. 2202; historical note, p. 2186.

Notes of Decisions

Volume 3—p. 2202; Volume 16—p. 12769; Volume 17—p. 13455.

10. Production of record by commission.—[Vols. 16, 17].—Plaintiff's motion, in action to set aside the commission's order dismissing its complaint against railroads, for an order requiring the commission to produce certain documents is denied and the commission's objections to interrogatories concerning those documents is sustained. Documents in issue, all of which are internal memoranda, staff recommendations, and instruments of similar nature, are privileged because they are an integral part of the decision-making machinery of an administrative agency; just as memoranda between a judge and his clerk are privileged, privilege of considered documents arises not from their content but from their nature, i.e., internal working papers of the commission. In any event, those documents are irrelevant, since in reviewing an administrative order the court must base its decision solely on evidence in the record.—Walled Lake Door Co. v. United States, 31 F. R. D. 258 (259-60).

Section 17. Commission procedure; delegation of duties; rehearings—(1) Divisions of commission; organization; composition.—[Unchanged. See vol. 11, p. 9295.]

Amendments, see footnotes, vol. 3, p. 2213, vol. 11, p. 9295-9296; historical notes, vol. 3, p. 2213.

Section 17. (2) Reference of matters to divisions, individual commissioners, or boards.—[Unchanged. See vol. 11, p. 9296.]

Amendments, see footnotes, vol. 11, p. 9296; historical notes, vol. 3, p. 2213, vol. 11, p. 2927, vol. 15, p. 12121, vol. 16, p. 12769, vol. 17, p. 13456, vol. 19, p. 15410.

Historical Note

It is recommended that §17(2) be amended so as to authorize the commission to delegate to qualified individual employees, including transportation economists and specialists, those matters which have not involved taking of testimony at a public hearing or submission of evidence by opposing parties in the form of affidavits.—Annual Report, 1963, p. 13; renewed, Annual Report, 1964, p. 65-6.

Notes of Decisions

Volume 18—p. 14216; Volume 19—p. 15410.

1. In general.—[Vols. 18, 19].—The contemporaneously enacted paragraphs of §17 should be construed in pari materia.—Malone Freight Lines, Inc. v. United States, 204 F. Supp. 745 (748)*.

Regulations of the Commission

27 FR 3830, Apr. 20, 1962: Assignment of Work, Business and Functions, item 11(c) of the Organization Minutes relative to Operating Rights Review Board, amended, effective Apr. 21, 1962.

27 FR 9997, Oct. 11, 1962: Assignment of Work, Business and Functions, item 7.4(a) of the Organization Minutes relative to Temporary Authorities Board, amended, effective day after date of order.

28 FR 198, Jan. 8, 1963: Operating Rights Review Board, specification of types of cases in which the board may make determinations, effective on date of order.

28 FR 896, Jan. 30, 1963: Assignment of Work, Business and Functions, items 4.4(p) and 7.5(a) of the Organization Minutes amended, effective Jan. 30, 1963.

28 FR 7693, July 27, 1963: Central and Field Organization (27 FR 2424), under section 3 Bureau Organization; item (c)(1) revised, new item (c)(4) added, item (d) amended, and item (k) revised, effective on date of order.

28 FR 8013, Aug. 6, 1963: Assignment of Work, Business, and Functions, item 6.2 (Chairman of the Commission) is amended by adding paragraph (e), effective Aug. 12, 1963.

28 FR 8185, Aug. 8, 1963: Assignment of Work, Business, and Functions, items 4.2(j) and (w) and item 7.11(b)(1) of the Organization Minutes amended, effective on date of order.

29 FR 3027, March 5, 1964: Assignment of Work, Business and Functions; Assignments to Boards, item 7.11(c) Operating Rights Boards, amended, and Item 8.4, under heading Rehearings and Further Proceedings, amended. Also, Appendix C is revised, all effective on date of order.

29 FR 3683, Mar. 24, 1964: Description of the Central and Field Organization, revised current description dated Jan. 1, 1964.

29 FR 4935, April 8, 1964: Assignment of Work, Business, and Functions, Item 2.4 of the Organization Minutes, under the heading Divisions of the Commission, amended, effective on date of order.

29 FR 11401, Aug. 6, 1964: Organization; Assignment to Boards, Item 7.11(a)(1) amended, effective on date of order.

29 FR 12331, Aug. 27, 1964: Description of the Central and Field Organization (29 FR 3683), miscellaneous amendments.

29 FR 12503, Sept. 1, 1964: Organization Minutes, under the heading Assignment of Duties to Individual Commissioners, Item 6.3(f) is revised.

29 FR 14517, Oct. 22, 1964: Organization Minutes, Item 6.3(m) amended, Item 6.5(c) added, and Item 6.6 renumbered as 6.7 and new Item 6.6 added, effective on date of order.

29 FR 16846, Dec. 8, 1964: Organization Minutes, under the heading Assignment of Duties to Individual Commissioners, item 6.2(c) is amended.

29 FR 17020, Dec. 11, 1964: Organization Minutes, under the heading Terms, Duties, and Responsibilities of Chairman, Vice Chairman, and Senior Commissioner present, Item 3.8 amended; and under the heading Committees of the Commission, Item 5.2(a), (b), and (c) deleted.

30 FR 2628, Feb. 27, 1965: Finance Review Board, specification of types of cases in which the board may make determinations, effective March 1, 1965.

30 FR 5723, Apr. 22, 1965: Organization Minutes, Item 6.3 Vice Chairman of the Comission, paragraphs (a), (b), (c), (d), and (k) are amended and, under the heading Assignment to Boards, a new Item 7.13 Accounting and Valuation Board is added.

30 FR 8246, June 26, 1965: Organization Minutes, Item 6.3 Vice Chairman of the Commission, new paragraph (n) added; and Item 9.1 amended, effective on date of order.

30 FR 9788, Aug. 5, 1965: Organization Minutes, miscellaneous amendments under (a) heading "Assignment of Duties to Divisions" and (b) heading "Assignments to Boards" so as to reflect changes in assignment of work resulting from the commission's reorganization of its headquarters staff, effective on date of order.

30 FR 10069, Aug. 12, 1965: Central and Field Organization, revised current description dated July 31, 1965.

30 FR 11013, Aug. 25, 1965: Central and Field Organization (30 FR 10069), Bureau of Enforcement, §(i) revised.

30 FR 11189, Aug. 31, 1965: Organization of Divisions and Boards and Assignment of Work, Business and Functions, revised, effective on date of order.

30 FR 12559, Oct. 1, 1965: Organization Minutes, paragraph (b) of Item 6.3 and Item 7.13 of Organization Minutes (30 FR 11189) amended, effective on date of order.

31 FR 242, Jan. 7, 1966: Organization Minutes, paragraph (aa) of Item 4.4, and paragraph (c) of Item 7.7 of Organization Minutes, as amended, (30 FR 11189 and 12559) further amended to reflect changes in assignment of work resulting from Presidential Reorganization Plan No. 3 of 1965, effective on date of Order.

31 FR 9248, July 6, 1966, Organization Minutes, paragraph 1 of item 4.2(t) and paragraph 2 of item 74(a) relating to Organization of Division and Boards and Assignment of Work (30 FR 11189, 12559, 13302, 31 FR 242, 2762) amended as set forth, effective on date of order.

31 FR 9529, July 13, 1966, Organization Minutes, Assignment of Duties; Item 4.2(t) and Item 7.4(a) amended as set forth, in connection with initial decision-making responsibility of Temporary Authorities Board in applications for temporary authority by water carriers and, also, those received as a result of a strike; effective on date of order.

31 FR 12693, Sept. 28, 1966, Organization Minutes, Assignment of Duties; Item 3.12 is redesignated as Item 3.13 and Item 3.12 is added reading as set forth, effective on date of order.

31 FR 13099, Oct. 8, 1966, Organization of Divisions and Boards and Assignment of Work, Business and Functions, paragraphs 0 and t of item 4.2 amended; and item 7.4(c) amended, effective on date of order.

32 FR 431, Jan. 14, 1967, Organization of Division and Boards and Assignment of Work: In connection with giving Review Boards jurisdiction to approve withdrawal of exceptions, to enter effective orders, and to stay recommended orders and vacate such stay, Organization Minutes (30 FR 11189, 12559, and 13302; and 31 FR 242, 4762, 9529, 12693, 13099, and 14025), are further amended as follows: Item 7.6(d), Item 7.11(c), and Item 7.12, revised.

32 FR 7105, May 10, 1967, Organization: Operations Boards, Item 7.7 of Organization Minutes is vacated and reserved, and Item 7.8 of Organization Minutes is amended, to reflect transfer of the commission's safety functions to Department of Transportation and the reassignment of certain remaining functions.

32 FR 8000, June 2, 1967: Organization of Divisions and Boards and Assignment of Work, Organization Minutes, Items 4.2, 4.3, 4.4, 6.3, 8.4 and 8.6 amended, and Items 6.5(c) and 6.6 deleted, to reflect transfer of safety functions to Dept. of Transportation and recent amendments to Items 7.7 and 7.8.

32 FR 8784, June 20, 1967: Organization Minutes, with a view to conferring general jurisdiction on all Review Boards, Items 7.6, 7.11, 7.12, 8.4, 8.5, and 8.6 are further amended.

32 FR 8690, June 16, 1967: ICC Central and Field Organization [supplemental to ICC Organization Minutes], revised current description published.

32 FR 10127, July 8, 1967: Organization Minutes, miscellaneous further amendments to reflect the new organization of the Office of Proceedings.

32 FR 10955, July 26, 1967: ICC Central and Field Organization (32 FR 8690), Items 2(d), 3(f), and 3(g) revised, effective on date of order.

32 FR 14627, Oct. 20, 1967: Organization Minutes (30 FR 11189), as amended, Item 6.4 is amended to indicate that appeals from hearing officers on requests for discovery will be disposed of by Chairman of respective division.

33 FR 4067, Feb. 20, 1968: Organization Minutes, as amended, Item 4.2(a) and Item 7.12 further amended by order of Feb. 13, 1968.

33 FR 5780, April 13, 1968: Central and Field Organization (32 FR 8690, as amended), Item 1(a) amended to show current addresses of certain area offices, deletion of listings for three area offices, and addition, in Region 1, of two area offices, effective on date of order.

33 FR 7795, May 28, 1968: Organization Minutes, as amended, present Item 7.3 is redesignated as Item 7.3(a) and new paragraph (b) is added thereto; Item 7.6 is further amended by adding thereto paragraph (d) as set forth, both amendments by order of April 3, 1968.

Section 17. (3) Conduct of proceedings; seal, oaths; quorum; rules.— [Unchanged. See vol. 11, p. 9297.]

Amendments, see footnotes, vol. 3, p. 2208, vol. 11, pp. 9297-9298; historical notes, vol. 3, p. 2208, vol. 11, p. 9298, vol. 15, p. 12121.

Notes of Decisions

Volume 7—p. 5657; Volume 12—p. 10324; Volume 14—p. 11534; Volume 15—p. 12122; Volume 16—p. 12770; Volume 17—p. 13456; Volume 18—p. 14217; Volume 19—p. 15411.

1. Authority of commission to control procedure before it.—[Vols. 3, 7, 9, 14-16, 19].— Under broad delegation of procedural rule-making authority, which authorizes the [Federal Communications] commission to conduct its proceedings in such manner as will best conduce to the proper dispatch of business and to the ends of justice, that com-

mission was empowered to promulgate a rule of procedure (in investigation proceeding which it initiated) requiring public proceedings except where proponents of a request for *in camera* treatment demonstrated a need therefor. And, that commission did not abuse its discretion in applying such procedural rule and rejecting respondents' request for confidential treatment of material in documents required to be produced by subpena duces tecum issued by presiding officer in the investigation proceeding.—FCC v. Schrieber, 381 U.S. 279 (289, 294, 298-90). [Not arising hereunder.]

See also Soo Line R. Co. v. United States, §5(2), n. 111, and Chicago, B. & Q. R. Co. v. New York, S. & W. R. Co., APA, 5 USC *Examiners*.

1a.—To correct errors.—[Vol. 18].—See Oklahoma Corporation Commission v. United States, §13(4), n. 56.

Although motions to strike in whole or in part applicants' exceptions to joint board's recommendations in their Alaska "grandfather" applications are in certain respects well placed, the pleadings give impression of a personal vendetta between counsel, reflection of which cannot be tolerated in proceedings before the commission. Attention of those responsible is called to canons 25, 29, and 38 of the Code of Ethics for Practitioners, and they are admonished to observe the same under penalty of disciplinary action.—Al Renk & Sons, Inc.—Alaska "Grandfather" Application, 89 M.C.C. 91 (93-4).

6. Objectionable matter.—[Vols. 15-19].—While applicant may have been somewhat strenuous in its contentions, language of its exceptions is not objectionable; motion to strike denied.—Porter Transp. Co. Extension, 91 M.C.C. 178 (179).

Regulations of the Commission

27 FR 7640, Aug. 2, 1962, Part 6: Fees for copying, certification, services, etc., paragraph (h) of §6.1 amended, effective on date of order.

28 FR 7397, July 19, 1963, Part 6: Fees for copying, certification, services, etc., paragraph (h) of §6.1 amended, effective on date of order.

29 FR 8418, July 3, 1964, Part 6: Fees for copying, certification, services, etc., paragraph (h) of §6.1 amended, and the Commission's policy regarding reproduction of copies of transcript from any source other than the official reporter stated, effective on date of order.

30 FR 8968, July 16, 1965, Part 6: Fees for copying, certification, services, etc., §6.1 Charges, paragraph (h) amended, effective on date of order

Section 17. (4) Powers of divisions, boards, etc.; effect of orders, etc—[Unchanged. See vol. 11, p. 9298.]

Amendments, see footnotes, vol. 3, p. 2218, vol. 11, pp. 9298-9299; historical note, vol. 3, p. 2213.

Notes of Decisions

Section 17. (5) Findings, etc., of commissioner or board; accompanying statement and recommended order; copies to parties; exceptions; recommended order as commission's order.—[Unchanged. See vol. 11, p. 9299, vol. 19, p. 15414.]

Amendment, see footnote, vol. 11, p. 9299; historical note, p. 9300.

Notes of Decisions

Volume 11—p. 9300; Volume 12—p. 10325; Volume 13—p. 11028; Volume 14—p. 11535; Volume 15—p. 12123; Volume 16—p. 12771; Volume 17—p. 13457; Volume 18—p. 14218; Volume 19—p. 15414.

10. Reopening on commission's own motion.—[Vols. 11-15, 17].—There is no question that the commission is empowered to reopen and reconsider determinations previously made; but though no specific court decisions are found on the commission's authority to reopen and reconsider its order after it has become subject of a court proceeding, in cases cited the court's approval of stay of its proceedings pending commission reconsideration was apparently obtained prior to the commission's order reopening the proceedings before it. However, the commission's reopening of proceedings while they are subject of judicial review, without prior request of or notice to the court, is insufficient reason of itself for the court's holding the commission's subsequent order void and of no effect. Even though such action by the commission may be offensive to the tradition and rules whereby lower courts are unable to act in their matters once they are pending on appeal, and courts may expect the courtesy of prior notice from the commission, the reviewing court is reluctant to hold that they may demand it.—Atchison, T. & S.F. Ry. Co. v. United States, 231 F. Supp. 422 (427)*.

Nevertheless, this practice of the commission contravenes the basic constitutional principles of separation of functions and due process of law. The act of defending in court an agency's judicial determination is executive, not judicial, and it is arbitrary and unfair when, to perfect that defense, an ex parte reconsideration of a judicial determination is made. It is also arbitrary and unfair, and a denial of due process, when a judicial branch of a regulatory agency, without notice to the appellant and an opportunity to be heard, may change and adjust its judicial position to facilitate a victory by its executive branch for its original judicial determination; such a situation might well demand of the court that it hold the report and order on reconsideration void and of no effect.—Id., p. 428.

Such action might be justified in instant case had plaintiffs not agreed by stipulation that further proceedings in the district court be stayed pending the commission's reconsideration of its original order. Although that agreement postdates the commission's ex parte action, plaintiffs are estopped from complaining that such action was arbitrary or unfair, and also from complaining that its "amplification" of its original order under guise of reconsideration was arbitrary and a denial of due process. Moreover, due consideration of all facets of the matter is convincing that no prejudice to plaintiffs has resulted from the manner in which the commission handled its "reconsideration," and that the drastic action which might be taken in a more appropriate case is not justified.—Id., pp. 428, 429.

See also Central Pac. Ry. Co. Control, §5(2), n. 45 *Conditions imposed*, and §5(9), n. 10.

15. Recommended order; effect; stay.—[Vols. 12-16, 18, 19].—There is a distinction between the time when an order of the commission becomes effective and the time when it is administratively final. Railroad's filing of a petition, requesting further hearing and an extension of time for filing exceptions, within 30 days from date of recommended order disapproving its proposed discontinuance of interlocking stayed the effective date of the recommended order. Therefore, the commission was not bound by the recommended order, although the petition was not disposed of within 30 days from its date, since there is no commission rule or any law that requires disposition of a petition for rehearing within 30 days of service of a recommended order. And, in postponing the time for filing exceptions, the commission acted within its discretionary statutory power.—Legge v. United States, 244 F. Supp. 878 (880-1)*.

The most cursory examination of examiner's report in consolidated application proceedings reveals the exact basis and reasons for the examiner's recommendations; the report amply reviews the evidence, sets forth detailed findings of fact, and in all other respects complies with requirements of Administrative Procedure Act. Even if the report could have discussed the evidence in greater detail or expanded the findings of fact, this is not required where the report contains findings which apprise the court of the essential basis of the commission's decision. The examiner having complied with his duty under §8(b) of APA to include a statement in his report, it was permissible for the commission

to affirm and adopt the examiner's report as it did.—North American Van Lines, Inc. v. United States, 217 F. Supp. 837 (842)*.

Though petitions of two applicants (in consolidated proceeding) seeking reopening, and leave to file exceptions to the examiner's recommended order, were filed after the recommended order had become effective by operation of law, issues raised by those petitiona are related to and should be disposed of concurrently with those in the other embraced proceedings; therefore, applicants' late-filed exceptions are accepted for filing as petitions for reconsideration.—Mollerup Van Lines, 95 M.C.C. 338 (339)*.

Practitioner who participated in both initial and further hearings on control application as an interested party did not file exceptions to examiner's report and recommended order after the prior hearing and did not seek reconsideration of the prior report; as his subsequent petition for leave to file exceptions does not set forth reasons justifying his failure to timely file such exceptions, it is denied and the exceptions rejected.—Roush—Control—Southern California Freight Lines, 90 M.C.C. 459 (460)*.

20. Employee boards, function of.—Since, by virtue of the 1961 amendment to §17(5), the commission has statutory power to authorize reconsideration of an examiner's recommended report and order by an employee board designated for that purpose, the court cannot agree with contention of plaintiffs (protestants in motor carrier application proceeding) that the commission abrogated its adjudicatory responsibility and delegated its decision-making process to its Operating Rights Review Board when it referred the applicant's exceptions to examiner's proposed report and order to that board for review.—Trailways of New England, Inc. v. United States, 235 F. Supp. 509 (511-12)*.

And inasmuch as neither plaintiffs nor the commission viewed the board's determinations as administratively final, the commission neither abdicated its decisional function to the board nor departed from representations it made to Congress in support of the 1961 amendment, i.e., that opportunity would be afforded for review of an employee board's action by the commission or an appellate division thereof. Indeed, Division 1 of the commission, convened as an appellate tribunal, reviewed the board's determinations and sustained them as consonant with the evidence and the law; thus, it was through the division, rather than the board, that the commission finally spoke. An opportunity was, therefore, afforded for a review of the employee board's action.—Id., p. 512.

Plaintiff's doubt of the commission's power to exercise §5 jurisdiction through its Finance Review Board is without merit. In disapproving proposed purchase transaction, the commission approved the board's findings and conclusions, that the transaction had not been shown to be consistent with public interest, by adopting them; clearly such procedure is permissible under §17(5) as amended Sept. 14, 1961.—Tank Lines, Inc. v. United States, 236 F. Supp. 354 (356)*.

Section 17. (6) Rehearing, reargument, or reconsideration of decisions, orders, and requirements.— [Unchanged. See vol. 11, p. 9301.]

Amendments, see footnotes, vol. 11, p. 9301; historical notes, vol. 3, p. 2204, vol. 9, p. 7745, vol. 11, p. 9302.

Notes of Decisions

Volume 11—p. 9302; Volume 12—p. 10326; Volume 13—p. 11029; Volume 14—p. 11536; Volume 15—p. 12124; Volume 16—p. 12771; Volume 17—p.13458; Volume 18—p. 14219; Volume 19—p. 15414.

10. Rehearing; reconsideration.—[Vols. 11-19.—On appeal from judgment of three-judge district court, limited to validity of the form of the judgment, which set aside the commission's order dismissing appellee's complaint alleging undue preference and prejudice of assailed rail rates, that portion of the lower court's judgment which instructs the commis-

sion to grant relief to appellee, and precludes it from reopening the remanded proceeding for receipt of additional evidence relevant to question of whether the rates in issue are in fact unreasonably preferential in violation of §3(1), is an improper limitation on the commission's duty to reconsider the entire case. Accordingly, the judgment is vacated and proceedings remanded to the district court with instructions to remand to the commission for further proceedings consistent with that court's opinion.—United States v. Saskatchewan Minerals, 385 U.S. 94 (95)*.

Although §1(15) authorizes the commission to dispense with a preliminary hearing in connection with issuance of emergency car service orders, the act nevertheless permits an affected carrier to file a petition for "rehearing, reargument or reconsideration" in advance of effective date of the order, and this automatically stays implementation of the order until the commission has ruled on the petition. Thus, when railroad failed to avail itself of that option and did not contest validity of Service Order No. 947 until after commencement of suit against it for civil penalties for alleged violations thereof, the commission was afforded no opportunity to reconsider its order in the light of affected carrier's specific criticism; such opportunity to reconsider and to determine whether railroad objections are of sufficient substance to overcome need for immediate action or call for revision, is even more valuable because the §1(15) order was issued without notice and hearing.—United States v. Southern Ry. Co., 380 F. 2d 49 (51-2, 54-5)*.

That the commission has no power to review an appellate division decision, even if the proceeding involves an issue of general transportation importance, is made clear by §17; provisions of §17(5), (6), (7) and (9) show clearly that when Congress used "division" it did not mean to include an "appellate division," and that when it meant to refer to an "appellate division" it used that precise term. Moreover, legislative history of §17 confirms the fact that Congress never intended that the commission should review a matter once it was decided by an appellate division to which it had been referred. The commission has the choice in the first instance whether it or an appellate division will act on an application for reconsideration; but once the matter is referred to an appellate division and it has acted, under the statute that is the end of the matter so far as the commission is concerned. Any review of the decision thereafter can only be had by a court.—Transamerican Freight Lines, Inc. v. United States, 258 F. Supp. 910 (913-5, 916-7, 919)*.

Rule 101(a)(4) of the commission's Rules of Practice, seemingly recognizing administrative finality of an appellate division decision, expressly states that a petition requesting a finding that a question of general transportation importance is involved shall not be considered an application for reconsideration; nevertheless, it also states that such a finding may be made by the commission "on its own motion." Under Rule 101(a)(4), once the commission determines that an issue of general transportation importance is involved and decides to review an appellate decision, all semblance of its finality is lost, and the purpose of the statute is defeated; therefore, since the rule is inconsistent with the statute, it can be given no effect.—Id., p. 918.

In action to set aside the commission's order denying plaintiffs' petition for reconsideration of ex parte approval of transfer of motor carrier operating rights under §212 (b) and the transfer rules, and denying their request for oral hearing, nothing of record shows an abuse of the commission's discretion; such petitions and requests are addressed to the sound discretion of the commission and its denial thereof may be reversed only on a clear showing of abuse of discretion. Plaintiffs' explanation as to why evidence they sought to present could not be submitted in affidavit form does not justify vacating the commission's order; and mere allegations in a petition unsupported by evidence are insufficient to create need for a hearing of any kind; sustained.—A. L. Root Transportation, Inc. v. United States, 280 F. Supp. 152 (156-7)*.

While the commission's order denying plaintiff's (protestant) petition for reconsideration of decision granting authority to defendant motor carrier did not specifically refer to second complaint (filed after recommended report and order was filed), although plaintiff asked that findings therein of subsequent vio-

lations be considered with particular reference to applicant's fitness to receive a certificate, it is apparent from the whole record that the commission was conversant with the second complaint and recommended findings therein, and that its decision was to dispose of the application and its collaterals finally. On the petition for reconsideration the commission had all of plaintiff's arguments and the full record of the case before it, and the detailed Division 1 opinion adequately covered the subsequent violations; while second complaint might have been mentioned affirmatively, it was substantially covered by the scope of the decision. Grounds advanced for reconsideration did not call for reversal of Division 1; complaint dismissed.—Public Service Coordinated Transport v. United States, 247 F. Supp. 985 (986-8)*.

Argument that it was unreasonable for the commission to grant a rehearing of its original decision in complaint proceedings after the long interval that elapsed between the original decision and reopening of the proceedings is refuted by provision of §17(6) that any party, subject to such limitations as the commission may establish, may "at any time" apply for rehearing or reconsideration of the same or any matter determined in a decision or order. The words "any time" mean "any" time, and not "within a reasonable time." Obviously, Congress intended to confer on the commission the flexible power to change its decisions after rehearing at any time.—United States v. I.C.C., 221 F. Supp. 584 (589)*.

In addition to the continuing jurisdiction to modify or rescind its prior orders granted to the commission by Congress and approved by the courts, in instant case the commission actually exercised such authority by specifically delaying the effective date of its orders (including the order under review, which granted control authority previously denied), within which period the various parties filed the various applications for reconsideration which ultimately brought the litigation before the court. The commission did not abuse its discretion in reconsidering the merits of the controversy in light of exception made in an earlier case to its policy against splitoff of interstate from corresponding intrastate rights; an application by instant defendants as plaintiffs, prior to their having called such exception to the commission's attention, might well have resulted in the court's dismissal of their petition for not having exhausted the administrative remedies before the commission, or in a remand to it for the purpose of considering the exception.—Alamo Exp., Inc. v. United States, 239 F. Supp. 694 (698)*.

The fact that the commission reconsidered the control application in light of that exception without a three-judge court having said it should do so does not make its action in so doing arbitrary. Finding no abuse of discretion in the commission's applying a recognized exception which had not earlier been called to its attention, the court has no reason to reverse or remand; on the contrary, self-correction of its own errors through the use of judicial inventiveness and imaginative resourcefulness should be the aid of a well-run administrative agency. The order sustained. —Id., p. 698.

Administrative rehearings are not matters of right but of pleas to discretion; and the discretion to be invoked is that of the body making the order, not that of the reviewing body. The granting or denial of petitions for rehearings are matters for the discretion of the commission.—Legge v. United States, 244 F. Supp. 878 (881)*; and commission determination with regard thereto will not be disturbed except on a clear showing of abuse of discretion. As there is no showing of abuse of discretion, denial of plaintiffs' motions for rehearing, or for reconsideration, was not in error.—Tank Lines, Inc. v. United States, 236 F. Supp. 354 (356)*; Oklahoma Corporation Commission v. United States, 235 F. Supp. 803 (807)*; Melman v. United States, 231 F. Supp. 503 (507)*; Black Ball Freight Service v. United States, 223 F. Supp. 191 (198-9)*; Atlantic Coast Line R. Co. v. United States, 209 F. Supp. 157 (160)*.

In accordance with the decision in 225 F. Supp. 973, plaintiffs' contention that the division which had decided the merits of the case, acting as an appellate division, could not properly entertain and pass on their petition for reconsideration of the report and order of that division, is not tenable.—Chief Freight Lines Co. v. United States, 230 F. Supp. 79 (81)*.

Commission order denying reconsideration

is not at variance with statutory mandates. The examiner's proposed report set forth his findings of fact in some details; the reviewing board expressly adopted his statement of facts and elaborated its conclusions; and appellate division of the commission, in turn, denied reconsideration on the ground that findings of the board were in accordance with the evidence and applicable. The Division was not bound to a choice of the examiner's contrary conclusions if those of the board were supported by the evidence; nor was it required to restate the board's report which clearly it adopted as its own; sustained.—Trailways of New England, Inc. v. United States, 235 F. Supp. 509 (512)*.

See also Deioma Trucking Co. v. United States, APA, 5 USC, *Reports*.

Congress, in recognition of the consistent holdings of the courts that rehearings before administrative bodies are addressed to their own discretion, in §17(6) invested the commission with authority to adopt rules regulating applications for rehearing; under that section the commission has power to make rules or orders confining the right to apply for rehearing, reargument, or reconsideration to proceedings involving issues of general transportation importance, where the order was entered by the commission or a division; but even though no issue of general transportation importance is involved, the right so to apply may not be thus confined where the matter was referred to an individual or a board under provisions of §17(2).—Malone Freight Lines, Inc. v. United States, 204 F. Supp. 745 (749, 754)*.

Analysis of paragraphs (1)-(9) of §17, construed in pari materia, is convincing that the commission did not exceed its statutory authority in amending Rule 101(a) of its Rules of Practice to limit administrative review, in proceedings not announcedly involving issues of general transportation importance, to determination, with administrative finality, by the same division which made the prior decision, acting in an appellate capacity.—Id., pp. 748-50.

Amendment of rule 1.101 of the Rules of Practice (so as to make final a division decision which has adopted a hearing examiner's decision unless a matter of general transportation importance is involved) while plaintiff's petition for modification and interpretation of its certificate was pending did not unlawfully deprive plaintiff of its right to file a petition for reconsideration by the entire commission, although hearing on the interpretation petition was held only one day after effective date of the amendment. The general rule is that amendments touching only procedure apply to pending actions; rule 1.101 is entirely procedural and therefore could properly be applied to all pending cases. Plaintiff has not shown a question of general transportation importance and therefore is not entitled to reconsideration by the entire commission.—Keystone Motor Exp., Inc. v. United States, 228 F. Supp. 793 (799-800)*.

Though plaintiff contends that the commission conducted application proceeding in a cursory manner by permitting the decision of two members of Division 1 to stand (one having dissented) without a rehearing by the entire commission, it does not assert that the commission's action was illegal or did not conform to its Rules of Practice. Under §17(6) the commission has specific authority to render division decisions final and, by its general rules, to restrict the right to file petitions for reconsideration of division decisions by the entire commission to cases involving "an issue of general transportation importance." Plaintiff's petition to have instant proceeding declared to involve such an issue was denied; the commission's action sustained.—Clark Transport Co. v. I.C.C., 233 F. Supp. 839 (842-3)*.

Since the commission had determined that railroad abandonment proceeding did not involve issues of general transportation importance, prior to appellate division's adoption without change of the hearing examiner's recommended report and order therein, appellants' contention that the commission's regulation (Rule 101 of the Rules of Practice) denying them a right to file a motion for a rehearing is unlawful because its power to take such steps under §17(6) does not extend to cases involving general transportation importance, and that theirs was such a case, is without merit.—State of Arizona v. United States, 220 F. Supp. 337 (342)*.

See also Davis & Randall, Inc. v. United States, APA, 5 USC, *Hearing.*

There is no merit in plaintiff's contention that consideration and disposition of his petition for reconsideration by the division, acting in an appellate capacity, which had determined that certain of his operations were for-hire transportation (for which operating authority is required) denied him due process of law. As the commission is a quasi-judicial administrative agency exercising judicial functions in its licensing and enforcement activities, reconsideration or review of its decision is not essential to due process provided due process was accorded in the original determination. Due process was accorded plaintiff in the proceedings in the first instance and, as there is no constitutional right to appeal to all or a majority of the commission, his claim of deprival of due process cannot be sustained.—Studna v. United States, 225 F. Supp. 973 (980-1)*.

Since the commission's order authorizing plaintiff's proposed stock ssue subject to the challenged condition was administratively final under Rule 1.101(a) of its Rules of Practice, the Secretary's refusal to file plaintiff's petition for reconsideration was proper under the commission's revised procedure limiting the right to apply for reconsideration.—Chicago, S.S. & S.B. R. v. United States, 221 F. Supp. 106 (110)*.

Except in a single instance distinguished by extraordinary circumstances, it has been consistently held that petitions for rehearings before administrative bodies are addressed to their own discretion. Administrative consideration of evidence always creates a gap between closing of the record and promulgation of the administrative decision, particularly where the issues are difficult, the evidence intricate, and consideration of the case deliberate and careful; it is therefore a rule almost of necessity that rehearings are matters, not of right, but of discretion, and that the discretion invoked is that of the body making the order, not a reviewing body (322 US 503); and only a showing of the clearest abuse of discretion could sustain an exception to that rule (327 US 515).—Suburban Transit Corp. v. United States, 215 F. Supp. 717 (721-2, 725, Note 9)*.

That the commission, in denying plaintiff's application and granting authority sought to a different applicant, acted on evidence 2-1/2 years old, and that its decision was the third in a row of different decisions on same record, do not in themselves give rise to any right to reopening of the record for rehearing. It was clearly within the commission's competence to weight plaintiff's allegations as to changes in conditions and circumstances since close of hearing against matters alleged in answer filed by the successful applicant, and examination of the petition and answer discloses no reason for finding that the commission, in denying plaintiff's request for rehearing, ruled arbitrarily and capriciously. Viewed individually or as a whole, the circumstances alleged by plaintiff, including character of its operations under temporary authority granted after the record was closed, are not of a level of importance that would deprive the commission of exercise of its discretion.—Id., pp. 725-6.

Moreover, although plaintiff, at the time it successfully sought review by the commission of the decision of Division 1, had been operating under the temporary authority for nearly 6 months and had ample opportunity to accumulate the evidence now proffered, it did not then petition for reopening but only for reconsideration and oral argument. Carriers should not be allowed to reopen the case for introduction of evidence available for production months before the commission acted; in the circumstances, plaintiff cannot now complain of the commission's exercise of discretion in denying its petition; the commission's orders sustained.—Id., p. 726.

Petitions for rehearings before administrative agencies are addressed to the sound discretion of the agencies and only a showing of the clearest abuse of discretion can suffice to overturn their denial. The commission's Rule of Practice 1.101(b) provides that a petition seeking to introduce evidence must show that the evidence is not cumulative and that there is reason why it was not previously introduced; thus there is a substantial burden on petitioner. The courts have held that summary denial of such a petition in the words "no sufficient cause" is adequate and that further findings and conclusions are unnecessary if it is clear that the commission gave due consid-

eration to the petition; the commission's order denying plaintiff's initial petition for further hearing to present additional evidence shows that it did so.—Colorado-Arizona-California Exp., Inc. v. United States, 224 F. Supp. 894 (901-2)*.

The evidence plaintiff now seeks to introduce on rehearing is substantially the same as was rejected by that order; it is not explained why the proffered evidence was not available at the hearing, and no showing is made to support allegation that plaintiff was prejudiced by combining the hearing with hearings on applications of two larger carriers. Inasmuch as the primary "changed circumstance" relied on by plaintiff—cancellation of a competitive interline arrangement—apparently occurred before the hearing, it cannot be said that the circumstances have taken any unexpected turn. Nor does evidence of plaintiff's operations under temporary authority or of grants of temporary authority to other carriers have any logical bearing on issue of whether plaintiff sustained its burden of showing public convenience and necessity at the hearing. It is clear that the commission gave consideration to the substance of plaintiff's petition, and its denial thereof was not an abuse of discretion.—Id., p.902.

Petitions for rehearing or reconsideration are addressed to the sound discretion of the commission, and denial thereof is not open to question unless a clear abuse of such discretion is shown. Summary denial of petition for rehearing in application proceeding, for the purpose of showing certain changes in the transportation situation, in the words "no sufficient cause" is clearly acceptable. It is not within the court's power to determine whether a different result might have been reached had the proffered evidence been submitted for rehearing.—Watkins Motor Lines, Inc. v. United States, 243 F. Supp. 436 (443)*; a claim of new evidence will not justify a holding that denial of rehearing was an abuse of the commission's discretion.—Campus Travel, Inc. v. United States, 224 F. Supp. 146 (149)*; similarly, in the absence of "good cause shown," denial of plaintiff's application to reopen its "grandfather" proceeding (closed in 1943), and the commission's refusal to waive application of rules 1.101(e) and 1.102 of its Rules of Practice did not constitute an abuse of discretion. Commission order sustained.—Cardinale Trucking Co. v. United States, 232 F. Supp. 339 (347-8)*.

The commission's denial of plaintiff's petition for further hearing on the issue of interpretation of its certificate was not an abuse of discretion; plaintiff presented no satisfactory explanation for its failure to adduce "additional evidence" of technological nature at the original hearing. Moreover, it is not probable that additional technological evidence would have affected the commission's ultimate decision.—U. S. A. C. Transport, Inc. v. United States, 235 F. Supp. 689 (692, 694)*.

In action to set aside decision and order of the commission holding that motor carrier authority sought was within exemption of §203(b1), since plaintiffs' late-filed petition for (1) leave to intervene, (2) waiver of rule 101(e) of the Rules of Practice, and (3) reopening and reconsideration showed good cause and was based on averments reasonably pertinent to issues therein, and since plaintiffs were diligent in acting when they acquired knowledge of the order, the commission abused its discretion when it denied their petition. Judgemnt for plaintiffs.—National Bus Traffic Ass'n. v. United States, 212 F. Supp. 659 (661-2)*.

See also Tidewater Express Lines, Inc. v. United States, §203(b), n. 60.

Though abandonment and trackage rights applications were filed separately, they involved interrelated matters and were decided by Finance Board on a consolidated record; thus, railway labor association, as intervener in the trackage rights proceeding but not in the abandonment proceeding, was qualified as a party to petition for reconsideration of the board's order authorizing abandonment without imposition of employee-protective conditions.—Seaborad Air Line R. Co. Trackage Rights, 312 I.C.C. 797 (799)*.

In seeking further hearing as alternative to reconsideration of its extension application, applicant proposed to introduce three classes of evidence pertaining to through-trailer operations between United States and Mexico, and attached copies of pertinent letters to Department of Commerce and from a Mexi-

can Government agency as appendixes to its petition. As the commission's order denying reconsideration and reopening the proceeding for further hearing indicated as reason therefor that the matters set forth in the appendixes merited consideration on their merits, and subsequent orders did not indicate that scope of the further hearing would be broadened to receive evidence on other matters, the examiner, under Rule 1.101(b) of Rules of Practice, correctly confined the receipt of evidence to the three grounds specified in applicant's petition.—Yellow Transfer Freight Lines, Inc., Extension, 94 M.C.C. 153 (158)*.

Request made during course of application proceeding, that it be designated one involving an issue of general transportation importance, denied as premature. Rule 1.101(a)(4) of Rules of Practice, which provides the only method of bringing such a request before the commission, authorizes filing of petition for such designation within 15 days from final decision of a division or appellate division, and specifically provides that petitions seeking this relief will not be entertained at any other stage of the proceeding.—M. D. Cressy Co., Inc., 91 M.C.C. 211 (214).

To warrant further hearing, petitioner must set forth specifically the new evidence to be produced, show that that evidence would likely produce a different result, and satisfactorily explain reasons for not producing it at the original hearing. While petitioner alleges that it would present evidence that supporting shipper could not obtain service from certain carriers at a date subsequent to the hearing, record is convincing that no relevant new evidence would be produced which would alter the results in extension proceeding; therefore, petition for further hearing is denied.—Wilson Bros. Truck Line, Inc., Extension, 94 M.C.C. 426 (428).

Petition for further hearing for purpose of introducing verified statement of a new witness (which was prepared a month after oral hearing for cross-examination) concerning preparation of cost analyses on a computer, in general, denied. Under modified procedure, petitioner is required to submit all his evidence at one time; furthermore, verified statement sought to be introduced does not show that cost analysis stricken from instant record was prepared by the new witness or under his direction; nor does it appear that evidence to be adduced at such further hearing would require conclusions different from those reached in the proceeding.—Aggregate Weight Provisions on Paper, Mass. to N. Y., N.J., 323 I.C.C. 525 (530-1).

As 17 applications for authority to serve two new plants whose traffic is primarily controlled by supporting shipper seek same authority, present practically identical issues, are all supported by same shipper, and can be more fully considered simultaneously than separately, petition for reconsideration of order consolidating them for consideration and disposition in a single report is denied.—Steel Transp. Co., Inc., Extension, 92 M.C.C. 387 (389).

Although exceptions in one of three related extension proceedings were filed subsequent to effective date of amended Rule 1.101 of the Rules of Practice (providing for administrative finality of decision of a division of the commission which does not reverse, modify, or change the initial report and recommended order), because of the nature of issues involved, including reappraisal and restatement of requirements and policies governing grants of motor carrier authority to Railway Exp. Agency, that proceeding is reopened for reconsideration on protestants' petitions, along with the other two.—Railway Exp. Agency, Inc., Extension, 91 M.C.C. 311 (312, 313, Note 4)*.

15. Reopening; scope.—[Vols. 13-16, 19].—Unless a clear abuse of its discretion is shown, the courts do not overturn the commission's determination in disposing of petitions seeking to reopen a proceeding in order that additional evidence may be submitted. As there is nothing of record to suggest that the commission abused its discretion in denying plaintiffs' petition, or that it did not weigh amply the supporting claims in the affidavit accompanying the petition, there was no error in its denial of reopening to receive additional evidence; sustained.—Trailways of New England, Inc. v. United States, 235 F. Supp. 509 (515)*.

Although plaintiff (protestant) did not petition for reopening of application proceeding to change a portion of certificate allegedly

granted by mistake until some 14 months after the certificate became final, both the petition and its application for waiver of rule 101(e) of Rules of Practice set forth facts which if found true would require the commission to reopen the proceeding to allow plaintiff to adduce evidence in support of its position and to be heard in opposition to grant of the challenged authority. Plaintiff acted diligently when it first acquired knowledge of order granting the certificate, and its petition for reopening showed good cause; moreover, at the court's instance it produced witnesses to show that it was in position to prove the truth of its allegations concerning circumstances giving rise to the claimed mistake. In summarily refusing, without a hearing, to waive rule 101(e) the commission acted arbitrarily and did violence to an established principle of law. Order denying the petition set aside and the cause remanded with directions to waive rule 101(e), grant the hearing requested, and make a factual determination on the matters alleged by the petition.—James J. Williams, Inc. v United States, 241 F. Supp. 535 (537-8, 539)*.

The commission neither abused its discretion, nor acted arbitrarily, capriciously, or unlawfully, in refusing to reopen motor carrier purchase proceeding for rehearing solely to determine whether, in view of pending application of another carrier to acquire control of vendee, shippers would continue to support reactivation of vendor's dormant rights and operation under the unified rights by a carrier other than vendee. Shippers amply demonstrated their support of vendee's new and improved service under vendor's rights, pursuant to temporary authority and, on the record alone, conclusion is justified that they are interested only in movement of their goods by the best service available; they are not interested in a name or ownership; and they would use the service offered under revival of vendor's rights whether it is continued by vendee or by applicant in the control proceeding. The commission's decision is sustained.—Commercial Motor Freight, Inc. v. United States, 276 F. Supp. 264 (267-8)*.

Plaintiff's petition for reopening of railroad control proceeding for further consideration and modification of order entered therein in 1923, alleging that one of conditions imposed on control approval and the agreement subsequently entered into by control applicants for purpose of embodying those conditions were now unreasonable and unlawfully discriminatory against it, raised issues relating to preferential solicitation and distribution of traffic betwen the control applicants, and attacked such preferential solicitation as improper or illegal under several sections of the statute as well as the antitrust law. The origin and authority for those practices being contained in both the challenged condition and the agreement, they are in reality but two aspects of the same matter; thus there was only one general issue before the commission, although in somewhat different contexts.—Denver & R.G. W. R. Co. v. I.C.C., 229 F. Supp. 249 (251, 253-4)*.

The order reopening the control case did not restrict the issues, and the examiner developed all issues raised and apparently received evidence on them. Following the decision in 376 US 375, the commission should have disposed of the entire matter, rather than consider the condition separately from the agreement on a procedural basis, and should have passed on validity of the agreement as well as actions of the parties thereto; disposition of the proceeding is incomplete. Remanded for further proceedings consistent with the court's opinion.—Id., pp. 253-4.

The commission's decision not to reopen hearings in investigation into railroad's proposed discontinuance of certain passenger trains, for purpose of taking additional evidence, is a matter on which it has considerable discretionary power; there is no showing that the discretion was abused. Complaint dismissed.—State of Minnesota v. United States, 238 F. Supp. 107 (113)*; similarly, motion to reopen the hearing on discontinuance of passenger train service within the State for presentation of further evidence is addressed to the discretion of the commission. And, in light of largely cumulative nature of evidence proffered, there was no abuse of that discretion.—State of Montana v. United States, 202 F. Supp. 660 (662)*.

The commission did not abuse its discretion by refusing to reopen the hearing in purchase proceeding for limited purpose of introduc-

tion of additional evidence to show lack of unlawful control and of dormancy. Unlawful control was charged at the hearing, at which time plaintiffs could have offered their proof, and evidence claimed to be "newly relevant" fails to undermine the trial examiner's findings as to dormancy.—Lombard Bros., Inc. v. United States, 226 F. Supp. 905 (908-9)*.

"Grandfather" clause rights determined many years ago should not be reopened or modified except when there is definite and positive evidence that a miscarriage of justice has occurred. On the evidence before it, the commission's conclusion that shipments of general commodities shown to have been transported eastbound by plaintiff's predecessor from the points in question were not substantial was a reasonable one, and that evidence did not disclose any miscarriage of justice which would justify or require that the "grandfather" proceeding be reopened. The commission's refusal to reopen the "grandfather" proceeding, sustained.—Keystone Motor Exp., Inc. v. United States, 228 F. Supp. 793 (798-9)*.

If the commission's challenged interpretation of plaintiff's "grandfather" authority in fact narrows the scope of authority to which plaintiff was entitled by its "grandfather" operations and which its "grandfather" certificate was intended to cover, plaintiff should petition the commission to reopen the "grandfather" proceeding.—Mitchell Bros. Truck Lines v. United States, 225 F. Supp. 755 (759)*.

None of the three major grounds relied on by Florida East Coast warrants reopening of proceeding on proposed merger of Seaboard Air Line and Atlantic Coast Line for further hearing to determine extent of alleged unlawful common control of applicants resulting from actions specified; even if facts alleged were substantiated at a hearing, they would not establish a violation of §5(4). Moreover, in addition to injunctive relief granted East Coast from applicants' action in denying it the use of jointly owned terminal and interchange facilities at Jacksonville after its employees went on strike, condition imposed on merger will prohibit survivor from refusing to handle empty or loaded cars destined to or received from competing carriers. Considering also the fact that East Coast could have raised the §5(4) issue at oral argument, petition for further hearing is denied.—Seaboard Air Line R. Co.—Merger—Atlantic Coast Line, 320 I.C.C. 122 (136, 138)*.

Reopening of released-rates application, to determine whether order granting the relief sought was unlawful in light of decisions in 53 MCC 157 and 311 ICC 515, placed applicant on notice that continuance of that authorization depended on differentiating its justification from those cases. The reopened proceeding was plainly not intended to be a vehicle for denunciation of applicant's tariff, and it understandably made no effort to justify the symmetry of its rate structure or appearance of its tariffs. The key to pleading and notice in the administrative process is adequate opportunity to prepare; but applicant had no notice that the sweep of the reopening order would be as broad as the examiner's interpretation thereof.—Wearing Apparel, Accessories, Piece Goods—Shulman, Inc., 321 I.C.C. 1 (3-4).

Furthermore, the examiner placed on applicant the burden of showing that any relief it should obtain should be greater than that granted its principal competitor. The principal competitor was not a party of record in instant proceeding or in the cases cited in the order, and it would be anomalous to place such a burden on applicant when the party adversely affected is apparently uninterested and the extent of relief granted it is unknown and not of record. Inquiry is therefore limited to scope of order reopening the proceeding.—Id., p. 4.

Reopening of proceeding on transfer of water carrier rights for hearing and further consideration, a year after approval, did not mean that the commission would determine the application de novo, disregarding fact that no-one seasonably opposed it, that the transaction was duly consummated, and that third persons have relied thereon in dealing with transferee.—Pittsburgh Towing Co.—Certificate Transfer—Zubik, 317 I.C.C. 661 (666)*.

Inasmuch as §5a application proceeding was reopened solely for oral hearing on alleged curtailment of right of independent action of parties to the agreement, petitioners' request that (if it finds the previously ap-

proved agreement for joint consideration of matters pertaining to interchange of equipment does not guarantee users the right to make independent announcements) the commission withdraw its approval of the agreement, without prejudice to amendment thereof proposed by petitioners, goes beyond scope of the reopening of the proceeding.—National Motor Equipment Interchange—Agreement, 316 I.C.C. 448 (451-2)*.

Orders reopening transfer proceeding under §212(b) and instituting investigation under §5(7) were broad in their sweep and, pursuant to §5(a)(3) of Administrative Procedure Act, respondents were informed by letter that the Bureau of Inquiry and Compliance would show, among other things, that the transfer proceeding contained false and fraudulent information designed to conceal the real party in interest and the purchase price. In light of those letters respondents received adequate notice, well in advance of hearing, of issues to be raised by the Bureau. Moreover, where adequate notice is given, the commission has inherent power to determine whether the transfer order was properly entered; evidence of happenings before and at time of the transfer order was therefore properly admissible, and in considering such evidence the examiner did not exceed scope of those orders.—Kowalsky's Exp. Service—Control and Merger, 93 M.C.C. 272 (277-8).

Order reopening purchase proceeding for further hearing, solely for presentation of evidence to show specifically any adverse effects on particular employees within meaning of reservation of jurisdiction in the order of approval, is clear and explicit and may not be construed as meaning that petitioner is only required to show by example that injury has occurred and why such injury is likely to continue, as basis for imposition of specific protective conditions. Limitation therein pertains only to admissibility of evidence at the further hearing and does not preclude the division from modifying its prior order to delete, substitute, or add conditions, where deemed necessary or unnecessary, for protection of employees within meaning of §5(2)(c). (See 58 MCC 133 and 75 MCC 147).—Midwest Buslines, Inc.—Purchase—American Buslines, Inc., 90 M.C.C. 173 (184-5)*.

See also Central Pac. Ry. Co. Control, §5(2), n. 45 *Conditions imposed*, and §5(9), n. 10.

Though applicant originally sought authority to transport gilsonite in bags from Bonanza, Utah, to Creston, Wyo., for interline movement beyond, in its petition for reconsideration it stated that movement in bags from Bonanza is declining appreciably and that it now seeks authority only for bulk movements. As the gilsonite transported in bulk to supporting shipper's facilities at Craig, Colo., would come to rest there for bagging and then be shipped on to Creston and points beyond, two separate movements would be involved. Applicant is already authorized to perform the transportation of bagged shipments that shipper now desires, hence only bulk movements need be further considered.—Bonanza Trucking Co., Extension, 94 M.C.C. 620 (622)*.

Applicants, having failed to avail themselves of opportunity to present at hearing on purchase and related §207 applications the evidence they now seek further hearing to introduce, are not entitled to have the proceeding reopened for that purpose.—Prichard Transfer, Inc.—Purchase—Weiss, 93 M.C.C. 535 (542).

In view of the long pendency of consolidated complaint proceedings, the Pennsylvania commission's requests for reopening of the records or for further hearings, to admit new evidence and evidence claimed erroneously excluded, are denied. Most of the excluded evidence consisted of opinion testimony which may have been technically admissible but would have had no appreciable bearing on the outcome; and it is doubtful that any of the new evidence to be adduced would have any bearing on the commission's conclusions.—Pennsylvania Public Utility Comm. v. Jones Motor Co., 89 M.C.C. 605 (611-12)*.

Although the commission has held that a "grandfather" certificate may be challenged by a successor in interest, it has denied reopening of "grandfather" proceedings where too much time had elapsed; it is 23 years since challenged "grandfather" rights were granted, during which time neither the "grandfather" applicants nor any of four successive transferees prior to petitioner sought any re-

consideration or extension thereof; analysis of abstract of shipments submitted in the "grandfather" proceeding indicates that no enlargement of those rights would be warranted upon reconsideration and that no miscarriage of justice has occurred; reopening denied.—Keystone Motor Exp., Inc.—Investigation of Operations, 89 M.C.C. 567 (570, 574)*.

20. Reversal, change, or modification.—[Vols. 16, 17].—See Walker v. United States, §16(1), n. 1.

Section 17. (7) Reversal or modification after rehearing, etc.—[Unchanged. See vol. 11, p. 9304.]

Amendment, see footnote, vol. 11, p. 9304; historical notes, vol. 3, p. 2204, vol. 9, p. 7745.

Notes of Decisions

Volume 12—p. 10328; Volume 13—p. 11030; Volume 14—p. 11539; Volume 15—p. 12126; Volume 16—p. 12773; Volume 17—p. 13460; Volume 18—p. 14220; Volume 19—p. 15417.

10. Modification, reversal, of orders by appellate division or full commission.—[Vols. 12-19.—While no section of the act states, *in haec verba* that an Appellate Division may reconsider its own actions, the reviewing court believes that appellate division had the power to reconsider and reverse its own order summarily affirming denial of motor carrier authority by Operating Rights Review Board. Provisions of §17, and of other sections of the act which authorize the commission to suspend or modify its orders, have been interpreted as giving it continuing jurisdiction to suspend, reconsider, or modify its orders even in absence of a petition for reconsideration; and, as stated in 340 US 419, "the certificate is the final act or order that validates the operation." The court sees no reason why, if the commission has such continuing jurisdiction, an appellate division doing the commission's work should not have the same power; such a division is merely sitting in lieu of the full commission for reasons of administrative efficiency. Both logic and sound policy require that the Appellate Division be empowered to reconsider its own actions, at least prior to actual issuance of the certificate.—Resort Bus Lines, Inc. v. I. C. C., 264 F. Supp. 742 (744-5)*.

Plaintiffs' attack on the commission's order granting control authority denied by order in a prior report on same proceeding, and on its order denying reconsideration of the order of approval, as being in excess of its authority is without merit. The Interstate Commerce Act itself, in §17(6) and (7) and §221(b), gives the commission a continuing jurisdiction over its orders, thereby allowing it to modify and even rescind a great number of them at any time. There appears to be no cutoff date, such as is found in the National Labor Relations Act, after which the commission may not modify or rescind its orders, and such action by it has been sustained by the courts. The commission had authority to reopen for reconsideration and to rescind or modify its prior orders, and did not abuse its discretion in doing so in the case under review.—Alamo Exp., Inc. v. United States, 239 I.C.C. 694 (697-8)*.

In view of the history of the litigation and the record before the commission and the court, the commission's final action in approving the proposed control cannot be deemed unreasonable. The mere fact that it had found in its original report that such control would not be consistent with public interest did not prevent it from later finding that it would be, in view of the subsequent considerations brought to bear before it. If supported by substantial evidence, the commission's final order cannot be attacked solely because it may be, or seems to be, inconsistent with findings in other proceedings before it. While the course of the litigation has been long, complex, and at times uncertain, there is nothing in the record to justify a reversal of the commission's orders, or a remand to it for any further consideration. Sustained.—Id., pp. 696, 698.

The whole commission is vested with authority to reverse, change, or modify a decision of a division of the commission [§7(a) of

Administrative Procedure Act and §17(6), (7) of Interstate Commerce Act]; and there is no requirement that in doing so the commission shall specify the weight given to any item of evidence or fact, or disclose the mental operations by which its decisions are reached. Decision-and-order which reversed a decision on reconsideration of division 1 and effectually reinstated its original decision partially denying plaintiff's application was reached upon the first consideration by the whole commission; that decision adequately adopted a prior reasoned report which had set out a sufficient basis for the action taken, and there was no necessity for further explanation as to the cause of the commissioners' votes.—Curtis, Inc. v. United States, 225 F. Supp. 894 (901-2)*.

There is no substance to plaintiff's contention that consideration, and disposition with administrative finality, of his petition for reconsideration by the division in an appellate capacity which made the initial decision, in accordance with rule 1.101(a)(3) of the commission's Rules of Practice, violates due process because an appeal to the very body which made the determination from which the appeal is taken is no appeal at all. Motions or petitions for rehearing or reconsideration have long been addressed without thought of constitutional infirmity to the court or judge which, or who, decided the case in the first instance; no reason appears why applications of the same kind to a commission cannot be similarly addressed (151 F. Supp. 367). Due process was accorded plaintiff in the commission proceedings in the first instance and, since there is no constitutional right to an appeal to all or a majority of the commission, his claim of deprival of due process cannot be sustained.—Studna v. United States, 225 F. Supp. 973 (980-1)*.

Petition requesting that matters complained of be declared issues of general transportation importance within Rule 1.101(a)(2) of Rules of Practice, filed to assure complainant's right of appeal to entire commission, denied, since exceptions to proposed report were filed before effective date of order setting up the new appeals procedure, and the parties retain all rights of appeal that existed prior thereto.—United States v. Oklahoma City-Ada-Atoka Ry. Co., 316 I.C.C. 731 (732)*.

Respondent in investigation proceeding, initiated to determine whether it was engaged in unlawful operations, could have appealed commission decisions in four other application proceedings in which it appeared as protestant, and in which collateral determination was made that its authority to serve points "in Connecticut, Pennsylvania, New Jersey, and New York within 100 miles of Columbus Circle" restricted its territory in all 4 States, on the ground that its claimed right to serve the entire 3 States first named precluded a grant of duplicating authority. However, such conclusionary findings do not control outcome of the investigation; apparently, no exhaustive study of scope of respondent's authority was made in the four cited proceedings because (unlike instant proceeding) the scope of that authority was a collateral issue.—T. I. McCormack Trucking Co., Inc.—Investigation, 89 M.C.C. 5 (10-11)*.

Section 17. (8) Stay of decisions, etc., not effective at time of application for rehearing, etc.—[Unchanged. See vol. 11, p. 9304.]

Amendment, see footnote, vol. 11, p. 9304; historical note, vol. 11, p. 9304.

Notes of Decisions

Volume 17—p. 13460; Volume 19—p. 15418.

2. Construction and interpretation.—[Vols. 17, 19].—In delegating to the commission special power in connection with issuance of railroad car special orders and with reference to declaring an emergency, Congress did not overlook administrative and judicial safeguards, such as the right to ask the commission for a rehearing, reargument, or reconsideration and, if dissatisfied with administrative review, then to seek judicial relief. Thus, one wishing to challenge validity of service order of the Safety and Service Board must first seek administrative relief from an appellate division of the commission; and applica-

tion for such relief would automatically stay effect of the order until the issue is administratively determined by that division. In fact, such an application is required before statutory provisions for judicial review by a three-judge district court become effective.—United States v. Southern Ry. Co., 364 F. 2d 86 (91-2).

See also United States v. Southern Ry. Co., 380 F. 2d 49, §17(6), n. 10.

Where the order of a division, individual commissioner, or board has not become effective when an application for rehearing is made, the order must be stayed pending disposition by the commission or appellate division; however, mere filing of application for rehearing does not relieve the carrier from the duty of observing an order, and in absence of a special order of the commission the persons affected are required to obey the order complained of.—Malone Freight Lines, Inc. v. United States, 204 F. Supp. 745 (749-50)*.

When railroad's petition seeking further hearing and extension of time for filing exceptions was filed within 30 days after service of recommended report and order, finding that its proposed discontinuance of interlocking system should be disapproved, it stayed the effective date of the recommended order, even though the order extending time for filing exceptions was not entered until several days after the running of the exceptions filing period.—Monongahela Connection R. Co. Modifications of Systems, 325 I.C.C. 160 (161)*.

Section 17. (9) Judicial relief from decisions, etc., upon denial or other disposition of application for rehearing, etc.—[Unchanged. See vol. 11, p. 9305.]

Historical note, see vol. 11, p. 9305.

Notes of Decisions

Volume 14—p. 11539; Volume 15—p. 12126; Volume 16—p. 12774. Volume 17—p. 13461; Volume 18—p. 14220; Volume 19—p. 15418.

2. Construction and interpretation.—[Vols. 14-19].—On question of when and in what proceedings a railroad may challenge a commission order awarding reparation to a shipper claiming injury because of carrier's violation of the act, federal district courts have jurisdiction of both §16(2) and §17(9) suits, under §1336 of the Judicial Code, but venue is determined by 28 USC §1398. And a summary of relevant statutes points out that §16(2) actions for enforcement of commission reparation awards and §17(9) actions to set aside commission orders are quite distinct proceedings, with different venue restrictions and different proceedings. Moreover, Congress gave certain procedural advantages to shippers bringing §16(2) actions that might well be lost or impaired if carriers may attack the reparation order in a §17(9) direct review proceeding. Accordingly, language and purposes of the two provisions (which clearly are subject to more than one interpretation) have to be harmonized.—I.C.C. v. Atlantic Coast Line R. Co., 383 U.S. 576 (580-6)*.

While a narrow, but important, category of cases is concerned, (1) it is conceded that if a commission reparation order is accompanied by a cease-and-desist order, carrier may obtain immediate review of the cease-and-desist order pursuant to §17(9); and such review will ordinarily determine validity of the finding of violation on which the reparation order is founded. Second, even when a cease-and-desist order is not joined, the reparation order will be subject to direct review when no other means of securing review is available, regardless of whether review is sought by shipper (337 US 426), or carrier (363 US 202). Therefore, essential question is to what extent those cited decisions (wherein party seeking review could not obtain it in a §16(2) suit, either directly or by interposition of a defense) compel allowance of respondents' direct review action. Taking a middle course, the court concludes that carriers may get full review by defending a §16(2) action and that policy underlying §16(2) precludes carriers' obtaining review in a forum other than that

chosen by shipper. But there is no obstacle to carriers' §17(9) cross-proceeding in forum chosen by shipper, should they desire to bring one.—Id., pp. 586-9.

Unquestionably, the order under attack is subject to review by the courts; and the three conclusions reached must serve as guideposts in deciding where such review is to occur, i.e., (1) respondents have ample opportunity to secure review of the order through defense of shipper's enforcement action, (2) allowing them the alternative of bringing direct review proceedings would substantially impair shipper's §16(2) right to select a convenient venue, and (3) contrary to protestants' contention, limiting review to the enforcement action would not be likely to result in disparity in treatment of shippers. Therefore, since the reparation was not accompanied by a cease-and-desist order, respondents may obtain review thereof only in the court where shipper filed its enforcement action (held in abeyance pending outcome of instant case)—or where shipper seeks review of the order. The district court erred in entertaining respondents' §17(9) action and judgment of the Court of Appeals sustaining that decision must be reversed.—Id., pp. 578-9, 602-6.

See also General Motors Corp. v. United States, 28 USC §1336, n. 2.

Requirement in the statute that administrative and judicial review be applicable to all cases of suits to enforce, enjoin, suspend or set aside an order of the commission has direct reference to 28 USC §2321, in which Congress directed that procedure in such cases required creation of a three-judge court; and Congress having provided administrative and judicial procedures, the prescribed procedures are exclusive, although the exclusiveness may not have been expressly provided for. Thus, in action to recover penalties for railroad's alleged violations of the commission's car service order, district court lacked power to inquire into validity of the order in question when the railroad had failed to seek review by a three-judge court on issue of validity of the order, in accordance with provisions of 28 USC §§2321-2325. Lower court's conclusion that the order was invalid, set aside and cause remanded.—United States v. Southern Ry. Co., 364 F. 2d 86 (91-2, 93, 96).

Though findings and resulting orders in investigation by the commission to determine applicability of rates charged on shipments of household goods during certain periods because of an error in tariffs then in force were declaratory in nature, they followed an adversary proceeding in which the critical question was sharply disputed. The commission ruled against respondents in the administrative proceeding and found certain past charges made contrary to that ruling to be in violation of §217(b) of Interstate Commerce Act; it then ordered the proceeding discontinued, which, following denial of rehearing, constituted a final order.—National Van Lines, Inc. v. United States, 326 F. 2d 362 (367)*.

On balance, under the standards of 307 US 125, the commission's declaratory order is subject to and ripe for review by the district court. Such a determination, made under statutory safeguards, cannot be said to have no legal effect: based on that order, the Government has already made deductions from payments due certain carriers, and others will be liable for refunds of overcharges in large aggregate amounts. Thus the order has an immediate and practical impact on the carriers; touches vital interests of carriers and shippers alike: and determines a right or obligation so that legal consequences will flow from it. Further, by not making the refunds the commission finds should be made, the carriers have already been found to be in continuing violation of §217(b), which could jeopardize their certificates or permits to do business.—Id., pp. 373-4.

If review is denied, validity of the subject ruling will have to be litigated in a multitude of suits, either for refund from the Government of payments deducted on basis of the order, in which case the commission's ruling could serve as prima facie evidence against the carriers, or in defense of actions by shippers for refunds of such overcharges, in which case the commission report (incorporated in the final order) would be available to the courts for their guidance; such suits could be tried in numerous courts, resulting in an undesirable flood of litigation. In its present posture the order has not removed any uncertainty, and until it is changed by the commission or judicially reviewed by a court the con-

fusion will continue. Order of the district court dismissing carriers' class action seeking review of the commission's order, reversed and the cause remanded for a hearing on the merits.—Id., pp. 373-4.

Purpose of the statute is to require a party aggrieved by administrative action to exhaust his administrative remedy before filing an action in the courts; it not only requires exhaustion of all administrative remedies, but specifies the point at which such remedies have been exhausted. The administrative remedy is exhausted when an application for reconsideration of commission decision complained of is denied or otherwise disposed of by the commission or an appellate division, depending on whether the commission has retained such application or referred it to an appellate division; denial of the application by either terminates all of a litigant's rights before the commission. Thereafter his only remedy lies in the courts.—Transamerican Freight Lines, Inc. v. United States, 258 F. Supp. 910 (915)*.

In action to set aside the commission's order denying plaintiff's application for motor carrier authority, record before the court is sufficient to entitle plaintiff to review of the order and, insofar as exhaustion of administrative remedies is concerned, additional efforts to secure a rehearing by the entire commission were unnecessary. The commission proceeding and order were administratively final when, after plaintiff filed exceptions to the examiner's report and recommended order, Division 1 entered its order which affirmed and adopted the examiner's findings and conclusions and denied plaintiff's application; and plaintiff was not required to file a petition under Rule 101(a)(4) of the Rules of Practice requesting a finding of an issue of general transportation importance, and ultimately a rehearing before the entire commission, prior to seeking judicial review.—Meat Packers Exp., Inc. v. United States, 244 F. Supp. 642 (645)*.

This section does not speak in terms of jurisdiction, but merely is designed to require exhaustion of administrative remedies before resort to the courts. Decision of appellate division in railroad abandonment proceeding was administratively final, pursuant to Rule 101 of the commission's Rules of Practice, when it did not reverse, change, or modify any of the hearing examiner's conclusions, or his ultimate decision, and no issues of general transportation importance were involved. While the commission's regulations prohibiting applications for rehearing by entire commission in such cases are valid and binding, and in those cases administrative remedies are exhausted at an earlier stage in the proceedings, the courts may be resorted to when such remedies are exhausted. Appellants followed a reasonable and prudent course when they filed suit in court on the assumption that the division's decision did not change the examiner's opinion, and at the same time filed a motion for rehearing before the commission on assumption that the decision did result in a change.—State of Arizona v. United States, 220 F. Supp. 337 (341)*.

See also Atlantic Coast Line R. Co. v. United States, 17(6), n. 10

Section 17(9) does not speak in terms of jurisdiction, but is designed to require exhaustion of the administrative remedies provided by the section and the rules of procedure governing applications for rehearing (which the commission was expressly authorized to adopt), before resorting to the courts.—Malone Freight Lines, Inc. v. United States, 204 F. Supp. 745 (750)*. [But see dissent.]

Under Rule 1.101(a) of the commission's Rules of Practice, plaintiff has done everything in its power to exhaust its administrative remedy, and defendants concede that it has done so, when its petition for reconsideration of decision of Division 2, finding its proposed reduced rates not shown to be just and reasonable, was denied by the same division acting as an appellate division; order complained of was clothed with finality by that rule as amended, and plaintiff's suit seeking judicial review is not premature.—Id., pp. 747, 748, 750.

Thus there is not involved the utter lack of jurisdiction which the court should notice sua sponte; that §17(6) authorizes the commission to deny the right to apply for rehearing, reargument, or reconsideration in proceedings not involving matters of general transportation importance does not make §17(9) operate to forbid judicial review of minor orders denied administrative review, though final; had Con-

gress intended such a result, it would have found simple, clear language to express it.—Id., p. 754.

Order incorporating the commission's findings on complaint, that plaintiff's "Route 77" service over Garden State Parkway in East Orange and Bloomfield, N.J., was not authorized by its outstanding certificates, and also those in extension application authorizing that service, together with letter from the commission advising plaintiff that its other operations should conform to that interpretation, imminently affect plaintiff's property rights in its other operations. While it would be expedient to conclude that grant of authority for the Route 77 service rendered moot the issue of plaintiff's unauthorized operation thereof, to do so would ignore its right to protect its property rights in its other operations and certificates thus imminently affected. Under such circumstances plaintiff should not be denied opportunity for review of the commission's determination on ground that the prime issue is now moot; expediency at such a price is too costly.—DeCamp Bus Lines v. United States, 224 F. Supp. 196 (199-201)*.

The court cannot permit the form of the order to control the issue of reviewability or allow it to obscure the practical effect which the order, together with the commission's subsequent directive, might entail. The order imparts administrative finality: the determination is not a general abstract declaration but a specific concrete adjudication; both order and letter were directed to plaintiff, requiring it to refrain from using its certificates contrary to the commission's interpretation and to conform its operations thereto; thus they contemplate future effect. Since certain of plaintiff's rights are now fixed by that interpretation, it would not be speculative, in light of the letter, to assume further commission action in event of plaintiff's noncompliance. Disregard of the commission's adverse action would entail threat of civil and criminal penalties, while compliance may unduly burden plaintiff. The commission's determination imposes a cloud on plaintiff's rights in use of its certificates and endangers its business investment therein. In light of 307 US 125, 351 US 40, and 363 US 202, the findings and conclusions incorporated in the order are reviewable.—Id., p. 201.

Plaintiffs' late-filed petition to intervene in application proceeding in which none of them participated showed good cause and was based on averments reasonably pertinent to issues therein and did not broaden them; the commission's order denying their petition was a final order; plaintiffs having exhausted their administrative remedies, the court has jurisdiction in action to set aside the commission's decision and order in the application proceeding.—National Bus Traffic Ass'n. v. United States, 212 F. Supp. 659 (661)*.

Validity of the commission's deviation rules and orders issued thereunder, insofar as they authorize use of regular alternate routes as deviations, are no less subject to judicial review than ones determining rates or rights to certificates; such orders, giving plaintiff's competitor a right which it did not have before and which plaintiff asserts adversely affects its operations, are not mere abstract declarations. In order authorizing plaintiff's competitor to use a shorter alternate route between two cities, the commission made no specific determination that any of criteria established by it as prerequisite to such authorization had been satisfied, but merely found generally that requirements of the deviation rules had been met; neither the parties nor a reviewing court can determine whether such an order has a rational basis in fact. That order and order denying plaintiff's petition for reconsideration must be set aside; case remanded for further proceedings consistent with the court's opinion.—Greyhound Corp. v. United States, 221 F. Supp. 440 (443, 445)*.

Motor carrier, in its action to set aside the commission's order suspending certain tariffs filed by it, found not entitled to relief when it has not exhausted its administrative remedies. Record indicates that, the tariffs having been suspended, plaintiff failed to petition for reconsideration of the suspension order as provided by Rule 200(b) of the Rules of Practice; this was essential before review could be sought in the court. Complaint dismissed, and temporary restraining order vacated.—W.J. Digby, Inc., of Iowa v. United States, 246 F. Supp. 335 (336)*.

Although plaintiff labor unions admittedly had actual notice of the challenged decision

and order of the commission one week prior to effective date thereof, and it is likely that they knew of the proceeding earlier because of the necessarily wide publicity given to the trade by Middle Atlantic Conference's complaint, they made no request to the commission for rehearing, and the record clearly shows that they took their chances in the court rather than appearing before the commission. Under various decisions, notably 303 US 41 and 327 US 540, it must be held that plaintiffs have not exhausted their administrative remedies and therefore have no standing to seek judicial review; complaint dismissed.—Teamsters Joint Council 40 (J.C.) v. United States, 238 F. Supp. 301 (306-7)*.

Neither the commission's order giving notice that it had concluded not to enter upon an investigation of proposed train discontinuance, nor its order denying petition for reconsideration of such decision, qualifies as an "order" subject to judicial review or relief within meaning of §17(9); neither action was final, both were completely gratuitous and in effect of no more technical signicance than informal statements of commission policy.—Sludden v. United States, 211 F. Supp. 150 (154)*.

Section 17. (10) Reference of administrative matters to examiners.—[Unchanged. See vol. 11, p. 9305.]

Section 17. (11) Intervention of representatives of employees.—[Unchanged. See vol. 14, p. 11540.]

2. Intervention by representatives of employees.—[Vols. 14, 17, 18].—Railway Labor Executives' Assn. had an absolute right under §17(11) to become a party to abandonment proceeding at the time of filing of the application.—Seaborad Air Line R. Co. Trackage Rights, 312 I.C.C. 797 (799)*.

Section 17. (12) Admission to practice before commission.—[Unchanged. See vol. 11, p. 9305.]

Historical notes, see vol. 11, p. 9306, vol. 12, p. 10328, vol. 13, p. 11031, vol. 14, p. 11541, vol. 15, p. 12128, vol. 16, p. 12775, vol. 17, p. 13462.

Historical Note

Public Law 89-332, Nov. 8, 1965, 79 Stat. 1281, provides that any person who is a member in good standing of the bar of the highest court of any State, possession, territory, Commonwealth, or the District of Columbia may represent others before any agency (as agency is defined in §2(a) of the Administrative Procedure Act), with exception of the Patent Office, upon filing with the agency a written declaration that he is currently so qualified and is authorized to represent the party on whose behalf he acts; but that the law may not be construed to (1) grant or deny the right to represent others to any person not so qualified, (2) authorize or limit discipline (including disbarment) of persons appearing in a representative capacity before any agency, (3) authorize a former officer or employee of an agency to represent others where such representation is prohibited by law or regulation, or (4) prevent an agency from requiring a power of attorney as a condition to settlement of a controversy involving the payment of money.

CONSULT THE TABLE OF CASES WHENEVER A CITATION IS FOLLOWED BY AN ASTERISK

1. Admission; suspension; disbarment.—[Vols. 11, 12, 14, 16, 17, 19].—Inasmuch as the federal statute expressly permits the Commissioner of Patents to authorize practice before the Patent Office of nonlawyers, and the Commissioner expressly granted such authority to individual who had not been admitted to practice law before the Florida or any other bar, that State may not prohibit practitioner from performing within the State tasks incident to preparation and prosecution of patent applications before the Patent Office, even though preparation and prosecution of such applications for others constitutes the practice of law within State statute. The State may not deny to those failing to meet its own qualifications the right to perform functions within the scope of the federal authority.—Sperry v. Florida, 373 U.S. 379 (383, 384-5). [Not arising hereunder.]

Four years of college are not required of nonlawyer applicants to practice before the commission, including 2 years which are creditable toward a bachelor's degree at a recognized college as an absolute minimum; technical education, training, or experience may be substituted for the remaining 2 years of college education. Examinations for such applicants are conducted semiannually at the commission's field offices in selected cities.—Annual Report, 1965, p. 11.

Although Bureau of Inquiry and Compliance stipulated only that if respondent practitioner had called witnesses to attest to his character they would have testified that he had a good reputation for honesty, integrity, and truthfulness, and though the Bureau was not required to present witnesses against respondent, it is noteworthy that not a single witness appeared at hearing to testify against him; and the factual data from purchase and investigation proceedings in which he appeared as counsel, on which the Bureau relied, fail to establish a prima facie case of misconduct. Respondent has therefore not been shown to have violated the Code of Ethics for Practitioners.—In re Kahn, 323 I.C.C. 706 (708).

While the record does not expressly show that complainants' counsel's misquotations of court and commission decisions were deliberate, they clearly were either deliberate or the result of inexcusable negligence. Counsel is admonished to abide by Canon 29 of the Commission's Canons of Ethics, which specifies that it is not candid or fair for a practitioner knowingly to misstate or misquote the contents of a paper or the language or effect of a decision or textbook.—B. G. Anderson & Co. v. Atlantic Coast Line R. Co., 319 I.C.C. 224 (226).

Though examiner cannot be blamed for feeling aggrieved because applicant's counsel, in consideration of certain protestants' withdrawal of their opposition, offered amendment (which the examiner accepted) restricting proposed operation to peddle service, and supported its acceptability at hearing, notwithstanding the entire commission had rejected such a restriction on authority granted same applicant in 79 MCC 279, careful examination of the record fails to support examiner's conclusion that applicant's counsel deliberately misled him or any party or prospective party to the instant proceeding.—Fox-Smythe Transp. Co. Extension, 88 M.C.C. 57 (58-60).

Counsel's explanation in exceptions that he did not recall the report cited at time he stated on the record that the commission had not rejected such limitation in any proceeding involving his client is rendered credible by fact that counsel for some of protestants were also unaware of the action in that proceeding although they or their law partners participated therein; moreover, carriers which the examiner found were misled have assured the commission that they were not; and finally, applicant's present certificate issued subsequent to that proceeding carries forward peddle service restrictions contained in prior certificates.—Id., p. 60.

Serious questions concerning propriety of conduct of purchase applicants' counsel in prosecution of the §5 and §210a(b) applications involve his possible complicity in a scheme to generate fraudulent operations under vendor's dormant rights so as to facilitate their transfer; his failure to investigate the matter of forged freight bills after their discovery at initial hearing; his continued urging, at continued hearing 14 months thereafter, that credence be given exhibit of vendor's representative shipments based on forged

documents; and his failure as a practitioner to observe standards of conduct prescribed by the Code of Ethics, including but not limited to his obligation to restrain his clients from committing improprieties and to endeavor to rectify acts of fraud or deception perpetrated by them upon the commission, or, failing that, to place the matter before competent authorities and terminate his relation with such clients.—Calore Exp. Co., Inc.—Purchase—T. W. Waterman Co., Inc., 93 M.C.C. 291 (298).

Mega, another practitioner, was present at discussions between the parties and their attorney and was entrused with preparation of the exhibit designed to withstand the charge of dormancy, and though his testimony and that of other witnesses differed widely in characterization of his role in perpetrating the fraud upon the commission, the evidence, viewed objectively, compels conclusion that he was aware of his participation in accomplishing unlawful common control of the two carriers. The record is accordingly referred to the commission's vice chairman for his consideration and appropriate action with respect to both applicants' counsel and Mega.—Id., pp. 296, 297, 298.

See also Dixie Ohio Exp., Inc., Investigation case §206(b), n. 15 *Notice*.

Requested postponement of hearing on certificate application because of unavailability of shipper witnesses having been denied, respondent practitioner refused to accept that ruling and sent applicant's president to represent it but did not himself attend the hearing, under a plan intended to elicit the hearing examiner's sympathy and obtain a favorable ruling of postponement. Respondent should have been present so that he could take exception to any ruling of the examiner which he considered prejudicial to his client's interests and thus provide a basis for court review thereof in manner specified by statute. His attitude violated his duty under canon 2 of the code of ethics for practitioners to maintain a respectful attitude toward the commission, and his attempt to thwart the commission's order violated canon 7, which states that no practitioner should render any service or advice involving disloyalty to the law or disrespect of its official ministers.—In re Bernard, 323 I.C.C. 649 (654-5).

Although when respondent was advised that the petition for postponement had been denied he was fully aware that applicant would be unable to present a competent witness to support the facts recited in the application, he did not advise the commission or any protestant of the situation; his so-called strategy dictated otherwise. Canon 23 specifically rules out any manner of fraud or chicane in support of a client's cause, and respondent's conduct falls within the law dictionary definition of chicane as the use of tricks or artifice. Respondent's course of action caused unnecessary expense and inconvenience to the commission which arranged the hearing and to the other parties who attended it at the appointed time and place; and his behavior lacked the candor and fairness required by canon 29.—Id., p. 655.

And although at time of issuance of the final report on the merits of the application the commission was not aware that respondent's absence from the hearing was deliberate, and neither the code of ethics nor the Rules of Practice provide that counsel's absence from an assigned hearing is a violation thereof, nor is there necessarily any disrespect, dishonor, disloyalty, deception, or public betrayal in a counsel's absence from a hearing, when the absence is deliberate for purpose of "strategy" or "tactics," as admitted by respondent in subsequent court proceeding seeking to set aside the commission's orders, it is culpable behavior that should not be condoned.—Id., pp. 655-6.

Additionally, though application was denied without prejudice to filing of a new application, respondent did not do so, but instead filed a proliferation of petitions for reconsideration and sundry other motions over a period of a year. This course of conduct showed lack of proper respect for the commission's rules and procedures designed to facilitate disposition of matters before it without infringing on due process; such conduct not only delays disposition of matters in the proceeding immediately concerned, but also wastes valuable time that could be spent in consideration of other proceedings. However, in view of respondent's 20 years as a practi-

tioner and absence of any prior disciplinary proceedings against him, his right to practice before the commission should not be revoked; but his lack of professional conduct warrants an official censure.—Id., p. 656.

Consideration of all the evidence warrants finding that respondent practitioners' allegations of improper and unethical conduct on part of hearing examiner and defendants' counsel were made without any real or tangible basis and were reckless in nature and not consonant with canons 2, 23, 25, 29, and 38 of the Code of Ethices for Practitioners; giving due consideration to respondents' age, experience, and previous unblemished records as members of the commission's bar for some 32 years, their improper and unprofessional conduct, showing lack of respect for the hearing examiner, a fellow practitioner, and the commission, warrants adverse criticism in form of censure; order of censure entered.—In Re Willette and Partridge, 315 I.C.C. 359 (364).

Though in his answer to show-cause order respondent Partridge appears to deny joining in the allegations advanced by respondent Willette, his action subsequent to filing of his petition for reopening of the complaint proceeding shows that he intended to join therein; a newspaper article appearing 2 days after date of his petition refers to a matter in issue at the hearing, calls public attention to the charges against the examiner, and embodies and extensive quotation from a statement by Partridge; those statements, which appeared in the public press inconsistently with canon 28 of the code of ethics, clearly demonstrate that he joined in Willette's allegations.—Id., p. 364.

The commission has ample jurisdiction to inquire into the conduct of respondents as class B practitioners when in their dealings with a shipper and in their solicitation practices they held themselves out as practitioners, and intermixed their status as such with their business of auditing freight bills; their agreement with shipper contained a promise to handle the matter of a rate reduction to the point of submitting documents to the commission; many of their subsequent letters to the carriers were signed by respondent Axelrod in his capacity as a practitioner; and solicitation letters they sent out carried a clear implication that they were in position to handle matters that could only be handled by a practitioner.—In Re Pollack and Axelrod, 315 I.C.C. 391 (3, 399).

Moreover, it is entirely within the realm of the commission to inquire into a course of action, private or otherwise, which tends to cast doubt on the overall fitness or qualifications of a practitioner to represent others before it; even before effective date of requirement of Rule 1.13 of Rules of Practice that practitioners conform to the code of ethics of the practitioners' association, respondents were chargeable with knowledge of the code under former Rule 71(b) and were required at least to uphold the spirit thereof; it would be anomalous to hold that class B practitioners, though having the same privileges before the commission as attorney practitioners, have a lesser degree of responsibility.—Id., p. 398-9.

Respondents' services for the shipper under their agreement required only 45 hours of study and of preparation and handling of correspondence, reflecting no unusual effort or learning; their efforts had no material effect on establishment of lower rates on shipper's traffic, and, though notified thereof, they did not participate in any hearings conducted in connection with revision of classification basis on shipper's commodity; while they may have been entitled to some fee, their valuation of their services at almost $9,000 and their attempts to collect that amount cannot be condoned.—Id., pp. 394-5, 399; also, while they did not personally draft complaint in their suit to collect that fee (which was dismissed) and are not shown to be culpably responsible for false allegations therein, they received a copy of it immediately after it was filed and did nothing during pendency of the matter to correct the untrue allegations.—Id., p. 395.

Respondents' advertising and solicitation letters improperly called attention to their status as practitioners, and while basic purpose of those letters was doubtless to obtain auditing accounts, such accounts could have ripened into proceedings before the commission; even if, by choice, respondents never went beyond rendition of an auditing service, their reference to their practitioner status was

misleading and not in keeping with the dignity of their calling as practitioners.—Id., p. 399.

While respondents' conduct indicates a serious disregard of ethical principles, in view of the death of respondent Pollack and the previous unblemished reputation of both, disbarment of respondent Axelrod should not be imposed; however, in view of the lack of respect shown for the dignity of his profession and of the commission, and because of his unprofessional conduct, adverse criticism in form of censure is warranted. Order of censure entered.—Id., p. 399.

Regulations of the Commission

30 FR 731, Jan. 22, 1965: Admission to Practice of Persons Who Are Not Attorneys At Law, notice of Dec. 1, 1954, as revised Feb. 1, 1955, further revised, effective March 1, 1965.

30 FR 15306, Dec. 10, 1965: Notice of Interim Rules - Attorneys Representing Others Before the Commission, effective pending issuance of amended rules following enactment of Public Law 89-332.

Section 18. (1), (2). Employees; expenses, of commission.—[Unchanged. See vol. 9, p. 7756, p. 7757.]

Historical Notes

By §303(c) of Public Law 88-426, 78 Stat. 400, Aug. 14, 1964, it is provided: Level III of the Federal Executive Salary Schedule shall apply to the following offices and positions, for which the annual rate of basic compensation shall be $28,500:*** (24) Chairman, Interstate Commerce Commission.

By §303(d), same act, it is provided: Level IV of the Federal Executive Salary Schedule shall apply to the following offices and positions, for which the annual rate of basic compensation shall be $27,000: *** (62) Members, Interstate Commerce Commission.

Memorandum from The President to the Heads of Executive Departments and Agencies, dated May 2, 1963, Preventing Conflicts of Interest on the Part of Special Government Employees; 28 FR 4539, May 7, 1963.

Executive Order 11222, dated May 8, 1965, Prescribing Standards of Ethical Conduct for Government Officers and Employees; 30 FR 6469, May 11, 1965.

Notes of Decisions

§18(2): Volume 3—p. 2222; Volume 9—p. 7757.

Regulations of the Commission

31 FR 3344, Mar. 3, 1966, Part O: The Commission, Subpart B—Canons of Conduct, miscellaneous amendments to Appendix I (31 FR 2718), effective on publication in Federal Register.

31 FR 4519, Mar. 17, 1966, Part O: The Commission, Subpart B—Canons of Conduct, miscellaneous amendments to Appendix I (31 FR 3344), corrected.

Section 19. Office and sessions.—[Unchanged. See vol. 9, p. 7757.]

Notes of Decisions

Volume 19—p. 15420.

Section 19a. Valuation of property of carriers.—[Unchanged. See vol. 9, p. 7758.]

Amendments, see footnotes, vol. 3, pp. 2224-2228, vol. 7, pp. 5669-5670; historical notes, vol. 3, p. 2228, vol. 7, p. 5671, vol. 15, p. 12129, vol. 16, p. 12777.

Historical Notes

Under Executive Order 11107, Administration of Alaska Railroads, dated April 25, 1963, giving the Interstate Commerce Commission jurisdiction "to fix, change, or modify rates for the transportation of passengers and property" under the authority set forth in the Alaska Railroad Act, 38 Stat. 305, the commission, in determining justness and reasonableness of such rates,

shall exclude for valuation purposes the portion of capital investment allocated to national public purposes by the Secretary of the Interior. (28 FR 4225, April 30, 1963)

The commission recommends that §19a be amended so as to eliminate requirements that the commission determine the present value of land, and the valuation of property held by carriers for purposes other than use in common carrier service; ascertain and report the amount, value, and disposition of aids, gifts, grants, and donations and the amount and value of concessions and allowances made by carriers in consideration thereof; and so as to make optional the requirement that the commission keep informed of changes in the quantity of property of carriers following completion of original valuation thereof.—Annual Report, 1962, pp. 199-200; renewed, Annual Report, 1963, p. 18; Annual Report, 1964, p. 66-7.

By Note on the contents page of Vol. 57 Val. Rep. (page III), it was announced that, effective with the closing of that volume, the printing of annual pipeline valuation reports would be discontinued. Only initial (basic) pipeline valuation reports will be printed in the future; and they will be included in the Finance Reports series of ICC Reports, beginning in Vol. 320.

Notes of Decisions

Volume 3—p. 2232; Volume 7—p. 5671; Volume 9—p. 7762; Volume 11—p. 9307; Volume 12—p. 10329; Volume 13—p. 11032; Volume 14—p. 11542; Volume 15—p. 12129; Volume 16—p. 12777; Volume 17—p. 13463.

Pipe Lines

328. Oil.—[Vols. 9, 11].—The oil contained in a carrier's pipeline system, although it may be equivalent in volume to oil purchased by the carrier, is nevertheless oil tendered for transportation and is in transit and, as such, is not to be inventoried and valued as property used for transportation purposes. Carrier's claim that its operating oil supply should be included in the valuation of common carrier property, rejected.—Jayhawk Pipeline Corp., 324 I.C.C. 779 (781-2).

An operating supply of products, in instant case liquified petroleum gas, is maintained in carrier's pipeline so that the product offered for shipment at origin is made available immediately to shipper at carrier-owned distribution terminal; it is purchased primarily as a traffic arrangement in the interest of assuring rapid delivery at distribution terminals. This applies whether the carrier is publicly owned, or is shipper owned. Under the commission's accounting rules, cost of the operating supply is includible in an asset account entitled "Operating Oil Supply," apart from cost of tangible property used in common carrier service. The operating supply is not in the category of common carrier property used for transportation purposes; carrier's operating supply of liquified petroleum gas is not to be inventoried and valued as property used for transportation purposes.—Mid-America Pipeline Co., 320 I.C.C. 787 (788-9).

Regulations of the Commission

28 FR 4304, May 1, 1963, Part 155: Uniform System of Records and Reports of Property Changes; Common Carriers Subject to Part I; Valuation Order No. 3, Second Revised Issue and Revised Supplement No. 5 to said order, miscellaneous amendments, effective June 1, 1963.

30 FR 13262, Oct. 19, 1965, Part 160: Reporting of Data for Initial Pipeline Valuations, §160.103, effective 30 days after publication.

31 FR 11180, Aug. 24, 1966, Part 150: Corporate History: Aids, Gifts, Grants, and Donations, Valuation records and reports, revoked, effective 30 days after publication in Federal Register.

31 FR 11181, Aug. 24, 1966, Part 151-Land Schedules and Industrial Tracks, Valuation records and reports, revoked, effective 30 days after publication in Federal Register.

31 FR 11181, Aug. 24, 1966, Part 155 Uniform System of Records and Reports of Property Changes; Common Carriers, Valuation records and reports §§155.19, §§155.20 and 155.22 revoked, effective 30 days after publication in Federal Register.

31 FR 11181, Aug. 24, 1966, Part 157 Inventory of Records, Valuation records and reports, revoked, effective 30 days after publication in Federal Register.

31 FR 12601, Sep. 24, 1966, Part 155: Uniform System of Records and Reports of Property Changes; Common Carriers, Valuation records and reports, correction (31 FR 11181), amended by revoking §§155.0 (f) thru (m) both inclusive, 155.19, 155.20 and 155.22, effective 30 days after publication in the Federal Register.

Section 20. Reports, records, and accounts of carriers; mandamus; liability of initial carrier for loss, etc.—(1) Reports from carriers, lessors, and associations.—[Unchanged. See vol. 15, p. 12130.]

Amendments, see footnotes, vol. 3, p. 2511, vol. 11, p. 9309, vol. 15, p. 12130; historical notes; vol. 3, p. 2512, vol. 9, p. 7776, vol. 11, p. 9309, vol. 12, p. 10330, vol. 13, p. 11032, vol. 14, p. 11543.

Notes of Decisions

Volume 13—p. 11033; Volume 15—p. 12130; Volume 16—p. 12777; Volume 17—p. 13465.

3. Periodical and special reports.—[Vol. 16]—See Commodity Statistics Reporting—Extent and Disclosure, §220(a), n. 5.

6. Carriers, lessors, subject to section.—[Vols. 13, 15, 17]. [Former §20(1), n. 6, v. 3, 7, 9]—Although merger of railroad system's parent holding company into a new Delaware corporation is not subject to §5(2) and, therefore, the new company may not be subjected to accounts and reports provisions of the act under §5(3), upon consummation it will be subject to, and must comply with, provisions of §20(1-10) in lieu of the old company to the extent provided by order in debt adjustment proceeding, 254 ICC 239. The mere change of situs by the old company for purpose of acquiring some benefit not available under laws of the State of original incorporation does not deny the commission the jurisdiction assumed in the debt adjustment proceeding.—Delaware & Hudson Co. Merger, 317 I.C.C. 177 (180).

Regulations of the Commission

28 FR 975, Feb. 1, 1963, Part 120: Annual, Special or Periodical Reports; §120.12, Annual Report Form C, as modified, prescribed for Class II railroads commencing with reports for year ended Dec. 31, 1962.

28 FR 1424, Feb. 14, 1963, Part 120: Annual, Special, or Periodical Reports; §120.14 Form prescribed for lessors to railroads, Annual Report Form E, Railroad Lessor Companies, prescribed for reports commencing with year ended Dec. 31, 1962.

28 FR 1509, Feb. 16, 1963, Part 120: Annual, Special or Periodical Reports; §120.11 Form prescribed for class I railroads, Annual Report Form A prescribed for reports commencing with year ended Dec. 31, 1962.

28 FR 11782, Nov. 5, 1963, Part 122: Monthly and Quarterly Operating Reports; §122.3, Operating statistics, Quarterly Report Forms OS-A, Train and Yard Service, OS-B, Revenue Traffic, and OS-C, Motive Power and Car Equipment, prescribed for reports commencing with the three months beginning with January 1, 1964.

28 FR 10711, Oct. 4, 1963, Part 123: Freight Commodity Statistics, miscellaneous amendments of regulations governing commodity statistics and reports of railroads, carriers by water, and electric railways, as to traffic and reports for year beginning Jan. 1, 1964.

28 FR 12318, Nov. 21, 1963, Part 120: Annual, Special, or Periodical Reports, §120.21 Annual reports of electric railways, Annual Report Form G (Electric Railways) prescribed for use commencing with year ended Dec. 31, 1963.

28 FR 13310, Dec. 7, 1963, Part 120: Annual, Special or Periodical Reports, §120.31 Annual reports of express companies, Annual Report Form H (Express Companies) prescribed for use commencing with year ended Dec. 31, 1963.

28 FR 13747, Dec. 17, 1963, Part 120: Annual, Special or Periodical Reports, amended by adding thereto §120.71 Piggyback traffic statistics—rail. Effective with reports for first quarter of 1964.

29 FR 351, Jan. 15, 1964, Part 120: Annual, Special or Periodical Reports, §120.70 Annual reports of refrigerator car lines owned or controlled by railroad companies, Annual Report Form B-1 prescribed for use commencing with reports for year ended Dec. 31, 1963.

29 FR 104, Jan. 4, 1964, Part 123: Freight Commodity Statistics, §123.6 Public inspection—railroad reports, added; and §123.52 Commodity codes required, modified and amended, as to reports required to be filed for quarter and year beginnign Jan. 1, 1964.

29 FR 1469, Jan. 29, 1964, Part 120: Annual, Special or Periodical Reports, §120.61 Annual reports of carriers by pipeline, Annual Report Form P prescribed for use commencing with year ended Dec. 31, 1963.

29 FR 2699, Feb. 26, 1964, Part 120: Annual, Special or Periodical Reports, §120.12 Form prescribed for Class II railroads, Annual Report Form C prescribed for use commencing with year ended Dec. 31, 1963.

29 FR 2947, Mar. 4, 1964, Part 120: Annual, Special or Periodical Reports, §120.11 Form prescribed for Class I railroads, Annual Report Form A prescribed.

30 FR 648, Jan. 20, 1965, Part 120: Annual, Special or Periodical Reports, §120.14 Form prescribed for lessors to railroads, Annual Report Form E, Railroad Lessor Companies prescribed for use commencing with year ended Dec. 31, 1964.

30 FR 885, Jan. 28, 1965, Part 120: Annual, Special or Periodical Reports, §120.21 Annual reports of electric railways, Annual Report Form G (Electric Railways) prescribed for use commencing with year ended Dec. 31, 1964.

30 FR 795, Jan. 26, 1965, Part 120: Annual, Special or Periodical Reports, §120.12 Form prescribed for Class II railroads, Annual Report Form C prescribed for use commencing with year ended Dec. 31, 1964.

30 FR 831, Jan. 27, 1965, Parts 124 and 126: §124.1 Waybills and §126.1 Classification of carriers for reporting purposes, paragraph (a), modified and amended, effective Jan. 1, 1965.

29 FR 12077, Aug. 25, 1963, Part 123: Freight Commodity Statistics, §123.6 Public inspection—railroad reports, amended; and §123.28 Public inspection—water carrier reports, and §123.44 Public inspection, electric railway reports, added, effective on date of order.

30 FR 140, Jan. 7, 1965, Part 121: Separation of Operating Expenses between Freight and Passenger Services, miscellaneous amendments required by recent changes in accounting rules and reporting requirements, effective as to reports for the year 1964.

30 FR 485, Jan 14, 1965, Part 123: Freight Commodity Statistics, §§123.6, 123.28, and 123.44 modified and amended, effective on date or order.

30 FR 583, Jan. 16, 1965, Part 120: Annual, Special or Periodical Reports, §120.61 Annual reports of carriers by pipe line, Annual Report Form P (Carriers by Pipe Line) prescribed, effective on date of order.

30 FR 1983, Feb. 12, 1965, Part 120: Annual, Special or Periodical Reports, §120.11 Form prescribed for Class I railroads, Annual Report Form A prescribed for use commencing with reports for year ended Dec. 31, 1964.

30 FR 13375, Oct. 21, 1965, Part 120: Annual, Special or periodical reports; §120.11, Railroad Annual Report Form A prescribed for use commencing with reports for year ending Dec. 31, 1965.

30 FR 13785, Oct. 29, 1965, Part 10: Uniform System of Accounts for Railroad Companies; §108 Other Passenger-train, effective Jan. 1, 1966.

31 FR 4210, Mar. 10, 1966, Part 120: Annual, Special or Periodical Reports, §120.12 Railroad Annual Report Form C, prescribed for Class II railroads commencing with reports for the year ending Dec. 31, 1965.

31 FR 9741, July 19, 1966, Part 120: Annual, Special or Periodical Reports, §§120.9 Class I Railroads, added, effective on date of order.

Section 20. (2) Period covered by and time for making reports; oaths for reports.—[Unchanged. See vol. 11, p. 9310.]

Amendments, see footnotes, vol. 3, p. 2528, vol. 11, p. 9310; historical notes, vol. 3, p. 2529, vol. 9, p. 7781, vol. 12, p. 10330.

Historical Note

The commission recommends, in view of the prohibitions in 28 USC §1001, that §20(2) be amended so as to eliminate the mandatory oath provision therein, and that such requirement be made discretionary with the commission.—Annual Report, 1964, p. 72.

Notes of Decisions

Volume 3—p. 2529.

Section 20. (3) Uniform system of accounts.—[Unchanged. See vol. 11, p. 9311.]

Amendments, see footnotes, vol. 11, p. 9311.

Historical Note

Under Executive Order 11107, Administration of Alaska Railroads, dated April 25, 1963, giving the Interstate Commerce Commission jurisdiction "to fix, change, or modify rates for the transportation of passengers and property" under the authority set forth in the Alaska Railroad Act, 38 Stat. 305, the commission, in determining justness and reasonableness of such rates, shall exclude for cost finding purposes the portion of capital investment allocated to national public purposes by the Secretary of the Interior. (28 FR 4225, April 30, 1963)

Notes of Decisions

Volume 3—p. 2512; Volume 7—p. 5793; Volume 9—p.7777; Volume 11—p. 9311: Volume 12—p. 10331; Volume 13—p. 11033; Volume 14—p. 11543; Volume 15—p. 12131; Volume 16—p. 12778; Volume 17—p. 13465; Volume 18—p. 14223; Volume 19—p. 15422.

16. In general.—[Vols. 3, 7, 9, 12-14].—Rule authorizing carriers to prepare and publish financial statements in reports to stockholders and others (except in reports to the commission) based on generally accepted accounting principles for which there is authoritative support, provides that any variance from prescribed accounting rules is clearly disclosed in footnotes to the statement, adopted as reasonable, in public inter-

est, and not unduly burdensome on carriers. —Financial Statements Released by arriers, 315 I.C.C. 507 (509).

18. Adjustment of accounts.—[Vols. 3, 7, 15].—It would be inequitable to require New York Central, as a condition on approval of its continued operation of Peoria & E. Ry., to account for and pay interest on monthly intercompany balances generated by current-year operations, as that would entail virtual closing of the Peoria's books each month, including recording of appropriate adjustments; in view of possibility that during any given month expenses could exceed revenues, use of a 12-month period for computation of the intercompany balance payable is reasonable. However, immediately after close of each year the cash amounts generated by the operations become a debt of Central, and interest thereon should be payable from date the amount becomes certain, and be remitted shortly thereafter; such settlement should be accomplished within 60 days after the close of the year in which the intercompany amount was created.—Cleveland, C., C. & ST. L. Ry. Co.—Operating Agreement, 320 I.C.C. 430 (437).

24. Depreciation accounting.—[Vols. 3, 7, 11, 13-15].—New York Central's practice, in operating the Peoria & E. Ry., of recording expenditures for purchase of equipment for account of the Peoria in advances payable account, rather than charging them to depreciation balances, is not unfair to the Peoria's minority stockholders or bondholders, since interest on both accounts accrues at same rate; furthermore, as depreciation is an operating expense to be considered in computing yearly intercompany balances, no interest on such amounts should be payable during the year the depreciation accrues. However, amounts in the account recording the depreciation balances and the account titled advances for expenditures for equipment should be balanced off at end of each year, and those amounts, as well as balances in other intercompany accounts (less amounts necessary to meet expenditures required to be made after the close of the year), should be paid to the Peoria at end of each calendar year, on or before 60 days from that date.—Cleveland, C., C. & St. L. Ry. Co.—Operating Agreement, 320 I.C.C. 430 (436, 437).

31. Taxes.—[Vols. 3, 7, 9, 12, 15].—Though the commission's accounting rules require that income taxes be recorded as tax expenses in year when the tax becomes payable, and not in an earlier year, showing of deferred Federal income taxes, resulting from accelerated depreciation, in computing net income in financial statements is commonly recognized among nonregulated industries as being in accord with generally accepted accounting principles; after careful consideration it is concluded that treatment of tax deferrals in financial statements in carriers' reports to stockholders or otherwise released to the public need not conform strictly with corporate books of accounts maintained under the accounting regulations or with their filed reports. Rule adopted therefore provides that any variance from the prescribed accounting rules be disclosed in footnotes to the statements.—Financial Statements Released by Carriers, 315 I.C.C. 507 (509).

Though shortened tax-depreciation guideline lives authorized by Internal Revenue Service will result in much larger tax-depreciation deductions in early years of service lives of facilities than book depreciation computed under commission accounting rules, neither that nor investment tax credit permitted by Revenue Act of 1962 warrants changes in present accounting rules or the commission's statement of policy dated February 9, 1959, that actual Federal income taxes payable for each year, based on effective tax regulations for the year, shall be recorded in the tax accounts of carriers' books of account and in financial statements. But present requirement for disclosure in carriers' annual reports of tax reductions for accelerated depreciation will be extended to apply to those attributable to tax-depreciation guideline lives, as well as investment tax credit.—Accounting for Federal Income Taxes, 318 I.C.C. 803 (805, 807-8).

Regulations of the Commission

Amendments, see footnotes, vol. 3, p. 2533, vol. 11, pp. 9315-9316; historical note, vol. 3, p. 2534.

Regulations of the Commission

29 FR 16087, Dec. 2, 1964, Part O: The Commission, §0.5 Credentials required by special agents, accountants, and examiners, paragraphs (c), (d), (e), (f), and (g) amended, effective on date of order.

29 FR 19107, Dec. 30, 1964, Part O: Order of Nov. 24, 1964 (29 FR 16087) corrected to substitute "accountants" for "accounts" wherever latter appears therein.

Section 20. (6) Persons furnishing cars or protection against elements; access to and forms of records, etc.; reports.—[Unchanged. See vol. 11, p. 9317.]

Historical notes, vol. 12, p. 10332, vol. 14, p. 11545, vol. 15, p. 12133, vol. 16, p. 12780, vol. 17, p. 13466.

Regulations of the Commission

28 FR 1960, Feb. 28, 1963: Retention periods, records, persons which furnish cars to railroads, 49 CFR 110.104.

29 FR 3088, Mar. 5, 1964: Same retention periods reference.

30 FR 3163, Mar. 6, 1965: Same retention periods reference.

31 FR 4067, Mar. 8, 1966: Same retention periods reference.

32 FR 3664, Mar. 2, 1967: Same retention periods reference.

NOTE: For recodification, see 49 CFR, Editorial Note, 32 FR 5606, April 5, 1967.

32 FR 14392, Oct. 18, 1967, Part 124 [formerly Part 24]; uniform System of Accounts for Refrigerator Car Lines, miscellaneous amendments pertaining to accounting treatment of extraordinary and prior period items, effective Jan. 1, 1967.

33 FR 4067, March 1, 1968: Record Retention Guide, XXIV Interstate Commerce Commission [Revised] 1.7 Persons furnishing cars to railroads, 49 CFR Part 1225.

Section 20. (7)-(10) Penalties; false entries; Persons furnishing cars, etc.—[Unchanged].

§20(9). 1. Mandamus to compel compliance with this chapter or supplementary statutes.—[Vol. 3].—Since §20(9) is limited to enforcement of the commission's orders against a carrier, it is not applicable to city and city official defendants.—United States v. City of Jackson, Miss., 206 F. Supp 45 (48).

Regulations of the Commission

§20(7): 28 FR 1960, Feb. 28, 1963: Retention periods, records, refrigerator car lines and railroad companies, 49 CFR 110.7; electric railway companies, 49 CFR 110.31; sleeping car companies, 49 CFR 110.50; express companies, 49 CFR 110.70; pipeline companies, 49 CFR 110.87.

29 FR 3088, March 5, 1964: Same retention periods references.

30 FR 3163, March 6, 1965: Same retention periods references.

30 FR 11524, Sept. 9, 1965, Part 110: Destruction of Records, §110.50 Sleeping car companies (23 FR 2128), correction of heading for consistency of format.

30 FR 12250, Sept. 24, 1965, Part 110: Destruction of Records, miscellaneous amendments of regulations governing destruction of records of railroad companies, electric railway companies, sleeping car companies, and express companies which are necessary in order to implement recent amendment of competitive-bidding regulations, effective on publishcation in the Federal Register.

31 FR 4066, Mar. 8, 1966: Retention periods, records, refrigerator car lines and railroad companies, 49 CFR 110.7; electric railway companies, 49 CFR 110.31; sleeping car companies, 49 CFR 110.50; express companies, 49 CFR 110.70; pipeline companies, 49 CFR 110.87.

32 FR 3664, Mar. 2, 1967: Same retention periods references.

32 FR 10794, July 22, 1967, Part 107a: Administrative Collection of Enforcement Claims, new Part 107a, adopting regulations published in 4 CFR Parts 101 through 105, added, effective Aug. 1, 1967.

33 FR 4067, March 1, 1968: Records Retention Guide, XXIV Interstate Commerce Commission [Revised] 1.1 Refrigerator car lines, and 1.2 Railroad companies, 49 CFR Part 1220; 1.3 Electric railway companies, 49 CFR Part 1221; 1.4 Sleeping car companies, 49 CFR Part 1222; 1.5 Express companies, 49 CFR Part 1223; and 1.6 Pipeline companies, 49 CFR Part 1224.

Section 20. (11) Liability of initial and delivering carrier for loss; limitation of liability; notice and filing of claim.—[Unchanged. See vol. 9, p. 7794, and vol. 11, p. 9322.]

Amendments see footnotes, vol. 3, p. 2552; historical note, p. 2555.

Notes of Decisions

Volume 3—p. 2559; Volume 7—p. 5818; Volume 9—p. 7796; Volume 11—p. 9323; Volume 12—p. 10333; Volume 13—p. 11036; Volume 14—p. 11546; Volume 15—p. 12134; Volume 16—p. 12780; Volume 17—p. 13467; Volume 18—p. 14225; Volume 19—p. 15424.

3. Purpose.—[Vol. 3].—The principal function of the Carmack Amendment is to permit a shipper in interstate commerce o bring an action against an initial carrier to recover for damages to a shipment of goods whether such damages occurred while the goods were in hands of initial carrier or a connecting carrier.—L. E. Whitlock Truck Service, Inc. v Regal Drilling Co., 333 F. 2d 488 (490, 491).

See also J & H Flyer, Inc. V. Pennsylvania R. Co., n. 36, below.

Purpose of the second Cummins amend-

ment (1916) to §20(11) was to restore the law of full liability as it existed prior to the Carmack amendment of 1906; practical result of railroads' publication of rates with extremely low released values and extremely high rates where there were no released values had been that shippers had a choice of rates in name only, because the full-value rates were prohibitively high, and thus were effectually compelled to use the low-value rates and accept relatively small amounts for loss or damage to their shipments.—Released Rate Rules —National M. Freight Classification, 316 I.C.C. 499 (509)*.

4. Effect.—[Vol. 3].—The statute has two undisputed effects crucial to the issue in action brought in State court to recover for damages to melons shipped from Rio Grande City, Tex., to Chicago, Ill.: first, it codifies the common-law rule that a carrier, though not an insurer, is liable for damage to goods transported by it unless it can show that the damage was caused by an act of God, the public enemy, an act of shipper, public authority, or the inherent vice or nature of the goods; and second, it declares unlawful and void any rule, regulation, or other limitation purporting to limit that liability.—Missouri Pac. R. Co. v. Elmore & Stahl, 377 U.S. 134 (137-8)*.

Effect of the Carmack Amendment was to codify the common law rule of carrier's liability for all loss or damage to shipments excepting only that due to acts of God, public enemy, and those arising from inherent nature of goods transported or resulting from fault of the shipper; it was also a rule of common law that as to those excepted causes of damage a carrier could nevertheless be held liable if it were negligent. Thus, carrier was liable for damages whether negligent or not if the loss or damage was not due to the excepted causes; it could not escape liability simply by showing absence of negligence on its part.—L. E. Whitlock Truck Service, Inc. v. Regal Drilling Co., 333 F. 2d 488 (491).

Applicability of Paragraph

8. Carriers, transportation, subject to paragraph.—[Vols. 3, 7, 9, 16-18].—Mere publication of a tariff does not of itself make the publisher a common carrier or make every service it performs a part of common carriage with consequent common carrier liability; and fixing point at which common carrier liability begins or ends is not dependent on requirement of filing the tariff but is a matter for the courts and the common law.—Republic Carloading & Distrib. Co. v. Missouri Pac. R. Co., 302 F. 2d 381 (386)*.

See also Sawyer & Co., Inc. v. Atchison, T. & S.F. Ry. Co., n. 30, below.

On traffic handled by water carrier operating under authority from Maritime Commission between Seattle and Seward in connection with land carriers operating between Seward and interior Alaska points and/or between Seattle and points in the 48 contiguous States, liability for loss and damage to shipments is determined, as to the land transportation, under §20(11), and as to the water transportation under the Carriage of Goods by Sea Act (46 USC §§1300-1303).—Alaska Freight Lines, Inc., v. Puget Sound Tug & Barge, 94 M.C.C. 376 (378).

Bills of Lading

15. Nature and function.—[Vols. 3, 7, 9, 19].— See Holford v. Louisville & N. R. Co., n. 115, below.

20. Uniform bills of lading; domestic and export.—[Vol. 3].—Shipment of plums was not transported and delivered to plaintiff with "reasonable dispatch" within meaning of that term in Section 2 of the "contract, terms, and conditions" of the uniform straight bill of lading; delay of 2 days was unreasonable and unexcused, therefore a wrong.—Great Atlantic & Pacific Tea Co. v. Atchison, T. & S.F. Ry. Co., 224 F. Supp. 903 (903, 905)*.

24. General construction of clauses limiting liability.—[Vols. 3, 19].—Carrier transporting perishable goods is not precluded from limiting its liability, by bill of lading and protective tariff provisions, to liability for negligent failure reasonably to carry out shipper's instructions; §20(11) provides simply that a carrier cannot limit its liability for damages caused by the carrier.—Trautmann Bros. Co. v. Missouri Pac. R. Co., 312 F. 2d 102 (104).

Only in case of misdelivery, negligent injury, loss or similar misfortune does a valuation clause in the contract of carriage come into

use; the limitation clause is designed for and does survive a breach of the contract, and the limitation of liability must apply where carrier is negligent or fails to follow shipper's instructions, or it is meaningless.—Minneapolis Soc. of Fine Arts v. Railway Exp. Agency, 213 F. Supp. 129 (133) [Not arising hereunder.]

Liability of Carriers

30. In general.—[Vols. 3, 7, 9, 13-19].—Part II, §219, n. 10.

In action to recover from carrier for damage to a shipment of melons, shipper established its prima facie case when it showed delivery in good condition, arrival in damaged condition, and the amount of damages; burden of proof was then on carrier to show both that it was free from negligence and that damage to the shipment was due to one of the excepted causes which relieve a carrier of liability. The court is aware of no new rule of federal law governing a carrier 's liability for spoilage and decay of perishables, similar to the "livestock rule," which absolves carrier from liability upon proof that it exercised reasonable care and complied with shipper's instructions.—Missouri Pac. R. Co. v Elmore & Stahl, 377 U.S. 134 (138-40)*.

Nor do rules 130 and 135 of the Perishable Protective Tariff, relied on by carrier, reflect any such change in the federal law; neither rule refers to presumptions or burdens of proof imposed by law, and it is clear (from the history underlying their adoption) that it was not the commission's intention in approving those rules to modify or reduce the common-law liability of a carrier.—Id., pp. 140-2.

The general rule of carrier liability being based on the sound premise that the carrier has peculiarly within its knowledge all facts and circumstances on which it may rely to relieve it of liability, the law casts upon it the burden of the loss which it cannot explain or bring within the statutory exceptions relieving it from liability. Carrier does not lack adequate means to inform itself of condition of goods at time it receives them from shipper and, while it has possession, it is the only one in position to learn what actually damaged shipment entrusted to its care. Judgment of State court against carrier, affirmed.—Id., pp. 136, 143-4.

At common law a carrier was not liable for damage occasioned by inherent vice or nature of goods transported in absence of negligence; however, under the Carmack amendment and rules of the Perishable Protective Tariff, upon proof of the perishable nature of goods involved the carrier is relieved of its insurer's liability. Thus, in the case of perishable goods, carrier's burden is not to prove that damage resulted from inherent vice of the goods, but to prove its own compliance with tariff rules and shipper's instructions. Lower court properly regarded shipment of frozen food as perishable for purpose of determining carrier's liability for damage; shipper's prima facie case that its shipment was delivered to the railroad in good order was met by latter's proof of shipment's perishable character and of its compliance with tariff requirements and shipper's instructions; since shipper then failed to show that, notwithstanding such apparent compliance, railroad failed to use due care, it is not entitled to recover for damages because part of the shipment was not frozen upon arrival.—Larry's Sandwiches, Inc. v. Pacific Electric Ry. Co., 318 F. 2d 690 (692-3).

A common carrier is not absolutely liable for spoilage or deterioration during course of shipment. So long as carrier has discharged its duty of reasonable care, it is not liable for damages occasioned solely by inherent nature, or vice, of goods shipped; nor is it liable for damages caused solely by acts or direction of shipper. Under governing perishables protective tariff, railroad's liability was limited to liability for negligent failure reasonably to carry out shipper's instructions; melons shipped were prone to spoilage, cars were re-iced at regular stations, and defendant, having no knowledge of shipper's pre-cooling operations, was under no duty to re-ice at origin of shipment; defendant was not negligent, hence did not contribute to spoilage of complainant's shipment of melons.—Trautmann Bros. Co. v. Missouri Pac. R. Co., 312 F. 2d 102 (104-5).

Lower court's finding that steel sheets, shipped in open gondola car on "Shippers load and count" bill of lading, rusted in transit

as result of shipper's failure to properly prepare the goods for shipment in such a car, and that the damage to the goods was within the exceptions from liability on part of the carrier contained in the Bills of Lading Act, and its judgment in favor of the railroad, affirmed.—Solway Metal Sales, Ltd. v. Baltimore & O. R. Co., 344 F. 2d 568 (569-70).

Under the Carmack Amendment, initial carrier is liable for damage to property moving in interstate commerce under a through bill of lading whether in its possession or that of a connecting carrier, and delivering carrier is equally liable. In action for damage to goods transported, a justiciable issue of fact is established when plaintiff shows that the goods were delivered to initial carrier in good condition and arrived in damaged condition; carrier sued then has the burden of proving that the damage was caused solely by an Act of God, the public enemy, inherent vice or nature of the commodity, or an act of shipper, After plaintiff makes a prima facie showing of damage to the shipment and carrier shows that the loss or damage arose from act of the shipper, plaintiff must prove that some act of the carrier concurred in or contributed to the damage before carrier can be held liable.—Minneapolis, St. P. & S.S.M. R. Co. v. Metal-Matic, Inc., 323 F. 2d 903 (905-6).

Defendant is not liable for damage to shipment of machinery which moved on straight bill of lading containing a "shipper's load and count" clause; the machinery was not skidded as required by railroad's tariff rules (although shipper knew of the skidding requirement and skidding was its prior regular practice), shipper improperly loaded the two cars used, thereafter closed and sealed the cars, and delivered them to initial carrier for movement. Shipper is conclusively bound by carrier's tariff rules, and parol evidence cannot be received to vary terms thereof; therefore, although initial carrier's inspector, before the cars were closed and sealed, inspected the shipment and reported that it was in good order, that act did not waive shipper's liability for failure to skid the shipment as required by the tariff. Defendant's liability cannot in anywise be premised on waiver of carrier rules and regulations or on shipper's reliance on the inspection before the cars were sealed.—Id., pp. 906-8.

In suit to recover for damage to delicate electronic equipment, loaded by plaintiff in van of a motor truck, a finding that goods were undamaged when delivered to the railroad could have been predicated only on speculation and conjecture. The loaded truck was already padlocked and secured on a flatcar when received by defendant, and the bill of lading said nothing about contents of the truck. Those circumstances relieved the railroad of any obligation to ascertain contents of the truck or whether they were properly packed for rail shipment; further, they placed on plaintiff the burden of proving that the packaged contents were properly loaded and secured within the truck for rail shipment. Trial judge's finding that plaintiff did not meet that burden is supported by the records; sustained.—Armour Research Found. of Ill. Institute of Technology v. Chicago, R. I. & P. R. Co., 311 F. 2d 493 (494)*.

Defendant has no common-carrier liability for loss of considered forwarder l.c.l. shipments, lost after unloading onto platform at its freight house (part of which was leased to plaintiff forwarder) and before they were loaded into rail cars or trucks by railroad employees for outbound haul or by local draymen for local delivery. Plaintiff had acknowledged delivery of inbound shipments, but had not delivered shipments into carrier's possession for immediate transportation, nor issued complete shipping instructions; no outbound bills of lading had been issued. Thus, so far as relation between plaintiff as shipper-consignee and carrier is concerned, interstate shipment had ceased or had not begun when loss occurred. Defendant's unloading services were performed at shipper's request in accordance with its tariff naming charges therefor, and not in its capacity as a common carrier. District court's judgment in favor of defendant, affirmed.—Republic Carloading — Distrib. Co. v. Missouri Pac. R. Co., 302 F. 2d 381 (384-7, 389)*.

Moreover, agreement covering plaintiff's lease of part of the depot, including use of the platform for temporary accommodation of freight actually or constructively in its possession, provided that freight on which defend-

ant received no road haul should at all times be deemed to be in plaintiff's possession, that plaintiff would be liable for loss and damage to freight being handled from highway truck to highway truck, and that loss or damage to freight on the platform would be the liability of the party having possession thereof under provisions of the agreement. Thus, under the lease terms, plaintiff at all times had possession of considered shipments and their loss was its responsibility.—Id., pp. 383, 387.

See also J & H Flyer Inc. v. Pennsylvania R. Co., n. 36, below.

Defendant railroad, as a common carrier, owed a duty to plaintiff, as shipper, to exercise reasonable care in handling considered shipment and to perform all required transportation services without negligence. And under the Carmack Amendment, a carrier, although not an absolute insurer, stands liable for damage to goods which it transports unless it can show its freedom from negligence and that the damage was caused by an Act of God, acts of a public enemy, public authority, an act of shipper, or an inherent vice or the nature of the goods. See 377 U.S. 134. Therefore, when plaintiff consignee established a prima facie case by showing delivery of the shipment to carrier in good condition, arrival in damaged condition, and the amount of damages, and defendant railroad failed to show by a preponderance of credible evidence either that it was free from negligence or that the damage was due to one of the excepted causes relieving it from liability, plaintiff is entitled to recover damages in the amount specified.—Sarno v. Southern Pac. Co., 277 F. Supp. 628 (631).

Carriers are charged with knowledge of information and instructions contained in their own freight bills. Though originating carrier's freight bills showed shipment of green corn, consigned to delivering carrier as agent with instruction to hold for disposition by shipper, as top-iced by shipper, with instructions to reice if delayed, they negligently failed to carry out shipper's reicing instructions after shipment arrived at destination. Under applicable tariff provisions respecting cars held for orders and the agreement of the parties as contained in the bill of lading, the carriers were responsible as carriers, not as warehousemen, from time shipment arrived at destination through the period of free time for unloading; and as shipper informed them of the consignee before expiration of the free time, the carrier continued to be responsible as a carrier until placement of the property for delivery at consignee's dock, and as such was also responsible for compliance with shipper's instructions to reice the load if delayed. —Skaggs v. Midland Valley R. Co., 233 F. Supp. 1004 (1005, 1007-8).

Under a fair and proper interpretation of those instructions, carriers would be responsible for checking the shipment and reicing as necessary until shipment was delivered to dock of the party entitled to receive it for unloading, and certainly through the free-time period. As the spoilage occurred prior to expiration of that period, defendant is liable for the loss, and it has not shown that the loss was due to any of the five causes relieving it from liability. Judgment for plaintiff.—Id., p. 1008.

In view of the carrier's duty to deliver freight shipped at the destination designated in the bill of lading, defendant railroad is liable to shipper and receiver of cement for breach of contract by virtue of its misdelivery of considered car; and error in routing instructions on bill of lading prepared by shipper does not relieve carrier of its duty to deliver at designated destination, nor permit it to change to destination. However, contrary to plaintiffs' contention, a negligence action will not lie where the only duty breached is one created by contract; therefore, since the only duty breached was railroad's duty to deliver under a contract of carriage, the court need not consider rules of law governing the measure of damages in tort actions. Accordingly, under §20(11), defendant is liable to plaintiffs for the value of the shipment plus the freight charges as damages which (having been within contemplation of the parties when the contract was made) might naturally be expected to follow a breach of the contract of carriage. —Marquette Cement Mfg. Co. v. Louisville & N. R. Co., 281 F. Supp. 944 (947, 950-1).

Defendant railroad found liable to seller of goods for full value of considered shipment, moved under order-notify bill of lading, when railroad delivered the shipment to agent of

purchaser of the goods without simultaneously receiving the bill of lading; as the shipment was subsequently stolen from its premises, purchaser refused to honor bank draft drawn on it for payment; and the bill of lading was returned to plaintiff-seller who made timely claim for loss upon the railroad. Inasmuch as purchaser's agent did not have or surrender the covering order bill of lading at the time of delivery, as required by specific provision on face thereof, the railroad had no right to deliver the shipment to him. However, pursuant to indemnity bond of purchaser and its surety, agreeing to hold the railroad harmless for delivering shipments covered by order bills of lading without surrender of such bills, railroad is entitled to indemnification from defendant insurance company as surety.—Capitol Packing Co. v. Smith, 270 F. Supp. 36 (37-40).

Plaintiff is not entitled to recover under the Carmack amendment for unreasonable and unexcused delay in transportation and delivery of a shipment of plums when it has not shown that it suffered any actual loss, damage, or injury as result thereof. Nor is plaintiff entitled to recovery under the common-law concept of damages, since the basic principle underlying common-law remedies is that they shall afford only compensation for the injury suffered.—Great Atlantic & Pacific Tea Co. v. Atchison, T. & S.F. Ry. Co., 224 F Supp. 903 (907)*.

Railroad's motion for summary judgment, in action brought under§20(11) for alleged damages to shipment of cantaloupes, must be allowed. The statute imposes liability for loss and damage to goods only upon initial carrier receiving goods from consignor for shipment or on the final carrier delivering shipment to consignee, and imposes that liability only in favor of the lawful holder of a bill of lading or receipt for the shipment. Accordingly, when plaintiff did not allege or show that it was the holder of a bill of lading or receipt for considered shipment, while defendant affirmatively showed by uncontradicted affidavits that it was neither the receiving nor delivering carrier, defendant is entitled to judgment.—Sawyer & Co., Inc. v. Atchison, T. & S.F. Ry. Co., 282 F. Supp. 791.

Though neither Government bill of lading nor plaintiff motor carrier's freight bill indicated that plaintiff was either initial or delivering carrier of shipment intended for movement in piggyback service under its contract with railroads, the Government withheld revenue from plaintiff on account of claim for loss of the shipment on line of connecting railroad, and because the railroad was willing to settle with plaintiff within limit of their indemnity agreement, plaintiff, not knowing that the Government's claim was over twice that amount, effected settlement. Plaintiff did not voluntarily choose to accept responsibility for the total loss to the Government and did not waive its immunity from liability under the Carmack amendment, and by undertaking to settle with the railroad at fault did not become liable for such claim, owing to the involuntary character of its action induced by the Government's retention of revenues earned in carriage of other goods.—Riss & Co. v. United States, 213 F. Supp. 791 (796-7, 799).

Deviation doctrine of liability is of purely admiralty origin and is not applicable in cases arising under the Interstate Commerce Act (citing 87 F. Supp. 691, 189 F. 2d 939).—Minneapolis Soc. of Fine Arts v. Railway Exp. Agency, Inc., 213 F. Supp. 129 (132).

Section 20(11) restates the common-law rule that a common carrier is ordinarily an insurer against loss, damage, or injury to property committed to it for transportation, and declares any limitation of liability or recovery to be unlawful and void; authority granted the commission, under exception therein, to grant partial exemption from full liability by released-rate orders is discretionary.—Released Rate Rules—National M. Freight Classification, 316 I.C.C. 499 (508-9)*.

31. Initial carrier.—[Vols. 3, 7, 9, 11, 14, 15, 17, 19].—In consignee's action to recover from railroad as initial carrier for damages to shipment of tomatoes from Merced, Calif., to Boston, Mass., plaintiff proved a prima facie case by evidence showing that (1) the tomatoes were grade "U.S. No. 2" and in good condition when delivered to defendant, (2) car was properly iced and re-iced during movement and, on arrival, temperature conditions therein were excellent, (3) rough handling by carrier caused shipment to be in subgrade

condition when delivered, and (4) amount of the damages. Therefore, since defendant failed to prove by a preponderance of credible evidence either that it was free from negligence or that the damage resulted from any of the excepted causes (see 377 U.S. 134) relieving a carrier from liability, plaintiff is entitled to recover damages from defendant railroad in the amount specified.—Sarno v. Southern Pac. Co., 277 F. Supp. 628 (629-31).

In accepting shipment tendered to it at Middletown Air Force Base, Pa., and delivering the loaded trailer either to railroad yard or to plaintiff motor carrier's terminal for loading on rail car for piggyback movement to Oklahoma under plaintiff's contract with railroads, short-haul motor carrier serving Middletown acted in its own right and not as agent for plaintiff, which lacked authority to serve Middletown. Government bill of lading correctly named the short-haul carrier as initial transportation company, Middletown as shipping point, and the short-haul carrier "via" plaintiff as route of shipment; plaintiff was not the initial carrier or liable as such for loss of shipment during rail movement, and fact that it furnished trailer used by the short-haul carrier did not make it such. Freight bill issued by plaintiff, which referred to the Government bill of lading and to the short-haul carrier's interest, did not indicate that plaintiff was the initial carrier, and any such assumption by Government accounting authorities was not justified under the facts and the applicable law.—Riss & Co. v. United States, 213 F. Supp. 791 (795-7, 798, 799).

Although he undertook to issue shipper a bill of lading covering considered shipment, local trucker's relation to the shipment was too slight to make him the initial carrier when he had received the goods from shipper for repacking and further handling and later hired authorized common carrier to transport them to interstate destinations, but performed no transportation; he was essentially a shipper as to the line-haul carrier hired, even for Carmack Amendment purposes. Activity and function of the trucker was similar to that of a non-consolidating freight forwarder who assumes carrier responsibility toward shipper and a shipper status, rather than initial carrier status, toward line-haul carrier who performs the transportation services.—Flanzbaum v. M & M Transp. Co., 203 F. Supp. 365 (367, 369-70)*.

32. Intermediate carrier.—[Vols. 3, 7, 9, 15, 19].—A carrier not named in the bill of lading but receiving possession of the cargo is liable as a connecting carrier; failure to name it in the bill of lading is unimportant.—Riss & Co. v. United States, 213 F. Supp. 791 (799 Note 2)*.

33. Delivering carrier.—[Vols. 3, 16, 19].—The Carmack amendment did not change common-law rule that a delivering carrier is one who receives actual or constructive possession of shipment for delivery to consignee; one who might have or would have received possession of an interstate shipment for delivery, but did not because of its damage or destruction while in hands of a connecting carrier, is not the delivering carrier.—Riss & Co. v. United States, 213 F. Supp. 791.

While Government bill of lading (on shipment intended for piggyback movement under plaintiff's contract with railroads) designated routing "via" plaintiff, it did not indicate that plaintiff was the delivering carrier nor purport to impose on it liability as anticipated delivering carrier. Plaintiff never received actual or constructive possession of the shipment, which was destroyed while on line of connecting railroad; it is not established that plaintiff would have made delivery to consignee had the cargo not been destroyed; thus, plaintiff was not the delivering carrier or liable as such within contemplation of §20(11).—Id., pp. 795-7, 798, 799.

See also Condakes v. Smith, n. 115, below.

36. For baggage.—[Vols. 3, 14-16, 19].—Use of redcap's services in furtherance of an interstate journey is a carrier-passenger relationship within the domain of federal law. Consequently any attempt by defendant to limit liability for loss of contents of jewelry salesman's sample case, which was being handled by railroad's redcap when it disappeared, must comport with terms of the Carmack amendments as amended by the Cummins amendments. Although defendant did not give the prospective passenger proper notice of a limitation of liability for hand baggage, if redcap was negligent in leaving hand truck on which he placed the case unattended

for the brief interval during which it disappeared, it was equally negligent for the salesman, in disregard of his employer's instructions and his practice, to let the bag out of his sight. Lower court's dismissal of the complaint affirmed.—J & H Flyer Inc. v. Pennsylvania R. Co., 316 F. 2d 203 (204-5).

Since §20(11) was not intended to confer new substantive rights on shippers, but instead to confer new remedial rights, any primary or substantive right which flow therefrom are not new, but are determined by reference to common-law doctrines; and at common law a carrier is liable as an insurer for loss to those goods which it holds itself out to handle. Carriers serving passengers are liable as insurers of passengers' baggage, but only as bailees for a passenger's property which is not "baggage" and contents of which is not disclosed; merchandise for sale, such as jewelry in the salesman's sample case, clearly is not "baggage." That rule should extend to redcaps, whose services are obviously those of assisting passengers with their baggage, and not of independent transportation; thus, since its redcap was not notified of valuable contents of the case, defendant is not liable as an insurer for loss of the jewelry which disappeared while left unattended on redcap baggage truck in railroad station.—Id., p. 205.

37. Negligence.—[Vols. 11-19].—Railroad is liable for value of wine contained in one tank of two-tank private car, shipped full from California but found empty when it reached consignee's tracks at Bronx Terminal Market, since it still held the car as a carrier during time it was placed on holding tracks awaiting placement on consignee's tracks, latter tracks being filled when car arrived. Defendant notified plaintiff promptly by telephone of arrival of car, and freight bill was mailed the next day, but that did not effect actual delivery under applicable tariff (providing that delivery of private car is complete when it is placed on a private track with due notice to consignee) when city owned the holding tracks and leased them to the railroad, not to consignee. And since tariff provision for written notice of placement of the car must be strictly complied with, railroad did not effect a constructive delivery when freight bill relied on as notice failed to state the holding location, and indeed was dated from a station a mile away from Bronx Terminal.—Eastern Wine Corp. v. New York Central R. Co., 355 F. 2d 30 (31).

Moreover, even if defendant was not holding the car on hold tracks as a carrier, it was at least a warehouseman bound to use ordinary care. And, in view of nature of the bonded cargo, railroad's failure to notify consignee of successive instances of seals on car doors being found broken by its employees or otherwise trying to protect the cargo after the first break, other than by notice to city police, breached its duty of ordinary care. Therefore, it is unnecessary to determine whether the wine was stolen during a period when defendant as a carrier still had an insurer's responsibility, or after it ceased to hold as a carrier and commenced to hold as a warehouseman or bailee for mutual benefit; in either case the railroad is liable for the loss.—Id., pp. 31, 32.

In suit to recover damages for loss of part of tank-car shipment of tung oil caused by leakage while in railroad's possession, plaintiff made out a prima facie case by showing delivery of shipment to carrier in good condition, subsequent damage and loss in transit, and amount of resulting damage. Burden then shifted to carrier to prove both that it was free from negligence and that the cargo damage was due to one of statutory exemptions relieving it from liability. Defendant's evidence failed to show that loss was due to shipper's act or default in furnishing a defective car when opinion of its witness (who inspected car 11 days after oil was lost), that break in car was due to defect in the metal, is not justified by his qualifications. Moreover, while record shows no specific negligence of carrier, it is conceded that spillage occurred during switching operation in rail yard and that break could have resulted from jostling effect of coupling when car was "kicked" down the track. As it failed to satisfactorily or convincingly bear either of the burdens of proof imposed on it, railroad is liable for damages in amount shown.—United States v. Gulf, M. & O.R. Co., 259 F. Supp. 704 (707-9)*.

In view of decision in 377 US 134, there is no merit in contention that, because plaintiff's shipment was perishable, carriers are liable

for loss or damage only upon plaintiff's proving them guilty of negligence in handling it.—Skaggs v. Midland Valley R. Co., 233 F. Supp. 1004 (1006).

Carriers are charged with knowledge of information and instructions contained in their own freight bills. Originating carrier's billing showed shipment of green corn, consigned to delivering carrier as agent with instruction to hold for disposition by shipper, as top-iced by shipper, with instruction to reice if delayed; it was also furnished copy of Government inspection certificate containing information as to loading and icing of the corn. Thus, when shipment originated, carriers had knowledge of nature of the load and that 31,000 pounds of ice had been placed in the car, 10,000 pounds on top of the load; and by inspection made nearly 4 days later at destination they had information that at least half of the top ice had melted and only 1,000 pound remained in body of the load. They were also charged with reicing if shipment was delayed, yet they waited another 3 days before reopening the car to inspect the load and reice, at which time it is definite by their own testimony that the top of the load was visible, the top icing having melted away. This was a negligent failure to properly carry out shipper's reicing instructions.—Id., pp. 1005, 1007.

40. Measure of damages.—[Vols. 15-19].—See also Zimmerman v. Allied Van Lines, Inc., §219, n. 30.

Though unexcused 2-day delay in transportation and delivery of shipment of plums was a wrong, there was no physical damage to, or deterioration of, the plums and they were sold at the same retail price as if delivery had been 2 days earlier; therefore, plaintiff cannot look to retail prices as a measure of damages. And fact that the wholesale price dropped during that period would not be a logical and proper criterion, since the plums were shipped for retail sale, and the retail and wholesale market price levels move independently of each other. Nor is the replacement value theory applicable, since plaintiff did not purchase substitute plums in wholesale market at the time it should have received considered shipment; to apply that criterion where no actual loss was suffered would result in unjust enrichment of plaintiff. Measure of damages urged is indefinite, uncertain, and bears no relation to the facts; cause dismissed.—Great Atlantic & Pacific Tea Co. v. Atchison, T. & S.F. Ry. Co., 224 F. Supp. 903 (905, 909)*.

Released Rates and Ratings

66. General released-rates order.—[Vol. 19].—Although railroads' application for a general released-rates order stated that it was filed on behalf of all carriers parties to the rail classifications, which name freight forwarders as participants, at the hearing rail applicants disclaimed any intention that proposed rules should apply to property delivered by shippers to forwarders. In view thereof, application is considered modified so as to apply only to rail parties to the classifications; such modification precludes application of proposed rules to a forwarder as a transportation agency, but not as a shipper.—Released Rate Rules—National M. Freight Classification, 316 I.C.C. 499 (501)*.

The commission is aware that many new improved articles of high value have come into existence during past several decades, many of which fall within scope of classification and tariff descriptions established many years ago for articles of relatively low value, and that it is impractical to revise commodity descriptions generally to reflect current values of all the various types of articles transported; nevertheless, proposed rules restricting application of all existing class ratings and rates in railroads' uniform freight classification and in national motor freight classifications to property (other than ordinary livestock and articles already subject to released rates) the value of which has been agreed upon or declared in writing by the shipper as not exceeding amounts named in the rules, are not justified by evidence of record.—Id., pp. 500, 513-4.

The proposals would have far-reaching effects on shippers by rail and motor: expensive revisions in their billing, pricing, and invoicing would be necessary; for many the packing of shipments so that their value could be ascertained would be impracticable, since in many instances value is not known until after shipment moves and invoicing begins; showing value for all shipments would delay

deliveries and increase pilferage; thus, the proposals would add considerably to shipper costs, cause much confusion in compliance, and greatly disrupt established business practices throughout the country. Moreover, if shipment were tendered without a statement of value, shipper would assume a portion of the common-carrier liability as an insurer in event its value exceeded the maximum allowed; and if unlimited common-carrier liability were desired, shipper (to be fully insured) would have to pay excess-value charges if the value exceeded the stated maxima.—Id., p. 512.

In addition, applicants have failed to prove reasonableness of the proposed rules, either as to the affected traffic as a whole or as to any particular commodities; there are many commodities or groups named in the classification as to which no evidence was submitted either individually or on a representative basis. Many articles are fairly uniform in value, so that the carrier knows with reasonable certainty the liability it assumes when it accepts a shipment for transportation; on such articles there is no sound basis fo maintaining rates subject to limited-liability provisions. To approve the proposed rules on the inadequate evidence submitted would in effect be delegating to the carriers statutory authority which was delegated only to the commission. Proposed rules do not conform to provisions of §20(11); applications denied.—Id., pp. 513, 514.

67. Released rates and ratings, lawful if authorized.—[Vols. 3, 12, 14, 16-19].—The authority granted the commission to modify the general rule of common-law liability, as restated in §20(11), by granting partial exemption from full liability for loss or damage to shipments in those cases where rates depending on and varying with declared or released values would, in its judgment, be just and reasonable under the circumstances surrounding the transportation, is discretionary; and Congress quite certainly intended that authorty to be used sparingly.—Released Rate Rules—National M. Freight Classification, 316 I.C.C. 499 (508-9)*.

The commission is not unmindful of the problem confronting rail and motor carriers in limiting their common-law liability as insurers against loss or damage to property of exceptionally high value, particularly where such high value is not known in advance and is not apparent when shipments are tendered; however, disapproval of proposed general released-rate rules for application to all traffic (with a few exceptions) moving under existing rail or motor class rates or ratings does not preclude the maintenance of rates dependant upon declared or released values on such high-value commodities, upon a showing of need therefor in appropriate proceedings in accordance with the standards approved in prior released rate proceedings such as those cited.—Id., p. 514.

70. Justification by carrier.—[Vols. 3, 7, 19].—To justify issuance of released-rate orders, carriers must show that susceptibility of the traffic to loss or damage is comparatively high and that wide range in value of the commodity makes amount of any possible claim difficult to estimate; while such data may be presented on a representative basis, it is essential that applicants for relief bear this burden of proof. Despite extensive evidence submitted to support proposed rail and motor rules for application of released rates to all class-rate traffic except ordinary livestock and articles already taking released rates, no such showing is made. Proposed limits of value were fixed largely on broad generalities and assumptions without sound basis, and proportion of applicants' total traffic that would be affected is not shown, estimates of both motor and rail applicants being mere guesses unsupported by probative evidence. Record not only fails to establish reasonableness of the proposed rules for commodities specifically mentioned, but no evidence of reasonableness, individually or on a representative basis, is submitted for many commodities or groups named in the classifications which are within purview of those rules.—Released Rate Rules—National M. Freight Classification, 316 I.C.C. 499 (509-10, 512, 513)*.

In addition to a showing of susceptibility of the traffic to loss and damage, there must also be evidence of frequency of claims and their ratio to transportation revenue, on an industry-wide basis, from the freight subject to claims; such evidence is extremely meager, and there is no showing that applicants have

had any difficulty in obtaining adequate insurance coverage or that present cost of such insurance is unreasonably high, both of which are also important considerations. Applicants have not sustained their burden of proving reasonableness of the proposed rules, either as to the affected traffic as a whole or as to any particular commodity to which the rules would apply.—Id. pp. 513-4.

76. Duty to advise shipper of choice of rates.—[Vols. 3, 16].—While shipper difficulties in complying with proposed general released-rate rules on class-rate traffic are insufficient alone to condemn the rules, they are a factor entitled to consideration. Released rates usually give shipper a choice of unlimited common-carrier liability at the higher rates, or limited liability in consideration of reduced charges, and to obtain the lower rate shipper by a fair and reasonable declaration binds himself to accept for damage claim purposes an amount not exceeding that declared or agreed. Under proposed rules, in tendering a shipment at existing class rates without a statement of value, shipper would assume a portion of the common-carrier liability as an insurer if its value exceeded the maximum allowed; and if unlimited liability were desired, shipper, to be fully insured, would have to pay excess charges on values above the stated maxima. Proposed rules would add considerably to shipper costs, would disrupt established business practices throughout the country, and are not shown to be just and reasonable. Not approved.—Released Rate Rules—National M. Freight Classification, 316 I.C.C. 499 (512)*.

Actions

115. In general; time for.—[Vols. 3, 9, 13-19].—In forwarder's action to recover value of shipments lost after unloading on platform at railroad's freight depot following inbound line haul by a motor carrier or connecting railroad, the fact that defendant railroad raised as a defense the limitation period specified in §20(11) and the Uniform Bill of Lading did not constitute an admission that it acted as a common carrier in performing the unloading, since that defense was an alternative one which could come into play only if defendant's unloading services were found to have been performed in a common-carrier capacity.—Republic Carloading & Distrib. Co. v. Missouri Pac. R. Co., 302 F. 2d 381, 387, 388)*.

See also Armour Research Foundation case, n. 30, above.

In action against delivering carrier for recovery of loss resulting from damage in transit to shipment of cantaloupes from a point in Mexico to Boston, Mass., complaint which alleges delivery of shipment in Mexico to initial carrier under a uniform straight bill of lading (no reference to any other bill of lading appearing) fails to state a cause of action under §20(11) for which relief may be granted. The court notes, also, that plaintiffs do not allege that they are holders of the bill of lading, or that they are owners of any interest in considered shipment; absent such allegations, no claim for which relief may be granted is stated. Accordingly, defendants' motion to dismiss the complaint for lack of jurisdiction, and for failure to state a claim against defendants for damage to the shipment, granted.—Condakes v. Smith, 281 F. Supp. 1014 (1015).

Shipper's suit against railroad for damages to shipments of brick, made pursuant to a uniform bill of lading, was barred under provision of Uniform Bill of Lading when it was not filed within two years and one day from date of railroad's letter unequivocably denying the damage claim, although the suit was filed less than two years after railroad's subsequent letter stating that, after further investigation, the initial disallowance was adhered to. In considering the time requirements under the Uniform Bill of Lading, numerous authorities have strictly construed the applicability and have held that they cannot be tolled by waiver or estoppel. Carrier cannot waive or be estopped to assert bill-of-lading requirements as that would permit discrimination which is prohibited by law; and, while those rules may seem harsh as applied to plaintiff's case, the court has no alternative but to follow them; judgment in favor of defendant.—Holford v. Louisville & N.R. Co., 266 F. Supp. 408 (408-9).

See also Sawyer & Co., Inc. v. Atchison, T. & S.F. Ry. Co. n. 30, above.

Since a railroad's transactions are multitudinous, and to prevent discrimination, the act

requires it to give shipper a bill of lading and requires shipper to give notice of a claim to the railroad as provided therein; these are substantial statutory requirements. Bill of lading covering plaintiff's shipment (damaged in transit) provided as a prerequisite to recovery that claims must be filed in writing within 9 months after delivery. Requirement of a written claim is an easy one, of which plaintiff was well aware; its filing not only enables railroad to make a full and complete investigation, but it is the orderly and uniform way to inform the carrier of a claim against it and that compensation is expected; further, it prevents discrimination and misunderstanding which can result from oral arrangements. Plaintiff's supplemental invoice, describing work required to repair the machine shipped, is not a claim sufficient to inform the railroad the plaintiff is presenting a claim for damages and expects recompense.—Lucas Mach. Div., New Britain Mach. Co. v. New York Central R. Co., 236 F. Supp. 281 (282, 283).

If the courts recognized estoppel, the fact that defendant's claim agents came to plaintiff's plant to examine and photograph the damaged machine and instructed plaintiff to repair it and inform defendant of the cost thereof might conceivably estop the railroad's defense of plaintiff's suit. However, review of federal decisions shows clearly that a written notice, however informal, must be filed with defendant railroad and that latter does not waive that requirement and is not estopped where (1) it actively negotiated with plaintiff for settlement of the claim, (2) oral claim for damages was made, or (3) the railroad had investigated and had actual knowledge that damage had occurred. It has also been held that for a carrier to waive, or be estopped from asserting, the bill-of-lading requirements would permit discrimination prohibited by law. Therefore, since no sufficient claim for damages was filed with defendant, its motion for summary judgment is granted.—Id., pp. 282-3.

116. Venue.—[Vols. 3, 18].—While action to recover cost of repairing trailer allegedly delivered in damaged condition following defendant's piggyback transportation thereof is within purview of 28 USC §1337, thereby giving the Federal district court original jurisdiction, it is also controlled by §20(11) which grants concurrent jurisdiction both to the district courts and to State courts. Plaintiff chose to institute suit in a State court and since the matter in controversy does not exceed $3,000, exclusive of interest and costs, it may not be removed therefrom to the Federal court; remanded to the State court.—Eazor Exp. v. Pennsylvania R. Co., 214 F. Supp. 695 (696-7).

See also First Flight Co. case, §20(12), n. 1.

117. Jurisdiction.[Vols. 3, 7, 11, 15, 18, 19].—It is a fundamental principle of the law of jurisdiction that a sovereign has personal jurisdiction over any defendant within its territorial limits, and that it may exercise that jurisdiction by any of its courts able to obtain service upon the defendant; thus, the United States is deemed to have personal jurisdiction over any defendant within the United States. While federal court jurisdiction is governed by the due process clause of the Fifth, rather than that of the Fourteenth, Amendment to the Constitution, modern Fourteenth Amendment precedents permit exercise of jurisdiction over any defendant having such minimum contacts with the State that the exercise does not offend traditional notions of fair play and substantial justice; and the Supreme Court has left no doubt that the material constitutional inquiry concerns contacts, not with physical territory of the court, but with the sovereignty of which the court is an arm, which in the case of federal courts is the United States.—First Flight Co. v. National Carloading Corp., 209 F. Supp. 730 (736-8).

Section 20. (12) Recovery by initial or delivering carrier from connecting carrier.—[Unchanged. See vol. 14, p. 11548.]

Amendments, see footnotes, vol. 3, p. 2614, vol. 14, p. 11548; historical note, p. 2614.

Notes of Decisions

Volume 3—p. 2614; Volume 11—p. 9324; Volume 12—p. 10333; Volume 15—p. 12138; Volume 19—p. 15431.

1. Recovery over by initial carrier.—[Vols. 3, 11, 12, 15, 19].—Apart from bill of lading he undertook to issue to plaintiff shipper, relation of local trucker, who hired defendant carrier to transport shipper's goods, to considered shipment was too slight to make him the initial carrier; initial and connecting carrier relationship contemplated by the statute did not exist as to the shipment. Therefore, plaintiff shipper may not recover in his action (in the right of the local trucker as initial carrier) against line-haul carrier as connecting carrier for amount of his unpaid judgment against trucker for damages to his goods allegedly sustained while being transported by defendant line-haul carrier.—Flanzbaum v. M & M Transp. Co., 203 F. Supp. 365 (370-1)*.

In a third-party suit against a connecting carrier under §20(12), requirement of §20(11) that suit be brought in a district in which defendant has a line of railroad does not apply. Also, since the great weight of authority deems a third-party suit ancillary to the original suit for purposes of venue, the usual venue requirements need not be met as to a third-party defendant. Therefore, motion of the Santa Fe to dismiss third-party suit brought against it by forwarder (defendant in shipper's suit brought in Eastern District of Tennessee for recovery of damages to shipment handled by Santa Fe as underlying connecting-carrier), on ground that it is neither incorporated in nor licensed to do (or doing) business in Tennessee, overruled.—First Flight Co. v. National Carloading Corp., 209 F. Supp. 730 (733).

Although the Santa Fe is incorporated in another State and maintains an office in Tennessee only for solicitation of traffic, the third-party suit against it may not properly be regarded as a diversity case. Since the original complaint is based at least partly upon a federal question under §20(11), as is the third-party complaint under §20(12), these federal claims confer jurisdiction upon the District Court to entertain the nonfederal aspects of the case under the concept of pendent jurisdiction, and no additional basis of jurisdiction, such as diversity of citizenship, is required; similarly, once jurisdiction of the principal suit is established, under the concept of ancillary jurisdiction no additional basis of jurisdiction is required to sustain a third-party suit.—Id., p. 735

Under the basic principle that a sovereignty has personal jurisdiction over any defendant within its territorial limits and may exercise that jurisdiction by any of its courts able to obtain service upon the defendant, the court may exercise jurisdiction over the Santa Fe. Santa Fe is incorporated within, and does business throughout much of, the United States; there are thus the requisite minimum contacts with the United States, and service has been made upon an acknowledged Santa Fe agent within the territorial limits of the court's process. The venue privilege is not open to Santa Fe as a third-party defendant, and while defending the suit in Tennessee may cause it some inconvenience, that consideration has no bearing on the issue of personal jurisdiction and is nothing like a denial of due process.—Id., pp. 736, 740.

Section 20a. Securities of carriers; issuance, etc.—(1) Carrier defined.—[Unchanged. See vol. 15, p. 12138.]

Amendments, see footnotes, vol. 15, p. 12138; historical notes, vol. 4, p. 2615, vol. 9, p. 7800, vol. 12, pp. 10218, 10330, vol. 13, pp. 10937, 11032, vol. 14, p. 11423.

Historical Note

The commission recommends that §20a be amended so as to expressly exempt from the commission's jurisdiction thereunder, securities issued by States, municipalities, or other governmental bodies which are carriers as defined in part I or part II of the act.—Annual Report, 1964, p. 60.

Notes of Decisions

Volume 4—p. 2617; Volume 7—p. 5824; Volume 9—p. 7800; Volume 11—p. 9324; Volume 12—p. 10334; Volume 15—p. 12139; Volume 19—p. 15432.

1. Carriers subject to section.—[Vols. 4, 7, 9, 15, 19].—Since Bi-State Development Agency of Missouri-Illinois Metropolitan District is not a carrier subject to the act, nor authorized to control any such carrier, any commission jurisdiction over its proposed bond issue must be on the ground that it is a "corporation organized for the purpose of engaging in transportation" as a rail or motor carrier subject to the act. And though the agency was created as "a body corporate and politic," use of those terms does not necessarily imply existence of a corporation within the meaning of a particular statute. Moreover, while it is authorized to issue bonds, and the proposed bond issue is designed to finance creation of a public passenger transportation system in the district, the commission's exercise of jurisdiction over such bond issue, prior to the agency's actually becoming a carrier subject to commission jurisdiction, would be foreign to and would serve none of the general purposes of the act. Application dismissed.—Bi-State Development Agency of Mo.-Ill. Met. Dist., Bonds, 317 I.C.C. 641 (642-4).

Upon consummation of purchase by the State of Vermont, pursuant to enactment of the State legislature, of an abandoned line of railroad for lease to and operation by a new railway corporation, the State does not become a carrier subject to the act merely by virtue of its ownership of the properties. Therefore, subsequent issuance by the State treasurer of negotiable bonds and promissory notes authorized by the legislature to reimburse the State treasury for cost of acquiring the line is not subject to the commission's securities requirements.—State of Vt. and Vermont Ry., Inc., Acquisition and Op., 320 I.C.C. 609 (616)*.

3. Electrically operated carriers.—[Vols. 4, 7, 9, 11].—District court's ruling that Hudson & Manhattan was an interurban electric railway within exemption of §77 of Bankruptcy Act was solely a determination as to the particular statute applicable to its reorganization, and it does not follow that such exempt status must be maintained under Interstate Commerce Act; considering all factors, particularly its long and continuing participation in joint passenger operations with Pennsylvania R., the Hudson does not fall within exemption of §20a(1), and application for issuance of securities by its successor corporation in reorganization and new subsidiary of latter created to conduct its transportation operations must be considered on the merits.—Hudson & M.R. Co. Trustee Abandonment, 312 I.C.C. 701 (703-4)*.

6. Holding companies.—[Vols. 4, 9, 12].—Although merger of railroad system's parent holding company into a new Delaware corporation is not subject to §5(2) and therefore the new company may not be subjected to securities provisions of the act under §5(3), upon consummation it will be subject to, and must comply with, provisions of §20a(2-11) in lieu of the old company to extent provided by order in debt adjustment proceeding, 254 ICC 239; mere change of situs by the old company for purpose of acquiring some benefit not available under laws of State of original incorporation does not deny to the commission the jurisdiction assumed in the debt adjustment proceeding.—Delaware & Hudson Co. Merger, 317 I.C.C. 177 (180).

While reincorporation under laws of another State creates a new corporation, the commission must look to the result intended, or the substance of the acts rather than the mere form; a new corporation succeeds to the rights, and becomes liable for the obligations, of the old where circumstances warrant conclusion that former is merely a continuation of latter and therefore the same person in law; reincorporation under Delaware laws without change of identity of corporate object, directors, or stockholders justifies such a finding. Reasons found in the debt adjustment proceeding for considering the old company a carrier for accounting and securities purposes will continue to exist as to the new, and securities considered therein will become an obliga-

tion of that company upon consummation of merger.—Id., p. 180.

See also Texas & Pac. Ry. Co.—Control—Kansas, O. & G. Ry. Co. case, §5(3), n. 10.

Section 20a. (2) Issuance of securities; assumption of obligations; authorization.—[Unchanged except July 24, 1965 amendment below. See vol. 9, p. 7801].

By act of July 24, 1965, §1, 79 Stat. 263, paragraph (2) was amended by striking the period at the end, inserting in lieu thereof a colon, and adding the proviso set forth below.

***Provided, That nothing in this section is to be construed as applying to securities issued or obligations or liabilities assumed by the United States or any instrumentality thereof, or by the District of Columbia or any instrumentality thereof, or by any State of the United States, or by any political subdivision or municipal corporation of any State, or by any instrumentality of one or more States, political subdivisions thereof, or municipal corporations.

Cross Reference

Section 3 of Public Law 87-527, July 10, 1962, 76 Stat. 142, provides that all power and authority granted therein to the Texas and Pacific Railway Company [to acquire securities or stock of, or property from, any other carrier, and to increase its capital stock of $75,000,000 to not more than $100,000,000 of capital stock outstanding] shall be subject to the provisions of the Interstate Commerce Act and any Acts supplemental thereto.

Historical notes, see vol. 4, p. 2615, vol. 9, p. 7801, vol. 12, p. 10330, vol. 14, p. 11549, vol. 16, p. 12784, vol. 17, p. 13472.

Notes of Decisions

Volume 4—p. 2621; Volume 7—p. 5826; Volume 9—p. 7802; Volume 11—p. 9325; Volume 12—p. 10334; Volume 13—p. 11038; Volume 14—p. 11549; Volume 15—p. 12139; Volume 16—p. 12784; Volume 17—p. 13472; Volume 18—p. 14299; Volume 19—p. 15433.

2. Purpose.—[Vol. 4].—The dominant purpose of the financial provisions of §20a is to maintain a sound structure for support of railroad credit to aid in developing a national transportation system. Indirectly, these provisions were also designed to protect the investing public against faulty or dishonest financing which could dissipate railroad resources, and thus to promote confidence of investors in railroad securities.—Chicago, S.S. & S.B. R. v. United States, 221 F. Supp. 106 (108)*.

Construction

10. Construction, generally.—[Vols. 4, 7, 9, 11, 19].—See Walker v. United States, §5(2), n. 110 *Securities*.

13. "Issue" of securities.—[Vols. 4, 7, 9, 11-13, 15, 18, 19].—Although, upon consummation of merger whereby a new Delaware corporation will replace railroad system's present parent holding company, the new company will be subject to securities provisions of the act to same extent as the old company was subjected thereto by order in 254 ICC 239, since the old company is still in existence the new company's issuance of 1,000 shares of $1 par value common stock, all of which are owned by the old company, did not require authority from the commission.—Delaware & Hudson Co. Merger, 317 I.C.C. 177 (181).

24. Conditions imposed, generally.—[Vols. 11, 17, 18].—It is clearly within the commission's power to attach conditions to its orders authorizing issuance of securities: the very language of §20a expressly empowers it to grant an application with such modifications and on such terms and conditions as it deems necessary or appropriate. And the guiding standards of §20a which emphasize the discretionary character of the commission's regulatory powers authorize it to impose any

condition relevant to the purposes of maintaining the financial integrity of the railroads and the preservation of a national system of transportation.—Chicago, S.S. & S.B. R. v. United States, 221 F. Supp. 106 (108)*.

Imposition on authority for plaintiff's issuance of stock to its employees under an option plan of a condition that the stock be sold for not less than its par value per share is supported by substantial evidence and was not arbitrary or capricious. That requirement has a reasonable relation to the commission's duty to maintain the integrity of railroad securities; in imposing it the commission performed an administrative function, and the court may not substitute its judgment on that critical issue. On the evidence before the commission, a minimum option price was a condition having a rational basis in the record as a whole, and the court has no right to eliminate from the order a condition which the commission has found requisite to its determination that the stock issue is in public interest; the order sustained.—Id., pp. 109-10.

Notwithstanding policy stated in 295 ICC 782 against approval of bond issues not redeemable at any time on payment of a reasonable premium, applicant urges that it must compete for its funds in same money market with industrial and utilities issues restricted against call for an initial 5-year period. As interest rates have not since improved, necessity found in Finance Docket No. 22140 (Aug. 9, 1952) for inclusion of redemption restrictions in order to obtain benefit of advantageous interest rates remains valid. Proposed bond issue subject to initial 5-year redemption restriction, approved.—Illinois Term. R. Co. Bonds, 317 I.C.C. 595 (599-600).

General Considerations

45. Public interest generally.[Vols. 4, 7].—See also Greyhound Corp. Stock, §214, n. 2.

Application by noncarrier corporation which controls a motor carrier and a forwarder for authority to issue stock in exchange for stock of another noncarrier, under merger agreement providing for prior acquisition by the latter of all assets of an affiliated motor carrier except its certificates, certain vehicles, and $5,000 cash, and reserving that carrier's right to continue its operations, denied; proposed transaction would result in common control of two motor carriers, which requires approval under §5(2), and in absence of such authorization applicant's issuance of capital stock to effectuate the transaction would not be for a lawful object or compatible with public interest.—Yale Exp. System, Inc., Stock, 90 M.C.C. 241 (242-3, 244-5).

Bonds: Purpose of Issuance

72a. [Retirement]—Sinking funds.—[Vols. 9, 11-13, 18],—Since after merger of Atlantic Coast Line into Seaboard Air Line the merged company will have substantially greater average annual net income than Coast Line now has, to require it to apply Coast Line's present sinking-fund requirements for retirement of its outstanding bonds would not only be unduly burdensome, but would provide for payments substantially exceeding amounts payable under present indentures on basis of Coast Line's present earnings. Proposed modification indenture, providing for a reasonable increase in sinking-fund payments to be made by the merged company on Coast Line's series A, B, C, and D bonds, sufficient to redeem annually an aggregate principal amount of $1,801,000 of the bonds, is fair to both merging carriers and to affected bondholders; approved, contingent on consummation of merger.—Seaboard Air Line R. Co.—Merger—Atlantic Coast Line, 320 I.C.C. 122 (199)*.

75. Payment of claims, generally.—[Vols. 4, 7, 9].—Authority granted successor corporation in reorganization of Hudson & Manhattan to issue not over $10,038,100 principal amount of first-mortgage, 20-year, 6-percent bonds to debtor's senior bondholders in partial payment of their claims to principal and interest, on basis of $340 principal amount of new bonds per $1,000 original face amount of debtor's first-mortgage and refunding mortgage bonds.—Hudson & M. R. Co. Trustee Abandonment, 312 I.C.C. 701 (705)*.

76. Payment, refund, or exchange for notes.—[Vols. 4, 7, 9, 12].—Issuance of not over $8,750,000 principal amount of first-mortgage 4-5/8 percent sinking fund bonds, series A, due Dec. 1, 1987, to provide funds for pay-

ment of note on which there is a balance of $8,500,000 due Dec. 15, 1962, authorized.—Illinois Term. R. Co. Bonds, 317 I.C.C. 595.

Stock: Purpose of Issuance

103. Exchange for other stock.—[Vols. 4, 7, 9, 11, 18, 19].—Authority granted Seaboard Air Line, on behalf of proposed merged company, to issue not exceeding 3,839,345 shares of common stock, $20 per value, and scrip certificates for fractional shares, in conversion and exchange for 1,554 shares of $100-par-value preferred stock and 2,700,481 shares of no-par common stock of Atlantic Coast Line, based on exchange ratios of 1.42 to 1 for Coast Line common stock and 3 to 1 for preferred.—Seaboard Air Line R. Co.—Merger—Atlantic Coast Line, 320 I.C.C. 122 (145, 191-2, 214).

In connection with approved merger of Boston & Maine R., Boston & Maine Corp. is authorized to issue shares of capital stock of $1 par value each for common and $100 for preferred, in number equal to shares of capital stock of the railroad issued and outstanding or in its treasury immediately prior to the merger, to be exchanged on a share-for-share basis; also, after merger, to issue shares of capital stock necessary to provide for employee stock purchase and stock option plans of the railroad in effect at time of merger.—Boston & Maine Corp. Merger, 320 I.C.C. 290 (299).

Issuance by new Delaware corporation of not over 1,630,959 shares of $1-par-value common stock to be exchanged for a like number of shares of no-par-value capital stock of railroad system's present parent holding company, for purpose of effecting merger, authorized.—Delaware & Hudson Co. Merger, 317 I.C.C. 177 (182, 183).

Issuance by Pennsylvania R. of not exceeding 367,391 shares of its $10-par-value common stock, to be exchanged for publicly owned stock of Lehigh Valley R., authorized.—Pennsylvania R. Co.—Control—Lehigh Valley R. Co., 317 I.C.C. 139 (142, 152).

106. Payment for railroad properties, rights, and franchises.—[Vols. 4, 7, 9, 11-14, 17-19].—Cadillac & Lake City Ry. Co., a newly organized carrier corporation, authorized to issue not exceeding 2,000 shares of common stock of par value of $10 each, of which 1,020 shares will be issued to its parent company (900 shares in consideration for assignment of the purchase agreement covering considered line of railroad) and the remaining 980 shares will be sold to rail fans, other interested individuals, and the general public.—Cadillac & Lake City Ry. Co. Acquisition and Operation, 320 I.C.C. 617 (620-1, 623.)

Authority granted Georgia & F. Ry., a new subsidiary of southern Ry., for issuance without competitive bidding of not over 25,000 shares of no-par-value common stock in substantially equal proportions to Carolina & N.W. Ry., Live Oak, P. & G. R., and South Georgia Ry. (also Southern subsidiaries), for a total consideration of $2,500,000, to be used to finance, in part, acquisition of physical properties, franchises, and rights of Georgia & F. R.—Georgia & F. Ry. Co.—Acquisition—Georgia & F.R., 317 I.C.C. 745 (747, 754).

107. Provision for working capital.—[Vols. 4, 7, 9].—To obtain working capital, Vermont Ry., concurrently authorized to lease a railroad line to be purchased by the State of Vermont, is authorized to issue not over 9,500 shares of $100-par-value common stock within 2 years from date of order; any shares remaining unissued at the end of that period will require additional authorization.—State of Vt. and Vermont Ry., Inc., Acquisition and Op., 320 I.C.C. 330 (335)*.

109. Payment of claims.—[Vols. 4, 7, 9].—Authority granted successor corporation in reorganization of Hudson & Manhattan to issue not over 590,476 shares of class A stock of $10 par value to debtor's senior bondholders in partial payment of their claims to principal and interest, on basis of 20 shares per $1,000 original face amount of debtor's first-mortgage and refunding mortgage bonds; also, to issue not over 58,849 shares of class B stock of $10 par value to debtor's junior bondholders for their claims, on basis of 3-1/2 shares per $1,000 face amount of debtor's adjustment income mortgage bonds.—Hudson & M.R. Co. Trustee Abandonment, 312 I.C.C. 701 (705)*.

114. No par value stock.—[Vols. 4, 7, 9, 17, 19].—Authority granted new subsidiary created to conduct debtor's railroad operations

under reorganization plan to issue not over 1,000 shares of no-par-value common stock f stated value $3,200 per share, to be issued directly to its parent company, debtor's successor in reorganization, to represent latter's right to all the new company's assets in event of its liquidation.—Hudson & M.R. Co. Trustee Abandonment, 312 I.C.C. 701 (705)*.

Notes

122. Payment for railroad properties, rights, and Franchises.—[Vols. 4, 7, 9, 12, 18, 19].—Cadillac & Lake City Ry. Co., a new corporation, authorized to issue a secured promissory note in principal amount not exceeding $39,750, bearing interest at not more than 6 percent per annum, to be used with $250 cash downpayment, to finance acquisition of branch line railroad which applicant will operate for prospective tourist traffic.—Cadillac & Lake City Ry. Co. Acquisition and Operation, 320 I.C.C. 617 (618, 623).

Authority granted Reading Co. to issue 5 serial promissory notes bearing interest at 5 percent per annum, in total principal amount of $450,000 payable over a period of 5 years, to finance purchase of Lehigh & S.R. System. As the properties are to continue under lease to Jersey Central, with the rental payable to the former owner, Reading will receive no immediate return on its investment, and payment of the principal portion of the purchase price over a 5-year period will allow it to absorb the cost of acquisition without unduly burdening its cash situation or significantly adding to its fixed charges.—Reading Co.—Purchase—Lehigh & S.R. System, 317 I.C.C. 633 (639).

Assumption of Obligation or Liability

175. Assumption of obligations, generally.—[Vols. 4, 7, 9, 11, 17-19].—When, under terms of applicants' agreement with bank which lent money to their subsidiary, they would assume liability on unsecured note issued by the subsidiary to the bank, it is immaterial that the agreement was executed as an instrument separate from the note or that it provides that funds necessary to discharge the subsidiary's obligation, if needed, will be advanced to it for payment on the note rather than paid directly to the bank by applicants. Applicants' obligation is clear, and assumption thereof requires the commission's approval.—Pennsylvania R. Co. Assumption of Obligation, 320 I.C.C. 111 (113).

176. Subsidiaries' or affiliated companies' obligations.—[Vols. 4, 7, 9, 11-15, 19].—Assumption of obligation and liability by Pennsylvania R. and Reading Co. for payment of principal and interest on unsecured 4-1/2-percent long-term note dated April 27, 1963, issued by their subsidiary Pennsylvania-Reading Seashore Lines to a bank, in principal amount of $3,600,000, authorized.—Pennsylvania R. Co. Assumption of Obligation, 320 I.C.C. 111.

187. Predecessor companies' obligations.—[Vols. 4, 7, 11, 19].—Authority granted Seaboard Air Line, incidental to merger approval, to assume all obligations and liabilities of Atlantic Coast Line (liquidating carrier) outstanding as of effective date of merger, including those contingently guaranteed by Coast Line either solely or jointly with other carriers.—Seaboard Air Line R. Co.—Merger—Atlantic Coast Line, 320 I.C.C. 122 (145, 213)*.

Assumption by new holding company, as successor to railroad system's present parent corporation, of obligation and liability as obligor or guarantor of (1) the old company's first and refunding mortgage 4-percent bonds due 1963, in principal amount not exceeding $14,822,000, (2) Albany & S.R. first consolidated gold 2-3/4-percent bonds due 1971, in principal amount not exceeding $8,305,000, and (3) Albany & S.R. 4-1/2-percent general mortgage bonds due 1975, in principal amount not exceeding $2,718,600, authorized.—Delaware & Hudson Co. Merger, 317 I.C.C. 177 (183).

Regulations of the Commission

29 FR 11127, July 31, 1964, Part 56: Issuance of Securities, Assumption of Obligations, and Filing of Certificates and Reports, entire 49 CFR Part 56 revised, effective Oct. 1, 1964.

30 FR 11210, Sept. 1, 1965, Parts 51 and 56: General Instructions and Issuance of Securities, Assumption of Obligations, and Filing of Certificates and Reports, §51.8 revoked, and §56.3 Procedure and §56.6 Reports amended, effective Oct. 15, 1965.

Section 20a. (3) Scope of commission's authority.—[Unchanged. See vol. 9, p. 7826.]

Historical notes, see vol. 4, p. 2615.

Notes of Decisions

Volume 4—p. 2673; Volume 7—p. 5864; Volume 14—p. 11550; Volume 18—p. 14233.

Section 20a. (4) Form and contents of applications; oath and signature.[Unchanged. See vol. 9, p. 7826.]

Historical Note

The commission recommends, in view of the prohibitions in 18 USC §1001, that §20a(4) be amended so as to eliminate the mandatory oath provision therein, and that such requirement be made discretionary with the commission.—Annual Report, 1964, p. 72.

Notes of Decisions

Volume 4—p. 2680; Volume 7—p. 5866; Volume 12—p. 10339; Volume 14—p. 11551; Volume 16—p. 12785; Volume 17—p. 13476.

Section 20a. (5) Disposition of securities described in application, etc.[Unchanged. See vol. 9, p. 7827.]

Section 20a. (6) Notice of application to governors of States; intervention; hearings.[Unchanged. See vol. 9, p. 7827.]

Notes of Decisions

Volume 4—p. 2685; Volume 16—p. 12786; Volume 18—p. 14233; Volume 19—p. 15437.

1. Right of State authorities to be heard.—[Vols. 4, 16].—See Brotherhood of Locomotive Engineers v. United States, §1(19), n. 14.

2. Right to be heard, generally.—[Vols. 4, 19].—There is no evidentiary support for plaintiff's contention that it was denied procedural due process of law by the commission's failure to grant it a hearing. The administrative record shows that plaintiff never requested a hearing or offered to introduce evidence to prove that the challenged condition imposed on authorization of its proposed stock issue was not proper, as required by Rule 1.101(b) of the commission's Rules of Practice. As §20a(6) clearly makes hearings on such matters discretionary with the commission, plaintiff was not entitled to hearing as a matter of right.—Chicago, S.S. & S.B. R. v. United States, 221 F. Supp. 106 (110)*.

Section 20a. (7) Jurisdiction of commission as exclusive and plenary.—[Unchanged. See vol. 9, p. 7828.]

Notes of Decisions

Volume 4—p. 2686; Volume 7—p. 5867; Volume 17—p. 13476; Volume 19—p. 15438.

2. Jurisdiction under this section.—[Vols. 4, 7, 17, 19].—Although the States had long regulated issuance of securities by interstate carriers, the jurisdiction conferred on the commission by §20a is exclusive and plenary, and carriers may issue securities without se-

curing approval by any authority other than the commission. Provisions of §20a relating to finance and management show on their face the clear intent of Congress to occupy completely the field of railroad securities regulation; the commission has proceeded on this basis, and the constitutional validity of the power under which it operates has been upheld.—Chicago, S.S. & S.B. R. v. United States, 221 F. Supp. 106 (108)*.

Common carrier's purchase of trucks and trailers under a conditional sales contract or a chattel mortgage is a single act requiring, at most, that one governmental authority pass upon legality thereof, following the same theory as applicable to issuance of stocks and bonds. Approval power rests with the Federal Government when interstate commerce is involved; and the court previously found that debtor carrier was engaged in interstate commerce. The Federal Government has preempted the field of interstate carrier financing, and mere fact that it does not exercise its authority in all phases thereof does not permit one or more States to step into the area of federal inactivity.—In re Independent Truckers, Inc., 212 F. Supp. 402 (406)*.

The commission's jurisdiction to determine applications for authority to issue securities is exclusive and plenary and independent of all other State or Federal authority, and it is not divested of authority to hear new applications merely because related proceedings are pending on appeal.—Central Freight Lines, Inc., Note, 90 M.C.C. 246 (247)*.

The commission's exercise of jurisdiction over issuance of securities by State agencies created to own and operate various types of public projects, but not actually carriers subject to its jurisdiction, would be foreign to and would serve none of the general purposes of the act. Moreover, the commission's jurisdiction under §20a(7) is exclusive and plenary; while some such agencies may have powers broad enough to authorize general transportation operations, including operations by rail or motor vehicle, an intention to supersede such an agency's exercise of sovereign powers should not be implied prior to its actually subjecting itself to the commission's jurisdiction by seeking to engage in transportation subject to the act.—Bi-State Development Agency of Mo.-Ill. Met. Dist., Bonds, 317 I.C.C. 641 (644).

Section 20a. (8) Guaranty of securities.[Unchanged. See vol. 9, p. 7828.]

Notes of Decisions

Volume 4—p. 2688.

Section 20a. (9) Issue of short-term notes; certificate of notification; proviso.—[Unchanged. See vol. 9, p. 7829.]

Notes of Decisions

Volume 4—p. 2689; Volume 7—p. 5868; Volume 9—p. 7829; Volume 17—p. 13476.

Section 20a. (10) Reports by carriers as to securities or proceeds.—[Unchanged. See vol. 9, p. 7830.]

Section 20a. (11) Securities issued contrary to law void; effect; penalty.—[Unchanged. See vol. 9, p. 7831.]

Notes of Decisions

Volume 4—p. 2692; Volume 7—p. 5869; Volume 9—p. 7832; Volume 14—p. 11551; Volume 16—p. 12786; Volume 17—p. 13476; Volume 19—p. 15438.

3. Discipling issuers of void securities.—[Vol. 4].—Section 20a(11) includes penal provisions, and well established principles of law require that such provisions not be enlarged by implications or extended to persons or cases not plainly within the meaning of the language employed. The commission's exercise of jurisdiction over issuance of securities by a bi-State agency created to own and operate various public projects, but not actually a carrier subject to commission jurisdiction, would be foreign to and would serve none of the general purposes of the act.—Bi-State Development Agency of Mo.-Ill. Met. Dist., Bonds, 317 I.C.C. 641 (644).

Section 20a. (12) Restrictions on actions of officers and directors; penalty.—[Unchanged. See vol. 9, p. 7832.]

Historical Note

It is recommended that §20a(12) be amended so as (a) to eliminate necessity for prior approval of the commission for a person to hold position of officer or director of more than one carrier when such carriers are in a single integrated system lawfully operated under common control, and (b) that the prohibition against "any person" holding position of officer or director of more than one carrier applies to holding of such positions by different members, officers, employees, or directors of the same firm, co-partnership, corporation, association, or joint stock association, or to representation of a person on board of directors of more than one carrier through an agent or nominee.—Annual Report, 1963, p. 15-6; Annual Report, 1964, p. 67-8.

Notes of Decisions

Volume 4—p. 2693; Volume 7—p. 7832; Volume 11—p. 9332; Volume 12—p. 10340; Volume 13—p. 11041; Volume 15—p. 12141; Volume 17—p. 13477.

Section 20b. Modification of railroad financial structures.—(1)-(13).—[Unchanged. See vol. 14, p. 11551, vol. 18, p. 14233.]

Notes of Decisions

Volume 15—p. 12142; Volume 16—p. 12787; Volume 17—p. 13478; Volume 18—p. 14235; Volume 19—p. 15439.

Section 20c. Recordation of railroad equipment trust agreements and other evidences of equipment indebtedness.—[Unchanged. See vol. 16, p. 12788.]

Historical note, vol. 17, p. 13481.

Regulations of the Commission

31 FR 16318, Dec. 21, 1966, Part 57: Recordation of Documents, §57.3(b) amended; §57.4(d) and (e) redesignated as §57.4(e) and (f), respectively, and a new §57.4(d) added; and new §57.5(e) added, effective 30 days from date of order.

Section 21. Annual reports of commission.—[Unchanged. See vol. 9, p. 7833.]

Amendments, see footnotes, vol. 4, p. 2695, vol. 9, p. 7833.

Section 22. Restrictions; quotations of rates for United States Government.—[Unchanged. See vol. 11, p. 9333, vol. 12, p. 10340, vol. 17, p. 13482, vol. 18, p. 14236.]

Historical Note

The commission recommends that §22 be amended so as to permit performance of services for governmental bodies free or at reduced rates only to extent such services (1) are performed during time of war or national emergency, or (2) involve transportation which is exempt from economic regulation under parts II and III of the act.—Annual Report, 1964, p. 61.

Notes of Decisions

Volume 4—p. 2700; Volume 7—p. 5875; Volume 9—p. 7836; Volume 11—p. 9336; Volume 12—p. 10341; Volume 13—p. 11042; Volume 14—p. 11560; Volume 15—p. 12153; Volume 16—p. 12790; Volume 17—p. 13482; Volume 18—p. 14237; Volume 19—p. 15441.

2. Interpretation, in general.—[Vols. 4, 7, 9, 11, 17, 19].—Section 22, which has been extended to apply to all forms of regulated common-carrier surface transportation service, allows a carrier to accord preferential rates for certain movements if it so desires; it does not require such rates.—Interpretation of Govt. Rate Tariff—Eastern Central, 323 I.C.C. 347 (349)*; furthermore, nothing prevents a carrier from requiring whatever it considers adequate to show that transportation service requested qualifies for the special rates which §22 permits, but does not require, it to establish.—Id., 332 I.C.C. 161 (165)*.

Special quotations allowed under §22 are set apart from the usual tariff rates, even though they are "rates" in a broad sense, inasmuch as they are only limitedly subject to regulatory jurisdiction, are not applicable on normal commercial traffic, and do not form a part of the general rate structure; also, a carrier may establish such quotations but cannot be required to do so. Therefore, since relief from antitrust laws under §5a(9) is conditioned on the commission's approval of provisions of a §5a rate agreement, and a procedure which might be appropriate for normal rates or tariff provisions is not adequate for discussion and submittal of §22 quotations, it is necessary that petitioner amend its agreement to establish appropriate procedures for joint action regarding §22 rates, and that those procedures be approved by the commission, in order for it to claim the §5a(9) relief from antitrust laws.—Southern Motor Carriers—Agreement, 323 I.C.C. 396 (397-9)*.

Insofar as §1 prohibits the charging of rates below a minimum reasonable level, it is obviously inconsistent with §22. No rate could be lower than "free," and §22 does not prevent free carriage; therefore, §1 places no limit on §22 quotations, and the same rationale applies to questions of unreasonableness, destructive competition, and revenue needs considered in light of §15a(2) and the national transportation policy.—Tennessee Products & Chem. Corp. v. Louisville & N.R., 319 I.C.C. 497 (501); however, §22 is permissive, and a carrier cannot be forced to give a reduced rate thereunder, or to give a similar reduction elsewhere simply because it has chosen to avail itself of the permissive treatment accorded by law. Nor can it be forced to raise the level of its §22 quotation or to cancel such a quotation voluntarily given; the plain language of §22 precludes such action.—Id., p. 502; as to unjust discrimination under §2 or undue preference under §3(1), the object of §22 was to settle beyond doubt that the discrimination in favor of persons therein named should not be deemed unjust (145 US 263).—Id., p. 501.

Authorized Reductions

5. Government bodies; United States.—[Vols. 4, 7, 9, 13, 15-19].—Federal procurement statutes, which provide for negotiation of special rates for transporting household goods of federal employees at government expense, are comparable to provisions of §22 which allow the United States to obtain preferred rates. Georgia regulation which does

not permit a rate for mass intrastate transportation of household goods, and which requires carriers to quote schedules of rates approved by the State commission, is opposed to the federal procurement policy of negotiating rates and, accordingly, must give way. By reason of the Supremacy Clause, a State is without power to provide the conditions on which the Federal Government will effectuate its policies. Once those policies have been determined, it is the court's function to enforce them.—United States v. Georgia Public Service Commission, 371 U.S. 285 (292-3)*.

The United States may contract with railroads for transportation at reduced rates and, in dealing with it, carriers need not as a general rule abide by their published tariffs; thus, if a §22 quotation reveals intention that it may be so used, it may be combined with another quotation rate to produce an aggregate lower than the through tariff rate. And since the Government may receive preferences, a quotation rate may conceivably also be combined with a local tariff rate if the quotation is designed to be used in that manner.—Great Northern Ry. Co. v. United States, 312 F. 2d 901 (903).

Therefore, the Government may not aggregate §22 quotation rate from origin of considered shipments to Seattle with local tariff rate beyond, under aggregate rule in tariff publishing a through rate to destinations, since that rule refers to separately established rates in tariffs on file with the commission and the §22 quotation was not so filed. Provision in item 4 of the quotation, that shipments would be subject to all other rules "which in any way increase or decrease the amount to be paid," does not indicate that it was to be considered a rate on file with the commission within meaning of aggregate rule of the through tariff. Rates under land-grant equalization agreement applied on those shipments; plaintiff is entitled to recover amounts recouped after audit by the Government pursuant to 49 U.S.C. §66.—Id., pp. 904, 905.

By agreement of the parties charges on shipments which moved under the §22 quotation to Seattle, over a route through their ultimate destinations, and were backhauled upon reconsignment are to be computed according to rule 14 of plaintiff's reconsignment tariff, which provides for application of the combination of tariff rates to and from the reconsignment point as maximum. Purpose of that rule was to permit aggregation of favorable rates in case of reconsignment, and in view of item 4 of the quotation, which also provides that shipments will be subject to all charges and allowances respecting reconsignment, the maximum charge should be computed using the quotation as if rule 14 were included therein and the quotation should be treated as a tariff for that purpose. Thus, the Government may combine the quotation rate and the local tariff rate for the backhaul to compute the maximum charge; plaintiff is not entitled to recover on those shipments.—Id., p. 905.

And although the parties negotiated agreement that tariff provision allowing 10 days' free time on export shipments would apply to Government shipments to the port of Mukilteo, Wash., there was no clear understanding as to shipments which like those involved were diverted to an inland destination and subsequently reshipped to Mukilteo under a new bill of lading. Moreover, plaintiff's final reply to the Government's request for inclusion of such shipments was received after movement of considered shipments and was not retroactive; thus, there was no final §22 agreement as to the free time allowance on those shipments.—Id., pp. 909, 910.

There being no single-factor through rate between origin and destination of its shipments, the Government seeks application of a combination of the published tariff rate for part of the movement and a §22 quotation rate for the other part; but that quotation contains no express provision that it may be used in combination with tariff rates and there is no indication that it was designed to be so used. However, though rule 14(c) of the commission's Tariff Circular 20 restricting combination rates to filed tariff rates does not by itself apply to an unregulated §22 quotation, item 6 of the quotation involved refers to all rules "which in any way increase or decrease the amount to be paid on any shipment"; the tariff circular rule has such an effect and must be considered as incorporated in the quotation; defendant's counterclaim as to shipments involved, dismissed.—Id., p. 911.

See also Great Northern Ry. Co. v. United

States, Govt. Traffic, §66, n. 1.

Since the United States may contract with railroads for transportation service at reduced rates, in dealing with it carriers need not as a general rule abide by their published tariffs; thus, when §22 quotation reveals intention that it may be so used, it may be combined with another quotation rate to produce an aggregate lower than the through tariff rate and, conceivably, a quotation rate may also be combined with a local tariff if the quotation is designed to be used in that manner. However, in order to combine a §22 quotation with another or with a regular tariff provision, the intention of the parties to accomplish that purpose must be apparent either by express provision or by necessary inference.—Gulf, M. & O. R. Co. v. United States, 312 F. 2d 921 (925).

When a transit privilege is expressly authorized in a §22 quotation, all conditions and limitations therein prescribed must be strictly observed. Express terms of two considered quotation series, each containing a transit privilege, vary so completely in limitations of traffic covered and transit privilege as to rebut any inference that they are complementary or that the transit privielge in one is subject to combination or interchange with that in the other. There is no provision in either quotation that provisions of one, including transit privilege, may be combined with those of the other; nor do the facts indicate an intention of the parties that either could be combined with the other for the purpose of combining different traffic covered, and the different transit-stop privileges in each, to accomplish a through-export rate from origin to port destination. The Government's computation of charges on basis of such a through-export rate does not comply with limitations of either or both quotations; charges assessed by plaintiff are correct.—Id., pp. 922-3, 924, 925-6.

There is no indication in the commission's report, which approved proposed amendment of motor carriers' Government Rate tariff so as to permit application of §22 rate quotations on shipments moving on commercial bills of lading containing endorsement stating that the transportation is for the government and that the cost will be reimbursed directly by the government, that it had considered the problems that could arise from use of such a bill of lading. Parties opposing proposed amendment presented to the commission (both by way of argument and by submission of verified statements of facts) the practical problem facing carriers in connection with determining proper, and indeed legally authorized, application of §22 rates to transportation performed pursuant to a commercial bill of lading so endorsed; this is a problem of great concern to entire transportation industry, yet nowhere in the report does the commission refer to that problem. Therefore, the case is remanded to the commission.—Middle Atlantic Conference Nat. Motor Frt. Traffic Ass'n v. United States, 265 F. Supp. 448 (449, 452-4)*.

Also, the decision does not indicate that the commission considered, evaluated and rejected plaintiffs' forceful and plausible argument that proposed endorsement is not practicable and that its implementation entails impossible policing difficulties, with the danger that some shippers would take advantage of reduced rates to which they are not entitled; accordingly, the court cannot assume that it did so, nor can the court supply necessary underpinnings for such a conclusion. On remand the commission will have an opportunity to bring its expertise to bear on this question; and, should it again approve proposed tariff amendment, it may also wish to clarify its holding concerning proper language of an endorsement on a commercial bill of lading sufficient to qualify a shipment moving thereunder for application of §22 rate quotations. —Id., p. 454.

Cancellation notice in supplements to rate bureau §22 rate quotations on household goods issued by plaintiff's respective tariff publishing agents for account of member carriers, pursuant to powers of attorney from carriers, effectively cancelled plaintiffs' previously filed individual rate tenders to the Department of Defense; both supplements, in addition to publishing higher rates for all carriers, specifically cancelled and superseded all individual rate tenders previously filed by the carriers. All member carriers were informed that their individual rates would cease to apply on effective date of the new uniform §22 quotations; no members objected to such changes and, after approval thereof by the

Government, the new common rates went into effect. Plaintiffs' individual rates having been cancelled by their respective agency supplements, rates published therein applied on considered shipments of household goods for the military which moved on Government bills of lading.—United Van Lines, Inc. v. United States, 353 F. 2d 741 (742-4).

Nor did such blanket cancellation notices in the supplements violate the commission's regulation requiring that a new quotation or tender which supersedes a prior one shall cancel the prior document by number. The cancellation notices which stated that all rate tenders previously filed by individual carriers were cancelled, sufficiently complied with that regulation; listing of some 1,700 numbers to be cancelled would be quite an onerous task for the tariff publishing agents; and use of the word "all" in the cancellation accomplished the same result.—Id., pp. 745-6.

Charges on household goods shipment from Washington, D.C., to Hawaii, which moved through port of Los Angeles on government bill of lading, should be based on rate via that port rather than on rate applicable via Norfolk, Va., as claimed by defendant. Plaintiff's service tender, required by the government to be filed, designated certain west coast ports as its ports for Hawaiian export and did not name Norfolk; required rate tender filed by movers association for its members, including plaintiff, named jointly filed rates applicable through nearest port and designated the west coast ports and Norfolk. As rate tender does not express the entire shipping agreement, since it does not state services intended to be covered by the rates, it should be read in light of provisions of the service tender; both tenders became part of the shipping contract. Plaintiff entitled to recover amount deducted by defendant, based on rate via Norfolk, on post audit.—Dean Van Lines, Inc. v. United States, 310 F. 2d 740 (741-2).

By becoming a party to §22 quotation of rates tendered to the United States, which contains rates on household goods between points within United States and points in Germany, plaintiff motor carrier brought itself within purview of §204a; thus, its claims for undercharges on that part of its transportation of Government shipments of household goods which occurred entirely within Germany, submitted more than 3 years after payment of its bills, are barred by 3-year statute of limitations in §204a. Considered shipments moved on through Government bills of lading which referred to the §22 quotation and covered complete movement from origin to destination; plaintiff undertook to provide transportation pursuant to the quotation, and fact that it rendered part of the service as agent of another does not change its carrier status. Carrier's action, based on a single bill-of-lading contract for a unified carriage, cannot be split or divided for purpose of maintaining separate suits on the various individual parts; nor can a party divide the grounds of recovery for successive suits in a single cause of action.—Von Der Ahe Van Lines, Inc. v. United States, 358 F. 2d 999 (1000-2).

Whether lower alternative rate named in plaintiff's §22 Quotation No. 52 on a "truckload minimum weight" of 50,000 pounds applied to a volume minimum, on which charges for many of considered shipments were computed, is a question of contract interpretation to be decided under Federal law. The fundamental rule that prior negotiations are merged into written contracts and that parole evidence cannot be admitted to vary terms of the written agreement, even though the writing is silent on the matter concerned, governs. While plaintiff's letter offered the lower rate on a "volume minimum weight," the quotation (submitted after subsequent oral discussions) says nothing about a volume minimum weight and, since it is not ambiguous, parol evidence to show that that rate was based on a volume minimum weight will not be considered. However, although plaintiff erroneously underbilled the Navy for many of considered shipments, its claim for additional freight is barred by the 6-year statute of limitations (28 USC §2501).—Baggett Transp. Co. v. United States, 319 F. 2d 864 (865-6, 868).

Plaintiff's Quotation No. 69, issued shortly before expiration date of No. 52, provided for alternation of the No. 52 rates where lower charges resulted, and also provided by cross-references for application of rule 10 of National Motor Freight Classification, which excludes weight of dunnage from computation of charges. Since the alternative provi-

sion incorporating No. 52 in no way limited duration of such incorporation, it was incorporated into No. 69 for the life of the latter. And since dunnage was not mentioned in No. 52 or in discussions preceding No. 69, such incorporation did not make No. 52 subject to rule 10 with respect to dunnage. Plaintiff was entitled to charge for weight of dunnage under Quotation No. 52 throughout the life of No. 69; and the same conclusion applies to Quotation No. 85, which likewise does not mention dunnage. But plaintiff was not entitled to charge for dunnage under Quotations Nos. 69 and 109, which refer to dunnage by incorporation and cross-reference.—Id., pp. 866-7, 871-2.

Under U.S. Government Rate Quotation and provisions of Western Classification No. 75, incorporated in the §22 quotation by reference, rate on scrap named in applicable classification item, rather than lower commodity rate in the quotation on "cartridge cases, empty, returned," was properly assessed on government's shipments described by its agents in bills of lading as "scrap noibn, having use for resmelting." Commodity shipped was compressed bales or bundles of pieces of brass, the items being compacted cartridge shells, going for resmelting; worn out metal articles reduced to other than their original form and shipped for resmelting are properly described, classified, and rated as scrap metal, rather than as the original article itself.—United States v. Francis, 320 F. 2d 191 (193-4, 196).

While some questions exist as to whether the government requested exclusive use of equipment for two shipments, which were covered by bills of lading containing notations as to specific kind and size of units of carrier equipment ordered and furnished, testimony does not warrant finding error in lower court's holding that the bill of lading notation was an appropriate annotation of a request for exclusive use of the equipment within the §22 quotation item pertinent to shipper's exclusive use of carrier's equipment.—Id., pp. 194-5, 198-9.

However, when weights of individual components of mixed shipments of explosives with other commodities were shown on the respective bills of lading, carrier's charge for entire shipment at higher rate applicable on one of the articles, rather than at rate applicable to each portion thereof as provided in item of the §22 quotation, was erroneous. That those bills of lading, prepared and signed by government's agents, contained statement as to rate and minimum (the rate charged) and also statement of waiver to move by truck does not support carrier's contention that a new and different contract for those shipments was entered into; no tender or quotation of rates for those shipments was specifically submitted. Lower court erred in holding that a price posted on the bill of lading by the government is a valid offer which contractually binds it if accepted; in determining whether agreement on rates had been reached, notations on bills of lading should only be considered evidence of whether or not there was an offer and acceptance.—Id, pp. 193, 194, 196-8.

On further consideration, the qualifications previously expressed in connection with declaratory determination that carriers might charge lower §22 rates, normally available only to the Federal Government, on shipments made by government contractors (whether on commercial or government bills of lading) if the government subsequently completely reimburses the contractor directly, remain unchanged. However, in light of the practical problems in policing proper application of §22 rates, and in order to be able to follow through on a shipment and determine (at a later date) whether total or merely partial reimbursement is involved, more information must be included on the face of bills of lading, i.e., government contract number, government agency, agency supervisor involved, and name of contractor. Therefore, approval of bill-of-lading endorsement as originally presented by motor carrier association is withdrawn and, in lieu thereof, new declaratory determination is made that special §22 rates will be permissible on traffic moving on commercial bills of lading endorsed as set forth.—Interpretation of Govt. Rate —Eastern Central, 332 I.C.C. 161 (162-5)*.

Tennessee Valley Authority is entitled to application of §22 rates on coal traffic of its Electric Power Division, notwithstanding benefits therefrom are passed on to consum-

ers of electricity in the area and no monetary benefit from the reduced rates flows into United States Treasury. Tennessee Valley Authority is constitutionally created, is an instrumentality of the Federal government performing an important governmental function, and has broad responsibility to carry out congressionally authorized functions and policy in a single integrated effort. Since its bill of lading is in acceptable form and it bears the charges, it is the sole direct beneficiary of the reduced rates, and fact that third parties may benefit ultimately from cheaper electricity after the coal has been used is not controlling. Its constitutional authority to dispose of electrical energy property of United States was recognized in 297 U.S. 288; such energy may properly be interchanged with neighboring utilities. Tennessee Valley Authority and its Electric Power Division are clearly within scope of "United States" as used in §22(1).—Tennessee Products & Chem. Corp. v. Louisville & N. R., 319 I.C.C. 497 (499-500).

Moreover, §22(2) specifies which quotations or tenders of traffic must be filed, and, whereas §22(1) speaks of "the United States," §22(2) refers to "the United States Government, or any agency or department thereof"; Tennessee Valley Authority is such an agency. Also, since §22(2) was enacted, the commission has accepted numerous filings on Tennessee Valley Authority's behalf, and Congress has been fully aware of its enjoyment of such rates; it would require cogent reasoning, which complainants have not offered, to endanger such acceptances, or those of the Federal government generally, at this late date. Congress has sanctioned the policy of negotiating rates for shipment of Federal property and has entrusted procurement officers with discretion to determine whether existing rates will be accepted or negotiations undertaken for lower rates; the commission may not interfere with this policy.—Id., pp. 500, 503.

And a complaint under §1 or §3(1) will not lie against a rate established on government traffic by a §22 quotation; §22(1) states that "nothing" in Part I shall prevent the handling of property free or at reduced rates for the United States, and the Supreme Court has interpreted this as exempting government traffic from the rate provisions of the act (355 U.S. 534). Congress has thus seen fit to accord preferential treatment to government traffic, and such action may not be presumed to be an idle gesture. Whether such treatment is as it should be is for Congress to decide, and it has not changed the law in that regard. The Tennessee Valley Authority traffic in issue moves on its billing, at rates it is permitted by statute to negotiate with the carrier, and it bears the charges; complainants' interest is therefore essentially indirect and complaint is in effect an attack on present-day justification of §22. However, the commission may not change the law directly or indirectly, but may only enforce it; complaint assailing §22 rates accorded Tennessee Valley Authority on coal from western Kentucky but not from complaining southern Tennessee mines, dismissed for lack of jurisdiction.—Id., pp. 501-2, 503.

Even assuming arguendo that jurisdiction does lie, the allegedly preferential rates, which are substantially higher, both relatively and absolutely, than complainants' rates, are not shown to violate §3. And as to complainants' allegation of violation of the antitrust laws, §22(2) provides for the antitrust relief afforded by §5a(9). Nevertheless, due consideration of the anittrust laws discloses no inconsistency with their expressed policy, especially as any possible inconsistencies therewith would depend largely on a positive finding on the §3 issue.—Id., p. 507.

Statutory and Common-Law Remedies Not Abridged

60. Savings clause as to existing remedies; interpretation.—[Vols. 4, 7, 9, 11, 18, 19].—Pursuant to clause which preserves existing common-law and statutory remedies, the act does not override common law rights of carriers save insofar as it does so expressly. Although, under §3, carriers are obligated to exchange freight between their lines and lines of connecting carriers, they cannot be forced to do so without prepayment (or security for payment) of rates and charges thereon; and nothing in the act specifically prohibits—after due notification of an intention to do so—a connecting carrier's demand upon a delin-

quent carrier for transportation charges before accepting or releasing a consignment.—Southern Ry. Co. v. Flournoy, 301 F. 2d 847 (854).

Regulations of the Commission

27 FR 7512, July 31, 1962: Drouth Order 60, transportation of livestock feed and hay to specified counties in Pennsylvania, New Jersey, and New York at reduced rates, until Oct. 23, 1962, authorized.

27 FR 7813, Aug. 7, 1962: Drouth Order 60, Amd't. 1, amends Drouth Order No. 60 by adding thereto specified counties in the three States, effective on date of order.

27 FR 8149, Aug. 15, 1962: Drouth Order 60, Amd't. 2, amends Drouth Order 60 by adding thereto two Pennsylvania counties specified, effective on date of order.

27 FR 8567, Aug. 25, 1962: Drouth Order 61, transportation of livestock feed and hay to specified counties in Missouri at reduced rates, until Nov. 20, 1962, authorized.

27 FR 8603, Aug. 28, 1962: Drouth Order 62, authorizes transportation of hay to six counties in Kentucky at reduced rates until Nov. 23, 1962.

27 Fr 8752, Aug. 31, 1962: Drouth Orders Nos. 60-62 (No. 60 Amdt. 3, No. 61, Amdt. 1, No. 62, Amdt. 1), extends expiration dates of those orders to, and including, March 31, 1963, effective on date of order.

27 FR 8846, Sept. 5, 1962: Drouth Order 61, Amdt. 2, amends Drouth Order 61 by adding thereto 13 named counties in Missouri, effective on date of order.

27 FR 8902, Sept. 6, 1962: Drouth Order 60, Amdt. 4, amends Drouth Order 60 by adding thereto 20 named counties in Ohio and 11 named counties in Tennessee, effective on date of order.

27 FR 8932, Sept. 7, 1962: Drouth Order 62, Amdt. 2, amends Drouth Order 62 by adding thereto 24 named counties in Kentucky and 4 named counties in Georgia, effective on date of order.

27 FR 9193, Sept. 15, 1962: Drouth Order 62, Amdt. 3, amends Drouth Order 62 by adding thereto the 15 Mississippi counties and 19 Louisiana parishes listed.

27 FR 9237, Sept. 18, 1962: Drouth Order 60, Amdt. 5, amends drouth Order 60 by adding thereto the 3 Pennsylvania and 32 Tennessee counties specified.

27 FR 9295, Sept. 19, 1962: Drouth Order 62, Amdt. 4, amends Drouth Order 62 by adding thereto the 14 Maryland counties listed.

27 FR 9489, Sept. 25, 1962: Drouth Order 62, Amdt. 5, amends Drouth Order 62 by adding thereto the specified counties in Arkansas, Kentucky, and Missouri, and the Louisiana parishes listed.

27 FR 9490, Sept. 25, 1962: Drouth Order 60, Amdt. 6, amends Drouth Order 60 by adding thereto the specified counties in Tennessee and West Virginia.

27 FR 9633, Sept. 28, 1962: Drouth Order 62, Amdt. 6, amends Drouth Order 62 by adding thereto the Alabama, Illinois, Ohio, and Tennessee counties listed.

27 FR 9856, Oct. 5, 1962: Drouth Order 62, Amdt. 7, further amends Drouth Order 62 by adding thereto the specified counties in Kentucky and Missouri and the Louisiana parishes listed.

27 FR 10059, Oct. 12, 1962: Drouth Order 62, Amdt. 8, further amends Drouth Order 62 by adding thereto the specified counties in Georgia, Pennsylvania, and North Carolina.

27 FR 10139, Oct. 16, 1962: Drouth Order No. 62, amendment 9, further amends Drouth Order 62 by adding the Alabama, South Carolina, and West Virginia counties listed.

27 FR 10236, Oct. 18, 1962: Drouth Order No. 60, Amdt. 7, further amends Drouth Order 60 by addition of the Alabama, Arizona, and Arkansas counties listed.

27 FR 10378, Oct. 24, 1962: Drouth Order No. 60, Amdt. 8, further amends Drouth Order 60 by adding the Alabama and West Virginia counties named.

27 FR 10779, Nov. 3, 1962: Drouth Order No. 60 Amdt. 9, further amends Drouth Order 60 by adding 41 counties named in Alabama, Arizona, Minnesota, and Mississippi.

27 FR 11364, Nov. 17, 1962: Drouth Order No. 60, Amdt. 10, further amends Drouth Order 60 by adding thereto three Texas counties named.

27 FR 12467, Dec. 15, 1962: Drouth Order 60, Amdt. 11, amends Drouth Order 60 by adding thereto 13 specified counties or portions thereof in Mississippi, New Mexico, and West Virginia, effective on date of order.

27 FR 12785, Dec. 27, 1962: Drouth Order 60, Amdt. 12, amends Drouth Order 60 by adding thereto 16 specified counties in Alabama, Michigan, and Texas, effective on date of order.

27 FR 12785, Dec. 27, 1962: Drouth Order 60, Amdt. 13, amends Drouth Order 60 by adding thereto Harney County, Oreg., effective on date of order.

28 FR 391, Jan. 15, 1963: Drouth Order 60, Amdt. 14, amends Drouth Order 60 by adding thereto Medina County, Tex., effective on date of order.

28 FR 622, Jan. 23, 1963: Disaster Order No. 7, Transportation of Livestock Feed and Hay to State of Florida at reduced rates, requested by Secretary of Agriculture because of recent freeze, effective on date of order.

28 FR 708, Jan. 25, 1963: Drouth Order 60, Amdt. 15, amends Drouth Order 60 by adding thereto specified counties in Utah, effective on date of order.

28 FR 1092, Feb. 2, 1963: Drouth Order 60, Amdt. 16, amends Drouth Order 60 by adding thereto three Minnesota counties and one Texas county, effective on date of order.

28 FR 1323, Feb. 9, 1963: Drouth Order 60, Amdt. 17, amends Drouth Order 60 by adding thereto four North Carolina counties, effective on date of order.

28 FR 1396, Feb. 13, 1963: Drouth Order 60, Amdt. 18, further amends Drouth Order 60 by adding thereto the specified counties and parishes in Louisiana, Mississippi, Nevada, and New York, effective on date of order.

28 FR 1397, Feb. 13, 1963: Drouth Order 60, Amdt. 19 and Drouth Order 62, Amdt. 10, further amends Drouth Orders 60 and 62 by adding to each the commodity cotton seed hulls to destinations and designated Alabama counties, effective on date of order.

28 FR 1494, Feb. 15, 1963: Drouth Order 60, Amdt. 20, further amends Drouth Order 60 by adding thereto one Alabama and one Texas county, effective on date of order.

28 FR 1704, Feb. 21, 1963: Drouth Order 62, Amdt. 11, amends Drouth Order 62 to include transportation of livestock feed at reduced rates to drouth area in Kentucky, effective on date of order.

28 FR 2320, March 9, 1963: Drouth Order 60, Amdt. 21, further amends Drouth Order 60 by adding thereto the named 21 counties in Alabama, 5 counties in Georgia, and 3 parishes in Louisiana, effective on date of order.

28 FR 2375, March 12, 1963: Drouth Order 60, Amdt. 22, further amends Drouth Order 60 by adding thereto the specified counties in Minnesota, Mississippi, Nevada, and Utah, effective on date of order.

28 FR 2547, March 15, 1963: Drouth Order 60, Amdt. 23, further amends Drouth Order 60 by adding thereto the 81 counties in Georgia listed, effective on date of order.

28 FR 7205, July 12, 1963: Drouth Order 63, transportation of hay and livestock feed at reduced rates to the 34 Mississippi counties named, effective on date of order.

28 FR 7624, July 26, 1963: Drouth Order 63, Amdt. 1, amends Drouth Order 63 by adding thereto the 61 Virginia counties listed, effective on date of order.

28 FR 8231, Aug. 9, 1963: Drouth Order 63, Amdt. 2, further amends Drouth Order 63 by adding thereto the 14 Mississippi counties listed, effective on date of order.

28 FR 8268, Aug. 10 1963: Drouth Order 63, Amdt. 3, further amends Drouth Order 63 by adding thereto the 8 Virginia counties listed, effective on date of order.

28 FR 10824, Sept. 19, 1963: Drouth Order 63, Amdt. 5, further amends Drouth Order 63 by adding thereto the 20 Maryland counties and 17 North Carolina counties listed, effective on date of order.

28 FR 10765, Oct. 5, 1963: Drouth Order 63, Amdt. 6, amends Drouth Order 63 by adding thereto the 18 North Carolina counties listed, effective on date of order.

28 FR 11834, Nov. 6, 1963: Drouth Order 63, Amdt. 7, amends Drouth Order 63 by adding thereto the 29 Pennsylvania counties listed, effective on date of order.

28 FR 12150, Nov. 14, 1963: Drouth Order 63, Amdt. 8, amends Drouth Order 63 by adding thereto the 42 Oklahoma counties and the 97 Texas counties listed, and extending expiration date of the order to April 30, 1964, effective on date of order.

28 FR 13330, Dec. 7, 1963: Drouth Order 63, Amdt. 9, further amends Drouth Order 63 by adding thereto the 205 counties in the States of Arkansas, Maryland, Missouri, New Jersey, Oklahoma, Texas, Virginia, and West Virginia listed in appendix, effective on date of order.

29 FR 19269, Dec. 31, 1964: Disaster Order No. 8, transportation of hay to the State of Montana at reduced rates, requested by Secretary of Agriculture because of recent heavy snowfall, effective on date of order.

30 FR 182, Jan. 7, 1965: Disaster Order No. 8, Amdt. 1 (Corrected), order also applies as to destinations in North Dakota counties listed.

30 FR 870, Jan 27, 1965: Disaster Order No. 9, Northwestern Pac. R. Co., et al., reduced rates on c.l. freight to and from disaster area in California north of Longvale, Calif., effective on date of order.

30 FR 1140, Feb. 3, 1965: Disaster Order 9, Amdt. 1, order amended so as to apply on traffic to or from certain Southern Pac. R. Co. stations, effective on date of order.

30 FR 2169, Feb. 17, 1965: Disaster Order 9, Amdt. 2, order further amended so as to apply on traffic to or from Northwestern Pac. R. stations south of Longvale, Calif., to and including Fulton, Calif., effective on date of order.

30 FR 2292, Feb. 19, 1965: Disaster Order 9, Amdt. 3, order further amended so as to apply on certain traffic moving to or from Grants Pass, Oreg., effective on date of order.

30 FR 2364, Feb. 20, 1965: Disaster Order 10, Camas Prairie R. Co., transportation of lumber and forest products at reduced rates from disaster (due to floods) area in Iowa until March 1, 1965.

30 FR 3303, March 10, 1965: Disaster Order 9, Amdt. 4, second ordering paragraph of Disaster Order 9, as amended, further amended to read as set forth, effective on date of order.

30 FR 4775, April 14, 1965: Disaster Order 9, Amdt. 5, Northwestern Pac. R. Co., extends expiration date of Disaster Order 9 from present Apr. 21, 1965 to May 31, 1965.

30 FR 7264, May 29, 1965: Disaster Order 9, Amdt. 6, further extends expiration date of Disaster Order 9 from May 31, 1965 to June 16, 1965.

30 FR 9895, Aug. 7, 1965: Drouth Order No. 64, transportation of hay at reduced rates to certain counties in Vermont, until May 31, 1966, permitted.

30 FR 11259, Sept. 1, 1965: Drouth Order 64; Amdt. 1, Drouth Order 64 amended to include the 43 counties in Pennsylvania listed in appendix.

30 FR 11790, Sept. 15, 1965: Drouth Order 64, Amdt. 2, Drouth Order 64 further amended to include the 46 counties in New York listed.

30 FR 13669, Oct. 27, 1965: Disaster Order 11, transportation of hay to State of Louisiana at reduced rates because of hurricane Betsy, until May 31, 1966, authorized.

31 FR 13156, Oct. 10, 1966: Drouth Order 65, Transportation of Hay at reduced rates to certain counties in the State of Pennsylvania, until May 31, 1967, authorized.

Section 23. Mandamus to obtain equal facilities for shippers.—[Unchanged. See vol. 4, p. 2821, vol. 11, p. 9336.]

Historical note, see vol. 4, p. 2821; for amendments, see footnotes, vol. 4, p. 2821, vol. 11, p. 9336.

Notes of Decisions

Volume 4—p. 2822; Volume 7—p. 5898; Volume 10—p. 8264; Volume 11—p. 9336; Volume 14—p. 11560; Volume 15—p. 12154; Volume 19—p. 15444.

2. Jurisdiction of courts.—[Vols. 4, 10, 14, 19].—District court lacked jurisdiction to issue orders in the nature of mandamus to compel defendant railroad to furnish sufficient, but not less than eight, empty boxcars daily for loading of soybeans at plaintiff's grain elevator and to remove filled cars from plaintiff's siding and replace them with empty ones, when there was no finding of discrimination as between shippers similarly situated and plaintiff concedes that none exists. Issue to be determined, i.e., reasonableness of railroad's method of car distribution for seasonal loading during a car shortage, is for the commission to decide; orders in question were entered without prior reference of the matter to the commission. Reversed and cause remanded to dissolve temporary restraining and injunction orders.—Spence v. Baltimore & O. R. Co., 360 F. 2d 887 (888-91).

Doctrine of primary jurisdiction generally requires that a court not assume jurisdiction to decide controversy involving a question that is within jurisdiction of an administrative agency prior to decision by such agency thereon where the question demands (1) the exercise of administrative discretion requiring experience, knowledge, and services of the agency; (2) the determination of technical and intricate matters of fact; and (3) where uniformity of ruling is essential to comply with purposes of regulatory statute administered. Therefore, under that doctrine, application to the commission would be prerequisite to maintenance of plaintiff's suit for mandatory injunction to require railroad to provide certain service (i.e., to deliver and pick up coal cars as needed and requested) beyond that which plaintiff presently receives, since the question of the reasonableness of rail service is a matter for the commission's initial determination. Suit dismissed.—Elgin Coal Co., v. Louisville & N. R. Co., 277 F. Supp. 247 (249-50)*.

Mandamus will not lie to require a public official or agency to perform discretionary acts; the commission's decision not to enter upon an investigation of proposed train discontinuance being within its discretionary power under §13a(1), the court has no jurisdiction to require it to do so.—Sludden v. United States, 211 F. Supp. 150 (154)*.

See also Robbins V. United States, §207(a), n. 9.

5. Necessity for prior determination by commission.—[Vols. 4, 7, 10, 15].—The issue to be decided in shipper's action to compel railroad to furnish boxcars, i.e., reasonableness of defendant's method of car distribution for seasonal loading during a car shortage, is one to be decided by the commission. When, without prior reference of the matter to the commission, lower court entered orders in nature of mandamus directing defendant to furnish specified number of empty cars for loading at plaintiff's grain elevator, the court engaged in an administrative investigation of available cars in the area, found that defendant had a number of obsolete cars on hand

and enjoined it for failure to supply cars requested by one particular shipper. Shortage of rail cars is a national problem currently under investigation by the commission; and the orders in question might create the very discrimination in distribution of available cars which the commission must strive to avoid. Reversed and remanded.—Spence v. Baltimore & O. R. Co., 360 F. 2d 887 (888-91).

In shipper's suit for mandatory injunction to require railroad to provide certain service beyond that plaintiff presently receives, the issue of reasonableness of car service furnished by the railroad to plaintiff, raised by allegation that railroad has failed and refused to deliver and pick up coal cars as needed and requested by plaintiff while at the same time providing prompt and adequate car service at all other coal tipples in the area, was a matter for initial determination by the commission.—Elgin Coal Co. v. Louisville & N.R. Co., 277 F. Supp. 247 (249, 250)*.

Section 24.—[Restated in §11 and §18. See vol. 4, p. 2723.]

Section 25. Safety appliances, methods, and systems.—[Unchanged. See vol. 9, p. 7843, vol. 11, p. 9337.]

Amendments, see footnotes, vol. 9, p. 7843, vol. 11, p. 9337; historical notes, vol. 4, p. 2737, vol. 13, p. 11042, vol. 14, p. 11560, vol. 15, p. 12155, vol. 16, p. 12791, vol. 17, p. 13486.

Notes of Decisions

Volume 4—p. 2738; Volume 7—p. 5884; Volume 9—p. 7847; Volume 11—p. 9337; Volume 12—p. 10342; Volume 14—p. 11561; Volume 15—p. 12155; Volume 16—p. 12791; Volume 17—p. 13486; Volume 18—p. 14239; Volume 19—p. 15444.

2. Construction and purpose of section.—[Vols. 4, 7, 9, 11, 14, 16-19].—In action to set aside order approving railroad's proposed discontinuance of considered interlocking plant, record does not support plaintiff's argument that the commission misconstrued objectives of §25 and the Safety Appliance Act and imposed an unnecessary peril to life and limb upon railroad employees. It is apparent that the commission did not refuse to consider all the risks involved, and that it made a finding of safety which is supported by the evidence. Moreover, there is nothing in the Safety Appliance Act which would prevent the commission from finding that applicant railroad had "made the requisite showing and that the application should be granted," as that finding is supported by the record. Complaint dismissed.—Legge v. United States, 244 F. Supp. 878 (880, 882)*.

Section 25 is the only authority delegated to the commission that has any bearing on prevention of rail-highway grade-crossing accidents. However, §25 contains no provision for protection of vehicular traffic at grade crossings; it applies only to signals and other similar appliances or systems used for safe and speedy movement of trains and prevention of collisions: it is intended to apply to train movements as such and does not authorize prescription of rules for movement of motor vehicles over railroad tracks. Both §25 and §1(21), which empowers the commission to require railroads to provide safe and adequate facilities for performing car service and to require extension of rail lines to provide service, limit the commission's jurisdiction to matters relating to operation of trains, and neither those nor any other existing statute confers any jurisdiction over railroads concerning highway grade-corssing matters. The commission therefore has no jurisdiction to require installation of protective signals, gates, or other devices at grade crossings.—Prevention of Rail-Highway Grade-Crossing Accidents, 322 I.C.C. 1 (46-8)*.

6. Automatic stops.—[Vols. 4, 7, 14-19].—Discontinuance of automatic intermittent train-stop system on petitioner's line between Newark, N.J., and Sayre, Pa., is justified by

discontinuance of all passenger service and great reduction of traffic density, and by improvements in locomotive and train equipment and in signal and braking equipment; trains are well spaced and operated at moderate speeds and physical characteristics of involved line are not so unfavorable as to cause any significantly difficult operating conditions; system now in use does not operate on the fail-safe principle, and faulty inductors may contribute to violations of signals and in turn to accidents; on balance, evidence is convincing that continuance of that system is not required, and that proposed automatic block signal system will provide adequate protection and safety.—Automatic Train Control Devices [Lehigh Valley R. Co.], 315 I.C.C. 663 (664-5, 668-9, 671)*.

In reaching this conclusion the commission has borne in mind the pendency of proceedings in which Pennsylvania R. seeks to acquire control of petitioner, and possibility of some increase in traffic over the line if such control should be authorized and consummated; however, traffic density on the line, even if increased, would still fall far short of that existing when the train-stop system was ordered installed, and its retention should not be required for that reason alone.—Id., p. 671.

14. Particular installations of devices required; test; approval.—[Vols. 4, 7, 9, 15-19].—In action against railroad for alleged violations of the commission's safety appliance regulations, fact that switch in question, established for purpose of temporarily moving work equipment from defendant's main line to point where new track was being constructed, was spiked and out of service, and that defendant had established safety measures to protect the switch, was no defense to violation of those regulations; the rules seem to be absolute and defendant could not substitute its judgment for that of the commission. Defendant could have applied for relief from the regulations, but did not do so; and that the commission, on application, had approved another railroad's deviation from regulations governing track relays did not excuse defendant's violation thereof.—United States v. Southern Ry. Co., 206 F. Supp. 562 (563).

Authority granted to discontinue automatic train control installation on petitioner's line between Etowah, Tenn., and Corbin, Ky.; considered installation is obsolete, expensive to maintain, and unnecessary for safety of operations. New wayside signals have been installed which give all indications as to broken rails, rockslides and similar interference that can be given by cab devices; present system causes inefficiencies in train speeds as the cabs have only two-indication devices whereas the wayside signals have a third indication permitting an intermediate speed not allowed under two-indication cab system. Under today's conditions, the commission would not require installation of the considered train-control system on the line involved; and adequate protection and safety will continue under petitioner's proposal to discontinue archaic installations.—Automatic Train Control Devices (Louisville & N.R. Co.), 325 I.C.C. 163 (164-7).

18. Signal and interlocking systems.—[Vols. 9, 11, 12, 15-19].—Proposed discontinuance of considered interlocking, in area where applicant conducts only a slow speed switch operation, approved. All operations are conducted on yard tracks at not more than 12 miles an hour, and are prepared to stop short of other movements, obstruction, or improperly lined switch; movement density, though still great, causes no problem under such circumstances. Employee dislike of hand-thrown switches is no ground on which to retain an interlocking; nor does weather appear important in determination of instant matter.—Monongahela Connecting R. Co. Modifications of Systems, 325 I.C.C. 160 (161-2).

Removal of automatic trainstop system between two named points and automatic cab-signal system between two other points on considered middle-of-the-line segments of petitioner's main line, approved. While lines under consideration are important frequently used main lines, train density thereover is significantly down in passenger movements and even freight movements, though still fairly heavy, are somewhat fewer. More important, however, operating conditions, wayside signals, and other circumstances on the lines have improved materially since the systems were installed in the mid-1920's and, as shown, the total picture currently adds up to

adequate protection and safety without the systems sought to be removed.—Automatic Train Control Devices, 323, I.C.C. 793 (796-7, 801-2). (Erie-Lackawanna R. Co.)

Proposed modification of Calwa interlocking of Atchison, T & S.F. Ry. and Southern Pac. Co. near Fresno, Calif., by change from local tower control to remote control from dispatchers' office at Fresno will continue to afford adequate safety protection, since basic engineering facts showing control of the signals, impossibility of their displaying aspects for conflicting moves, and existence of adequate communications are sufficient to satisfy applicants' burden of proof respecting the point of control, and nearness to crossing of signals relocated as proposed is not shown to present any safety problem.—Atchison, T. & S.F. Ry. Co. Modifications of Systems, 319 I.C.C. 1 (4-5, 7).

Applicant proposing to remove one track of an 11-mile segment of line that had been washed out and to substitute a traffic control system in lieu of present block signal system on the remaining track has the burden of convincing the commission that safety of operation over the line involved would not be significantly diminished, and a record on which the fundamental issue of safety can be determined with assurance is a prerequisite to approval. Applicant has not met this burden in satisfactory manner; involved segment is not only curvy and subject to severe weather conditions, impairing visibility, but is also subject to rock slides, washouts, and other track obstacles due to the terrain, the weather, and type of industries in the area, and it does not appear that proposed change from 2-mile to 11-mile signal spacing would maintain adequate protection. Safety of railroad operations is not a matter to be taken lightly, and applicant's failure to reply to protestants' exceptions suggests a lack of concern. Application denied.—Monongahela Ry. Co. Modifications of Systems, 319 I.C.C. 753 (755, 757).

Discontinuance of automatic block signal system on a 3.5-mile segment of applicant's San Pedro line, with incidental modifications of interlocking, and operation under yard rules or orders of train dispatcher, is justified when conditions have changed greatly since installation of the system and its purpose of expeditious movement of a heavy volume of traffic is no longer applicable; passenger and box motor services have been discontinued, and remaining freight traffic can safely be handled in manner proposed.—Pacific Electric Ry. Co. Modifications of Systems, 315 I.C.C. 381 (383-4).

Discontinuance of manual block signal system on applicant's Saginaw branch will not materially affect safety, since passenger service has been discontinued and number of trains operated has decreased; trains are presently being operated safely under timetable and train orders on other branches where topography, weather conditions, and train density are similar; applicant's flagging and other operating rules, including 10-minute spacing of trains, will provide adequate protection for normal operations. However, as the Saginaw branch may be used as a detour for passenger trains, approval is conditioned on installation and operation of a manual block system whenever such trains are operated thereover in detour movements.—New York Central R. Co. Modifications of Systems, 315 I.C.C. 73 (76).

Automatic block-signal and traffic-control systems have certain features not available where trains are operated by timetable and train orders, and are generally installed to facilitate safe movement of trains where traffic density is comparatively high; relative degree of protection afforded by the respective methods depends on a number of factors, including traffic density, speed, grades, curves, and weather conditions.—New York Central R. Co. Modifications of Systems, 315 I.C.C. 113 (115).

Decrease in number of freight trains and discontinuance of passenger service on applicant's Sandusky branch tends to minimize need for continuance of automatic systems when adequate protection is provided by flagging and other operating rules; trains are now operated with apparent safety on other branches where topography, weather conditions, etc., are similar; approval of proposed discontinuance of signal systems is warranted provided applicant continues present normal operations where only one train is operated in

the territory at any one time. However, while no change in traffic pattern is presently contemplated, operation of additional trains over the Sandusky branch may be desirable in future; should that occur, and occasional detour movements be continued, additional protection would be necessary; approval is therefore conditioned on installation and operation of a block-signal system whenever more than one train is operated at any one time on considered line.—Id., p. 116.

While operation by timetable and train orders where train density is light is under normal conditions a safe method for operation of trains, each case seeking authority for such movement is decided on its own merits.—New York Central R. Co. Modifications of Systems, 315 I.C.C. 194 (197).

Considering terrain, weather conditions, method of proposed operation, and present traffic density, discontinuance of traffic control system, and associated changes in interlocking, on line between Toledo and Berwick, Ohio, is warranted provided no change is made in existing traffic pattern; however, should traffic density increase in any substantial amount, approval of operation by timetable and train orders would not be warranted, since trains operate in most cases in opposing directions and, while normally meeting at Fostoria, could meet at any available point; applicant, though not anticipating any such change, admits its possibility; application granted on condition that a block-signal system be installed and operated if and when existing traffic pattern, as set forth in 304 ICC 643, is changed by addition of a train or trains other than occasional extras, or whenever a passenger train is detoured between those points.—Id., p. 197-8.

Regulations of the Commission

29 FR 13606, Oct. 3, 1964, Part 136: Installation, Inspection, Maintenance, and Repair of Systems, Devices, and Appliances, §136.410 Locking, hand-operated switch, revised, effective on date of order.

31 FR 2380, Feb. 4, 1966, Part 136: Installation, Inspection, Maintenance, and Repair of Systems, Devices, and Appliances, Part 136 amended to read as set forth, effective March 31, 1966.

32 FR 927, Jan. 26, 1967, Part 135: Discontinuance or Material Modification of Signal Systems, instructions governing applications, issued March 15, 1954 (15FR 1530), as revised, reissued, and codified as New Part 135, §135.1 through §135.20, effective Feb. 15, 1967.

32 FR 3059, Feb. 18, 1967, Part 135: Effective date of order published in 32 FR 927 is extended to April 1, 1967.

32 FR 5624, April 6, 1967, Part 235 [formerly Part 135]: Discontinuance or Material Modification of Signal Systems. In view of pleading filed by Association of American Railroads, and since considered matter will be responsibility of Dept. of Transportation beginning April 1, 1967, order of Jan. 10, 1967 (32 FR 927) is vacated and set aside and the matter transferred to Dept. of Transportation for disposition.

NOTE: For recodification, see 49 CFR, Editorial Note, 32 FR 5606, April 5, 1967.

Section 26. Short Title.—[Unchanged. See vol. 11, p. 9339.]

PART II

INTERSTATE COMMERCE ACT; MOTOR CARRIERS

Chapter 8, Title 49, U.S. Code

Section 201. [*§301 U.S.C.*] ***Short Title.***—[Unchanged. See vol. 11, p. 9339.]

Amendment, see footnotes, vol. 11, p. 9339.

Section 202. (a) [§*302 U.S.C.*] Application of provisions.—[Unchanged. See vol. 11, p. 9339.]

Amendment, see footnotes, vol. 11, p. 9339.

Cross Reference

By provision of Executive Order 11340, dated March 30, 1967 (32 FR 5453, April 1, 1967), the date on which the Department of Transportation Act takes effect is April 1, 1967.

Notes of Decisions

Volume 15—p. 12158; Volume 16—p. 12795; Volume 17—p. 13489; Volume 19—p. 15453.

1. Constitutionality.—[Vols. 15, 16].—See Cardinale Trucking Co. v. United States, 28 USC §2325, n. 42.

2. Construction and interpretation.—[Vols. 15, 16, 19].—The Motor Carrier Act is a highly remedial statute, and its terms are broad and comprehensive enough to bring within them all those who, no matter what form they use, are in substance engaged in the business of transportation of property on public highways for hire; and, being remedial, it should be liberally interpreted to effect its evident purpose.—I.C.C. v. Dudgeon, 213 F. Supp. 710 (714); I.C.C. v. Interstate Auto Shippers, Inc., 214 F. Supp. 473 (476).

In enacting Part II of the act, Congress established a comprehensive plan for regulating the carriage of goods by motor truck in interstate commerce. By §206 it required that common carriers secure certificates of convenience and necessity before engaging in interstate commerce; by §216(b) it directed property carriers "to establish, observe, and enforce just and reasonable rates, charges, and classifications"; and by §217(a) it directed carriers to file with the commission and print and keep open to public inspection tariffs showing all such rates and authorized the commission to reject any tariff not in consonance therewith.—W. J. Dillner Transfer Co. v. United States, 214 F. Supp. 941 (944-5).

There can no longer be any doubt that the commission has full power over regulation of both vehicles and facilities of common carriers engaged in interstate commerce. [See 222 US 20 and 332 US 422.] Order prescribing regulations to prevent race discrimination between passengers deals expressly with vehicles and terminal facilities when used in interstate commerce and is therefore an order regulating vehicles and facilities of interstate commerce; any incidental effect on strictly intrastate matters, such as may flow from economic necessity to use the same vehicles and facilities in intrastate as well as interstate transportation, cannot prevent the commission's exercise of its recognized right to regulate interstate commerce.—State of Georgia v. United States, 201 F. Supp. 813 (815)*.

Exercise of the commission's regulatory jurisdiction has no effect on the right of individual respondent, found to be jointly participating in unauthorized for-hire transportation, under Idaho community property statutes. Even though described arrangements for leasing respondent's vehicles are proper and necessary to her accumulation of an estate separate from that of her husband, she cannot avoid, on the basis of State community property statutes, the jurisdiction vested in the commission over interstate carrier operations.—Zirbel Transport, Inc., Investigation and Revocation, 91 M.C.C. 705 (707, 709-10).

The Montana Supreme Court has no jurisdiction to determine respondent's rights under the Interstate Commerce Act; Congress has left such determinations to the commission and the Federal Courts.—Daniels—Investigation of Second Proviso Eligibility, 88 M.C.C. 357 (363)*.

Insofar as Federal Aviation Agency's assertion of plenary power over Dulles International Airport under Second Washington Airport Act, including power to regulate operation of for-hire motor transportation at such facilities, extends only to transportation covered by the taxicab and air-passenger exemptions, no conflict can arise between the power

of that agency and that of the commission.—A.B. & W. Transit Co. Extension, 88 M.C.C. 175 (179, 184).

As to certain operations shown to be needed and not covered by any exemption, FAA concedes that it is mandatory under §206(a)(1) of Interstate Commerce Act that carriers with which it may contract for such service hold certificates from the commission, and it does not assert power to oust the commission from selection of the carrier or carriers to be authorized. Therefore, in view of its apparent willingness to permit operation of the selected carriers at Dulles Airport, the question of its authority to exclude authorized motor carriers from operation thereat need not be considered. Nor is there any reason to question FAA's exercise of the normal police or proprietary function incident to efficient handling of passengers and carriers at a busy terminal.—Id., pp. 179, 184.

As to matter of the franchise fee and other excersises of power assertedly beyond the normal proprietary or police function, the commission states, as it did in 30 MCC 618, that all selected applicants are under obligation to comply with all lawful requirements of the FAA, without attempting to add any penalties or sanctions within the commission's power to those asserted by the FAA itself.—Id., p. 184.

Section 202. (b) [*§302(b) U.S.C.*] **State regulation of intrastate commerce.**—[Unchanged except by act of Sept. 6, 1965, Pub. L. 89-170, §2, 79 Stat. 648, which designated existing provisions as paragraph (1) and added paragraph (2), below. See vol. 11, p. 9340.]

(2) The requirement by a State that any motor carrier operating in interstate or foreign commerce within the borders of that State register its certificate of public convenience and necessity or permit issued by the Commission shall not constitute an undue burden on interstate commerce provided that such registration is accomplished in accordance with standards, or amendments thereto, determined and officially certified to the Commission by the national organization of the State commissions, as referred to in section 205(f) of this Act, and promulgated by the Commission. As so certified, such standards, or amendments thereto, shall be promulgated forthwith by the Commission and shall become effective five years from the date of such promulgation. As used in this paragraph, "standards or amendments thereto" shall mean specification of forms and procedures required to evidence the lawfulness of interstate operations of a carrier within a State by (a) filing and maintaining current records of the certificates and permits issued by the Commission, (b) registering and identifying vehicles as operating under such certificates and permits, (c) filing and maintaining evidence of currently effective insurance or qualifications as a self-insurer under rules and regulations of the Commission, and (d) filing designations of local agents for service of process. Different standards may be determined and promulgated for each of the classes of carriers as differences in their operations may warrant. In determining or amending such standards, the national organization of the State commissions shall consult with the Commission and with representatives of motor carriers subject to State registration requirements. To the extent that any State requirements for registration of motor carrier certificates or permits issued by the Commission impose obligations which are in

excess of the standards or amendments thereto promulgated under this paragraph, such excessive requirements shall, on the effective date of such standards, constitute an undue burden on interstate commerce. If the national organization of the State commissions fails to determine and certify to the Commission such standards within eighteen months from the effective date of the paragraph, or if that organization at any time determines to withdraw in their entirety standards previously determined or promulgated, it shall be the duty of the Commission, within one year thereafter, to devise and promulgate such standards, and to review from time to time the standards so established and make such amendments thereto as it may deem necessary, in accordance with the foregoing requirements of this paragraph. Nothing in this paragraph shall be construed to deprive the Commission, when there is a reasonable question of interpretation or construction, of its jurisdiction to interpret or construe certificates of public convenience and necessity, permits, or rules and regulations issued by the Commission, nor to authorize promulgation of standards in conflict with any rule or regulation of the Commission.

Historical Note

The commission urges early enactment of legislation which would provide for the voluntary establishment of greater uniformity in State requirements for registration of operating authorities of interstate motor carriers.—Annual Report, 1964, p. 74.

Notes of Decisions

Volume 9—p. 7862 [par. (c)]; Volume 11—p. 9340; Volume 2—p. 10343; Volume 13—p. 11043; Volume 14—p. 11562; Volume 15—p. 12159; Volume 16—p. 12797; Volume 17—p. 13490; Volume 18—p. 14242; Volume 19—p. 15453.

5. State regulation and taxation.—[Vols. 9, 11-19].—Congress may direct that federal regulation occupy only a limited portion of an activity being conducted in interstate commerce; and the Commerce Clause does not wholly withdraw from the States the power to regulate local matters with respect to which Congress has not exercised its power, even though such State regulation may affect interstate commerce. However, by enacting the Motor Carrier Act which contains certain exceptions as to its applicability, Congress intended the federal regulation and the exceptions to occupy the entire field; and intended that trucks hauling nonmanufactured agricultural products in interstate commerce should not be regulated at all, except as to safety of operation and equipment. Attempt of Kansas commission to assert jurisdiction over rates for intrastate movement of shipments of unprocessed grain in interstate commerce had commercial aims; and, by the Motor Carrier Act, the Federal Government has preempted regulation of those carriers.—State Corporation Commission v. Bartlett & Co., Grain, 338 F. 2d 495 (498-9)*.

In action against State commission to enjoin arrests of owner-drivers of equipment leased by them to plaintiff which operates as a "cooperative association" under the Agricultural Marketing Act (the arrests having been made because owner-drivers did not hold operating authority either from the State or the commission and not because they violated any State laws or regulations as to physical operation of the trucks), immediate problem involved was compliance with State laws; however, since the State statutes recognize the right to engage in any interstate transportation authorized by federal law, a federal

question is presented. Whether considered owner-driver trucks come within "agricultural cooperative" exemption of §203(b5) is a legal question on which the courts will ultimately have to rule; nevertheless, instant case is one which initially calls for expertise of the commission in making findings of fact and perhaps fashioning a policy expressed in terms of a legal standard. This does not suggest an intrusion by the Federal Government into the State domain, because of the language of the State statutes.—Agricultural Transp. Ass'n of Texas v. King, 349 F. 2d 873 (875-6, 883-5).

Since the commission's order prescribing regulations prohibiting race discrimination by regulated interstate motor passenger carriers deals expressly with vehicles and terminal facilities when used in interstate commerce, it is not an order regulating the subject matter of intrastate commerce; to extent that such regulation of interstate vehicles and facilities affects strictly intrastate matters, such effect is incidental; any such effect resulting from economic necessities of operation of the motor carrier industry cannot prevent the commission's exercise of its recognized right to regulate interstate commerce. However, nothing in the order or in the court's decision touches in any way power of the State commission to regulate purely intrastate motor transportation in any manner heretofore legally open to it.—State of Georgia v. United States, 201 F. Supp. 813 (815)*.

Prior to the Motor Carrier Act of 1935 a State, in absence of congressional legislation dealing directly with the subject, could (1) adopt regulations to promote safety on the highways and conservation in their use, provided the indirect burden imposed on interstate commerce was not unreasonable, and (2) impose a fair and reasonable nondiscriminatory tax as compensation for use of its highways; but it did not have authority to issue "interstate" certificates of public convenience and necessity, since that would involve determination by State officials of adequacy of existing facilities for conducting interstate commerce, a test peculiarly within the province of federal action.—Daniels v. United States, 210 F. Supp. 942 (946)*.

In the Motor Carrier Act Congress adopted a comprehensive plan for federal control and regulation of the carriage of goods by motor truck in interstate commerce, so all-embracing that the former power of States was greatly reduced; no power at all was left in States to determine what carriers could or could not operate in interstate commerce. Exclusive power of the federal government to make this determination is shown by §206(a), which describes the conditions under which Interstate Commerce Commission may issue certificates of convenience and necessity; and an exemption authorizing a State commission to issue interstate certificates to carriers who have no corresponding intrastate rights would produce a result contrary to the policy of the act.—Id., pp. 946, 950-1; and 35 F. Supp. 136 held that it is beyond the constitutional power of a State to permit or prohibit interstate carriage on grounds of public convenience and necessity.—Id., p. 948.

As the enabling statute prohibits the commission's regulation of motor carriage in intrastate commerce, in making a declaratory determination as to lawfulness of tariff rules providing for stoppage to unload intrastate portion of a mixed shipment of interstate and intrastate traffic tendered on one bill of lading, its conclusions in no way affect the States' exclusive jurisdiction over intrastate commerce. Issuance of a bill of lading covering both intra- and interstate commerce cannot broaden the commission's jurisdiction: bill of lading is a receipt for the goods and a contract to transport and deliver it; and to extent that it is a contract for carriage of intrastate commerce it is governed by laws of the particular State having jurisdiction. A volume of mixed inter- and intrastate commerce thus tendered does not become wholly interstate in character merely because the intrastate portion is unloaded under a stopoff rule, and the commission may not prescribe a tariff rule that would have effect of providing rates or charges on intrastate commerce.—Central States Motor Freight Bureau, Inc., Petition, 319 I.C.C. 745 (747-8, 749, 751)*.

And so far as the jurisdictional issue is concerned, that finding applies with equal force to contract as to common carriers.—Id., 321 I.C.C. 726 (729)*.

It is not the function of the commission to

determine the validity of State laws applicable to motor carriers authorized by it to engage in the transportation business; the Supreme Court not only accepts but is bound by the construction given to State statutes by the State courts.—Bowman Transp., Inc.—Purchase—A. W. Hawkins, Inc., 90 M.C.C. 303 (306).

While the commission recognizes the right of a State court to interpret State certificates, Montana Supreme Court's dictum that the Motor Carrier Act would not affect State interstate certificates granted prior thereto would apply only to whatever rights respondent might have under Montana law by virtue of such a certificate.—Daniels—Investigation of Second Proviso Eligibility, 88 M.C.C. 357 (363)*.

Grant of alternate operating-convenience route within Missouri between Kansas City and St. Joseph to carrier whose existing route is through Kansas should present no unique or difficult problem in enforcing the commission's regulations, nor interfere with enforcement of pertinent laws and regulations by the States concerned; applicant is not now operating unlawfully, and there is no indication that purpose of application is to enable it to circumvent State laws or regulations, nor have the respective States expressed any interest in that regard.—Capitol Truck Lines, Inc., Extension, 88 M.C.C. 212 (217).

Since regulations prescribed to remove unjust discrimination between interstate passengers in racial segregation of seating in buses and use of terminal facilities are limited to facilities operated in interstate commerce and services connected therewith, and do not apply to operation of vehicles by interstate carriers when transporting passengers solely in intrastate service, there is no interference with legitimate exercise of the exclusive jurisdiction reserved to the States by §202(b) to regulate intrastate commerce.—Discrimination—Interstate M. Carriers of Passengers, 86 M.C.C. 743 (748, 753)*.

That compliance with the rules may for economic reasons compel a carrier to provide non-segregated facilities for its intrastate as well as its interstate passengers presents no legal impediment to prescription of rules necessary to remove unjust discrimination against interstate commerce. Moreover, federal courts have held under the equal protection clause of the Fourteenth Amendment that States have no power to regulate intrastate transportation by requiring segregation of intrastate passengers on vehicles or in use of terminal facilities. [142 F. Supp. 707, affirmed 352 US 903; 328 US 373.]—Id., p. 748.

6. ——Protection of highways and traveling public, interstate commerce.—[Vols. 9, 11, 12, 16-19].—Requirement that for-hire motor carriers operating in interstate or foreign commerce report accidents occurring in their intrastate operations, including those involving vehicles and drivers used exclusively in intrastate commerce, in no way abridges or interferes with exclusive power of the State to regulate intrastate commerce; however, carriers who at no time engage in interstate or foreign commerce, or whose operations therein are sporadic or occasional, should not be required to report intrastate accidents.—Qualifications of Employees and Safety of Operations, 91 M.C.C. 141 (145-6)*.

Since §192.3 of the commission's safety regulations requires motor carriers to abide by valid State highway regulations, and violations of State maximum weight laws may be considered in determining a carrier's fitness, it must be assumed that certificated carriers are aware of their obligations when they publish minimum weights for rate proposals with limitations on the number of vehicles to be used; and mere mention of State weight laws and fact that they are complex does not indicate that violations thereof would automatically follow. However, if the minimum weight is so unrealistic that it cannot be met without an obvious violation of State maximum weight laws resulting, the rate should not be approved. Proposed rate on alcoholic liquors, minimum 96,000 pounds in not more than two trailers, which requires minimum loadings of 48,000 pounds, is not shown to be unlawful when protestants admit that no violation of State laws would occur if respondent uses city tractors in pickup and delivery service.—Alcoholic Liquors, Detroit, Mich., to Long Island City, 319 I.C.C. 404 (408-9).

20. Operation in intrastate commerce.—[Vols. 9, 11, 19].—From the commission's findings of fact, which are supported by sub-

stantial evidence, conclusion is inescapable that plaintiff's only purpose in routing l.t.l. shipments originating at and destined to points in Maryland over a route through Delaware is to attempt to make legal, by converting into interstate shipments, shipments in intrastate commerce for which plaintiff lacks authority from the Maryland commission. That such a purpose is in bad faith and a subterfuge warranting a cease-and-desist order was settled in 219 F. Supp. 43, affirmed 375 US 452. And no logical basis other than subterfuge is shown for use of the circuitous route through Delaware. There being no factual or legal errors in the commission's order denying plaintiff's petition for a declaratory order, the complaint seeking injunctive relief is dismissed.—Service Trucking Co., Inc. v. United States, 239 F. Supp. 519 (521-2)*.

The evidence as a whole overwhelmingly justifies conclusion that plaintiffs' operations between named Pennsylvania points over authorized interstate routes tacked at points in New Jersey are not logical and normal operations through their headquarters, but artificial, contrived arrangements designed to obtain desirable Pennsylvania intrastate business within the rightful jurisdiction of the State commission. [The Jones Motor Co. case, 218 F. Supp. 133, distinguished.] In the full sense of the word, plaintiffs' considered operations are subterfuges, and the commission's issuance of cease-and-desist orders conformed to the mandate of the national transportation policy to cooperate with State authorities; the commission's orders sustained.—Hudson Transp. Co. v. United States, 219 F. Supp. 43 (49-50)*.

Grant of authority from two Illinois points to points in same State does not authorize any intrastate operations but only portions of through interstate movements.—Kindsvater Extension, 92 M.C.C. 131 (134).

Motor transportation of athletic teams and related organizations between Ames, Iowa, and the Des Moines airport, arranged and paid for by Iowa State University, involves operations only between points in that State when, though the teams are actually traveling between Ames and points outside Iowa, there are no through routes or common arrangements between the participating carriers and, insofar as applicant is concerned, the trip is an intrastate movement for which no authority from the commission is required. Under governing precedents, a passenger's intention to continue or complete an interstate journey is not controlling as to the inter- or intrastate character of motor-carrier operations where his written contract with carrier is for intrastate movement; and that is true even when the transportation agreement is made by a third party. Proposed operations are not in interstate or foreign commerce; and are not subject to the Motor Carrier Act. Application dismissed,—Midwest Transp. Inc., 98 M.C.C. 362 (363-4).

Vendor's intrastate certificate (used as basis of interstate operations) must be interpreted in light of the policy established by the issuing State.—Liquid Transporters, Inc.—Purchase—Black, 93 M.C.C. 423 (428, note).

No logical reason appears for petitioner's routing of otherwise intrastate l.t.l. freight between points in Maryland over a route via Bridgeville, Del., other than the fact that it lacks intrastate authority to transport it. That such routing is not motivated by considerations of economy and efficiency is obvious, considering circuity of the Bridgeville route, that petitioner maintains its terminal and break-bulk point at Federalsburg, Md., rather than at Bridgeville, and that only shipments moving between Maryland points without a prior or subsequent interstate movement are routed through Delaware; moreover, petitioner uses the direct all-Maryland routes for nonregulated Maryland intrastate traffic and for shipments to Maryland points already in the stream of interstate commerce. In the considered operations, petitioner is attempting in bad faith to convert to interstate commerce traffic which, but for such routing, is actually intrastate commerce subject to the laws of Maryland; those operations are conducted as a subterfuge to evade the State laws and are not authorized by petitioner's certificate.—Service Trucking Co., Inc.—Declaratory Order, 94 M.C.C. 221 (225, 226)*.

Where in absence of State regulation defendants, in transporting freight moving between Pennsylvania points without a prior or subsequent interstate movement, would use the normal and direct routes, their transporta-

tion of such freight over routes through New Jersey authorized by their interstate certificates is a bad-faith attempt to convert what is essentially intrastate commerce into interstate and thus defeat the regulatory laws and policies of the Commonwealth of Pennsylvania; such operations, being intrastate in character though physically interstate, are subject to State regulation.—Pennsylvania Public Utility Comm. v. Hudson Transp. Co., 88 M.C.C. 745 (748, 750)*.

Though the commission has no jurisdiction over intrastate commerce, cooperation between the Federal Government and the several States is woven by necessary implication into very fabric of the Motor Carrier Act and is expressly required by the national transportation policy; that requirement is sufficiently definite and essential to support a complaint filed on behalf of a State and the issuance of an appropriate compliance order. Whether or to what extent enforcement action under Pennsylvania laws would be ineffective or unduly time consuming need not be considered, since the act clearly contemplates that, under circumstances like those involved, the Federal power be made available to supplement that of the States.—Id., pp. 748, 750.

Regulations of the Commission

31 FR 16567, Dec. 28, 1966, Part 177b: Standards for Registration of Certificates and Permits with States, new Part 177b setting forth regulations governing registration of interstate authority with the several States, added, effective 5 years from date of the order (Dec. 14, 1966).

Section 202. (c) [*§302 (c) U.S.C.*] Incidental transportation exempt under part II.—[Unchanged. See vol. 11, p. 9342.]

Amendments, see footnotes, p. 9342.

Historical Notes

By Executive Order 11107, Administration of Alaska Railroads, dated April 25, 1963, the Interstate Commerce Commission is given jurisdiction "to fix, change, or modify rates for the transportation of passengers and property" under the authority set forth in the Alaska Railroad Act, 38 Stat. 305, which jurisdiction had been given to the Secretary of the Interior by Executive Order No. 3861 of June 8, 1923; latter order superseded. (28 FR 4225, April 30, 1963)

Executive Order 11107 codified as Title 49, Chapter II, Part 1200 — Administration of Alaska Railroads (49 CFR §§1200.1 - 1200.4), 28 FR 12278, Nov. 20, 1963.

Notes of Decisions

Volume 11—p. 9343; Volume 12—p. 10344; Volume 13—p. 11043; Volume 14—p. 11562; Volume 15—p. 12159; Volume 16—p. 12798; Volume 17—p. 13491; Volume 18—p. 14244; Volume 19—p. 15455.

5. In general.—[Vols. 11-19].—In action to set aside the commission's order granting interstate authority to intervening defendant for transportation of passengers between Northhampton and Williamsburg, Mass., there emerges for the first time the question as to whether a certificate is permissible when all proposed interstate transportation as to which there is supporting evidence will be within a terminal area of certified carriers and under arrangements with them; the court ought not to make a decision on that question, even if it be a question of law, until the point is raised before and considered by the commission. In remanding the case for further action, however, the court does not intend to confine the commission to considering whether on the record as it now stands §202(c) precludes issuance of a certificate; the commission is not precluded from permitting presentation of further evidence.—Interstate Busses Corp. v. United States, 259 F. Supp. 577 (580-1)*.

Motor operations in Anchorage, Alaska, area in connection with prior or subsequent

water and rail movements to and from "Outside" are in interstate or foreign commerce and not exempt from licensing provisions of the act under §202(c), since the connecting carriers are not subject to the act.—Al Renk & Sons, Inc.—Alaska "Grandfather" Application, 89 M.C.C. 91 (96, note).

Though proposed plan V TOFC rates ostensibly offer joint motor-rail-motor service, essentially they provide for a rail line-haul only, with motor pickup and delivery within terminal areas, which under commission precedents is considered incidental to the line haul and performed for the line-haul carrier within meaning of §202(c)(2). While the commission is not bound by stare decisis to same extent as the judiciary, and the proposed rates may not violate the letter of §202(c)(2), approval would encourage filing of common-carrier applications by motor carriers operating wholly within terminal areas in order to enter into joint rates with line-haul carriers; in view of the questions of statutory interpretation and regulatory policy thus raised, the more responsible course for the present is to adhere to the established precedents. Since there is no proof that respondent motor carrier would perform any line-haul service under the proposed rates, they may not be found lawful.—Rubber Articles, Philadelphia to Ill., Ky., Mich., & Mo., 319 I.C.C. 632 (635, 637, 638).

Collection and delivery: [Vols. 16, 19.—Collection or delivery service means only intracity or intraterminal transportation performed in picking up and gathering together at origin, or in distribution at destination, of shipments prior or subsequent to, and incidental to, an intercity or intercommunity line-haul movement.—Joint Northeastern Motor Carrier Assn., Inc. v. Creger, 91 M.C.C. 494 (496).

Section 202(c) partially exempts from regulation those motor carrier operations conducted by regulated water carriers, within their terminal areas, in performance of collection, delivery, and transfer services; and, in contrast to commercial zones, terminal areas are the terminal areas of the carriers. Although, in 54 MCC 21, the terminal area of motor carriers and forwarders at any given municipality was defined as being coextensive with the commercial zone thereof, no such general rule has been promulgated with respect to terminal areas of rail or water carriers. Therefore, questions as to maximum permissible limits of the terminal areas of such carriers must be determined upon the facts in each case.—Sause Bros. Ocean Towing Co. v. W. R. Chamberlin & Co., 91 M.C.C. 199 (202).

While a water carrier's terminal area is not necessarily coextensive with the port district of area served, it is generally not less extensive than the port district; also, the extent of the port district is good evidence to show reasonableness of carrier's terminal operations. Therefore, defendant water contract-carrier's terminal area at ports of Crescent City, Calif., and Brookings, Oreg., may extend at least to the territorial scope of those port districts which, apparently, is beyond the commercial zone of each city. Accordingly, since the Brookings area is found to be within defendant's Crescent City terminal area, its motor transportation of lumber originating at Brookings (about 30 miles away) to Crescent City for movement by water to southern California ports is not shown to be unauthorized motor carriage conducted beyond maximum permissible limits of the terminal area wherein pickup and delivery service may be performed as incident to the line-haul water operations.—Id., pp. 201, 203-4.

See also Motor Transp. of Property Incidental to Air, §203(b), n. 40.

Commercial zones: [Vol. 12].—See also Lattavo Bros., Inc. case, §203(b), n. 60 *Territorial operating authorities*, below.

Since defendant's authority to serve Philadelphia commercial zone as its terminal area stems from its authority for its Philadelphia-Newtown Square, Pa., route, it may pick up or deliver freight therein only when incidental to a line haul over that route, and may not do so in connection with a movement over its Trenton, N.J.-Holyoke, Mass., route by virtue of fact that commercial zone of an off-route point appurtenant to latter route overlaps a corner of the Philadelphia zone. But if commercial zone of an authorized point on or appurtenant to the Trenton-Holyoke route overlapped the Philadelphia municipal limits, it could pick up or deliver shipments within those limits incidental to a line haul over that route.—Joint Northeastern Motor Carrier

Assn., Inc. v. Creger, 91 M.C.C. 494 (496).

Express Agency: [Vols. 11, 13, 16, 19].—Though definition of motor common carrier operations in §203(a)(14) excluded interstate operations of an express company only to extent they were previously subject to Part I, and decision in 201 ICC 755 appears to limit the commission's jurisdiction over express companies under Part I to services immediately associated with line-haul movements by rail or water-and-rail, the reason for including express companies in Part I was to protect the public in all instances where express traffic moved and, therefore, it would appear that the commission had jurisdiction over all local express service, particularly to further its legitimate interest in those services actually associated with rail or water-rail movements. —Railway Exp. Agency, Inc., Extension, 91 M.C.C. 311 (336-7)*.

However, findings in 21 MCC 161 lead to conclusion that terminal accessorial services associated with an independent line-haul movement by motor vehicle, which is not within scope of §1(1), were not considered to be subject to regulation prior to enactment of §203(a)(14), but became subject through enactment of Part II. Furthermore, an express company, notwithstanding its independent status as a common carrier subject to Part I, may not utilize regulated carriers to provide any service for which they lack specific authority; thus, whether operating under its own certificates or using services of an authorized independent motor carrier, Railway Exp. Agency is bound by all limitations inherent in such operating authority, including any restricting pickup and delivery service to a defined motor carrier terminal area.—Id., p. 338.

In view of REA's decreasing use of passenger trains and increasing reliance on line-haul motor transportation, this state of the law tends to foster unnecessary legal complications in what should be a relatively simple carrier-shipper relationship, since, unless effect and applicability of various provisions of the law are coordinated, the maximum pickup and delivery zone at a given community incident to a line-haul shipment by an express carrier such as REA would seem to vary depending on whether the line haul is by rail or motor. To remove this probable uncertainty the matter is referred to Division 1 for institution of an appropriate proceeding to define the terminal area of an express company as that type of carrier is regulated by the act as a whole—Id., p. 338.

In stating in 91 MCC 311 that it did not desire to maintain a situation wherein Railway Exp. Agency's pickup and delivery zones at a given community would vary according to whether the line haul was by rail or by motor vehicle, and in referring the matter to division 1 for investigation to resolve that issue, the commission did not absolve REA of its duty to comply with existing law as therein construed, and did not imply that the ultimate decision might favor the maximum zone that REA wishes to serve. Until some change is found to be required, after full consideration of interests and rights of motor carriers and the general public, as well as proper application of the controlling statutes, REA is bound to follow the law as it now stands. The issue is closed insofar as current proceedings are concerned, and REA is cautioned that nonadherence in its motor-carrier operations to limits set forth in 54 MCC 21 will constitute illegal operation.—Railway Exp. Agency, Inc., Extension, 92 M.C.C. 657 (658-9).

When conducting motor carrier operations over its own certificated highway routes, Railway Exp. Agency's pickup and delivery service is restricted territorially by commercial zone limitations fixed in 54 MCC 21.—Railway Exp. Agency, Inc., Extension, 92 M.C.C. 487 (489).

When REA operates pursuant to its interstate certificates, its pickup and delivery service as a motor carrier is limited under part II of the act to commercial zone and terminal area limitations applicable to all motor carriers and not, as applicant contends, to terminal areas established by its tariff publication as a carrier subject to part I. Therefore, since Loring Air Force Base is not within the terminal area of any point on the route sought, it is not a point of service within scope of the application; specific authority to serve the base as an off-route point is required.—Railway Exp. Agency, Inc., Extension, 98 M.C.C. 75 (76-7, 78); for the same reasons, grant of authority sought would not

enable REA to serve Robins Air Force Base even though the record is presuasive that its failure to specifically name the base as a point of service was merely an inadvertent error.—Id., 91 M.C.C. 887 (889-90)*.

"For" line-haul carrier: [Vol. 12].—Since a transfer, collection, or delivery service performed within the terminal area for a line-haul carrier is regarded as incidental to the line-haul operation, and performed for the line-haul carrier within meaning of §202(c)(2), such service must be performed under line-haul carrier's tariff rather than under joint through rates to which applicant and the line-haul carriers would be parties. Though both supporting carriers expressed a wish to use applicant's service within their Seattle terminal on a "concurrence basis" implying a joint-rate agreement, such an agreement is not permissible under commission precedents. While applicant proposes to render a transfer service within the terminal area of line-haul carriers serving Seattle, that operation can be performed only as an agent for or under contractual arrangements with those carriers; consequently, proposed service falls within exemption provisions of §202(c)(2).—Ric's Transfer Co., Inc. Extension, 96 M.C.C. 366 (369).

Forwarders: [Vols. 11, 12, 19].—See also Panther Cartage Co. case, §203(b), n. 40.

Since respondents are found to be providing, jointly and in concert, an unauthorized for-hire freight forwarding service in violation of §410(a), it follows that motor-carrier operations conducted in their behalf by respondent cartage company within terminal areas of Miami and Fort Lauderdale, Fla., are also unlawful; cease-and-desist order entered.—Federal Shippers Assn., Inc.—Investigation, 316 I.C.C. 523 (527)*.

Motor carriers: [Vol. 11].—Pickup and delivery operations performed by a railroad subsidiary for itself, either prior or subsequent to a line-haul by motor vehicle, even though such line-haul is performed as a substitute for rail service, are governed by findings in the Terminal Area case, 54 MCC 21, which apply to a certificate or permit issued under Part II to "any motor carrier"; the statutory intent is clear that such transportation be considered part of, and be regulated in same manner as, the motor transportation to which it is incidental; there is therefore no merit to arguments that such subsidiary's terminal area service in connection with its own line-haul operations should be either greater or less than that authorized in the Terminal Area case.—New York Central Transport Co.—Modification, 89 M.C.C. 389 (399).

Under modification of railroad subsidiary's certificate permitting substituted all-highway service within each of 12 defined key-point zones, it may serve all points in commercial zones of break points between adjacent zones, including points actually located in other zones.—Id., p. 413.

Passenger carriers: [Vols. 16, 19].—Although passenger carriers are not excluded from benefits of §202(c), terminal area pickup and delivery service is not ordinarily a concomitant feature of a passenger carrier's operating practice, especially insofar as transportation of passengers rather than package express is concerned. Unlike property carriers, whose terminal areas are normally coextensive with commercial zones of municipalities, terminal areas of passenger carriers are confined to corporate limits of the points they serve. In originating charter parties at points adjacent to those he is authorized to serve, applicant has been operating unlawfully although apparently in good faith.—Rose Extension, 86 M.C.C. 723 (724).

While applicant is limited in handling express as a passenger carrier to pickup and delivery within corporate limits of municipalities it serves, if it were granted separate authority sought for transportation of express in pup semitrailers drawn by passenger-carrying vehicles it would be entitled to provide pickup and delivery within the commercial zones of the involved municipalities.—Continental Southern Lines Extension, 88 M.C.C. 547 (549).

Railroads: [Vol. 11].—Under Part I, terminal areas may be varied and extended according to character of the commodity and the necessary pickup operations and practices incident to tendering it for rail transportation. Also, as held in 53 MCC 614, where a railroad that is providing exempt motor service within two contiguous terminal areas desires to serve

both areas from a single station, such operation would be a bona fide collection and delivery service within meaning of §202(c), provided the single terminal area was defined in its tariff so as to include the geographical scope of the operation.—Sause Bros. Ocean Towing Co. v. W. R. Chamberlin & Co., 91 M.C.C. 199 (202).

No general rule corresponding to that of 54 MCC 21 for motor carriers and forwarders has been promulgated respecting limits of terminal areas which may be served by railroads; terminal areas of stations on a railroad's line are described in its filed tariffs, and it can and does change the limits of its pickup and delivery zones through republication of its tariffs. When a motor carrier (including a subsidiary) performs pickup and delivery service as agent for, or under contractual arrangement with, the railroad immediately prior or subsequent to a rail movement, it may perform such service at all points within the rail terminal area as defined in the railroad's tariffs, even though beyond the terminal area (coextensive with the commercial zone) as defined in the cited case.—New York Central Transport Co.—Modification, 89 M.C.C. 389 (398, 399).

And proceeding in which railroad subsidiary seeks to eliminate certain key-point restrictions for purpose of establishing Flexi-Van service through the retained key points is not the proper forum for modifying or permanently fixing the territorial limits of terminal areas in which it may perform transfer, collection, or delivery service for the parent railroad.—Id, p. 399.

Terminal area of a railroad at a point embraces all points in the area within which it performs bona fide collection, delivery, or transfer service, including points beyond a municipality that are specifically described in the railroad's tariffs. And since Oakbrook, Ill., outside the Chicago commercial zone, is within the terminal area described in railroad's plan II TOFC tariff, its motor carrier subsidiary can serve that point under the §202(c)(2) exemption as the railroad's agent without specific motor carrier authority. Also, while rail-subsidiary applicant would require motor carrier authority in order to provide proposed Chicago-Oakbrook service in its own right unrelated to its parent's rail service, the proposed delivery service (in connection with plan III TOFC service) cannot be regarded as wholly separate from its rail parent's line-haul TOFC service. In the peculiar circumstances presented, services provided under plans II and III, although different in form, are the same in substance and plainly are inseparable; therefore, in conjunction with the parent railroad, proposed motor carrier operations may be conducted under the terminal area exemption.—New York Central Transport Co. Extension, 99 M.C.C. 94 (96-7, 100-101)*.

Terminal areas: [Vols. 12, 13, 16-19].—Enlargement, see Chicago, Ill., Commercial Zone case, NTP, n. 5 *Exemption.*

In sustaining the commission's decision limiting area at certain Florida points within which complainant intercoastal water carrier may conduct terminal area service by motor vehicle, the court does not imply that in every instance the "terminal area" limits under §202(c)(1) must identically correspond with the area in which local transportation is exempt under §203(b8); permissible terminal area limits at a particular point for a particular carrier may be smaller or larger than the area defined in §203(b8). Nevertheless, the "terminal area" limitation and the commercial zone area are kindred concepts since, in each case, the statutory exemption from certification pertains to transportation of a local type. Terminal area limitation imposed by the commission represented proper exercise of its judgment in a field in which it is particularly qualified to speak and is consistent with the purpose of Congress in enacting §202(c)(1).—Sea-Land Service, Inc. v. United States, 222 F. Supp. 558 (564)*.

See also Law Motor Freight, Inc. v. C. A. B., §203(b), n. 40.

Inasmuch as no general rule (corresponding to that in 54 MCC 21 for motor carriers and forwarders) has been promulgated with respect to terminal areas of rail or water carriers, questions concerning maximum permissible limits of the terminal areas of such carriers must be determined on the facts in each case; and, as stated in 82 MCC 395, the maximum permissible extent of a carrier's terminal area will depend largely on the character of

the community served, regardless of whether the prior or subsequent line haul is performed by motor, rail, or water.—Sause Bros. Ocean Towing Co. v. W. R. Chamberlin & Co., 91 M.C.C 199 (202, 203).

Transfer service: [Vols. 16, 18].—Under the §202(c)(2) partial exemption of transfer, collection, and delivery services performed for regulated carriers within terminal areas, applicant clearly can perform a transfer service for supporting line-haul motor carriers within Seattle, Wash., terminal area, and thus within the entire commercial zone of that city, without specific authority from the commission when acting as an agent or under contractual arrangements with those carriers. Application was filed because of the decision in the Easton case, 68 MCC 64, that a transfer service between all points in the New York City commercial zone could not be performed under the §202(c)(2) exemption, that decision was predicated on a unique situation where the terminal area, having been specifically defined, was not coextensive with the New York City commercial zone. In instant proceeding, however, unlike the New York City situation, the Seattle terminal area of supporting motor carriers is coextensive with commercial zone of that city. Application dismissed.—Ric's Transfer Co., Inc., Extension, 96 M.C.C. 366 (368-9).

Water carriers: [Vols. 11, 12, 15, 19].—A water carrier's terminal area is not necessarily coextensive with port district of the area served, but it is generally not less in territorial extent, and extent of the port district is good evidence to show reasonableness of a water carrier's terminal operations, maximum permissible extent of which depends largely on character of the community served.—Sause Bros. Ocean Towing Co. v. W. R. Chamberlin & Co., 91 M.C.C. 199 (203).

Points beyond commercial zones or port districts of Crescent City, Calif., and Brookings, Oreg., are not shown to be geographically, economically, and industrially separate communities independent of the respective ports, and trucking of lumber from such points to Crescent City in connection with coastwise movement beyond, by defendants authorized to serve both ports, does not exceed permissible limits of their terminal areas. Coastal area between these ports is sparsely populated and dependent on the lumber industry, Oregon shippers aided building of the Crescent City port and have used it for many years, and large area of port district of Brookings, which is not a public port accessible to self-propelled vessels, indicates its special character. That two port districts are involved does not affect character of considered two-State area as a single terminal area.—Id., pp. 203-4.

Moreover, one defendant holds specific authority to transport lumber as a contract carrier and cannot participate in joint rates or interline movements; to narrowly construe its terminal area would render its services entirely dependent on motor transportation since practically all sources of lumber are beyond commercial zone of Crescent City, and would defeat purpose of the act to preserve a national transportation system by water, as well as destroy flexibility previously found desirable.—Id., p. 204.

Section 203. (a)(1)-(9). [*§303 U.S.C.*].—[Unchanged. See vol. 9, p. 7867; vol. 15, p. 12161.]

Amendments, see footnotes, vol. 14, p. 12161.

Notes of Decisions

§203(a)(9): Vol. 9—p. 7867; Vol. 11—p. 9345; Vol. 13—p. 11044.

5. Express company; in general.—[Vols. 9, 11, 13].—Railway Exp. Agency's increasing use of line-haul motor transportation has placed a current emphasis on service subject to regulation under Part II, and in light of prior commission decisions, particularly 201 ICC 755, 21 MCC 161, and 91 MCC 311, it cannot be deemed to be unaware of the dis-

tinction between express business handled in connection with rail and water service under Part I and that related to highway transportation under Part II. No ambiguity in that respect now exists, and further consideration of that issue in proceedings involving REA's express service is unnecessary and undesirable.—Railway Exp. Agency, Inc., Extension, 92 M.C.C. 657 (658).

Section 203. (a)(10) [*§303(a)(10) U.S.C.*] **Interstate commerce.—** [Unchanged. See vol. 9, p. 7869; vol. 19, p. 15459.]

Notes of Decisions

Volume 9—p. 7869; Volume 11—p. 9346; Volume 12—p. 10346; Volume 13—p. 11044; Volume 14—p. 11564; Volume 15—p. 12161; Volume 16—p. 12802; Volume 17—p. 13493; Volume 18—p. 14247; Volume 19—p. 15459.

5. Interstate commerce defined.—[Vols. 9, 11-19].—Goods ultimately destined for shipment to another State acquire the character of interstate commerce as soon as they begin their journey, even though there is a temporary break in transit in the State of origin; and such halt in transit is an incident of the interstate movement. Thus, when grain purchased by appellee at its country elevators or other interior Kansas points was moved by truck to its River Rail Elevator at Kansas City, Kans., (where it was graded, tested, and deposited in special bins and held exclusively for resale to customers located outside Kansas), and was in fact eventually shipped to out-of-State purchasers, the truck shipment to River Rail was but the commencement of the movement to ultimate destinations in another State; therefore, truck movement from origins to River Rail is shipment in interstate commerce.—State Corporation Commission v. Bartlett & Co., Grain, 338 F. 2d 495 ((497-8)*.

The essential character of transportation classifies it either as interstate or intrastate; and the intention formed prior to shipment fixes its essential character. When intention which produces the movement is known, incidents of transportation become insignificant and need not be considered in determining whether the transportation is intra- or interstate. Ordinarily that question is determined by what is actually done and not by any mere billing or plurality of carriers, and where commodities are in fact destined from one State to another a rebilling or reshipment en route does not of itself break continuity of the movement or require that any part be classified differently from the remainder.—Great Northern Ry. Co. v. Thompson, 222 F. Supp. 573 (582).

Whether commerce is interstate or intrastate in character is a question of fact, determined primarily from the origin and destination, the intent of the parties, continuity of movement in accordance with such intent, and consideration of all circumstances surrounding the transaction. Mere billing or forms of contract do not determine the nature of inter- or intrastate commerce, and movement of a shipment including both intrastate and interstate traffic on a single bill of lading does not transform intrastate portion into interstate traffic. Nor, where intrastate portion of such a shipment is unloaded at a point in the origin State under a stop-in-transit rule, can a single-shipment concept confer an interstate character on the entire movement; "shipment" merely denotes the subject matter of transportation, and it is the "transportation" contemplated which determines the interstate or intrastate character of the shipment.—Central States Motor Freight Bureau, Inc., Petition, 319 I.C.C. 745 (748, 749)*; and, so far as jurisdiction is concerned, that finding applies with equal force to contract as to common carriers.—Id., 321 I.C.C. 726 (729)*.

Respondents' argument that the commission lacks jurisdiction in investigation into lawfulness of motor carriage of property having a prior or subsequent movement by air-

craft, because its jurisdiction is expressly limited to commerce defined in §203(a)(10), rejected. Although statutory definition of interstate commerce does not specifically mention commerce moving partly by air, and §203(a)(10) does not specifically confer authority to determine what motor operations fall within partial exemption of §203(b7a), the very extent of the commission's duty to administer, execute, and enforce the act incontrovertibly depends on, and is limited by, the scope of any exemption from regulation provided in the act; there must of necessity be included in those duties the power to determine scope of any partial exemption.—Film Transit, Inc., and Air Dispatch, Inc.—Investigation, 98 M.C.C. 145 (148, 149).

See also Midwest Transp., Inc., case, §202(b), n. 20.

Ohio intrastate motor carrier's continuous movement, in for-hire carriage, of shipments picked up at points within Pennsylvania portion of shipper's plant (the plant being astride the Ohio-Pennsylvania line) and moved over shipper's private roads across the State line to the Masury, Ohio, gate of the plant, thence over public highways to Ohio destinations, is transportation in interstate commerce and subject to certificate and permit requirements of the act. Therefore, even though the public highways used are wholly within Ohio, petitioner may not lawfully engage in such transportation unless and until it obtains an appropriate interstate certificate or permit.—Lattavo Bros., Inc.—Petition for Interpretation, 98 M.C.C. 767 (768-9).

Service provided by respondent California passenger carrier, through his "lease" of buses to passenger groups desiring transportation to points outside California, with drivers regularly employed in his authorized intrastate charter service, and the subsequent transportation, amounts to no more than an interstate charter operation. Essential nature of the service provided is not altered by provisions of the lease designed to place ostensible control in the hands of the passenger group; moreover, considering the entire picture, it is apparent that purpose of the leasing plan is to avoid regulation under the act. Respondent has been and is engaged in interstate transportation of passengers, in charter operations, without appropriate authority.—Roesch Investigation of Operations, 91 M.C.C. 824 (825-6).

Transportation between western New York and New York City commercial zone is in interstate commerce, since unique location of New York City practically requires passage through Pennsylvania or New Jersey to reach it from western New York; also, certain New Jersey points are in the New York commercial zone.—Hollebrand, 88 M.C.C. 685 (688)*.

In determining whether rail movement of cement from mill to silo storage and subsequent motor distribution to shippers' customers constitutes a single continuing movement, essential character of the commerce must be considered; under criteria of 71 MCC 17, the major manifestations of shippers' intent at time of shipment establish that the continuity has been broken and that there are two separate and distinct movements; at time of initial movement no shipment or part thereof is allocated to any consignee; such shipments are generally made for purpose of replenishing shippers' supply at the silos, and for economy and convenience in effecting subsequent distribution.—New England Transp. Co. Extension, 88 M.C.C. 703 (707).

Between State points: [Vols. 11, 19].—Plaintiff's truck movement of reels of electric cable (manufactured in and shipped by rail from Bonham, Texas) from its railheads in north central North Dakota to designated ballistic missile sites in that area was transportation in interstate commerce when it was part of the entire movement from Bonham to the missile sites. Prior to shipment the manufacturer stenciled coded designation identifying its exact installation site on each reel, and the entire movement from Bonham to the site was under plaintiff's control. Temporary delay and transshipment at the railhead did not cause break in continuity of the transportation; nor was continuity affected by consignee's right of inspection and rejection at the railhead or by separate motor carrier billing therefrom to ultimate missile site.—Great Northern Ry. Co. v. Thompson, 222 F. Supp. 573 (582-4).

The evidence does not precisely reveal character of barge movement of cement from

Hannibal, Mo., to St. Louis, which is subsequently moved therefrom by truck to other Missouri points; however, even assuming that the barge movements were in interstate commerce, interstate character thereof would end at shipper's St. Louis storage facility unless there had been a prior decision that the cement was destined for other Missouri points and it did not come to rest in the St. Louis facility.—L. A. Tucker Truck Lines, Inc. v. United States, 215 F. Supp. 261 (264)*.

However, shipments moving by truck from St. Louis to southeast Missouri points beyond Perryville, Mo., over the most direct route, which traverses Illinois between the bridges at St. Louis and Perryville, would constitute shipments in interstate commerce.—Id., p. 265.

The commission has not previously dealt specifically with question of whether motor transportation of airline passengers (whose line-haul air journey is interstate) between an airport and another point in the same State is in interstate commerce; however, in cases where the issue was raised, it has consistently held that regardless of passengers' intention to continue or complete an interstate journey, a carrier of passengers operating wholly within a State, selling no through tickets, and having no common arrangements with connecting out-of-State carriers, is not engaged in interstate commerce; and that view is supported by the courts. No reason to depart from the precedents in prior decisions is shown in proceeding concerning application of the §203(b7a) exemption; further, no overriding necessity—in the public interest—is found to claim that one-State incidental-to-air passenger carriage is in interstate commerce. Therefore, the question must be answered generally in the negative; however, adoption of a specific or all inclusive rule thereon does not seem practical and is not undertaken.—Motor Transp. of Passengers Incidental to Air, 95 M.C.C. 525 (529, 536-7)*.

Although both Washington National and Dulles International Airports are in Virginia, motor service between them is interstate in character because the natural route traverses Columbia Island, a portion of the District of Columbia.—A.B. & W. Transit Co. Extension, 88 M.C.C. 175 (183).

It has long been established that for-hire motor transportation by one carrier within confines of a single State, when preceded or followed by for-hire transportation by another carrier across a State line, may be transportation in interstate commerce subject to part II; the question is determined by essential character of the commerce involved—the most important factor being the presence or absence of a fixed and persistent intent of shipper that his goods move to a destination in another State.—Motor Transportation of Property Within a Single State, 94 M.C.C. 541 (549-50)*.

However, not all commerce is transportation; under principles of 298 US 170 transportation begins only at the point where shipper tenders his goods to a for-hire carrier. Therefore, when a for-hire motor carrier transports within a single State property which has moved from, or will move to, points beyond that State in private motor carriage, such for-hire movement is not transportation in interstate commerce subject to economic regulation under Part II, but is in intrastate commerce. Any inconsistent conclusions in earlier cases cited and others of similar import are accordingly overruled.—Id., pp. 550, 551.

Transportation for prime contractors of out-of-State shipments from rail stations in 8 North Dakota counties to missile-launching sites in those counties is in interstate commerce when, although shipments do not move on through bills of lading, it is shippers' fixed and persisting intention at time of shipment that they be delivered at the missile sites, and the motor part of the movement is an integral element in a continuous transportation service.—Maas Transport, Inc., Extension, 92 M.C.C. 581 (584)*.

Interstate character of ex-rail shipments did not end with storage in applicant's warehouse in Queen's County, N.Y., prior to delivery; fact that consignee's plant is in Westbury, Nassau County, N.Y., and its customers are in Nassau County warrants conclusion that at time shipments left origin it was contemplated by shipper, consignee, and applicant that the ultimate destination would be points in Nassau County rather than applicant's warehouse in Queens.—Paul Marckesano & Sons, Inc., Extension, 86 M.C.C. 727 (732).

Common- and private-carrier operation: [Vols. 12, 13].—Initial barge movement of considered cement traffic from Hannibal, Mo., to shipper's St. Louis plant could be in interstate commerce because Illinois would be traversed in the channel of the Mississippi River; still if private barges of supporting shipper were used, the initial movement would not be the first leg of an interstate shipment.—L. A. Tucker Truck Lines, Inc. v. United States, 215 F. Supp. 261 (263-4)*.

Fundamental principles of 298 US 170, that not all commerce is transportation, that transportation begins only when merchandise has been placed in possession of a carrier subject to economic regulation, and that a shipper is not such a carrier, are not altered in dealing with part II instead of Part I, for though part II extends to proprietary operations for purpose of safety regulation, it does not subject shippers to economic regulation. Therefore, under Part II, transportation must be considered as beginning at the point where shipper tenders his goods to a for-hire carrier. If delivery is then made at a point in the same State, the relevant transportation is not interstate transportation, even if it is preceded or followed by a private-carrier movement across the State line.—Motor Transportation of Property Within Single State, 94 M.C.C. 541 (550-1)*.

But while the case cited does not permit combination of for-hire transportation wholly in one State with physically interstate carriage by an owner for purpose of subjecting the former to economic regulation, there may be situations where Congress has intended that the otherwise separate private and for-hire movements be combined to establish Federal jurisdiction over the whole for purposes unrelated to economic regulation, such as matters relative to employment of drivers of private motor carriers operating within a single State in transportation of traffic moving to or from such State in motor common carriage.—Id., pp. 550-1.

Intent: [Vols. 11,12].—From time of purchase of grain at country elevators and other interior points in Kansas and truck movement therefrom to appellee's River Rail Elevator at Kansas City, Kans., until it was sent to out-of-State buyers, activities in connection therewith were performed in furtherance of a clear intent that the grain would ultimately be delivered outside Kansas; an original intent to move the grain in interstate commerce is demonstrated, and deposit and handling at River Rail did not change interstate character of the truck movement to that elevator.—State Corporation Commission v. Bartlett & Co., Grain, 338 F. 2d 495 (497-8)*.

Whether particular commerce is interstate or intrastate is to be determined by essential character of the commerce, and an important factor in ascertaining such character is the fixed and persisting transportation intent of the shipper at time of shipment, as ascertained from all circumstances present. As to specific quantities of involved chemicals which are sold when rail movement begins, it reasonably appears that the traffic will be under a continuing intention for ultimate delivery to specific customers at a specific point in Texas beyond rail terminals, and in performing such distribution, applicants will be participating in through movement from origins beyond Texas, and their operations, to this extent, will be interstate commerce. The commingling of intrastate and interstate cargoes does not change their status.—Ryder Tank Line, Inc., Extension, 91 M.C.C. 497 (500).

Intrastate: [Vols. 11-13, 19].—Where, following interstate movement by rail from production plants to shipper's silos, cement is stored and allocated or distributed to consignees from storage only after specific sale is made, subsequent motor transportation from silo distribution points to consignees located within the same State is in intrastate commerce because the shipments to the silos have come to rest following rail delivery. To extent that proposed transportation of cement would be intrastate, therefore, application must be dismissed.—Schwerman Trucking Co. of N.Y., Inc., Extension, 94 M.C.C. 683 (688).

Evidence of applicant's movements of stove oil within Alaska does not indicate that they were other than intrastate movements from storage at Valdez to Fairbanks; thus such shipments on their face were in intrastate commerce and not relevant to its "grandfather" application for interstate authority between points in Alaska.—Alaska Freight

Lines, Inc., 94 M.C.C. 200 (204).

No authority is required by Atlanta warehouse company for delivery of stored goods to owners within Atlanta commercial zone, since by storage the goods transported are removed from the flow of interstate commerce.—Atlanta Bonded Whse., Inc., 91 M.C.C. 104 (105, 106).

A passenger carrier operating wholly within a State, selling no through tickets and having no common arrangements with out-of-State carriers, is not engaged in interstate commerce; nor is intent of the passenger to continue on an interstate journey controlling where his written contract with the carrier is for an intrastate movement. Those principles are no less applicable where the contract for transportation is made by a third party; thus, although Labor Department arranges for considered transportation of migrant workers to ultimate destinations, movement of such passengers by applicant from reception center in El Paso to El Paso bus terminals is local and intrastate in nature, even though some of them may be bound for interstate points, in absence of any common arrangement between applicant and other carriers for interchange of passengers, or any coordination of applicant's dual activities as a local and a line-haul carrier.—Moore Service, Inc., Extension, 89 M.C.C. 180 (181, 182).

20. Operation between Alaska and other States.—As applicant, in order to perform authorized operation between Alaska and United States border points in Washington and Idaho, must move through Canada, it must comply with all requirements of that country and its Provinces to extent pertinent, and, under specific provision of §203(a)(10), no requirement under Part II can conflict therewith. However, under additional provisions of §203(a)(10) it must observe the rates and practices requirements of Part II as to the entire transportation.—Lynden Transfer, Inc., 92 M.C.C. 797 (802).

Section 203. (a)(11) [*§303(a)(11) U.S.C.*] Foreign commerce defined.

[Unchanged. See vol. 17, p. 13494.]

Amendments, see footnotes, vol. 15, p. 12162-3; vol. 17, p. 13494.

Notes of Decisions

Vol. 11—p. 9348; Vol. 12—p. 10347; Vol. 13—p. 11045; Vol. 14—p. 11564; Vol. 17—p. 13494; Vol. 18—p. 14251; Vol. 19—p. 15461.

5. Foreign commerce, in general.—[Vols. 11-14, 17-19].—Prior to Alaska's admission as a State, motor transportation between a point in Alaska and a point in what was then the United States, to extent it took place within the United States, was, under §203(a)(11) as amended, foreign commerce and was subject to regulation by the commission; therefore, applicant could at that time have transported Alaskan shipments only to the extent of its outstanding operating authority.—Trans-American Van Service, Inc., Extension, 94 M.C.C. 248 (251-2).

Canadian applicant's motor transportation of bananas from Seattle, Wash., to international boundary ports of entry in Idaho, Montana, and Washington is part of a through movement in foreign commerce from Costa Rica to Calgary, Alberta, Canada; shipments originate in Costa Rica, move to Seattle by boat where they are loaded directly into applicant's trucks, and transported by applicant to Calgary receivers; also, there is a continuing intention of shippers that the bananas move from Costa Rica to Calgary. Therefore, under the provisions of §203(a)(11), proposed motor transportation is not subject to the permit or certificate requirements of the act.—B-Line Fast Freight, 94 M.C.C. 702 (703).

Even to extent that proposed motor transportation of imported salt cake from Jacksonville, Fla., to various points in the State would take place entirely in Florida, it would in large part involve through movements in foreign commerce inasmuch as 75 percent of the salt cake is preconsigned by the importer to particular buyers; authority from the commission is required.—Petroleum Carrier Corp. Exten-

sion, 89 M.C.C. 139 (140)*.

When traffic is transported from a United States origin to one of applicant's Canadian terminals by a connecting carrier, and the fixed and persisting intent of shipper at time of shipment is that the traffic move without significant interruption from the United States origin to a Canadian destination, the entire movement, including transportation by applicant from its Canadian terminal to the Canadian destination over a route through the United States, is in foreign commerce for which authority is required, and any portion of the movement which traverses the United States is subject to full economic regulation by the commission. But when applicant transports shipments which actually originate in Canada and subsequently traverse United States highways to reach their ultimate Canadian destination, the transportation over United States highways is within exemption of §203(a)(11). —East-West Transport, 88 M.C.C. 352 (354-5).

Motor operations between Haines and other Alaska points north and west thereof necessitate traversal of Canada and thus are subject to the act.—Al Renk & Sons, Inc.—Alaska "Grandfather" Application, 89 M.C.C. 91 (96, note).

Principle that a passenger carrier operating wholly within a State, selling no through tickets and having no common arrangements with out-of-State carriers, is not engaged in interstate or foreign commerce is equally applicable where the contract for transportation is made by a third party; although Labor Department arranges for transportation of migrant workers with both Mexican railroad and applicant busline, the carriers have no through routes or common arrangement whereby either sells tickets for transportation in both countries; therefore, although the workers are actually engaged in a journey from Mexico to a point in Texas, applicant's transportation of them from international bridge to reception center in El aso is intrastate transportation and not in foreign commerce.—Moore Service, Inc., Extension, 89 M.C.C. 180 (181).

Section 203. (a)(14) [*§303(a)(14) U.S.C.*] **Common carrier defined.**—[Unchanged. See vol. 11, p. 9349.

Amendment, see footnote, vol. 11, p. 9349.

Notes of Decisions

Volume 9—p. 7871; Volume 11—p. 9349; Volume 12—p. 10347; Volume 13—p. 11046; Volume 14—p. 11564; Volume 15—p. 12163; Volume 16—p. 12803; Volume 17—p. 13495; Volume 18—p. 14252; Volume 19—p. 15462.

1. Common carrier defined.—[Vols. 9, 11-19]. —See also §203(a)(15), n. 1.

In performing driveaway of automobiles under contracts with individual owners, defendant is a common carrier as defined in §203(a)(14) when his advertisements constitute a holding out to the general public; drivers are not only selected by him, but are necessarily under his supervision and control as agents or employees during course of the transportation; he furnishes substantially all facilities for, and performs substantially all functions of, transportation of such automobiles in interstate commerce; by his holding out, as well as his verbal representations to each owner, he establishes an expectation on the owner's part that he assumes to perform a transportation service; and for each automobile transported he charges and receives from the owner a definite sum of money, receipt of which is compensation within meaning of Part II.—I.C.C. v. Teeter, 228 F. Supp. 479 (480, 482).

Defendant who furnishes substantially all facilities for, and performs substantially all functions of, transporting automobiles in interstate commerce for individual owners, in driveaway service, is a motor common carrier as defined in the statute; such operations are subject to certificate provisions of §206(a).—I.C.C. v. Dudgeon, 213 F. Supp. 710 (715); in substantially identical case, defendants have assumed characteristic burdens of the transportation business and are a common carrier. —I.C.C. v. Interstate Auto Shippers, Inc., 214 F. Supp. 473 (477).

Whether a transportation agency is a common carrier depends, not on its corporate charter or declared purposes, but on what it does; defendant, though ostensibly chartered as an employment agency furnishing drivers to shippers, actually engaged in unauthorized for-hire transportation of motor vehicles as a common carrier, holding out to the general public by letters, advertising, solicitation, and rate quotations, and providing a complete transportation service anywhere in the United States for any shipper willing to pay its price. —United States v. Aides, Inc., 211 F. Supp. 122 (124, 125).

Nonstock corporation whose sole activity is and has been the transportation of property for compensation, which obtains its traffic through "agency agreements" with known truckers, and which performs over 90 percent of the total value of its transportation service for canneries, meat packinghouses, produce dealers, and other persons not engaged in farming operations and does not attempt to determine whether shippers submitting traffic to it are engaged in farming operations, is a common carrier as defined in §203(a)(14) and not a cooperative association within exemption of §203(b5).—I.C.C. v. Nelson Cooperative Marketing Association, 209 F. Supp. 697 (699-700, 701).

Operations conducted by applicant in Alaska are those of a motor common carrier; it has terminals at Seattle, Wash., and at Anchorage and, under arrangements with certain U.S. mainland carriers, undertakes to transport household goods between Seattle and points in Alaska. Shipments tendered at Seattle are placed in applicant's vans or containers and forwarded by water to Alaskan ports, principally Seward, where most of them are transferred to the Alaska Railroad and transported by it to Anchorage or Fairbanks from which points they are moved to storage or distributed to destination. Shipments to Anchorage area and the Kanai Peninsula are handled through applicant's terminal and moved in its vehicles, whereas shipments to Fairbanks, or ports other than Seward, are tendered to local motor operators for distribution; the reverse procedure is followed on shipments originating in Alaska and destined to States on the mainland. Accordingly, as a result of described operations, applicant has qualified as a motor carrier within meaning of §206(a)(5) of the act.—Alaska Van & Storage Co., Inc., 94 M.C.C. 381 (383-4)*.

In transporting nonexempt commodities by motor vehicle for some 65 to 100 shipper members for "charges" or "rates," defendant shipper association has been performing an unauthorized common carrier service for compensation, even if such rates or charges were only reimbursement for operating expenses rather than profitmaking.—Natl. Motor Frt. Traf. Assn., Inc. v. Internatl. Shippers, 94 M.C.C. 440 (446-7).

See also Cahaba Steel Co. case, §203(c), n.2.

Vendee's transportation of petroleum products under contract-carrier rights it seeks to purchase would be common carriage. The service proposed is not unique, and vendee is now providing a similar service as a certificated common carrier in the same territory; also, though authority from only one point is involved, the limitation as to origin point does not limit the service to that for a single shipper, since service from that point may be performed for and at the direction of any number of consignees. Vendee's proposed operation would be that of a common carrier.—Ruan Transport Corp.—Purchase—Hillside Transit Co., Inc., 90 M.C.C. 523 (525-6).

Proposed transportation of commercial papers and business records is common carriage when the commodities involved have no intrinsic value, though their loss might be considered catastrophic by some shippers; ordinary vehicles would be used and services offered (such as pickup after normal working hours) are not unique, but are often provided for customers by common carriers; further, applicant seeks authority to serve the entire business and financial community, within territorial limits. Also, while proposed transportation of sales audit media for one shipper and of exposed and processed film and prints for another could be performed under continuing contracts, there would be no exclusive assignment of vehicles, nor would the service be designed to meet those shippers' distinct needs. All operations proposed operations require only prompt and dependable service and are therefore common carriage.—Southern Couriers, Inc., Extension, 94 M.C.C. 111 (115); for the same reasons, proposed expeditious, nonscheduled, door-to-door service for banking, business, and photography establishments is common, not contract, carriage. —Woody, 94 M.C.C. 759 (762).

Proposed service is common carriage when shipper's basic desire is for a carrier that will have equipment available when required to supplement its present available service, and expedited service with multiple deliveries, for which it asserts a "distinct need," is of type regularly performed by common carriers.—Huston, 92 M.C.C. 374 (377).

Contract-carrier applicant failed to establish that his proposed service offers a bona fide economic advantage to shipper under the "distinct need" alternative of §203(a)(15) when, though arguing that six specified services (not performed by common carriers) meet the "distinct need" test, he will not assign vehicles to shipper's exclusive use for continuing periods of time; availibility of equipment will depend on volume of shipments transported to destination territory of applicant's outstanding permit. Shipper will not use applicant's proposed services unless his charges are less than transportation costs incurred by shipper in its proprietary operations; and there is no evidence that proposed rate reflects any economies, or that it is economically feasible. Proposed operation is common, rather than contract, carriage for which no need is shown.—Harris Extension, 94 M.C.C. 227 (229-30).

Where a proposed operation does not meet either test of contract carriage laid down in §203(a)(15), the logical conclusion is that it is actually that of a common carrier.—Hagen Extension, 92 M.C.C. 479 (484); proposed transportation of meats and packinghouse products is common carriage when the physical transportation requires no service not normally performed by protesting common carriers for other shippers of those commodities, and proposed peddle delivery service to smaller consignees does not differ materially from that frequently afforded by transporters of perishable commodities.—Id., p. 485; similarly, proposed transportation of frozen foods, which does not meet either of the alternative requirements of §203(a)(15), is common carriage. Applicant would not assign vehicles to shipper's exclusive use, nor does proposed service meet a "distinct" need of shipper; and apparently, applicant would

offer service to any shipper willing to contract with it, thus in effect holding out service to the public generally, as do common carriers. —Nationwide Carriers, Inc., Extension, 89 M.C.C. 675 (679-80).

Since evidence adduced pertains to transportation needs of the lumber industry rather than distinct needs of individual shippers, operation proposed is common carriage.—Goodman Motor Transport Co., Extension, 91 M.C.C. 206 (210).

Evidence is convincing that, despite its practice of operating only under contracts, respondent holds itself out to any and all shippers who desire service within the scope of its relatively narrow territorial and commodity authority; consideration of factors enumerated in 82 MCC 777 compels conclusion that its services are not intrinsically different from those of common carriers; in the circumstances, its contracts with 19 individual shippers, some of whom are competitors, must be regarded as a holding out of service to the general public within meaning of §203(a)(14). —Tar Asphalt Trucking Co., Inc., Conversion, 88 M.C.C. 443 (445)*. Sustained, Tar Asphalt Trucking Co. v. United States, 208 F. Supp. 611 (614)*.

Inasmuch as, in its proposed delivery service for an air freight forwarder from Cleveland airport to points beyond terminal areas of the line-haul air carriers, applicant would ultimately serve the general public rather than the forwarder, its proposed operations would be those of a common carrier.—Panther Cartage Co. Extension, 88 M.C.C. 37 (42).

Armored truck: [Vol. 12].—Transportation by armored-car operators of business records and documents, which requires neither special vehicles nor special protective measures, is common carriage; such special services as pickup after normal working hours are not unique and are often provided by common carriers for their customers. Also, expansion by armored carriers generally into new fields, such as transportation of film, dental and optical supplies, and precision instruments, which likewise requires only prompt and dependable service, is indicative of carriers' willingness to offer a small-package delivery service to any shipper willing to support an application and contract with them; and since the net effect is that carrier is holding out its service to the public generally, such a delivery service is more consistent with common than with contract carrier status.—Armored Carrier Corp. Extension, 92 M.C.C. 336 (360, 361).

Coordinated rail-motor operation: [Vol. 15]. —Railroad subsidiary's handling of merchandise or other commodities which are, at the time, in custody of railroad or express companies, as distinguished from unlimited direct-to-the-public service, has long been recognized as a form of common carriage; present record warrants no different conclusion.—Pacific Motor Trucking Co. Extension, 89 M.C.C. 81 (86).

Holding out: [Vols. 11, 12].—Statutory definition of a common carrier stresses not what a person does but what he holds himself out to do; the holding out is important not only because of significance historically given it but because, even if the performance does not match it, the promise may have the adverse effect of existing carriers which underlines the requirement of a certificate. Defendant's advertisement of its business, that of providing drivers for "driveaway" transportation of an automobile owner's private car to place where the driver wishes to go, and its actual operation thereof, can..ot be reconciled with its claim of being merely an intermediary between owner and driver. Since defendant fixes rate owner must pay driver and sets all terms of their relationship, its position differs from that of an ordinary employment agency; and in view of its holding out and actual operations, the commission rationally could, and would, conclude that defendant led its customers to believe that it, not the drivers, was getting their cars from one place to another, and that it was in fact operating as a common carrier.—I.C.C. v. AAA Con Drivers Exchange, Inc., 340 F. 2d 820 (825, 826)*.

Advertisements of his business to the general public by defendant, engaged in transporting automobiles for owners in driveaway service, constitute a holding out of an automobile transportation service within meaning of §203(a)(14).—I.C.C. v. Dudgeon, 213 F.Supp. 710 (714); I.C.C. v. Interstate Auto Shippers, Inc., 214 F. Supp. 473 (477).

See also Service Associates case, §203(c), n. 3.

Number of shippers: [Vols. 11, 19].—Upon the execution of its seventh contract, applicant has reached that stage in its development at which addition of another contract would require a finding that it has ceased to serve only the limited number of persons permitted by §203(a)(15), and its operations would become those of a common rather than a contract carrier.—Umthun Trucking Co. Extension, 91 M.C.C. 691 (696, 697); likewise, grant of additional contract-carrier authority to applicant, authorized to serve seven contract shippers, would place him in a position of serving more than "one or a limited number" of shippers. However, since type of service supporting shipper requires is no more specialized than that provided by common carriers for other shippers faced with similar merchandising problems, and applicant is willing to accept common carrier authority, application is treated as one for a certificate. —Major Extension, 94 M.C.C. 652 (655)*.

Special service: [Vols. 11, 12, 19].—That plaintiff's equipment is peculiarly essential for the type of commodity transported does not negate its status as a common, as distinguished from a contract, carrier; its equipment was designed for a type of product produced by a class of customers rather than for the special requirements of a particular product of a single customer, and its specialized service may be held out to all members of the public who have occasion to ship products for which such specialized equipment is appropriate.—Tar Asphalt Trucking Co. v. United States, 208 F. Supp. 611 (614)*.

The only limitation by definition upon transportation which a motor common carrier may provide is that it be held out to the public generally. Other than the limitations in its certificate with respect to commodities, territory, and the like, no restriction is imposed on manner in which it may perform its physical operations, provided the same service is made available to all who desire to use it; thus, a common carrier may provide a variety of specialized services and may even assign vehicles to exclusive use of any customer desiring it, provided only that if offers the same service to all.—Moyer, 88 M.C.C. 767 (772).

Although applicant is presently serving one shipper only, he proposes to serve an undisclosed number of additional shippers and his single tractor-trailer until will apparently not be assigned to exclusive use of any one. Nor is the service designed to meet shipper's "distinct need" since it in no way differs materially from that normally offered by irregular-route common carriers of refrigerated or chilled commodities. Basic requirements for proposed transportation of dairy products—suitable equipment when needed, trained personnel and multiple deliveries—are regularly provided by motor common carriers; thus proposed service is common rather than contract carriage.—McGiffen, 91 M.C.C. 555 (556-7).

Although proposed transportation of experimental and display machinery and equipment for a manufacturer is highly specialized and contract carriers provide such service, common carriers are not forbidden to do so and often must do so to remain in business; proposed service is common carriage.—Donaldson Transfer Co. Extension, 89 M.C.C. 651 (652)*.

1b. —Operation by lease or other arrangement.—[Vols. 9, 11-19].—Applicant who uses tractor-trailers leased from owner-operators, but exercises direction and control over the vehicles and drivers, assumes responsibility both to shippers and to the general public, issues bills of lading and publishes tariffs of rates and charges for the traffic carried, and pays the vehicle owners a percentage of the charges collected, is a common carrier.—Hale Distributing Co., Inc., 89 M.C.C. 361 (363)*.

Using primarily leased equipment in its transportation of bananas for a number of shippers, applicant supervised loading of traffic, required progress telephone calls, diverted shipments in transit, paid claims for spoilage, paid the Federal transportation tax from 1953 until its repeal, and paid fines for violation of overweight laws. Compensation was usually on a percentage of revenue, but applicant has leased equipment on a flat sum basis, and at times the flat sum exceeded the revenue; such transportation is common carriage by applicant.—White's Trucking Service, Inc., 91 M.C.C. 454 (456, 457).

A person holding out a transportation service to the public, and in fact providing such a

service, cannot negate his status as a carrier merely by utilizing casual operators and disclaiming responsibility and control over the operations. There is no significant or substantial difference between respondent's operations and those found to be unauthorized common carriage in 77 MCC 365; essentially respondent, for compensation and as a regular practice, provides owners with driveaway transportation of their automobiles from Cleveland to stated destinations and holds his service out to the public by advertisements in local newspapers and in a telephone directory listing under "Automobile Transport Companies."—Spencer—Investigation of Operations, 88 M.C.C. 243 (245)*.

Though in form respondent merely brings together automobile owners and casual operators who then come to a mutual agreement and perform their respective duties, in practice the net result of the transactions is that owners receive driveaway service, drivers are paid for their driving, and respondent profits from providing transportation service for the owners. Facts that respondent owns and operates no vehicles of his own, employs no professional drivers, and does not instruct those used concerning the commission's regulations, together with other facts of record, affect quality of transportation service offered and not the nature of the service itself; those conditions afford no basis for holding that considered transactions among the parties are such as to render the common-carrier definition of §203(a)(14) inapplicable to respondent's operations.—Id., pp. 245-6.

Section 203. (a)(15) [*§303(a)(15) U.S.C.*] **Contract carrier defined.**—[Unchanged. See vol. 11, p. 9360; vol. 18, p. 14254.

Notes of Decisions

Volume 9—p. 7882; Volume 11—p. 9360; Volume 12—p. 10350; Volume 13—p. 11047; Volume 14—p. 11566; Volume 15—p. 12165; Volume 16—p. 12804; Volume 17—p. 13496; Volume 18—p. 14254; Volume 19—p. 15467.

1. Contract carrier defined.–[Vols. 9, 11-19].—Nonprofit corporation transporting property of its shipper members is a contract carrier when it is reimbursed for its services at scheduled rates and charges. Doctrine of the Schenly case (61 F. Supp. 981, aff'd 326 US 432), that "compensation" as used in the statutory definition does not necessarily involve an element of profit but may in some circumstances involve merely reimbursement for expenses of operation, is applicable; the evidence supports the district court's finding that applicant performed its transportation services for "compensation"; affirmed.—Shippers Cooperative, Inc. v. I.C.C., 308 F. 2d 888 (889,892)*.

In determining that appellant is a contract rather than a private carrier, its corporate status may not be disregarded where those in control have deliberately adopted the corporate form to secure its advantages and no violence is done to the legislative purpose by treating the corporate entity as a separate legal person. One who has created a corporate arrangement as a means of carrying out his business purposes does not have the choice of disregarding the corporate entity in order to avoid the obligations laid on it by the statute for protection of the public.—Id., pp. 892-3.

See also Cahaba Steel Co. case, §203(c), n. 2.

Legislative history of the 1957 amendment of §203(a)(15) and enactment of §212(c) clearly evinces congressional intent to preserve the basic distinction between common and contract carriers and to overcome effect of holding in 350 US 409 that a contract carrier is free to aggressively solicit new business within limits of its permit. Of the three criteria of contract carriage established by that amendment, the basic test, to which all contract carriers must conform, is transportation "under continuing contracts with one person or a limited number of persons"; the remaining cei-

teria, assignment of vehicles for a continuing period of time to exclusive use of each person served, and furnishing of service designed to meet the distinct need fo each individual customer, are stated in the disjunctive, and compliance with either, coupled with compliance with the basic test, is sufficient to bring a carrier within the statutory definition of a contract carrier.—P. Saldutti & Son, Inc. v. United States, 210 F. Supp. 307 (310-11)*.

It is for the commission to determine, under the facts in each case, whether a carrier serves a limited number of shippers, and if the commission's findings on this issue are supported by substantial evidence and in accord with applicable law, the court will not disturb them. The commission gave consideration to all relevant factors bearing on the issue of "limited number"; there is substantial evidence to support its conclusion that plaintiff does not operate under continuing contracts with a limited number of persons within meaning of §203(a)(15) and that its operations are those of a common carrier. While plaintiff's failure to meet the basic criterion makes unnecessary a consideration of the other two, the commission's conclusions that it failed to meet either of those tests are likewise supported by substantial evidence.—Id., pp. 311-2.

Under §203(a)(15) as amended in 1957, one of the tests of contract carriage is the furnishing, under continuing contracts, of "transportation services designed to meet the distinct need of each individual customer." That language is plain and unambiguous: the contracts are to furnish transportation services, and only such services are to meet the distinct needs of the customers; the reference to transportation services restricts and limits the language which follows. Nothing in the legislative history of the 1957 amendment indicates that Congress meant to give contract carriers the advantages which would ensue from furnishing nontransportation services.—National Trailer Convoy, Inc. v. United States, 227 F. Supp. 730 (732, 734)*.

To qualify as a contract carrier under the statute, as amended in 1957, an applicant must satisfy the fundamental test of transportation "under continuing contracts with one person or a limited number of persons"; all contract carriers must conform to that test. However, since the other two statutory criteria are stated in the disjunctive, once the basic test is met the applicant qualifies if he either (1) assigns vehicles for a continuing period of time to the exclusive use of each contract shipper, or (2) furnishes transportation service designed to meet distinct need of each such shipper. Therefore, the commission having recognized that plaintiff (applicant) satisfies the basic test and the "exclusive assignment of vehicles" one, there was no burden upon it to show shipper's"distinct need" because it comes within the statutory definition under the other alternative.—Meat Packers Exp., Inc. v. United States, 244 F. Supp. 642 (646, 647-8)*.

While the commission must also determine whether, under §209(b), issuance of the permit applied for would be consistent with the public interest and the national transportation policy, the term "distinct need" in §203(a)(15) is not the same as, and cannot be used interchangeably with, the determination to be made under §209(b); and, due perhaps to a confusing of distinct need under §203(a)(15) with the criteria in §209(b), the commission adopted a too narrow a basis in making its evaluation. In finding that services applicant (palintiff) would render could not be deemed designed for certain distinct needs of its shipper, the commission did not properly apply the statute and the effect of its decision was to place on applicant a greater burden of proof than was required; order set aside, and case remanded to the commission for further proceedings consistent with the court's opinion.—Id., pp. 648, 651-2.

Applicant for permit must show that it meets statutory definition of a contract carrier, i.e., one who engages in transportation "under continuing contracts with one person or a limited number of persons" either (1) by assigning vehicles for a continuing period of time to the exclusive use of each person served or (2) by furnishing services designed to meet the distinct needs of each customer, but not both alternatives. Plaintiff (applicant) would serve only one shipper-consignee under a continuing contract and it also satisfied the "exclusive assignment of vehicles" test; therefore, it was error for the commission to

require applicant to satisfy the distinct need alternative, to place burden of proof in that respect on it, and to make an adverse finding of no distinct need under such alternative definition. However, having qualified under either alternative, an applicant may not rest his case; issuance of permit sought must be justified under the five criteria of §209(b).—Midwest Truck Lines, Ltd. v. United States, 269 F. Supp. 554 (558, 560-1)*.

And, while evaluation of §209(b) criteria regarding "nature of the service proposed" involves the question of need for proposed services, the term "distinct need" in §203(a)(15) is not the same as, and cannot be used interchangeably with, the determination to be made under §209(b). It seems clear that the commission's unnecessary conclusion of no distinct need for plaintiff's proposed service under the §203(a)(15) definition was carried forward to its §209(b) evaluation, since that conclusion was the primary reason for denying the application, and such unnecessary no-distinct-need finding may well have provided a prejudicial coloration by the commission of the §209(b) criteria. Report and order set aside, and case remanded for further consideration consistent with the court's opinion.—Id., pp, 561, 567.

Proposed operations qualify as contract carriage under the second test of §203(a)(15) when supporting shipper has shown a distinct need for the type of transportation service which applicant proposes. Round-robin movement of frozen foods and pallets and emergency shipments of plant supplies and equipment necessitate availability to shipper of an "on-demand" service rendering prompt and expeditious transportation between its cold-storage warehouses and processing plants 24 hours a day and 7 days a week. Moreover, applicant proposes to serve the sole supporting shipper under a continuing contract, and his expressed intention to seek additional contracts with three producers which route their traffic through that shipper's warehouses does not alter that fact.—Jacobs Extension, 96 M.C.C. 87 (92, 93)*.

Proposed service is contract carriage when applicant would serve only five shippers and its proposal contemplates the furnishing of a transportation service designed to meet their distinct needs.—Russell Transfer Co., Inc., 95 M.C.C. 412 (419); and when applicant's proposed service—in backhauling of traffic to presently served shipper's manufacturing plants on return trips from destination States of shipper's outbound freight—is tailored to be an integral part, and extension, of contract carrier service now being performed for the same shipper, it qualifies as a "service designed to meet a distinct need" within the alternative requirement of §203(a)(15). Thus, though vehicles would not be assigned to shipper's exclusive use, proposed service satisfies the statutory definition of contract carriage.—H. H. Follmer Contract Hauling, Inc., Extension, 94 M.C.C. 276 (277-8); also, proposed service is contract carriage when applicant would assign vehicles exclusively to supporting shipper's traffic and the service, designed to meet shipper's particular problems, is identical to that it now provides at that shipper's other stores.—A. B. C. Exp. Co. Extention, 94 M.C.C. 386 (389-90)*.

Although applicant does not intend to assign his vehicles for a continuing period to supporting shipper's use, but merely to "spot" one or two vehicles at shipper's plant and use his vehicles on a rotation basis, he has met the alternative criterion of contract carriage in proposing a service closely coordinated with shipper's fluctuating production and sales efforts, and keyed to the expeditious deliveries and multiple dropoffs required by shipper's business. Moreover, while application is unrestricted as to contracting shippers, his proposal involves provision of service for a single shipper and therefore meets the "one person or a limited number of persons" requirement of the contract carrier definition. And his trip-leasing of vehicles to other carriers for return trips has no significance in determining contract carrier nature of his proposal.—Toomey, 95 M.C.C. 331 (335-6).

The service applicant proposes is contract carriage; he performs daily operations, picking up meats in N.Y.C. about 2 A.M. and delivering them to shipper's stores by 6 A.M. Applicant serves only supporting shipper herein, and assigns his one vehicle to shipper's exclusive use. In addition, applicant performs certain extra services; he inspects meat for quality, and informs the shipper if it

doesn't meet his standards; applicant has keys to shipper's stores, and places deliveries inside. Applicant must also frequently contact various stores of shipper to make sure that the one with the most immediate need gets preferred service. Granted.—Muzzillo, 94 M.C.C. 563 (564).

While applicant's proposed service does not show that he intends to assign equipment to supporting shipper on a continuing basis, he guarantees that his equipment will be available for shipper's exclusive use during its principal shipping seasons. While the proposal might not satisfy the first alternative requirement of §203(a)(15) proposed operation is contract carriage, nevertheless, because applicant proposes a distinctive transportation service, designed specifically to meet the particular transportation requirements of his supporting shipper.—Feagin, 94 M.C.C. 695 (696).

The first consideration in determining contract-carrier status is the number of shippers served, and though "limited number" as used in the statute is a relative term and it is impossible to establish any hard-and-fast limit to the number a contract carrier properly may serve, among factors to be considered are the different types of commodities transported, number of permits under which the carrier operates, territory in which the operation is conducted, and similarity in services that the carrier performs under its effective continuing contracts. Armored-car operations involving highly specialized protective services in transportation of money and other valuable items were correctly classified as contract carriage in 77 MCC 433, and where carrier providing them limits its operations to those performed under contract with a clearly definable class of shippers, such as banks or banking institutions, it may properly be found to comply with the requirement of service for a limited number of persons.—Armored Carrier Corp. Extension, 92 M.C.C. 336 (358, 359).

However, transportation of business documents and other items of little or no intrinsic value, in which prompt and dependable service is all that is needed and no special protective measures or special equipment are required, is not within sphere of services so specialized as to warrant finding that proposed contract carriage of such items meets the "limited number of persons" requirement even in absence of a limitation to the actual persons to be served. That requirement can be satisfied by limitation of service to a class of persons, whether by defined or inherent limitation, only where the service involved is unusually specialized and unique to the point of admitting of no other treatment.—Id., p. 360. [But see dissent.]

And there is nothing in transportation of film, or of dental or optical supplies, as proposed or performed by certain armored-car operators, which suggests that it is contract carriage, when there is no assignment of vehicles to exclusive use of contracting shipper and only prompt and dependable service is required; those carriers serve all their contracting shippers in same manner, and their services are not designed to meet the distinct need of each individual customer. These conclusions do not preclude applicants or any other carrier from receiving contract carrier authority to transport commodities similar to those involved, provided criteria of §203(a)(15) are satisfied; but carriers are cautioned that those statutory limitations cannot be defeated by creation of separate commonly-controlled companies which individually may qualify as contract carriers but which collectively provide service to the general public or to that part of it having need thereof. —Id., pp. 361, 362.

Since proposed service, consisting of repetitious transportation of about eight scheduled truckloads of staple grocery items from California suppliers to shipper's three destinations in Washington, has no characteristics which would render it unique or specialized with reference to shipper's needs and the type of service normally and regularly provided by existing carriers, it is not a service designed to meet "distinct need" of the shipper within the §203(a)(15) requirements. However, applicant will assign equipment to shipper's exclusive use on the northbound movements to Washington destinations and, to make its operation economically feasible, intends to transport exempt commodities southbound to California points since shipper has no southbound movements. Such one-way assignment of equipment, where backhaul is within the

§203(b6) exemption, is assignment of equipment to an applicant's contracting shipper as contemplated by the statute. Therefore, on the basis of assignment of equipment, proposed operation comes within the statutory definition of contract carriage.—Interstate Distributing Co., 91 M.C.C. 36 (38-40)*.

Applicant serves only two shippers, under continuing contracts, and assigns and will continue to assign vehicles to exclusive use of each; and considering in addition the dangerous nature of the explosives traffic involved, safety considerations, coordination required in making jobsite deliveries, and use of conveyors in loading and unloading, proposed service is obviously within the amended definition of contract carriage.—H. Messick, Inc., Extension, 89 M.C.C. 209 (214)*; and though applicant's present alternation of equipment between those two shippers is not a "dedication" as contemplated by the act, upon grant of present application it intends to assign vehicles to supporting shipper's exclusive use at its three plants. Proposed service, coordinated to meet that shipper's particular requirements, is that of a contract carrier.—Id., 91 M.C.C. 585 (586-7)*.

Even though applicant does not propose to assign vehicles to contracting shippers' exclusive use, his provision of a highly specialized service, including delivery of lumber to out-of-the-way and often almost inaccesible oilfields and stringing of lumber through those oilfields for roadbuilding purposes, satisfies the alternative requirement of a service designed to meet each shipper's distinct needs. Moreover, his proposed practice of daily telephone consultation with shippers, assuring them of having equipment available promptly on call, comes close to accomplishing same result as assignment of vehicles.—Sears, 92 M.C.C. 602 (606).

Proposed service in transportation of cheese, which ensures multiple pickups keyed to numerous manufacturers' production patterns in response to fluctuating purchase requirements of contracting shipper's customers, may properly be deemed one designed to meet shipper's distinct and particular needs, when there is no suggestion that any other shipper of cheese in the area who can satisfactorily use common carrier services has requirements identical with or even similar to those shown; and that grant will enable applicant under 7 permits to serve a total of 4 shippers all engaged in related activities in same geographical area is not inconsistent with "limited number of persons" requirement of §203(a)(15). In view of that conclusion, applicant's contemplated use of trip-leased equipment for movements to the West, which would not be assigned to shipper's use "for a continuing period of time," has no significance.—Nationwide Carriers, Inc., Extension, 92 M.C.C. 1 (4-5)*.

Applicant will continue to be a contract carrier when it proposes merely to extend its operation for one of shippers it already serves under continuing contracts, and service offered is responsive to that shipper's distinct needs.—Manfredi Motor Transit Co. Extension, 92 M.C.C. 471 (473)*; even though applicant would not dedicate equipment to that shipper's exclusive use.—Tractor Transport, Inc., 88 M.C.C. 117 (121); and proposed service for a comparatively small automobile manufacturer and its subsidiary, in addition to the major automobile manufacturer and two government agencies already served, would not be sufficient of itself to change applicant's status as a contract carrier.—K. W. McKee, Inc., Extension, 89 M.C.C. 777 (783).

When applicant proposes to serve only three shippers through assignment of specific vehicles to each, and those shippers state that they desire and need that type of service, proposed operation is contract carriage, and use of vehicles to perform intrastate transportation of grain as a backhaul would not affect exclusiveness of assignment to the shippers using them for outbound movements.—Redland Oil Co., Inc., 91 M.C.C. 771 (775).

Applicant will be a contract carrier when it will serve a single shipper under a continuing contract and will assign all its equipment to that shipper's exclusive use. Since the second requirement of the definition in §203(a)(15) is in the alternative, such assignment of vehicles is sufficient to require evaluation of the application in accordance with the criteria of §209(b) even if the proposed operation satisfied no distinct need of the supporting shipper.—Bursch Extension, 91 M.C.C. 953 (955)*.

Applicant now serves only two shippers; as this number would not be increased and half of applicant's motor vehicles are used only in the service of supporting shipper, proposed service is that of a contract carrier as defined in §203(a)(15).—Capital Exp., Inc., Extension, 91 M.C.C. 819 (822).

Corporate respondent, a purported shippers' association found to have been performing an unauthorized transportation service for its members, cannot divest itself of a carrier's mantle by leasing vehicles separately for each shipment, when it has direction and control over them; as its membership list is composed of a limited number of shippers and there is no evidence of a holding out to the general public, its operation is contract carriage.—Western Shippers Assn., Inc.—Investigation, 88 M.C.C. 575 (577).

Applicant proposes to serve only one shipper and, while he will dedicate only 5 out of 8 tractors to shipper's exclusive use, the others will be held in reserve, and applicant in effect is guaranteeing that 5 tractors will be continually dedicated to shipper's exclusive use and stationed at its plant; such service constitutes contract carriage.—Trushenski, 91 M.C.C. 502 (505).

Applicant's proposed transportation of meat, in temperature-controlled equipment with overhead "tram" rails and switches, for shipper of mainly "kosher" products which require extra precautions in handling, is contract carriage and applicant's personalized service as "house carrier" is designed to fulfill supporting shipper's distinct needs. Proposed service will replace a proprietary trucking operation; applicant will assign all of its vehicles to shipper's exclusive use and will provide a closely integrated service of the expeditious type required.—Garmarc Transp. Co., Inc., 91 M.C.C. 489 (490, 491-2)*.

Proposal by railroad subsidiary to provide exclusive service under contract with a single shipper, and to assign vehicles to shipper's exclusive use for continuing period of time, is that of a contract carrier.—Pacific Motor Trucking Co. Extension, 91 M.C.C. 61 (63).

Proposed transportation of imported canned goods and sugar is contract carriage when applicant proposes to serve a limited number of shippers or consignees under contract, to assign equipment to their exclusive use for continuing periods, and to furnish services meeting their distinct needs, such as coordination of pickups and deliveries with shippers' desires, often on extremely short notice, inspection of the merchandise at piers by trained personnel, sorting of cases of canned goods according to code numbers, and recoupment and return of shipments rejected for damage.—Beatty Motor Exp., Inc., Extension 89 M.C.C. 190 (192, 193-4).

Though §203(a)(15) defines a contract carrier as one serving "one person or a limited number of persons," Congress apparently did not intend the commission to set any arbitrary "exact-number" limitation on shippers that a contract carrier may serve; to the contrary, §209(b) provides that permits shall specify "the number or class" of persons authorized to be served, and 82 MCC 536 held that "limited number" is a relative term without particular significance except in relation to the carrier's overall operations. Applicant's supporting shippers—a department-store corporation, its numerous subsidiaries, and its concessionaires—being generally all of one class, may be regarded as a "limited number of persons" within meaning of §203(a)(15), and in performing service for such shippers applicant would be a contract carrier within definition therein.—S. Klein Trucking Corp., 89 M.C.C. 53 (56).

Though the statutory criteria of contract carriage in §203(a)(15) do not provide an arbitrary demarcation between common and contract carrier operations, they provide a substantive yardstick. "Limited numbers," as used therein to denote persons who may be served, is a relative term without significance unless compared to carrier's overall operation; a large number of shippers of a limited class may constitute a "limited number of persons" if the service is tailored to specialized needs of members of that limited class. But when there is no "limited class" relation among supporting shippers other than their requirement of refrigerated equipment, their transportation needs otherwise vary in significant respects, and no specially tailored service would be provided or is shown to be needed, proposed operations fail to meet that test.—Connell Transport Co. Extension, 91

M.C.C. 113 (121, 122).

The substance of the arrangements and not their form determines whether there is an "exclusive assignment" of vehicles; where there is substantial evidence of dedication of vehicles to a shipper's use under a continuing arrangement whereby they will be constantly available to that shipper, carrier's use of the equipment for a backhaul, such as of unregulated commodities, does not destroy the "assignment for exclusive use" within §203(a)(15). When applicant has for years provided one contracting shipper a service tailored to its distinct needs, and essentially all of its unregulated transportation has been performed for that shipper, proposed transportation of that shipper's traffic to additional destinations will continue to be contract carriage.—Id., p. 121.

Though use of equipment for a backhaul movement of exempt commodities does not of itself destroy the exclusive assignment of vehicles to a shipper, use of the same equipment in regulated service for others, as where applicant would perform contract carrier service for another shipper on return, precludes applicant from contending its vehicles are assigned to exclusive use of the contracting shipper for a continuing period of time; and the same conclusion is applicable, a fortiori, where applicant serves the general public on return movements as a common carrier of nonexempt commodities.—Huston, 92 M.C.C. 374 (376); likewise, applicant does not meet that test when, though his refrigerated trailer would purportedly be "on consistent call for service" of supporting meat shipper, he intends to use the same vehicle at times to balance his operation by transporting machinery for another contracting shipper. Nor does proposed service satisfy the alternative test of meeting a distinct need of the shipper; basically, shipper desires expeditious service on meats; statutory criteria of contract carriage are not met.—Shaw Extension, 92 M.C.C. 118 (120); Hulme Extension, 91 M.C.C. 575 (580).

The statute requires a contract carrier to serve a "limited number of persons," and applicant, presently serving seven shippers and proposing to serve an additional one, is admonished to adhere to the principles enunciated in 91 MCC 691 to assure that its operations do not expand to the point where it is serving the public generally.—Oyler Motor Transit Co., Inc., Extension 94 M.C.C. 638 (641); however, assuming that proposed service meets that requirement of the definition, it meets one of the alternative requirements of the statutory definition as to nature of the service, inasmuch as equipment will be assigned to supporting shipper's exclusive use. Therefore, the application will be evaluated in accordance with criteria in §209(b).—Id., p. 641.

Since effective date in 1957 of amended contract carrier definition in §203(a)(15), applicant has filed a total of 30 permit applications, of which 11 were either filed or granted in or subsequent to April 1962. To date, he has been granted a total of 12 permits authorizing service for 7 different shippers, and by present and 2 other applications he seeks authority to serve 3 more shippers. The pattern of expansion followed by applicant since 1957 and accelerated since April 1962 clearly demonstrates his intent to offer service to the public generally; instant application must therefore be denied because execution of another contract would enable him to serve more than the "limited number." of persons permitted by §203(a)(15).—Major Extension, 92 M.C.C. 316 (318-9)*.

The "limited number of persons" requirement of the contract-carrier definition, being relative, can be satisfied by limitation of service to a class of persons, whether by defined or inherent limitation, but only where the service involved is so unusually specialized or unique as to permit no other treatment. Proposed transportation of commercial papers used in banking operations for a large number of shippers is not thus specialized and cannot be considered contract carriage, since the involved commodities have no intrinsic value and their transportation does not require that they be guarded or transported in special vehicles or otherwise involve the protective services characteristic of armored carrier operations.—Southern Couriers, Inc., Extension, 94 M.C.C. 111 (114-5); Woody, 94 M.C.C. 759 (762).

The term "limited number" in §203(a)(15) is a relative term without significance unless

compared to carrier's overall operations. As an isolated instance, applicant's proposal to serve a single shipper, and to assign specific equipment to shipper's exclusive use for a continuing period of time, would be contract carriage; however, in less than 4 years of operation, applicant has accumulated eight separate grants, including one as a common carrier, has been authorized to serve seven shippers under contracts, and has filed three applications that are not yet decided. Thus, in spite of its concentration on service for only two industries, the pattern of expansion and enlargement followed demonstrates clearly that applicant's purpose is to offer service to any shipper willing to contract with it, and it is in effect holding out its services to the public generally as do common carriers.—Umthun Trucking Co. Extension, 91 M.C.C. 691 (694, 696).

Some contract carriers, providing highly specialized services, may properly serve more than seven shippers; however, those whose services do not possess a high degree of specialization are put on notice that attempts to expand their operations by offering service to more than six or eight shippers will be carefully scrutinized to insure that they are not serving more than the limited number permitted by §203(a)(15). A carrier whose operations enlarge so that it serves more than a limited number of persons may seek conversion to common carrier status through an appropriate §207 application.—Id., pp. 696-7.

Shippers association's unlawful for-hire motor carriage was not that of a contract carrier, since in transporting freight for some 65 to 100 members it did not serve a "limited number" of shippers.—Natl. Motor Frt. Traf. Assn., Inc., v. Internatl. Shippers, 95 M.C.C. 440 (447).

In defining a contract carrier as one which operates under contracts with one or a limited number of persons, the act does not specify an arbitrary number of contracts which must not be exceeded; this figure is within the commission's jurisdiction to fix. Whether a carrier serves a "limited number" of shippers must be determined from all the facts and circumstances surrounding a particular operation or type of motor carrier service; among factors to be considered are the different types of commodities transported, number of permits held by the carrier, territory in which its operations are conducted, degree of specialization required by nature of its shippers' business, and degree of similarity in services performed under its effective continuing contracts.—P. Saldutti & Son, Inc., Conversion, 89 M.C.C. 338 (340)*.

Although respondent operates in a limited area, it serves a variety of shippers, performs varied transportation services, handles a number of dissimilar commodities, and operates several different types of vehicles, and in operating under contracts with at least 20 shippers it does not serve a limited number of persons, or a limited class of customers within principle of 77 MCC 433. In spotting vehicles at shippers' plants and providing certain types of trailers for certain shippers, it does not dedicate particular vehicles to individual shippers and thus does not assign vehicles to exclusive use of each person served; and incidental services performed for shippers are not of such nature that they may be performed only by a contract carrier. Thus respondent's operations do not conform to the contract carrier definition, but are those of a common carrier.—Id., pp. 340-1.

Essential distinction between common and contract carriage is the presence or lack of a holding out to serve the public generally; in exercising its right to select shippers it will serve, a contract carrier, if it is not to breach the line of demarcation between contract and common carriage, must affirmatively stand aloof to the lure of a public calling by restricting its service to one or a limited number of persons. These statutory limitations cannot be defeated merely by creation of separate commonly controlled transportation corporations, which may individually qualify as contract carriers but collectively provide service to the general public or to that part of the public having need therefor; in such circumstances the resulting public service adds a new competitive operation not shown to be required by present or future public convenience and necessity.—Best Transport, Inc., 88 M.C.C. 147 (158)*.

Both the commission and the courts have consistently held that corporate entities may be disregarded when necessary to permit the

proper exercise of regulatory power; it is the substance and not the form of the arrangement that is determinative of the issues involved. Accordingly, in determining whether operations performed or proposed by a number of commonly controlled carriers constitute, in fact, common or contract carriage, the collective scope and character of the operations in issue, as well as the total number of shippers served by all carriers operating under common control, must be considered. Only by thus disregarding the corporate fiction can the legislative purposes underlying the functional restrictions imposed by statute on contract-carrier service be effectuated.—Id., p. 158.

Transportation of exempt commodities as a backhaul does not violate the concept of assignment of vehicles to shipper's exclusive use for a continuing period as required by the statute; thus, contrary to common-carrier protestants' assertions, proposed operation is that of a contract carrier. However, since performance of single-line service is not functionally related to contract carriage as such, but is a type of service performed by common and contract carriers alike, proposed rendition of single-line service may not be considered as an undertaking to provide a specialized service tailored to meet shipper's distinct need without concomitant showing that shipper has an actual need for such service.—Minnesota Trucking, Inc., 94 M.C.C. 58 (60, 61).

Any proposed contract carrier operation must first be examined to determine whether it meets requirements of the new definition in §203(a)(15). Although the Supreme Court in 368 US 81 emphasized the "distinct need" test, the "exclusive assignment of vehicle" requirement may not be ignored, but must continue also to be applied in appropriate circumstances; where proposed operation does not meet either test, logical conclusion is that it is actually that of a common carrier as defined in §203(a)(14).—Moyer, 88 M.C.C. 767 (770).

Where supporting shipper requires multiple delivery service for handling of small shipments consigned to several customers in a single vehicle, and prompt deliveries of short-notice orders are necessary to avert shutting down of customer's production line, proposed service closely integrated with shipper's manufacturing operations and keyed to its and its customers' production schedules, which would be virtually a part of shipper's organization, is a personalized service which can properly be described as designed to meet shipper's particular and distinct needs.—Id., pp. 778-9.

And notwithstanding applicant's statement in exceptions that proposed service is designed to meet shipper's distinct needs "as distinguished from * * * assignment of equipment," purport of the record as a whole is that applicant will assign vehicles to shipper's exclusive use within meaning of the contract-carrier definition; even though he proposes to use vehicles only southbound in shipper's service and they may be used for movement of exempt commodities on return, they will be considered as assigned to contracting shipper's exclusive use. [86 MCC 637.] Since applicant would serve only two shippers, service proposed is within definition of §203(a)(15).—Id., p. 773.

Proposed operation cannot be found to be that of a contract carrier within the statutory definition; record fails to show that applicant would assign vehicles to each shipper's exclusive use under a continuing contract, or that she has any firm arrangements for such dedication of equipment; also, applicant has no contracts with supporting shippers concerning terms, charges, or amount of traffic to be transported. Moreover, since it cannot be determined from the record whether vehicles assigned to a shipper for its outbound movements would be assigned to the same shipper on return, or would be returned empty for that shipper's exclusive outbound use, evidence is not convincing that applicant would be in a position to assign equipment for a continuing period of time to each shipper's exclusive use.—Fogleman Extension, 94 M.C.C. 671 (673-4).

Nor has applicant shown that proposed service is designed to meet shippers "distinct need" under the statutory alternative. The shippers desire a carrier which will provide flexible and expeditious single-line service, with multiple pickups and deliveries for less-than-truckload shipments. There is nothing

distinctive or specialized about such service; on the contrary, it is one regularly provided by common carriers and supporting shippers are using motor common carriage. The mere possibility of low-cost transportation, predicated on a series of uncertainties, does not make the proposed service distinctive.—Id., p. 675.

Respondent's operations do not meet criteria of amended contract-carrier definition when, with possible exception of two tank trailers which were set aside for use of two shippers for respondent's convenience (because of nature of commodities transported), it does not dedicate vehicles for a continuing period of time for exclusive use of each person served; its services, as conducted under 19 continuing contracts, are not restricted to a limited number of shippers, and are similar to those offered by many common carriers of like commodities. Issuance of certificate in lieu of permits, authorized.—Tar Asphalt Trucking Co., Inc., Conversion, 86 M.C.C. 756 (757)*; and respondent's use of heating units and pumps with extra long hoses is not indicative of a distinctive or specialized service.—Id., 88 M.C.C. 443 (445)*.

There is nothing distinctive in nature of service proposed or shown to be needed by supporting shipper that would require finding it could only be performed satisfactorily by a contract carrier.Though applicant contends that his proposed minimum rate meets the "distinct need" test, he has not sustained burden of proving that service contemplated offers a bona fide economic advantage to shipper. Proposed rate is not shown to reflect any economies or advantages inherent in contract carriage or to be economically feasible, since it is predicated largely on return hauls of exempt agricultural commodities, which might not materialize, and if such movements were not available or were less than anticipated proposed operation would be unprofitable. Applicant has met neither test of contract carriage.—Hagen Extension, 92 M.C.C. 479 (485).

Applicants proposed transportation of certain agricultural implements does not meet the criteria of contract carriage when his statement that he intends to assign at least one vehicle to shipper's exclusive use is not supported by any other evidence; he intends merely to spot equipment at shipper's plant site—a normal service of any common carrier; considering also his certificated authority under which he may transport agricultural machinery for same shipper, it does not appear that there would in fact be an exclusive assignment of vehicles for a continuing period. Moreover, shipper's only special desire is that open-top vans be furnished, which does not constitute a "distinct need" in the contract carrier sense. Proposed service is common carriage.—Kindsvater Extension, 92 M.C.C. 131 (133).

Although application was filed under §207, at the hearing alternative expanded contract carrier authority was requested; commission's decision relevant to §203(a)(14) and (15) determines whether operation is that of common or contract carrier rather than form in which application is filed. The overall physical operations proposed determine whether application should be treated as one seeking authority pursuant to §207 or to §209; in view of lack of evidence pertaining to alternative proposal, application is treated as one seeking common carrier authority.—Goodman Motor Transport Co., Extension, 91 M.C.C. 206 (209).

Private carrier seeking authority for one-way contract-carrier operation would operate its vehicles interchangeably to move considered traffic to the four supporting receivers; this does not constitute dedication of equipment as contemplated by the statutory definition of contract carriage; nor does the proposed service appear to be specialized; however, neither common- nor contract-carrier operation by applicant would be consistent with public interest.—Ralph A. Veon, Inc., 88 M.C.C. 279 (280)*.

Proposed transportation of cement does not conform to the contract carrier definition since applicant's equipment would not be assigned for a continuing period of time to shipper's exclusive use, nor is the service designed to meet shippers' distinct need since it would consist only of single-line transportation of cement by tank trailer or flat-bed; moreover, 86 MCC 447 found that public interest requires issuance of common rather than contract carrier authority to motor car-

riers serving the cement industry as a whole.—Reaveley, 91 M.C.C. 604 (606-7).

Applicant would not be a contract carrier when he would not assign equipment to shipper's exclusive use, proposed service is not designed to meet a distinct need of shipper or its customers, and the only aspect which might be considered specialized—loading and unloading of disassembled pipe organs—is to be performed by shipper's employees.—LeTarte, 91 M.C.C. 158 (160).

Picking up and returning repossessed automobiles to dealers is not a contract carrier operation within §203(a)(15), since it involves only a driveaway service, which by definition calls for furnishing of a driver only, so that there can be no dedication of equipment; nor do supporting shipper's needs require a specialized kind of service for which common carriers are unsuited.—Morris, 89 M.C.C. 386 (387).

Applicant's proposed service for two new shippers would not be contract carriage when, though it professes willingness to dedicate equipment to their exclusive use if required, both shippers specifically disclaim any need for such exclusive use, and no distinct needs of those shippers that applicant would be required to serve are demonstrated.—E. W. Bohren Transport, Inc., Extension, 89 M.C.C. 266 (267).

Proposed service wherein applicant would not assign vehicles to shipper's exclusive use, and which is not shown to be designed to meet any distinct need of shipper or to be different from service that protestant common carrier is authorized and equipped to perform, does not meet the test of contract carriage; but other proposed service, in which applicant would serve a single shipper through assignment of vehicles to to that shipper's exclusive use, is that of a contract carrier.—Sears, 89 M.C.C. 173 (176).

Owner-operator service: [Vols. 9, 11, 19].—In performing operations solely with equipment leased from owner-operators, applicant does not exercise the degree of control or responsibility necessary to establish bona fide for-hire operations as a contract carrier. Applicant owns no terminal or equipment; employs no personnel except its president, a part-time bookkeeper, and the president's son; does not pay for insurance; maintains no real safety program respecting drivers other than its asserted right to "fire" those who prove unsatisfactory; does not select, pay, or in any genuine sense direct drivers of the leased vehicles; and has no means of assuring that equipment will be available for any substantial period of time.—T. P. Trucking Co., Inc., Extension, 91 M.C.C. 764 (768).

Section 203. (a)(16) [*§303(a)(16) U.S.C.*] **Motor carrier defined.**—[Unchanged. See vol. 9, p. 7885.]

Notes of Decisions

Volume 11—p. 9363; Volume 12—p. 10352; Volume 13—p. 11048; Volume 14—p. 11566; Volume 15—p. 12166; Volume 16—p. 12805; Volume 19—p. 15473.

1. Construction and interpretation.—[Vols. 11-16, 19].—Whether applicant, who owns no motor vehicles and proposes to provide service with equipment leased, with drivers, from a nonaffiliated company, would actually control, direct, and assume responsibility for proposed operations, so that its status would be that of a carrier by motor vehicle, is highly questionable.—Spruance Extension, 91 M.C.C. 864 (867).

Section 203. (a)(17) [§*303(a)(17) U.S.C.*] Private carrier defined.— [Unchanged. See vol. 9, p. 7885.]

Notes of Decisions

Volume 9—p. 7885; Volume 11—p. 9363; Volume 12—p. 10352; Volume 13—p. 11049; Volume 14—p. 11567; Volume 15—p. 12166; Volume 16—p. 12085; Volume 17—p. 13497; Volume 18—p. 14258; Volume 19—p. 15473.

5. Private carrier defined.—[Vols. 9, 11-19]. —See also §203(c), notes.

In appeal from district court's denial of injunction against motor carrier of exempt agricultural commodities and certain shippers to whom carrier leased its trucks on return trips to haul nonexempt commodities, under trip-lease arrangements whereby shippers formally leased carrier's trucks for carriage of their shipments from the distant points back to considered destination, the question at issue is controlled by decision in 368 US 370. The trial court made specific findings of fact which resolved the basic factual issues touching on control, direction and domination of the transportation by the "lessee" and as to substance of the operation, all favorable to appellees; that determination cannot be found erroneous; affirmed.—I.C.C. v. Piedmont Sales Co., 330 F. 2d 351

Appellant nonprofit corporation is a "person" as defined in §203(a)(1) and as used in §§203(a)(15) and (17) and 209(a); therefore, when the facts show that it is operating as a contract carrier within meaning of Part II, it cannot be a private carrier.—Shippers Cooperative, Inc. v. I.C.C. 308 F. 2d 888 (892, 893)*.

The two tests of private carriage applied by the commission and adopted by the Supreme Court in 368 US 370 require finding, first, that no person other than the shipper has any right to control, direct, and dominate the transportation, and second, that no person is in substance engaged in the business of transporting property for hire. Both tests must be satisfied, and the test of substance supplements the test of control to such an extent that even a finding of shipper control does not in itself suffice to render the transportation private carriage.—I.C.C. v. Moore, 236 F. Supp. 168 (173).

Defendant nonprofit shippers association cannot be classified as a private carrier exempt from economic regulation under the act when the facts of record clearly show that it was engaging in interstate transportation of property for its shipper members for compensation. See 326 US 432 and 308 F. 2d 888.—I.C.C. v. International Shippers Ass'n of New Jersey, Inc., 249 F. Supp. 66 (69)*.

In defining a particular motor carrier operation it is the substance, rather than the form, that is important; from the outset the commission has correctly interpreted the statutory definitions as importing that a purported private carrier who hires the instrumentalities of transportation from others must—if he is not to utilized a licensed carrier—assume in significant measure the characteristic burdens of the transportation business.—I.C.C. v. Arpel, Inc., 211 F. Supp. 370 (373).

No particular incident of the legal relationship determines who is the employer of the driver; payment of wages does not establish that fact, but merely aids in determining who has the power of control, which is the controlling consideration. In considered operations under purported "trip leases," most of shippers' and consignees' contacts with the drivers were for payment only of a sum designated by defendants after delivery of a shipment; the relation between defendants and drivers was in substance that of employer and employee, with defendants delivering ancillary instructions as to the method of payment of the drivers. Defendants' business is that of a for-hire carrier shallowly cloaked with a subterfuge arrangement purporting to represent private carriage. Furthermore, defendants' claim of private carriage finds no support in the fact that some shipments transported consisted of exempt agricultural commodities.—Id., pp. 373-4.

Although plaintiff contends that shipper-lessees exercise direction and control over details of the transportation performed with

vehicles leased from and drivers supplied by plaintiff, the Supreme Court in 368 US 370, in considering a substantially similar factual situation, expressly affirmed the commission's consistent position that such control falls far short of establishing that the shipper-lessees are engaged in private carriage. That decision is controlling, and, there being rational basis for the commission's conclusion that considered operation was for-hire carriage by lessor rather than private transportation by shippers, it is affirmed.—John J. Casale, Inc. v. United States, 208 F. Supp. 55 (56, 59-60)*.

In order that transportation be private carriage, it must appear that it is performed by a bona fide "owner, lessee, or bailee" who is not a "common carrier" or a "contract carrier" (as those words are used in §203(a)(17)), and within the scope, and in furtherance, of a primary business enterprise (other than transportation) of the person engaged in such transportation (§203(c)). The test of compensation is not the criterion for determining whether considered transportation is in fact that of a private carrier. The commission was clearly justified in concluding that plaintiff's Plan 2 transportation to the West Coast of automobiles owned at the outset by west coast dealers was not private carriage; sustained.—Studna v. United States, 225 F. Supp. 973 (975-6, 979, 983-4)*.

Defendant corporation, engaged in the business of servicing and repairing oil and gas wells in several States, was a private carrier of property within meaning of the statutes pertaining to the commission's power to regulate safety of operations of interstate motor carriers. While pumping equipment transported was permanently mounted on defendant's trucks, that equipment and the auxiliary portable equipment transported on its pump trucks constituted "property," was owned by defendant, and was transported by it in interstate commerce in furtherance of its well-servicing commercial enterprise.—Harshman v. Well Service, Inc., 248 F. Supp. 953 (954, 958, 960)*.

Hauling activities of corporation in transporting its own merchandize in vehicles leased from carrier of exempt agricultural commodities, under a bona fide lease arrangement, were those of a private carrier; such activities were not changed from private carriage merely because the lease arrangement called for lessor to use the units when lessee did not need them or because drivers of the trucks, although employees of lessee, were obtained from among lessor's experienced drivers.—I.C.C. v. Schultz Transit, Inc., 207 F. Supp. 749 (751-4).

Under plan II-1/2 TOFC service, in which the railroad furnishes the trailers but leases them to shipper or consignee for the movements to and from the railroad ramps, the transportation subject to regulation does not begin until shipper has performed the pickup service at origin, and ends when consignee accepts delivery of the trailer at the railroad ramp at end of the rail line-haul. Shipper and consignee perform the pickup and delivery services themselves and during such times the shipment is under their control; terminal pick-up and delivery operations thus performed are private carriage and need not be confined to the origin and destination terminal areas.—Foodstuffs, Macon, Ga., to Florida, Indiana, Kentucky, Ohio, 321 I.C.C. 132 (134-5).

Though the Supreme Court held in 368 US 370 that mere vesting of control in shipper is not in itself determinative of whether operation by a shipper with leased equipment is private carriage and that the test of substance applied by the commission in more recent cases transcends the limited concept of "control" enunciated in 27 MCC 191, emphasizing that a shipper wishing to transport his own goods must assume in significant measure the characteristic burdens of transportation, the Court did not conclude that the commission must abandon consideration of control in favor of a "characteristic burdens of transportation" test, but only that the commission may and has supplemented its "control" test with other factors; in essence, the test is one of substance involving evaluation of all relevant factors.—Lovell—Investigation of Operations, 92 M.C.C. 728 (733, 736).

And while that decision imposes a sharp limitation on purported private carriers who seek to avoid the characteristic burdens of transportation, there is no indication therein or in subsequent commission decisions that a shipper is precluded under every circumstance from performing bona fide private car-

riage with leased vehicles; the Court recognized, at least implicitly, that there may be a genuine leasing and employment arrangement. Under ordinary circumstances a lessee of vehicles divests itself of the burdens of capital investment and risk of premature depreciation or catastrophic loss; hence, while those factors must be considered as part of the total picture, they are not in themselves controlling.—Id., p. 734.

Substance of operations now conducted by two shippers with vehicles leased from respondent establishes that they are bona fide private carriage for which no authority is required. Shippers have exclusive control of the vehicles leased to them; drivers are shippers' employees and are directed by them in their duties; notwithstanding drivers' past connections with respondent and his role in assisting them to obtain positions, shippers in fact exercise their responsibility of complete control over them. Respondent owns, furnishes, and maintains the equipment and assumes costs of operation and vehicle insurance, while shippers pay for public liability and property damage insurance, drivers' salaries, and withholding assessments, keep drivers' logs and medical certificates, and supervise the physical operations. However, the parties are cautioned that their lease agreements should include a minimum amount of annual rental.—Id., pp. 735-6.

In determining whether a particular operation is bona fide private carriage or some form of unauthorized transportation decked out in the trappings of private carriage, each case must be decided on its own particular facts.—Jackson and Plunkett—Investigation of Operations, 88 M.C.C. 671 (672).

Partnership whose primary business is operating oil company's bulk plant at Aiken, S.C., and acting as its sales agent in that area is a private carrier in transporting the oil company's products from Port Wentworth, Ga., to Aiken. If it pruchased the products at Port Wentworth, both transportation to the bulk plant and transportation direct to customers in Aiken area would be private carriage; the act does not permit a different conclusion merely because carrier is bailee, not owner, of the property; §203(a)(17) does not limit the right of private carriage to property transported by owners.—Id., pp. 676, 679; and oil company's payment of a hauling allowance that may yield the partnership some profit above cost of transportation does not preclude a finding of private carriage; existence of an identifiable transportation charge is not determinative of carrier status (93 F. Supp. 517); congressional committees reporting on present language of §203(c) disclaimed any intent to interfere with operations of private carriers even though a charge is made.—Id., pp. 677, 679.

Section 203(a)(17) does not limit the right of private carriage to property transported by the owner thereof, but includes property of which the transporter is the lessee or bailee, subject to the primary business test prescribed in §203(c).—Car Services, Inc., 92 M.C.C. 595 (599-600).

The mere taking of title to shipments transported does not establish private carriage.—Meinerz Creamery Co.—Investigation of Operations, 88 M.C.C. 77 (85); thus, in investigation into respondent's transactions in the purchase and resale of sugar, the fact that respondent is the clear owner of property being transported is not sufficient to establish that its carrier operations are those of a private carrier. Moreover, that is the normal practice in unauthorized transportation of sugar and other fungible commodities; and if it were not for the mechanics of taking title to the sugar transported, there could be no question but that respondent is engaged in for-hire transportation.—Utley Lumber Co., Inc., Investigation of Operations, 94 M.C.C. 458 (463-4).

In distinguishing between bona fide private carriers and their impersonators (buy-and-sell operators who attempt to camouflage unauthorized transportation with the forms of bona fide private carriage), the commission is aided by certain common-sense indicia; the principal indicia, as summarized in 82 MCC 651, repeated.—Smith Grain Co., Inc., Investigation of Operations, 86 M.C.C. 767 (769-70).

In determining whether a particular arrangement results in private or for-hire carriage, the overall picture and all salient factors must be weighed, including documents purporting to establish the legal relationship

and the actual practices of the parties in conducting the operations. In order for considered operations to constitute bona fide private carriage, respondent shippers must control, direct, and dominate them as well as assume the characteristic burdens of private carriage; also, the part played by other respondents must not in any way constitute their engagement in interstate or foreign transportation for hire.—Transport Rental Systems, Inc., Investigations, 94 M.C.C. 402 (409).

Thus, when meatpacker respondent, with the aid and assistance of vehicle leasing company and respondent purporting to furnish drivers to shippers, actually furnished both equipment and drivers to shipper respondents in order to obtain a backhaul for its proprietary operations, and the record is not conclusive that the equipment or drivers were subject to direction or control of anyone else during any of considered movements of shipper respondents' goods, those operations were for-hire, rather than private, carriage; and since respondents' vehicle leasing company and furnisher of drivers jointly took part in the plan of operations, former actually acts as instrumentality which brings together private carriers desiring a remunerative backhaul and shippers seeking inexpensive transportation service without concomitant responsibilities inhereint in true private carriage.—Id., pp. 410-11.

Who has the right to control, direct, and dominate performance of the service usually determines whether the respondent is the bona fide agent or employee of shipper respondents conducting private carriage, or whether he is unlawfully performing service as a for-hire carrier. It is the economic realities behind the arrangements, not their form, which is crucial in determining the status of the operations; and the purpose of regulation cannot be frustrated by creation of employer-employee or a principal-agent relationship when, in fact, the transportation is under exclusive control and domination of respondent rather than shippers.—Kapke Investigation of Operations and Practices, 91 M.C.C. 377 (385, 386).

Therefore, regardless of the terms of employment or agency agreements, under which considered transportation is ostensibly conducted by respondent shippers as private carriage, such transportation is for-hire carriage provided by respondent when the shippers enjoy use of interstate motor service, are guaranteed a fixed cost for such transportation service, and are totally disassociated from the risks and obligations normally incident to private carrier status.—Id., p. 386.

Tests which determine whether lease and use of equipment by shipper result in proprietary operation or whether lessor is providing shipper with a for-hire service are: (1) whether exclusive control is vested in shipper, and (2) whether lessor is in substance engaged in interstate transportation. Lease of equipment with drivers to shipper raises a presumption that lessor has control, to rebut which the parties have burden of showing shipper's exclusive right to direct and control the transportation.—Zirbel Transport, Inc., Investigation and Revocation, 91 M.C.C. 705 (708); notwithstanding purported leasing arrangements, respondent shipper does not exercise exclusive control over its alleged "private" carriage, nor has it assumed any significant burdens which are inherent in establishment of real private carriage.—Id., p. 709.

In determining whether a particular arrangement between a shipper and the owner of equipment used to transport that shipper's product results in private or for-hire carriage, all fact and circumstances surrounding the transaction must be weighed; essentially, the issue is who has the right to control, direct, and dominate performance of the service. Hence, although all facts and circumstances are helpful in shedding light on the real nature of the questioned operations, two significant guideposts are (1) the equipment by which the transportation is accomplished, and (2) the driver thereof.—G & W Transfer Co., Inc.—Investigation of Operations, 89 M.C.C. 251 (253)*.

Transportation purportedly performed by shipper under leasing arrangement is for-hire carriage by lessor rather than bona fide private carriage when it assumes no responsibility for compliance with commission's safety regulations and has practically nothing to do with the vehicles except to order their use when it has products to ship, and shifting of drivers back and forth between it and lessor

negates any claim that they are its full-time employees.—Schultz Transit, Inc., Investigation of Operations, 89 M.C.C. 305 (309)*.

Given the basic circumstances of leased vehicles used solely to fulfill transportation requirements of shipper-lessee, the primary question is who has the exclusive right to and does actually control, direct, and dominate the transportation performed; a basic element in resolving that question is relation of the drivers of the leased vehicles to the lessor for, where exclusive control by shipper over his drivers is lacking, the transportation service cannot be said to be under shipper's exclusive domination and direction, and hence is not legitimate private carriage.—Frost Motor Exp., Inc., 89 M.C.C. 155 (157); and in absence of a showing to the contrary, a lease of equipment with drivers by a carrier to a shipper raises a presumption that the transportation is performed by the carrier for compensation and thus is subject to regulation.—United Retail Merchants' Stores, Inc.—Investigation, 89 M.C.C. 183 (185-6).

To have exclusive right to direct and control the transportation service, shipper must control that significant instrumentality of commerce, the driver. Under master leasing agreement covering respondent shipper's use of vehicle owner's equipment from time to time for movements from California to Washington, shipper's "sole right to discharge and/or hire" drivers is illusory, since it is not obligated to employ the vehicle owner at all, and agreement can be terminated on 10 days' notice. Driver's identity may be unknown to shipper until termination of the haul; there is no negotiation for amount of driver's wages, except that they are presumably covered by the lump sum paid the vehicle owner; and since shipper has no control over the southbound movement, it cannot determine in advance the driver's availability under hours-of-service regulations for the northbound trip.—Id., p. 186

Directing the carrier to appear at point A for loading of commodities to be delivered at point B is the extent of shipper's interest and responsibility until delivery of the cargo; carrier assumes responsibility for maintenance of the vehicle, payment of the driver, protection of the public, and safe delivery of the goods; shipper assumes nothing more than liability for transportation charges under the contract. In no instance do the owner-operators or their drivers stand in relation of servants to the shipper-lessee as master; rather, the equipment owners act in capacity of independent contractors who from time to time perform a designated service for a lump-sum payment; such operation is for-hire carriage by respondent carriers, not private carriage by shipper.—Id., p. 187.

In determining status of a purported private carrier operation with leased vehicles, substance thereof rather than its contractual form must be considered; all facts and circumstances surrounding arrangement between shipper and owner of equipment used to transport that shipper's products must be weighed to determine whether it constitutes legitimate private carriage. One test is who has the right to control, direct, and dominate performance of the service, and the most useful indicator is relation of the drivers to the owner of the vehicles; while respondent shipper exercises some control over drivers of leased vehicles, their more vital economic relation is with the owner-lessor, to whom they look for continued employment; under the leasing arrangement, the equipment must be redelivered to lessor in California upon completion of westbound movement, at which time drivers revert to its complete control; also, shipper has no right to divert equipment to destinations not on a relatively direct route to California, or to use it to transport other than edibles, thus does not possess exclusive right of direction and control normal to private carriage.—Center America Corp.—Investigation of Operations, 88 M.C.C. 740 (742-3).

In addition, use of a "substantiality" test turning on extent of assumption of the usual economic burdens of private carriage was approved in 368 US 370. According to the economic criteria emphasized therein, respondent shipper has shifted to lessor such characteristic burdens as the large capital investment in equipment, with risk of premature depreciation or loss, risk of a rise in variable operating costs such as repairs and maintenance, and risk of nonutilization of high-priced equipment—in short, has attempted to acquire transportation at a fixed and definite

cost from lessor, while maintaining that it is the transporter of westbound shipments. Acceptance of that contention would so blur distinction between private and for-hire carriage as to frustrate effective regulation of the latter, contrary to declared intention of Congress.—Id., p. 743.

In determining whether a particular arrangement between a shipper and the owner of equipment used to transport that shipper's products results in ligitimate private carriage by the shipper or in unlawful for-hire carriage by the equipment owner, the recitations of the duties of each party, no matter how closely they conform to requirements established in previous decisions concerning purported private carriage, must yield to consideration of the actual operations of the parties; and, given the basic circumstance of leased vehicles used solely to fulfill shipper-lessee's transportation requirements, the most useful indicator is relation of the drivers to lessor of the vehicles.—Huffman—Investigation of Operations, 88 M.C.C. 437 (440).

Regardless of lease terms charging shipper with duty to employ and pay drivers and confering sole control over them, shipper does not have exclusive right to control the transportation service performed when in fact lessor recommends the drivers to be employed and has thus far recommended only those who formerly worked directly for him; lessor also determines which driver should be assigned to each particular trip, prepares the entire payroll, and acts as an indispensable intermediary in distribution of the checks drawn by shipper. Mere transfer of the same drivers to shipper's payroll, without some positive showing that shipper has assumed their sole direction and control, does not establish that the service performed is private carriage.—Id., pp. 441, 442.

Section 203. (a)(18) [*§303(a)(18) U.S.C.*] **Broker defined.**[Unchanged. See vol. 9, p. 7887.]

Notes of Decisions

Volume 9—p. 7887; Volume 11—p. 9365; Volume 12—p. 10354; Volume 13—p. 11050; Volume 14—p. 11567; Volume 15—p. 12167; Volume 16—p. 12806; Volume 17—p. 13498; Volume 18—p. 14259; Volume 19—p. 15478.

1. Broker defined.—[Vols. 9, 11-19].—A broker is not a carrier; no other conclusion is possible when broker definition in §203(a)(18) is read in conjunction with definition of a motor common carrier in §203(a)(14). Although a broker of round-trip tours controls the itinerary and tour schedule, the carrier has actual control of and responsibility for the physical operation and maintenance of equipment throughout the tour; the important difference, clearly recognized in language of §211(a), is that a broker's function is, not to provide transportation in sense of performing or engaging therein, but to arrange for its provision by authorized motor carriers.—Auch Inter-Borough Transit Co. Extension, 88 M.C.C. 455 (457-8).

Corporate respondent, a purported shippers' association, and individual respondents who acted as its agents, did not unlawfully engage in brokerage of transportation by procuring a separate equipment lease for each shipment transported, when the corporation was treated as the carrier by its shipper members, was identified as the carrier on most of the bills of lading, and bore risk of loss or damage in all instances, thus performing a transportation service for its members.—Western Shippers Assn., Inc.—Investigation, 88 M.C.C. 575 (577).

Section 203. (a)(19 [*§303(a)(19) U.S.C.*] "Services" and "Transportation."

—[Unchanged. See vol. 9, p. 7890.]

Notes of Decisions

Volume 9—p. 7890; Volume 11—p. 9368; Volume 12—p. 10355; Volume 13—p. 11050; Volume 16—p. 12807; Volume 17—p. 13498; Volume 18—p. 14260; Volume 19—p. 15479.

1. Services and operations distinguished.—[Vols. 9, 11, 12, 19].—Consideration of §203(a)(19) together with language of the Supreme Court in 364 US 454 indicates that service as well as physical characteristics should be considered in determining what type of passenger terminal facility is contemplated by the act and will be subject to regulations prohibiting the utilization, in connection with transportation in interstate commerce, of terminal facilities of which the use of all or any part is segregated on the basis of race, creed, color, or national origin.—Discrimination—Interstate M. Carriers of Passengers, 86 M.C.C. 743 (750, 751)*.

Clearly, those regulations would not apply to every independently operated roadside restaurant at which a bus stops solely to pick up or discharge occasional passengers, or to every independently operated drugstore or other ticket agent which does nothing more for benefit of the carrier's passengers than sell tickets and post schedules; but if in addition to selling tickets the agent offers or provides terminal services and facilities for the comfort and convenience of interstate passengers, such as a public waiting room, restroom, or eating facilities, the premises where those services and facilities are made available should be considered part of the carrier's terminal facilities.—Id., p. 751.

2. Transportation defined.—[Vols. 2, 11-13, 16-19].—Part I, §1(3)(a), notes.

The commission's extension of the principle it established in connection with delivery of new automobiles, that delivery of a single car under its own power was no less "transportation" subject to the statute than was the use of one car for towing or carrying others, to cases where an automobile was not being transported for sale but merely for convenience of the owner has been sustained by the courts. [214 F. Supp. 473, aff'd 323 F. 2d 367.]—I.C.C. v. AAA Con Drivers Exchange, Inc., 340 F. 2d 820 (824)*.

Some needs of shippers relate to transportation and some do not; the property transported must be readied for use or sale; activities pertaining to sale are beyond the scope of transportation, while those pertaining to use may or may not be within the realm of transportation. Delineation of what are transportation services, which may be considered in determining shipper's needs for proposed contract carrier service, is peculiarly within the competence and expertise of the commission; it should make the determination in the first instance.—National Trailer Convoy, Inc. v. United States, 227 F. Supp. 730 (734)*.

Assuming that the issue of whether operations in issue are "transportation" was properly before the court, there can be no doubt that automobile wholesaler's described activities in connection with driveaway movement from Kansas City, Mo., to the West Coast of automobiles owned at the outset by west coast dealers constitute transportation within the meaning of the statute.—Studna v. United States, 225 F. Supp. 973 (975-6, 983)*.

Reference in §203(a)(19) to vehicles "used" in transportation in interstate commerce is not equivalent to "only while being so used"; such construction would be a limitation which Congress has not seen fit to impose, and in application of safety regulations would be a disservice to the need for public safety on the highways. It is more reasonable, and in conformity with expressed Congressional intent, to give "used" its fair, ordinary meaning; thus it is wholly immaterial whether a vehicle operated by a for-hire interstate carrier was empty at time of a particular violation, or was engaged in intrastate commerce, or loaded with unidentified cargo moving between unknown points, or unengaged in any operation. Proof that the vehicle was one used in inter-

state commerce in ordinary sense is all that is required to bring it within the commission's jurisdiction.—United States v. Pioneer Motor Service, Inc., 204 F. Supp. 611 (612-3).

As a carrier-owned pallet is property used in transportation of shipper's freight under pallet exchange agreement between named shipper and certain motor common carriers, it is clearly within definition of "transportation" and "services" and is subject to regulation. Though the agreement indicates that title to the pallets remains in original purchaser even after exchange, the pallets are unmarked and as a practical matter would not be identifiable after exchange; also, the agreement provides that when a pallet becomes worn out it shall be replaced by the party then in possession. Under the circumstances, title passes with each exchange, and carrier would always be transporting its own pallets.—Legality of Pallet Exchange Agreement—Kraft, 322 I.C.C. 439 (441-2).

Transportation subject to the commission's jurisdiction includes receipt of a shipment from consignor and its delivery to consignee, whether or not either one takes place at a point located on a public road; reference to public highways in §§206(a) and 209(a) does not limit the commission's jurisdiction over receipt and delivery services performed in connection with interstate transportation.—Lattavo Bros., Inc.-Petition for Interpretation, 98 M.C.C. 767 (769).

Under Part II as under Part I, transportation begins only when merchandise has been placed in possession of a carrier subject to economic regulation; as a shipper is not a carrier subject to economic regulation, transportation must be considered as beginning at the point where shipper tenders his goods to a for-hire carrier, even though he has previously moved them in private carriage. See 298 U.S. 170.—Motor Transportation of Property Within Single State, 94 M.C.C. 541 (550)*.

Proposed interchange of TOFC traffic by applicant railroad with another railroad at a point on latter's line instead of at a point also on applicant's line, to shorten applicant's prior or subsequent haul under its motor-carrier authority for substituted service, is a transportation service at the proposed interchange point.—Green Bay & Western R. Co. Extension, 91 M.C.C. 363 (366).

Stationing of storage or nursing tanks at farms which lack suitable tanks for receipt of liquid fertilizer is an integral part of the transportation service provided on that commodity when in many instances the only feasible method of delivery is to pump the liquid fertilizer from the line-haul vehicle into applicant's nursing tanks. But spreading of such fertilizer at the farms by use of self-propelled tanks is a separate and distinct nontransportation service.—Delaware Exp. Co. Extension, 92 M.C.C. 718 (721, 722, 723).

Contract carrier's proposal in extension application to allow retention of its trailers at jobsites for up to 14 days for storage of nitro carbo nitrate is an accessorial service equivalent to dedication of equipment at destination, and is clearly a transportation service within meaning of the act; otherwise, the commission would be unable to determine lawfulness of trailer retention charges or to establish rules and regulations respecting such charges. Such service is distinguishable from common-carrier proposals to provide such nontransportation services as spreading asphalt in road construction work or washing and repairing foreign cars.—H. Messick, Inc., Extension, 92 M.C.C. 293 (299-300)*.

Authority is not required for interstate transportation of passengers in special or charter operations on behalf of mortuaries. See 72 MCC 708.—Canzano, 95 M.C.C. 568 (570)*.

The solicitation, as such, wouldn't be part of a transportation service. Handling of cash letters and microfilm to and from Chicago for banks in Indiana in a service whereby defendant furnishes a messenger who travels by bus or taxi between banks to pick up items, thence to station to use rail service between South Bend and Chicago, is not transportation within meaning of the act. Public carriers used by the messengers at no time have custody or control over the transportation of said items; on the contrary, the messengers have full custody and are accountable to the defendant for safe handling of the commodities. If it isn't transportation within meaning of the act, it goes without saying it wouldn't be subject thereto.—B.D.C. Corp. v. Armored Carrier Corp., 94 M.C.C. 486 (487-8).

Section 203. (a)(20)-(21) [§*303(a)(20)-(21) U.S.C.*] Interstate operation; Foreign operation.—[Unchanged. See vol. 9, p. 7893.]

Section 203. (a)(22), (23) [§*303(a)(22,23) U.S.C.*] Migrant farm workers.—[Unchanged. See vol. 17, p. 13499.]

Section 203. (b) [§*303(b) U.S.C.*] Vehicles excepted from operation of law.—[Unchanged, except by the Dec. 17, 1963 amendment below. See vol. 18, p. 14260.]

By Public Law 88-208, Dec. 17, 1963, 49 Stat. 545, paragraph (b) was amended by changing the period at the end thereof to a semicolon and adding the following:

* * *or (10) the emergency transportation of any accidentally wrecked or disabled motor vehicle in interstate or foreign commerce by towing.

Historical Note

The commission recommends that §§203(b5) and 402(c) be amended to provide that agricultural cooperatives and shipper associations, respectively, shall be entitled to exempt status thereunder only upon application and proof of eligibility. Also, that §203(b6) be amended so as to limit application of the agricultural and other commodity exemptions to providing direct assistance to farmers, ranchers, and fishermen in transportation of their products to local markets, and to provide appropriate grandfather rights for carriers now operating under the exemptions.—Annual Report, 1962, pp. 201, 202; both renewed, Annual Report, 1963, p. 19; recommendation as to §§203(b5) and 402(c) renewed.—Annual Report, 1964, p. 76.

Notes of Decisions

Volume 9—p. 7894; Volume 11—p. 9371; Volume 12—p. 10356; Volume 13—p. 11051; Volume 14—p. 11567; Volume 15—p. 12169; Volume 16—p. 12807; Volume 17—p. 13499; Volume 18—p. 14263; Volume 19—p. 15480.

1. Constitutionality.—[Vol. 9].—Plaintiff must establish that he was possessed of property in the constitutional sense and that he was deprived of it by order of the commission without an opportunity to be heard, in order to show that the commission's orders (ruling on his applications for (1) "grandfather" rights under §7(c) of Transportation Act of 1958 and (2) a certificate for authority to transport commodities not within ambit of his "grandfather" request) amounted to unconstitutional deprivation of property. Although not expressly stated, language used in the *Milk Transport* case, 190 F. Supp. 350, aff'd per curiam, 368 U.S. 5, makes it clear that no unconstitutional deprivation of property occurred with the passage of the 1958 statute; Congress could include or exclude any commodities from the "grandfather" clause, or could have refused to include any "grandfather" clause in the 1958 amendment. By enacting that statute, Congress clarified and defined the scope of the agricultural exemption, which was its prerogative; and the commission merely exercises reasonable control over plaintiff's operations, of a type and character sanctioned by the Supreme Court in 284 U.S. 248. Complaint dismissed.—Hughes v. United States, 278 F. Supp. 11 (14-16, 18-20)*.

2. Construction and interpretation.—[Vols. 12, 13, 15-19].—Legislative history of §203(b) shows that Congress intended, by the exception in §203(b6), that trucks hauling nonmanufactured agricultural products in interstate commerce be not regulated at all as to matters other than safety of operation or equipment standards. That statutory exception from regulation prevails as against the Kansas commission's attempt to regulate motor carriers hauling, between Kansas points, shipments of unprocessed grains which are moving in interstate commerce.—State Corporation Commission v. Bartlett & Co., Grain, 338 F. 2d 495 (498-9)*.

Motor carrier engaged solely in transportation of agricultural commodities, and therefore partially exempt from regulation under §203(b6), is not exempt from keeping driver's daily logs.—United States v. Handfinger, 364 F. 2d 800 (801-2).

Exception from regulation under §203(b6) extends to all transportation of exempt agricultural commodities, even in "tainted" vehicles, except in mixed loads with non-exempt products; and, prior to 1958 amendment to the statute, the courts held that the exemption covered otherwise exempt commodities in a fresh frozen state. However, plaintiff is not entitled to "grandfather" authority under §7(c) of Transportation Act of 1958 for continuance of its transportation of frozen fruits, berries, and vegetables under its "agricultural commodities" and "farm produce" authorities issued prior to enactment thereof, since such certificates only permit transportation of those items in mixed loads with non-exempt commodities; such mixed load transportation was already regulated prior to the 1958 act; and language and legislative history of that act supports the conclusion that §7(b) therein does not save plaintiff's authority to continue such transportation.—Lester C. Newton Trucking Co. v. United States, 264 F. Supp. 869 (874-6)*.

See also Air Dispatch, Inc. v. United States, n. 40, below.

Insofar as Federal Aviation Agency's assertion of plenary power over Dulles International Airport under the Second Washington Airport Act, including power to regulate operation of for-hire transportation at such facilities, extends only to transportation covered by the taxicab and air-passenger exemption, no conflict arises between the power of that agency and that of the commission.—A. B. — & W. Transit Co. Extension, 88 M.C.C. 175 (179, 184).

20. Casual, occasional, reciprocal transportation.—[Vols. 9, 11, 12, 15, 17-19].—Exemption of §203(b9) does not apply to corporate and individual defendants' business of nationwide transportation of automobiles for owners, in driveaway service, because of repetitious nature of the operations; during previous calendar year defendants entered into about 1,500 "driveaway agreements," of which a substantial number involved interstate transactions.—I.C.C. v. Interstate Auto Shippers, Inc., 214 F. Supp. 473 (475, 476).

See also I.C.C. v. AAA Con Drivers Exchange, Inc., case, §203(c), n. 3.

Defendant, although ostensibly an employment service furnishing drivers to shippers of motor vehicles, actually held out and provided a complete transportation service for compensation anywhere in the United States for any shipper willing to pay its price; thus, it was a common carrier engaged in transportation as a regular occupation or business and, as such, was not within exemption of §203(b9).—United States v. Aides, Inc., 211 F. Supp. 122 (125).

Respondent's occasional transportation of automobiles as "good will" to west coast dealers who have purchased them in Kansas City area is not within exemption of §203(b9); he admittedly retains the $25 deposit of each driver as compensation for these activities; moreover, that section applies only to persons "not engaged in transportation by motor vehicle as a regular occupation or business," and respondent admittedly engages therein on a regular basis.—Studna Investigation of Operations, 88 M.C.C. 52 (55)*.

See also Service Associates case, §203(c), n. 3.

30. Transportation in national parks and reservations.—[Vols. 9, 11, 12, 14, 15].—As operations authorized between Washington, D.C., and Dulles International Airport and between latter and National Airport, though clearly requiring authority from the commission, will be conducted in part over segments of George Washington Memorial Parkway, over which the Secretary of Interior exercises administrative control through the office of National Capital Parks, carriers operating over that highway must comply with present and future regulations through which the control of the Secretary is exercised.—A.B. & W. Transit Co. Extension, 88 M.C.C. 175 (184).

32. Transportation of school children.—[Vols. 9, 19].—Although defendant asserts that a substantial portion of its charter service found to be beyond scope of its incidental charter rights under §208(c) is performed for schools, such transportation is not within the

§203(b1) exemption of schoolbuses; such transportation is exempt only when it is an integral part of the school's educational program and is provided by the regular schoolbuses, whereas defendant's operations are conducted with vehicles used as regular buses in a commercial interstate passenger operation and not vehicles "employed solely in transporting school children and teachers to or from school."—Brunswick Transp. Co., Inc.—Revocation of Certificate, 91 M.C.C. 899 (904-5).

Transportation of school children and their teachers in connection with school-related activities on trips sponsored by school authorities is within scope of §203(b). While language of that exemption is not entirely clear, "school" as used in the abstract refers, not to a building, but to a body of students and teachers. Schooling today encompasses more than classroom instruction, and to find that the transportation exempted is limited to that to and from school buildings, and does not embrace transportation to places of historical or cultural interest unless the school building serves as one terminus of the trip, would preclude performance by schoolbus operators who are the natural persons to whom school authorities would look to for such transportation. Such a result would be contrary to public interest and would create regulatory problems without really benefiting certificated passenger carriers.—Keller, 94 M.C.C. 238 (240-1)*.

40. Transportation incidental to aircraft transportation.—[Vols. 11, 14, 15, 17-19].—Civil Aeronautics Board acted properly in applying criteria in its own regulations for determining air carriers' pickup and delivery zones, and in not considering itself bound by the commission's criteria of a "terminal area," in authorizing air freight forwarder to perform surface pickup and delivery transportation "in connection with air transportation" between Boston, Mass., and Nashua, N. H., 34 miles apart. In effect, CAB published new ground rules, since result of the order is to declare Nashua within the Boston pickup and delivery area so that all air carriers and air forwarders may, on approval of tariffs filed, operate similar surface transportation; however, in holding that CAB applied proper standards, the court does not imply that the commission is bound to rule that Nashua is within the Boston terminal area for the purpose of granting exemptions under §203(b7a) of its statute.—Law Motor Freight, Inc. v. C.A.B., 364 F. 2d 139 (140, 142, 145). [Not arising hereunder.]

The CAB published its regulations and procedures in concert with the commission; and the system, devised to avoid interagency conflict (particularly that arising out of CAB's interpretation of "services in connection with * * * air transportation" and the commission's interpretation of services "incidental to transportation by aircraft) while preserving agency sovereignty, is to give CAB the first judgment, which shall be given non-conclusive respect by the commission. Furthermore, the commission not having been called on for its decision as to the matter in controversy, there is not even a conflict between administrative actions.—Id., pp. 140, note, 145.

In remanding investigation proceeding to the commission for further findings of fact to support its conclusion that considered motor carrier operations of plaintiff, between Greater Wilmington (Del.) Airport and Baltimore, Md., do not fall within the incidental-to-air exemption, the court does not hold that the commission's apparent policy of holding "incidental" to transportation by aircraft all motor transportation within 25 miles of a particular airport is unreasonable or outside of the commission's discretion. However, a clear finding of fact should have been made to substantiate the final determination that plaintiff is not entitled to the §203(b)(7a) exemption claimed. If after full consideration, the commission finds facts justifying its determination, its order should be affirmed; the court retains jurisdiction pending such consideration and determination.—Zantop Air Transport, Inc. v. United States, 250 F. Supp. 623 (626)*.

In view of the commission's report on reconsideration, following remand for further findings of fact to support its conclusion that plaintiff's motor carrier operations were not within the §203(b7a) exemption, which amplified and affirmed its prior decision, as well as its written statement (requested by the court) indicating what specific findings of fact sup-

port its determination of the exemption issue, the court concludes that the commission's definition of incidental-to-air motor transportation is within the limits of statutory authority and, also, that its findings that plaintiff's operations do not fall within such exemption are supported by substantial evidence. Accordingly, the commission's decisions and orders are affirmed; complaint dismissed with prejudice.—Id., 272 F. Supp. 265 (266-7)*.

Action challenging the commission's regulations governing exempt incidental-to-air motor transportation, adopted pursuant to §203(b7a), insofar as the rules exempt transportation performed in emergencies. The commission correctly interpreted the statute when it held, in 95 MCC 71 and 95 MCC 526, that motor transportation of property and passengers performed in bona fide emergencies was "incidental" to transportation by aircraft, and therefore exempt; and that such emergency transportation was not substituted motor-for-air line-haul service even though it extended from one airport to territory normally served by another. The commission's differentiation of emergency situations is not arbitrary or capricious, but on the contrary is amply warranted; and inter-city trip, which is not generally "incidental" to an air trip, is inescapable when an emergency occurs and usual local landing is impossible; and the airline absorbs cost of such trip and does not further hinder shippers or passengers.—National Bus Traffic Association v. United States, 249 F. Supp. 869 (871-2)*.

Also, it is legally significant that considered statute has been amended several times since the commission's conclusion in 48 MCC 310, which dealt with the same issue, that sporadic and irregular operations, emergency in character, furnished at airline's expense as a substitute for impossible or impracticable air transportation and not as a complement of, but subordinate to, regular air service, were within the §203(b7a) exemption; such longstanding administrative interpretation, applying to a substantially re-enacted statute, is deemed to have received congressional approval and has the effect of law. See 380 US 678. While construction of "incidental" in the statute might not call for "expertise" wisdom, nevertheless the commission is probably far more aware than a court of the overall considerations applicable to classify a particular motor trip as being within the incidental-to-air exemption; and the courts should be slow to overturn such administrative decisions.—Id., p. 872.

The court views "incidental" as meaning a minor adjunct to the prime matter, of lesser significance, but related and necessary to complete effectuation of the matter in chief. Surely the final phase of the journey on land from an airport to the city where the air trip ends is incidental to transportation by air; and it is immaterial whether it is the usual short trip or a longer trip necessitated by an emergency; such a journey is not of such overall significance that it must be deemed outside the word "incidental" to the air trip. There is no doubt that an emergency situation justifies specialized treatment; the commission's orders, in all respects, sustained..—Id., p. 873.

The commission clearly had jurisdiction to determine the extent of the statutory exemption provided by §203(b7a) and to regulate plaintiff's operations beyond scope of the exemption as so defined. The line of demarcation between exempt and unexempt service is equally important for purposes of application of permissible regulations to motor carriers and for the withholding of impermissible ones by the commission. The commission has the broad power under §204(a)(6) to administer and enforce the provisions of Part II, and to make all necessary orders and prescribe rules, regulations, and procedures for that purpose. Determination of the area of exemption through case-by-case adjudication, or by general rule subject to case-by-case application is within the commission's competence; and no real dissonance appears, in theory or in practice, between the voices of the commission and the Federal Aeronautics Board in this area, taking into consideration their respective objectives and functions in view of the national transportation policy.—Wycoff Co., Inc. v. United States, 240 F. Supp. 304 (308-9)*.

Movements of freight by motor carriers "incidental to transportation by air" within contemplation of the statute must mean something different than motor carrier movements preceding or following air transportation: the

required relationship to air transportation must be "incidental," and in considering the meaning of the exempting language it is proper and necessary to consider the nature and circumstances of the air transportation, including the holding out of its extent by the approved tariffs of the airlines. A movement incidental to air transportation must be incidental to some particular air transportation, not merely to the broad system of air traffic as a whole, and one of the relevant circumstances would seem to be its context with the regulatory plan to which the airline in question is subject. Though this is not the only possible factor, and indeed is not accepted as such by the commission's regulation defining the transportation embraced by the exemption (49 CFR 210.40), it is a relevant circumstance historically, practically, and conceptionally, and its application in plaintiff's case cannot be deemed irrational.—Id., p. 311.

Similar recognition of the limited meaning of the term "incidental to air transportation" in relation to the actual operations of the airlines goes far toward answering plaintiff's contention that the regulation—which limits the exempt zone to the terminal areas of the direct air carriers as provided in tariffs accepted by the Aeronautics Board—must be specially tailored for areas where airports, particularly those receiving jet aircraft, are widely spaced. Congress could not have meant by the exemption to fill the gaps between airports, however extended, by a wholesale substitution of unregulated motor carrier service. The exemption covers handling of airfreight by motor carriers only to the extent that this can reasonably be deemed incidental to air transportation facilities and services in actual operation; to allow a motor carrier by virtue of any claimed exemption from regulation to transport shipments any distance so long as they have prior or subsequent movements by aircraft could only result in the rapid deterioration of effective motor carrier regulation in interstate commerce.—Id., p. 311.

While the Aeronautics Board ordinarily does not approve tariffs that provide for terminal deliveries beyond 25 miles from an airport, the commission has recognized that inflexible mileage restrictions should not be imposed, but that the relation of airline tariffs approved by the board to incidental transportation services furnishes at least a general practical guide, subject to reevaluation by the commission under special circumstances. The definition of the exempt zone, as applied to plaintiff's transportation of airfreight to or from Salt Lake City Airport, was not unreasonable or arbitrary, and even its exclusion of a large industrial plant located slightly beyond 25 miles from the airport and hence not included in approved airline tariffs cannot be called arbitrary or capricious in view of the entire record. Since the decision under review rests on a rational basis, was justified by adequate findings of fact supported by substantial evidence, and was in keeping with persuasive historical and practical considerations, the informed discretion of the commission must be upheld.—Id., pp. 310, 311.

Since the commission has jurisdiction to regulate all motor common carriers engaged in movement of goods in interstate commerce with regard to qualification and hours of work of carrier employees and the safety regulations and equipment standards to be met by carriers, and also has authority to economically regulate all motor vehicles used in interstate commerce except when used exclusively in incidental-to-air transportation of goods, determination of scope of that exemption must logically fall on the commission. Whether that determination is accomplished on an ad hoc basis or by use of the rule making power does not alter the right to make the determination.—Air Dispatch, Inc. v. United States, 237 F. Supp. 450 (453)*.

No conflict has arisen between the commission and the Civil Aeronautics Board as to regulations adopted by the commission to govern such exempt transportation; nor have those regulations been attacked as an unreasonable exercise of power vested in the commission; therefore, inquiry into substance of the regulations would be premature. Finding that the commission has jurisdiction to define scope of the §203(b7a) exemption is dispositive of litigation attacking its statutory authority to promulgate the regulations in issue.—Id., pp. 451-3.

To come within scope of the incidental-to-aircraft exemption of §203(b7a), motor transportation must be confined to transportation

in bona fide collection, delivery, or transfer service of shipments which have been received from, or will be delivered to, an air carrier as part of a continuous movement under a through bill of lading covering, in addition to the air line-haul movement, the collection, delivery, or transfer service performed by motor carrier.—Motor Transp. of Property Incidental to Air, 95 M.C.C. 71 (85)*.

It is immaterial whether a shipment moves under the billing of a direct air carrier or an air freight forwarder as far as the operation of the exemption is concerned. Since the Federal Aviation Act classifies both as air carriers, and an air freight forwarder is considered by the C.A.B. to be an air carrier, rules governing participation of air freight forwarders in air-motor transportation make no distinction between direct and indirect air carriers. A substantial portion of air freight forwarder traffic moves to or from points beyond the terminal areas of air carriers, with shippers being charged air forwarder rates between air terminals and motor carrier's published charges between air terminal city and ultimate origin or destination; such forwarder service is similar to that furnished by direct air carriers through connection with regulated motor carriers; and the motor movement beyond airline terminal areas is not within the §203(b7a) exemption.—Id., pp. 72-3, 88-90.

Geographical limits within which exempt transportation may be performed are not fixed specifically but, as held in 61 MCC 595, motor carriage to be exempt must be performed within terminal area established by the line-haul air carrier in tariffs filed with the CAB. However, since many airfreight users' plants are outside present terminal zones established in air carriers' tariffs, and geographical limit of the §203(b7a) exemption would automatically expand should the CAB allow air carriers to extend their terminal areas, the commission should retain some control in order to ensure that the exempt transportation is truly "incidental" to air carriage. Therefore, regulations adopted (reflecting the definition in 61 MCC 595) provide that, either upon the commission's own motion or on petition of any interested person, a proceeding may be instituted looking toward individual determination or definition of geographical extent of the §203(b7a) exemption at a particular point.—Id., pp. 76-8, 85-7.

It is not advisable to set any specific mileage limit within which substituted motor-for-air transportation in emergency situations, such as those due to bad weather or equipment failure, would fall within the statutory exemption. It is stressed, however, that such motor transportation must be truly emergency in character, and must be caused by conditions beyond control of the air carrier, in order to be exempt under §203(b7a); over-solicitation of available cargo space does not constitute such an emergency situation; nor does fact that airport cannot receive jet planes clothe an operation to and from nearest jet airport with the character of an emergency. Decision as to what constitutes an emergency situation must be made by direct air carriers in the interest of public safety.—Id., pp. 75, 87-8.

Incidental-to-aircraft transportation of passengers, unlike the transportation of property, is exempt under §203(b7a) even though not arranged or paid for by the line-haul air carrier or provided under a through ticket; but it may not involve a motor movement of too great a distance. While prior or subsequent movement by a line-haul carrier is fundamental to the concept of incidental transportation, it is equally fundamental motor carriage must be distinguishable from line-haul motor transportation; hence, incidental-to-air motor carriage of passengers must not involve a movement over so great a distance as to be characteristic of an independent journey approaching in significance (rather than being subordinate to) the prior or subsequent air journey.—Motor Transp. of Passengers Incidental to Air, 95 M.C.C. 526 (528-9, 533)*.

And unlike such exempt transportation of property, which must be limited to that performed within line-haul air carriers' terminal areas established in tariffs filed with CAB, the necessary definiteness provided by such tariff filings can, with respect to transportation of passengers, be provided effectively only by setting precise limits to the geographical extent of the exemption. Data of record is convincing that motor passenger service for a distance in excess of 25 miles takes on the char-

acter of a line-haul operation, as distinguished from the customary terminal service; therfore, prescribed regulations governing the incidental-to-air motor carriage of passengers set a radius of 25 miles of the pertinent airport as a geographical limit to the exemption; however, all portions of the commercial zone of any municipality, or any part of which is within such 25-mile radius, will be deemed to lie within the exempt zone and, as was done in 95 MCC 71, provision is made for individual determination of the exempt zone at a given airport where such action is shown to be justified.—Id., pp. 533-5.

But, following the reasoning and decisions in 48 MCC 310 and 95 MCC 71, no specific mileage limit is fixed for substituted motor-for-air transportation of passengers in emergency situations; such transportation must be truly emergency in character; and determination that an emergency exists rests with officials of the air carrier.—Id., pp. 529, 537-8.

In view of modus operandi of both the airlines and limousine operators, to require that exempt passenger transportation entail through ticketing or travel at the air carriers' expense would render virtually all interstate limousine service subject to certificate and permit requirements of the act. Such a requirement, long after passage §203(b7a), would disrupt airport transportation services, and seems unnecessary because of economic and practical considerations which should limit the service to that performed as an adjunct to line-haul air transportation. Nor is a requirement applicable to movement of freight necessarily appropriate to the transportation of passengers.—Id., p. 535.

Consideration of dictionary definitions of "incidental" together with prior interpretations of the §203(b7a) exemption, as applicable both to passenger and property carriers, is persuasive that Congress must have intended "incidental to transportation by aircraft" to mean something more than "having an immediately prior or subsequent movement by aircraft." It could be argued, on analogy with §203(c), that such "incidental" transportation must be performed within a reasonable terminal area of the air carrier and be limited to a bona fide terminal, as distinguished from line-haul service. The CAB proceeding to determine zones within which air cargo carriers may provide pickup and delivery service, and the commission's pending rulemaking proceeding involving incidental-to-air transportation, are both limited to transportation of property; a similar rulemaking proceeding will be instituted to determine scope of the §203(b7a) exemption with respect to transportation of passengers.—Hatom Corp., 91 M.C.C. 725 (729-30)*.

For those reasons, no determination should be made in instant application proceedings of area in which the exemption of §203(b7a) might apply to passenger operations; however, because applicants' proposed limousine service involves distances of 26 to 65 miles, none of the proposed operations should at this time be found to fall within the geographic scope of that exemption.—Id., pp. 731, 733.

To come within the incidental-to-aircraft exemption of §203(b7), collection, delivery, or transfer service in vicinity of Salt Lake City Airport on shipments moving on the direct (line-haul) air carrier's bill of lading must be confined to points named in such carrier's Salt Lake City Airport terminal area tariff as filed with CAB; and if shipments move under billing of an air forwarder (an indirect air carrier), such service must be confined to points in the forwarder's Salt Lake City Airport terminal area tariff.—Wycoff Co., Inc., Extension, 89 M.C.C. 369 (371)*.

Since an air freight forwarder is in effect an indirect air carrier and has been so defined and classified by Civil Aeronautics Board, and the line-haul movement of the freight is performed by an air carrier, the freight is "air freight" whether tendered to delivering motor carrier by a direct air carrier or by an air freight forwarder.—Panther Cartage Co. Extension, 88 M.C.C. 37 (41).

Following decision in 61 MCC 587 that the reasonable terminal area of an air carrier is that established by such carriers in their tariffs filed with CAB, "incidental" motor operations confined solely to transportation between the terminal area points and the airport city named in the air freight forwarder's tariff are legitimate collection, delivery, and transfer services, provided such pickup and delivery points are not beyond the limits of the nal area established by the air carrier which

performs the air portion of the line-haul transportation; conversely, if the motor operations extend beyond the limits of the terminal area established by the line-haul air carrier, such operations are line-haul motor operations not within the §203(b7a) exemption even though conducted to points named in the air forwarder's tariff.—Id., pp. 40, 41.

Since the exemption of §203(b7a) speaks of transportation by motor vehicle when incidental to transportation by "aircraft," rather than by "air carriers," and following a strict interpretation of exemptions, interpretation limiting areas in which motor transportation (including that performed for air freight forwarders) is partially exempt to the terminal areas of the air carriers whose aircraft perform the air line-haul is entirely proper; any broader interpretation would, without justification of record, serve only to divert traffic from authorized motor carriers. Accordingly, any points named in supporting air forwarder's tariff which are within the terminal areas of air carriers, serving the Cleveland airport may be served by applicant without authority from the commission, and those which are not, may not be so served.—Id., p. 41.

Following principle established in 48 MCC 310, proposed motor service between Cleveland and the Columbus, Dayton, and Akron airports, limited to occasional emergency shipments transported at the air forwarder's expense and arising from inability of the line-haul air carrier to accept the shipments for air transportation because of airplane overloads or adverse weather conditions, is likewise within exemption of §203(b7a).—Id., p. 41.

Assuming that each of supporting air forwarders has filed with CAB its own tariff providing rates between Bradley Air Field, Conn., and surrounding terminal area points, that the same rates apply at such points as to and from Bradley Air Field, and that pickup and delivery services performed by applicant are included in such rates, applicant's transportation of shipments tendered by the forwarders under their bills of lading for collection, delivery, or transfer requires no authority from the commission if such terminal area points are not beyond limits of the terminal area established by the air carrier that performs air portion of the line-haul transportation.—Special Delivery, Inc., Extension, 88 M.C.C. 275 (276).

And occasional movements between Bradley Air Field and five other airports in Massachusetts, New York, and New Jersey, arising from inability of airlines to accept shipments for air movement because of inclement weather or airplane overloads, are likewise within exemption of §203(b7a) if the air forwarders' tariffs list such other airports, shipments move on the forwarders' bills of lading, and they absorb applicant's charges. However, authority is required for proposed transportation for supporting forwarders of parcels from Bradley Air Field to the other five airports on a regular basis and, also, of parcels and baggage between Bradley Air Field and points in Connecticut and western Massachusetts not designated as terminal area points in the forwarders' tariffs.—Id., pp. 276-7.

Transportation of a shipment received from or delivered to an air carrier as part of a continuous movement under a through air bill of lading is "incidental" to transportation by aircraft when it is limited to a bona fide collection, delivery, or transfer service within a reasonable terminal area of the air carrier; such a reasonable terminal area was found in 61 MCC 587 to be that established by the air carriers in their tariffs filed with Civil Aeronautics Board, on assumption that CAB would reject any publication resulting in unreasonable enlargement of such terminal area. —Air Cargo Terminals, Inc., Extension, 88 M.C.C. 468 (469).

And if traffic is tendered to the motor carrier by an air freight forwarder (an indirect air carrier) under such forwarder's bill of lading, the motor operations are considered legitimate collection, delivery, or transfer if confined to such points named in the forwarder's tariff as are not beyond limits of the terminal area of the direct air carrier which performs the air portion of the line haul.—Id., p. 470.

Motor operations in Anchorage, Alaska, area in connection with prior or subsequent air movement from or to "Outside" may or may not be exempt under §203(b7a); see 61 MCC 587 and 88 MCC 37.—Al Renk & Sons, Inc.—Alaska "Grandfather" Application, 89 M.C.C. 91 (96, note).

Though applicant may operate under the

air-passenger exemption in transporting between Washington, D. C. and National and Dulles-International Airports (and between those airports) persons having an immediately prior movement, or intending an immediately subsequent movement, by air, that exemption does not extend to persons who will not themselves travel by air, even though they have good reason to utilize proposed limousine service.—A.B. &W. Transit Co. Extension, 88 M.C.C. 175 (179, 182-3).

Respondent air carrier's motor transportation of property, having a prior or subsequent movement (to or from Detroit) by air, between Greater Wilmington (Del.) Airport and Baltimore, Md., 65 miles, does not fall within partial exemption of §203(b)(7a), but is a separate line-haul motor operation for which authority is needed. Motor transportation, to be within that exemption, must be a bona fide collection, delivery, or transfer of shipments, within a reasonable terminal area of the air carrier as construed in 61 MCC 587 and 95 MCC 71. Record clearly shows that respondent does not serve Detroit-Baltimore shippers by use of the airport serving Baltimore, but seeks to link the Wilmington Airport to the Baltimore area in an inter-community line-haul service which requires appropriate authority; and respondent's argument that it needs a broader terminal area for an efficient Detroit-Baltimore airline service is not material to determination of lawful scope of the statutory exemption.—Zantop Air Transport, Inc.—Investigation of Operations, 102 M.C.C. 457 (462-3)*.

As established in 61 MCC 587, and other prior decisions, motor transportation of property in order to come within statutory exemption of §203(b7a) must be confined to transportation in bona fide collection, delivery, or transfer service, of shipments received from or to be delivered to an air carrier as part of a continuous movement under a through air bill of lading covering, in addition to line-haul movement by air, the collection, delivery, or transfer service by motor carrier. While not defining geographical limits of such exempt carriage, cited case clearly distinguishes motor transportation on behalf of, and within terminal area of, an air carrier from transportation which, though essentially part of a through air-motor service, extends beyond air carrier's terminal area and must be considered an independent line-haul motor service; former being within the exemption while latter is not; and terminal areas ordinarily are those established by air carriers in tariffs filed with the C.A.B. And those criteria have been applied uniformly since the cited decision.—Film Transit, Inc., and Air Dispatch, Inc.—Investigation, 98 M.C.C. 145 (150-1).

Motor carrier respondent does not deny that it has transported, without specific authority, a large volume of traffic between Memphis airport and numerous points located outside air freight-forwarder respondent's terminal areas as established in valid tariffs on file with C. A. B. Designation in that manner of points to be served through motor carrier collection and delivery service has long been regarded as the most basic characteristic of a true "incidental-to-air" operation; and if, as respondents urge, determination of such terminal areas is reserved by statute solely to the C. A.B., it would have been a simple procedure for the air forwarder to file with that agency an appropriate tariff naming all points presently at issue. That requirement not having been met, it is clear that under the most liberal interpretation of §203(b7a), and irrespective of distances involved, the questioned motor transportation is not within the "incidental-to-air" exemption. Respondent has been, and is, engaged in unlawful line-haul motor carriage; cease and desist order entered.—Id., pp. 151-2.

Although the incidental-to-aircraft exemption of §203(b7a), insofar as property carriers are concerned, is being reexamined in a rule-making proceeding, for purpose of expeditious disposition of instant application the issues are treated in light of 61 MCC 587, which found that the exemption embraces only bona fide collection, delivery, or transfer of shipments received from or delivered to an air carrier as part of a continuous movement under a through bill of lading covering that service as well as the air line-haul, and 83 MCC 229, which found that while a pickup and delivery service may be essentially a part of a through air-motor service, it is not incidental-to-air within the exemption unless it is performed for or on behalf of an air carrier.—

Con-Ov-Air Air Freight Service, Inc., 92 M.C.C. 526 (527-8).

While airlines' agency which arranges for motor pickup and delivery for its members lists the seven involved points in Middlesex County, N.J., among those receiving such service on shipments moving to or from New York City airports, a substantial portion of applicant's service is performed on behalf of, and pursuant to arrangements with, shippers and consignees rather than air carriers; and though the traffic normally moves on a single airline waybill to or from shipper's or consignee's place of business, applicant's charges are separately itemized, and it advances those charges to the air carriers on shipper's behalf. Such operation is independent line-haul service outside scope of the exemption.—Id., pp. 528-9.

Although applicant seeks authority between two airports and points apparently within terminal areas of air carriers serving them, the service proposed will not be incidental to transportation by aircraft within exemption of §203(b7a) when he will transport shipments under his own bills of lading and not as agent for the one tendering him the traffic.—Nickerson, 88 M.C.C. 186 (188).

45. Operation by or for agriculture cooperative associations.—[Vol. 19].—Appellant cooperative (organized for primary activity of transporting its members' farm products and supplies) being a "cooperative association as defined in the Agricultural Marketing Act," its trucking operations are exempt from economic regulation by the commission under §203(b5); and such cooperative does not lose its statutory status by engaging in an activity other than its primary activity, so long as such other activity is incidental to the primary one and necessary to its effective performance. Nothing in the legislative history of §203(b5) indicates that Congress intended to limit the type of commodity hauled or otherwise condition the exemption granted therein; absence of a commodity limitation in §203(b5) contrasts with presence of such limitations in the preceding and following §203(b) exemptions, and conclusion that the difference was deliberate is strengthened by fact that provisions of §203(b4a) and §203(b5) were initially stated as clauses in a single sentence.—Northwest Agricultural Coop. Ass'n v. I.C.C., 350 F. 2d 252 (253-5, 256)*.

Appellant's transportation of non-farm products and supplies was incidental and necessary to its farm-related transportation both in character and amount—incidental because limited to otherwise empty trucks returning from hauling member farm products to market, and producing a small return in proportion to its income from farm-related transportation; necessary because it is not economical to operate trucks empty on return trips, and because the additional income is no more than necessary to render performance of its primary farm transportation financially practicable. Appellant is not engaged in a "general trucking business"; its trucking operation, viewed as a whole, is a farm service performed jointly by its members for themselves; therefore, since considered return haul transportation did not deprive it of its character as a "cooperative association" under the Agricultural Marketing Act, it retained its right to the §203(b5) exemption.—Id., pp. 255, 257.

Defendant cooperative association is not entitled to exemption under §203(b5) when it does not meet definition of such an association set forth in the Agricultural Marketing Act; its sole business is for-hire motor transportation of property for members and nonmembers, a substantial part of transportation it performs for members involves processed materials and is not related to their activities as farmers, and it does not meet requirement of that definition as to amount of business transacted for members and nonmembers. The carriage of dressed and frozen meats and packinghouse products for shipper members in their capacities as packinghouses, of cattle for a member in its capacity as a cattle dealer, and of fruits for two members in their capacities as motor carriers, not being related to farming activities of those members, is not "member business" within that statute. The cooperative does not qualify as a bona fide agricultural cooperative association.—I. C. C. v. All American Association, 281 F. Supp. 18 (20-22).

Even if shipper association to which defendant purportedly trip-leased vehicles with drivers were found to be an exempt coopera-

tive association within purview of §203(b5), any such exempt status would not redound to defendant's benefit in considered transportation of an unauthorized commodity because (1) as an authorized carrier it is specifically prohibited by §207.6(a) of the commission's leasing regulations from leasing to any private carriers or shippers, and (2) the purported leases were totally illegal by their very provisions so that the vehicles involved were not "controlled and operated" by the cooperative as required by §203(b5), but were in fact operated under defendant's control.—United States v. Lowther Trucking Co., 229 F. Supp. 812 (815).

Defendant cooperative association is not entitled to exemption under §203(b5) when it does not meet definition of such an association set forth in the Agricultural Marketing Act; it does not deal in farm products or supplies, does not control and operate vehicle in for-hire transportation service for farmer members, and does not meet requirement of that definition as to amount of business transacted for members and nonmembers. While five farmers are its incorporators, members, officers, and directors, the cooperative was organized by two individuals and their wholly owned vehicle leasing company so their vehicles could "keep rolling"; those two individual defendants sign all the cooperative's checks, determine all matters of policy and detail, and manage all the transportation; farmer members are not familiar with its business and transportation, and no service is rendered for them individually. The cooperative does not qualify as a bona fide agricultural cooperative association; it exists in name only and is a fictitious sham.—I.C.C. v. Iowa Cooperative Assn., 236 F. Supp. 873 (875-6, 877-8).

And defendant hog slaughtering plant was not incorporated as and does not qualify as an agricultural cooperative association. It is an ordinary commercial business corporation and was formed as a civic endeavor for promotion of industrial development of the community. While many of its stockholders are farmers, each stockholder has many votes as shares of stock owned, and there is no limitation on the rate of dividend that may be paid. Nor is the plant eligible for membership in defendant cooperative since it does not raise or feed hogs, and all those slaughtered by it are purchased from outside sources. As used in statutory definition of such a cooperative, "farmers" includes not only individuals, but also corporations, partnerships, and other business entities; however,such persons (whether natural or corporate) must be engaged to some extent in the common pursuit of farming in order to qualify for membership in a lawfully constituted cooperative; the slaughtering plant is not a farmer and is not engaged in agricultural production.—Id., pp. 876-7.

See also Agricultural Transp. Ass'n of Texas v. King, §202(b), n. 5.

Whether defendant nonstock corporation is entitled to operate under the agricultural cooperative exemption of §203(b5) depends on whether it qualifies under the Agricultural Marketing Act, which requires that it be owned and controlled by farmers acting together for their mutual benefit to promote the merchandising of their farm products, or in purchasing, distributing, furnishing, etc., farm supplies or farm business services; such an association may not deal in farm products, supplies, or business services with or for nonmembers in an amount greater in value than the total amount of such business transacted by it with or for members.—I.C.C. v. Nelson Cooperative Marketing Assn., 209 F. Supp. 697 (700).

A "farmer" is a person, natural or corporate, actively engaged in farming operations to some extent; and persons or corporations engaged in businesses such as canneries, meat packinghouses, dealers in produce, and the like, do not qualify as farmers solely because farm products are used by them as raw materials in their manufacturing processes. Similarly, manufacturers of farm implements and farm supplies do not qualify as farmers merely because their products may be used on a farm or by a farmer. Thus, business transactions with such nonfarming entities is not member business for purposes of the Agricultural Marketing Act. The commission's views as to qualifying criteria of a bona fide cooperative association and nature of the service it may provide, expressed in 86 MCC 5, are persuasive and entitled to special consideration,

particularly in light of the absence of legal precedents.—Id., pp. 700-1.

Under the precepts of the Agricultural Marketing Act, transportation performed by a cooperative association must directly benefit the farming operations of its members, regardless of whether the services are performed for members or nonmembers. Transportation of canned goods from canneries to grocers and chain stores, of processed meats from packinghouses to meat dealers, of cheese from brokers to distributors, and other transportation which is not necessary to farming activities of farmer members are activities in which even a bona fide cooperative association may not rightfully engaged.—Id., p. 701.

Accordingly, defendant does not qualify as such an exempt cooperative association, since (1) it is not a producer-controlled association, its operations being controlled and managed by three individuals not engaged in any farming activities related thereto; (2) its primary purpose is not the marketing of farm products of, of the furnishing of farm business services to, its members, and its sole activity in transportation for compensation which it mostly performs for canneries, packinghouses, and other persons ineligible for membership; and (3) the value of its dealings in services with or for nonmembers or "members" who are actually ineligible exceeds that of its dealings with eligible members, being over 90 percent of the total value of its transportation, and it does not attempt to determine whether shippers submitting traffic to it are engaged in farming operations.—Id., pp. 699-700, 701.

50. Carriage of livestock, fish, agricultural commodities.—[Vols. 9, 11-19].—Since "agricultural commodities" are those products, whatever they might be at any point of time, which are exempt under §203(b6) when they are carried in straight loads, the purpose of an interstate certificate to transport agricultural commodities can only be to authorize transporation of those items in mixed loads with non-exempt goods. Accordingly, acceptance of the commission's interpretation that coverage of the "agricultural commodities" class in such certificates remains fixed as of time of issuance thereof is difficult because, as judicial or legislative changes are made in items encompassed within the §203(b6) exemption, it is arguable that there are corresponding changes in coverage of "agricultural commodities" certificates.—Lester C. Newton Trucking Co. v. United States, 264 F. Supp. 869 (876)*.

Transportation of fresh hog carcasses, which the court finds are fresh meat for which a degree of refrigeration is required, is not within the agricultural commodity exemption of §203(b). While dressed poultry was held to be an exempt agricultural commodity, not manufactured, in 113 F. Supp. 599, in amending the statute since that time Congress specifically incorporated into §203(b6) the commission's Administrative Ruling No. 107 which shows: Meat and meat products, fresh, frozen or canned—not exempt. Although live hogs are ordinary livestock when they are shipped into defendant slaughtering plant, after they are killed and processed as described they are no longer ordinary livestock; they have become meat, or as variously described, fresh pork, dressed pork, fresh hog carcasses, etc., having lost their exempt status as "ordinary livestock." Furthermore, the parenthetical phrase "(not including manufactured products thereof)" in §203(b6) does not modify "ordinary livestock" but relates only to "agricultural (including horticultural) commodities" therein.—I.C.C. v. Iowa Cooperative Assn., 236 F. Supp. 873 (878-9).

See also I.C.C. v. Schultz Transit, Inc., §203(c), n. 3.

Dehydrated alfalfa meal was classified as nonexempt by the commission's Administrative Ruling No. 107, which Congress adopted in the 1958 amendment of §203(b6), and transportation thereof requires appropriate authority. Defendant had at least constructive knowledge of the nonexempt status of that commodity by virtue of its possession of Ruling 107, and its unauthorized transportation thereof under purported trip-leases of vehicles with drivers to a shipper association violated §206(a) when, under terms of the "leases," such operations were in fact conducted under its control.—United States v. Lowther Trucking Co., 229 F. Supp. 812 (814, 815, 817).

See also Atchison, T. & S.F. Ry Co. v. United States, §204(e).(f). n. 2.

Any authorized interstate motor carrier may engage in transportation of exempt commodities without affecting its status as a for-hire carrier under the act.—Briggs, 92 M.C.C. 707 (716).

Exemption of grain truckers from licensing and rate regulation by §203(b6) does not indicate any intent of Congress to isolate them from competition.—Grain in Multiple-Car Shipments—Rvier Crossings to So., 318 I.C.C. 641 (685)*.

Application of the test enunciated in 351 US 49, wherein the Supreme Court considered the issue of manufactured agricultural products, makes it clear that casien is not an exempt agricultural commodity, but a manufactured product thereof. It is produced from milk which is precipitated by adding an acid, then washed, pressed, disintegrated, dried, and pulverized; after such processing, it no longer retains a substantial identity with its source commodity. Casien is a distinctive name; its use, for example, as an ingredient in paint and plastics, is different from the origin product; and its size, shape, value, texture, chemcial composition, and properties give casien a character distinctive from milk. Also, unlike exempt powerdered milk, which has retained its substantial identity and can be returned to the origin product merely by adding water, casien is not even soluble in water and cannot be returned to the origin product. Therefore, casien is not an exempt agricultural commodity under provisions of §203(b6); petition for declaratory order denied.—Cossitt Motor Exp., Inc.—Powdered Milk and Casien, 96 M.C.C. 557 (558-9).

It has been an established rule since long before passage of the Transportation Act of 1958 that the combining of exempt and nonexempt commodities in mixed shipments is unlawful without appropriate authority. See 166 F. 2d 116 and 186 F. 2d 400.—Hughes, 89 M.C.C. 471 (477)*.

Though the 1958 amendment of §203(b6) specifically incorporated Administrative Ruling No. 107 for purpose of establishing status of commodities therein listed as exempt or nonexempt, second proviso of the amended section establishes status of a number of commodities classified otherwise in that ruling; thus, to extent that the listing in Ruling 107 deviates from language of that proviso, it must yield. While language of the amended section is not entirely clear, since it embraces a number of specific commodities, general effect of that in the second proviso pertaining to fish and shellfish is to broaden the exemption to include cooked as well as fresh seafoods, and the legislative history indicates intent of Congress to exempt such commodities as deviled crabs, clams, or lobsters, codfish cakes, salamon croquettes, and the like. —Id., pp. 484-5.

Transportation of prepared food products such as frozen french-fried potatoes is not exempt from certificate and permit requirements of the act; and mere presence of such a "regulated" commodity in mixed shipments with "otherwise exempt" commodities has been found to destroy the "exempt" status of the latter, thus subjecting all commodities in the mixed shipments to full economic regulation.—Home Transfer & Storage Co., 88 M.C.C. 223 (229-30)*; similarly, while grain is an "exempt" commodity within §203(b6) and may lawfully be transported in straight t..l. shipments without authority from the commission, applicant is cautioned that it may not transport grain in mixed shipments with commodities subject to the permit or certificate requirements of the act.—Burton Trucking, Inc., Extension, 94 M.C.C. 790 (792).

Wooden bolts are "cut to length" sections of a felled tree and therefore unmanufactured agricultural commodities within definition in 52 MCC 511; likewise firewood, which is designed for destruction and is split from a bolt without regard to form or shape, solely to reduce the bolt to billets of size suitable for the ordinary wood-burning combustion chamber, is within the exempt category. But shingles made from bolts, and shakes of handsplit and resawn type, which are products of machine work, are manufactured products; and shakes made entirely by hand but split to predetermined dimensions, with purpose of producing an article of lasting specific utility, are as certainly an article "made for use from raw or prepared material," within definition of "manufactured" in 283 US 1, as similar articles made by machinery; thus, transportation of either shingles or shakes requires authority from the commission.—Everett—Investiga-

tion of Operation, 88 M.C.C. 784 (787-8).

Act of 1958: [Vol. 19].—Decision in 315 US 475 requires that the commission reconsider the grant of certificate which substantially curtailed appellant's prior operations (in the proceeding on its application for "grandfather" authority under §7(c) of Transportation Act of 1958 to transport frozen fruits, berries, and vegetables and frozen seafoods and poultry when transported therewith) in the light of appellant's status as a common carrier, its demonstrated ability to perform the service, and the transportation characteristics and marketing pattern of considered seasonal agricultural products.—Willis Shaw Frozen Exp., Inc. v. United States, 377 U.S. 159*.

The commission's conclusion, on reconsideration of "grandfather" application proceeding under §7(c) of Transportation Act of 1958, that shipments handled during and since 1954 should be considered (but traffic handled prior to 1954 was too remote to be considered) did not arbitrarily restrict applicant's evidence; and its adoption of a four growing season cut-off period as a reasonable period for determining the scope and continuity of applicant's operations on and since the critical date is not arbitrary nor an abuse of agency discretion. By affording an agricultural-commodity carrier a four season cut-off, the commission assures that he will not be penalized for a bad crop year, while also maintaining the public interest in regulating all transportation that does not meet the statutory "bona fide operation" criteria. Also, in accordance with guidelines relating to "holding out" as developed in 315 U.S. 475, the commission correctly considered and evaluated applicant's holding out and solicitation in connection its actual service during the "grandfather" period. Sustained.—Hughes v. United States, 278 F. Supp. 11 (17, 20-21)*.

Decisions concerning "grandfather" clause in the Motor Carrier Act of 1935 are applicable to cases arising under §7(c) of Transportation Act of 1958; and in administering such a clause, as established in 315 US 15 and 315 US 315, the test or standard is the scope of bona fide operations on the statutory cut-off date and since that time. Thus, maximum extent of a carrier's "grandfather" rights under the 1958 statute is fixed by the extent of his operations on May 1, 1958. Operations subsequent to that date are relevant for limited purpose of showing continuance thereof, but no new rights may be acquired by such subsequent operations.—Denton Produce, Inc. v. United States, 270 F. Supp. 402 (405-6)*.

The commission's order granting in part, and denying in part, plaintiff's "grandfather" application for authority to transport bananas from Gulf ports is amply supported by evidence of its operations, including shipments transported and origins and destinations thereof, during the period from January 1957 to December 1959. Therefore, although urged by plaintiff, it would not be proper to remand the case for commission consideration of new operations, begun after entry of order under review, since those operations would not support grant of additional authority requested. To now order reopening, for consideration of such new operations, is not justified; moreover, to do so would be to require the commission to consider remote and irrelevant operations. Authority granted plaintiff was proper in all respects, and that not granted was properly denied; complaint dismissed.—Id., pp. 406-8.

Congress has entrusted to the commission the delineation of territorial scope of motor carrier authority to be granted, and the judgment required is highly expert; only where the error is patent may a reviewing court say the commission transgressed. Thus, in carrier's action to set aside commission orders granting, in part, its application under §7(c) of Transportation Act of 1958 for "grandfather" authority to transport frozen fruits, berries, and vegetables, the court must review evidence submitted by applicant upon which the commission determined the extent of its bona fide operation as contrasted with mere holding out; and, as did the full commission on reconsideration, the court review will include shipments transported in 1956 and, also, will treat the three commodities involved as having been handled in a single commodity class.—Lester C. Newton Trucking Co. v. United States, 264 F. Supp. 869 (877-9)*.

Upon detailed consideration of the evidence of record (analyzed from standpoint of the three areas of operation plaintiff seeks to have authorized) and comparison of authority

sought in each area with that granted by the commission on evidence of shipments not only actually handled but also authorized to be transported under "general commodities" and "frozen foods" clauses in certificates then held by plaintiff (applicant), the court concludes that the commission's decision as to scope of the "grandfather" authority to be granted may not be disturbed. Temporary stay of the commission's order dissolved and the action dismissed.—Id., pp. 879-85, 886.

Evidence sustains the commission's partial denial of plaintiff's application under §7(c) of Transportation Act of 1958 for "grandfather" authority to transport considered commodities in straight or mixed loads from origins in 27 States to points in 39 States and the District of Columbia. Careful review of the whole record, in light of criteria set forth in 315 US 475, does not show that the commission transgressed in imposing restrictions on geographical scope of the operations with respect to areas of origin and destinations; due consideration was given to plaintiff's status and performance as a common carrier of a restricted number of commodities, transportation characteristics and marketing patterns of the seasonal agricultural products involved, and to carrier's demonstrated ability to perform the described services, as required by decision in 377 US 159, in placing restrictions on commodities plaintiff may carry between the several origins and destinations. Commission orders delineating scope of plaintiff's "grandfather" authority are in accord with the applicable law and supported by substantial evidence; complaint dismissed.—Colonial Refrigerated Transp., Inc. v. United States, 255 F. Supp. 999 (1002-4)*.

If plaintiff is correct in its contention that origins and destinations of the perishable commodities it transports change frequently and unpredictably from year to year in the normal course of business, the commission's failure to consider data covering the years 1955, 1956, 1959, and 1960 has prevented plaintiff from obtaining a determination with regard to the full scope of its service and its unpredictable and fluctuating nature. Should such evidence support a conclusion that plaintiff's operation was area-to-area, the commission's authorization of point-to-point service would change its character in a manner not authorized by law; statewide authority is not the only alternative if the operation was from market area to market area, with stops for pickup and delivery at shifting points within the areas. The commission should have considered the proffered evidence for what bearing it might have on the character of plaintiff's operation; remanded for rehearing in conformity with the court's opinion.—Hale Distributing Co. v. United States, 221 F. Supp. 266 (269, 279)*.

In granting plaintiff only point-to-point "grandfather" authority for transportation of frozen fruits, berries, and vegetables, the commission largely ignored the factor of his holding out, coupled with showing of representative service, which should have been considered under principles of 315 US 475. As to origin territory, the facts of plaintiff's business, particularly his small size and the fluctuating character of the frozen-foods traffic, justify application of the area-of-service concept applied by the commission in other cases; the test used therein to find an area-wide pattern of service—that of widespread service to a representative number of points—should be applied. This does not necessarily require grant of statewide origin authority: for example, countywide authority might be considered.—Jarman v. United States, 219 F. Supp. 108 (112-4, 115-6)*.

Plaintiff's service from the origin area as a whole should determine the destination territory; to base such authority on a point-to-point analysis of shipments from each shipping point used is the sort of pulverization forbidden by the Supreme Court. As to return service, shipments from any point in the destination territory to the whole origin area should be taken into account; this does not require grant of area-wide return authority, but geographically close points should be treated as a unit. Thorough reconsideration of plaintiff's application is needed; case remanded for rehearing and further consideration in accordance with the court's views.—Id., pp. 114, 117, 118.

Purpose of "grandfather" provisions of §7(c) of Transportation Act of 1958 was to assure those entitled to its benefits a substantial parity between future operations and prior

bona fide operations; and actual and substantial, rather than merely potential, service is the standard by which applicant's claim to such rights must be tested. However, once "common carrier" status is established, a carrier holding itself out to transport a group of commodities, and showing actual ability to perform the service held out, is entitled to "grandfather" authority to transport the entire group of commodities between all points and areas authorized in absence of commission findings, supported by substantial evidence, that it had limited its holding out between certain points or areas. The mere fact that carrier did not transport all or every commodity between all points and areas served does not justify limiting commodities to be transported in the future.—Willis Shaw Frozen Exp., Inc. v. United States, 256 F. Supp. 257 (263-4)*.

The commission failed to apply the principles of 315 US 475 when, in determining scope of plaintiff's (applicant) "grandfather" authority to transport frozen fruits, frozen berries and frozen vegetables, it undertook to evaluate the carrier's holding out and ability to provide service without sufficient findings as to transportation characteristics and marketing pattern of the agricultural commodities involved. Although considered commodities were not treated as a single commodity class, the commission report discloses no basis or explanation for its findings in that respect; the commission should at least point out wherein the frozen fruits, berries and vegetables hauled by plaintiff differ from those found to comprise a single commodity class in 211 F. Supp. 280. Therefore, since the commission on remand failed to comply with the Supreme Court's mandate in 377 US 159, its conclusions are set aside and the case is remanded for further consideration.—Id., pp. 264-5.

Section 7 of Transportation Act of 1958 conferred no prescriptive operating rights upon plaintiff because of its transportation of crude rubber prior to enactment thereof. Since only the eleven commodities specified in the second proviso of §7(a) were "made subject" to part II by enactment of that statute, §7(c) thereof provided "grandfather" rights only for carriers of those eleven commodities, not including crude rubber, which had been "exempt" and were being specifically made "not exempt."—Midwest Emery Freight System, Inc. v. United States, 202 F. Supp. 229 (233-5)*.

The Congressional intention in amendment of 1958 was to determine the agricultural exemption at its then level, and then to accomplish a roll-back to remove certain articles from the exemption; to accomplish the former, Congress specifically adopted the commission's Administrative Ruling No. 107 as determinative of what was or was not then exempt, and to effect the latter listed 11 specific types of commodities, including "frozen vegetables," that had been held to be within the exemption and would be returned to regulation. The "grandfather" rights conferred by §7(c) of the 1958 act pertain only to those 11 commodities whose transportation was thus expressly made subject to regulation under Part II.—Lester C. Newton Trucking Co. v. United States, 209 F. Supp. 600 (603-4)*.

Ruling 107 provides that "cooked" vegetables are not exempt and were not exempt prior to the 1958 amendment; it also provides that fresh frozen vegetables were exempt prior to that amendment under the authoritative ruling of the Home Transfer case (141 F. Supp. 599, affirmed 352 US 884); both provisions are of equal weight and validity and both must receive full recognition by the court. However, the Home Transfer case did not hold that "frozen vegetables" as such were exempt, but only that those which were merely blanched or heated to point of inactivation of the enzymes and then quick-frozen had not changed their character as fresh vegetables. This constitutes the line of demarcation and gives effect to each provision of the statute; any other conclusion does violence to the express Act of Congress.—Id., pp. 604-5.

The commission is the expert in the field of transportation and its judgment is entitled to great deference because of its familiarity with conditions of the industry it regulates. In adopting the Supreme Court's view in the Home Transfer case, it concluded that cooking vegetables beyond the point of inactivation of the enzymes and then freezing them brings them within the classification of "cooked vegetables" which Congress has said are not (and were not) exempt. That con-

struction of the statute cannot be considered unreasonable; if the result is to fragmetize the industry, it is due to the act of Congress itself, and the remedy must there be sought.—Id., p. 605.

The commission further set out three criteria which it indicated might be applied in the future as to agricultural products in general. Each of the specific frozen vegetables mentioned in the proceedings before the commission and now before the court comes within the first criterion; the court agrees with the commission's opinion that those commodities were not exempt prior to the 1958 amendment and therefore are not entitled to benefits of the "grandfather" clause. With respect to commodities other than those specifically considered, application of those criteria may more properly be presented directly upon a hearing on a cease-and-desist order if such occasion arises.—Id., pp. 605-6.

Basic to a right to haul a particular product under a §7(c) "grandfather" certificate is the requirement that the product must have been an exempt agricultural commodity prior to passage of the 1958 Act and that it was made nonexempt by that Act. Though all products transportated by plaintiff are now nonexempt, whether all were exempt prior to the 1958 statute is another question, which it is not the court's function to determine in the first instance; the precise delineation of an enterprise which seeks the protection of the "grandfather" clause has been reserved for the commission, and within reasonable limits it is for the commission to determine the scope of that delineation.—Ballentine Produce, Inc. v. United States, 209 F. Supp. 679 (683)*.

The commission's arbitrary selection of January 1, 1957, for determining remoteness of transportation of all 11 comodities covered by the Act of 1958, some of which have nothing in common, precludes due consideration of their varying transportation characteristics. In determining plaintiff's "grandfather" rights for bananas and frozen fruits, berries, and vegetables, the commission improperly refused to consider evidence of operations before that date. Those commodities are subject to all the unpredictable factors affecting crops, and practical effect of such refusal was to limit proof of plaintiff's operations prior to May 1, 1958, to one crop season; considering nature of those crops, that short period was not a fair test of the true scope of plaintiff's operations. Under the precept of 315 US 475 to consider a "grandfather" applicant's past operations as a whole, plaintiff should have been permitted to show nature and extent of its operations for a sufficient period prior to 1957 to prevent any distortion of the true pattern of its activities.—Frozen Food Exp. v. United States, 219 F. Supp. 131 (137-9)*.

The commission also improperly refused to consider evidence of plaintiff's holding out and solicitations throughout the "grandfather" period; those factors were not irrelevant or unimportant in determining nature and extent of its bona fide operations; and decisions in 315 US 15 and 475 and 211 F. Supp. 280 support the rule that proper holding out and solicitation are standards to be considered in hearings on "grandfather" applications. Both plaintiff's holding out and solicitation during the entire "grandfather" period and its operations prior to 1957 were proper standards the commission was required to consider, and its failure to consider either one of them was enough alone to invalidate its order. The commission's order set aiide and proceeding remanded for further proceedings consistent with the court's opinion.—Id., pp. 137, 139-40.

Although plaintiff cites 211 F. Supp. 280 in support of its claim that frozen fruits, frozen berriers, and frozen vegetables should be treated as one commodity class as a matter of law, decision therein was reached as a finding on a fact issue, based on the proof in that record; and while the language of the act may not foreclose a fact issue on this matter, nothing therein indicates that those commodities must be treated as one class. But, though there was no proof in plaintiff's application proceeding raising any fact issue on that question, there could be a relationship between that aspect and the holding-out and solicitation issues, and it should be open for proof and further consideration on remand.—Id., p. 140.

Movement of frozen fruits, berries, and vegetables is seasonal and greatly dependent on weather, crop, and market conditions; the traffic moves from and to points where cold

storage facilities are available, and those locations change from season to season; plaintiff's services were primarily on l.t.l quantities, requiring multiple pickups and deliveries at locations which change from time to time. One plaintiff held out to serve all origins in Tennessee, its operations followed the storage point changes dictated by shippers' requirements, and it provided multiple pickup service at 8 widely scattered points; the proof shows that the characteristics of its operations from Tennessee during the critical period entitled it to statewide authority for outbound traffic and that the commission, in limiting "grandfather" authority to two origins, acted arbitrarily and without supporting evidence.—Winter Garden Co. v. United States, 211 F. Supp. 280 (286)*.

Though the record shows that destination points constantly change with changes in prices, marketing practices, and consumer demand, the sole test employed by the commission was predominance of movement, without regard to changing characteristics of the traffic; while its grant of destination points and return territory allowed is supported by the evidence, it abused its discretion in rejecting evidence of plaintiffs' 1956 operations as too remote from the critical date. Seasonal and changing nature of the traffic made consideration of the 1956 shipments crucial; the commission's refusal to consider 1956 shipments denied plaintiffs their statutory right to prove that, in their bona fide operations, changes in origin and destination points were frequent and were attributable to special characteristics of the traffic. Characteristics of the business, properly applied, dictate grant of some additional authority, geographically, to both plaintiffs.—Id., pp. 286-8, 290.

Frozen fruits, frozen berries, and frozen vegetables have the necessary similarities in transportation and marketing characteristics and are sufficiently related to qualify as "a whole class" within ruling in 315 US 475 that the commission may not atomize a "grandfather" applicant's prior service where there is substantial evidence that he was in bona fide operation as a carrier of "a whole class or classes of property." Those foods were processed in same plants, required same transport facilities, and were delivered to warehouses having freezer facilities; all three were actually hauled in mixed truckloads; insofar as plaintiffs held out to carry those items, they should be treated as belonging to the same class. And one plaintiff's withdrawal of its application as to frozen fruits does not invalidate the tests to be applied; it should be permitted to haul frozen berriers and/or vegetables to any point within scope of its authority.—Id., pp. 288, 289.

The commission exceeded its statutory authority in requiring separation of plaintiffs' private and for-hire operations; §7(c) of the 1958 act, which spells out the standards to be applied in disposing of "grandfather" applications, contains nothing that authorizes such restriction. Plaintiffs' bona fide operations as conducted on the statutory date were primarily in l.t.l. quantities consisting of a mixture of their own frozen foods and frozen foods owned by and carried for others; segregation of those operations would drastically change their basic character and thus not assure to plaintiffs the substantial parity between future and past operations required by the "grandfather" clause (315 US 15); plaintiffs have the right to continue to mingle their private and for-hire operations without restriction.—Id., p. 291.

The requirement of §7(c) that an applicant prove bona fide operation on and after May 1, 1958, subjects applicants only to §210, which prohibits dual control of a common and contract carrier unless it is found consistent with public interest, but does not prohibit control of a common or contract carrier by a shipper engaged in private carrier operations; and while the commission has viewed a shipper's control of or interest in a motor carrier applicant as bearing on the applicant's fitness to conduct the proposed operation, it has recognized that fitness is not an issue in "grandfather" proceedings.—Id., p. 291.

In view of the decision in Willis Shaw Frozen Exp., Inc. v. United States, 256 F. Supp. 257, involving an application for "grandfather" authority under §7(c) of Transportation Act of 1958, that absent a finding to the contrary, supported by substantial evidence, a carrier holding itself out to transport a group of commodities and demonstrating its ability to perform the service held out, is entitled to

authority to transport those commodities as a single class notwithstanding its failure to transport all or every commodity between all points and areas, reevaluation of the evidence in proceeding on applicant's "grandfather" application under that statute is required; and, on further hearing, the entire record is considered.—Querner Truck Lines, Inc., 102 M.C.C. 616 (617, 618)*.

Considering characteristics of transportation services rendered by applicant prior and subsequent to the critical date, and viewing the proceeding in light of applicant's status and performance as a common carrier, scope of the "grandfather" authority to which it is entitled, commoditywise and territorially, is determined with full consideration of its common-carrier undertaking in light of the overall pattern of its past operations. Applicant's demonstrated ability is evaluated within the context of distinguishing substantial operations from incidental, sporadic, or infrequent service; and territorial authority is granted where record shows similar characteristics of service to areas having some cohesion in an ecconomic and transportation sense and that applicant has served a sufficient number of points in each area. Prior findings modified and certain additional authority is granted, conditioned on applicant's surrender of its previously issued certificate for cancellation.—Id., pp. 618-20.

On reconsideration, and in light of the commission's recent review of the statutory standards of §7(c) of Transportation Act of 1958, particularly with respect to remoteness of shipments, applicant is entitled to somewhat broader grant of "grandfather" authority under that act for transportation of bananas from East Coast ports. Overall pattern of applicant's operation (including such factors as shifting origin points and all shipments transported, both before and after Jan. 1, 1957), when viewed in the light of the standards of 315 US 475, shows an undertaking by applicant, as supported by representative shipments, to serve all three involved origin ports to active customer locations in shipper's sales territory. However, paucity or complete lack of shipments to some destinations shipper claims to be active does not support grant of "grandfather" authority; granted in part.—M. D. Cressy Co., Inc., 98 M.C.C. 160 (162-4)*.

For similar reasons, and since applicant has transported frozen fruits, frozen berries, and frozen vegetables as a single commodity class, "grandfather" authority under the 1958 act to transport those commodities, broader than that heretofore granted, is justified when, notwithstanding substantial reductions in vehicles operated and shipments transported in 1960 (attributable in large measure to its cessation of unauthorized operations), applicant continued to hold itself out to provide service as formerly to the best of its ability. Mere holding out is not itself sufficient, but as applicant accompanied its holding out with substantial service performed both prior and subsequent to the critical date, a more liberal view of scope of its "grandfather" operations is warranted; however, evidence as to shipments transported from and to points in the 20 States involved justifies grant of authority only from and to specified points in the States named.—Refrigerated Service, Inc., 98 M.C.C. 218 (220-24)*.

See also Kendall Co. case, §206(a)(1), n. 50.

"Grandfather" applicant must establish that it has been engaged in bona fide transportation of commodities for which authority is sought, on and since May 1, 1958, except for interruptions beyond its control; a "bona fide operation" connotes actual service rather than mere holding out, and substantial as distinguished from sporadic service. Unless substantiality of operations involved reflects an area-wide pattern of service, only authority between points actually served both on and continuously since the critical date is comprehended. Thus, since statewide authority should not be granted under a "contiguous area of service" concept where there has been no service at all or an area-wide pattern of service is not shown, grant in the prior report must be narrowed to more properly reflect applicant's actual transportation activities.—M & M Produce Co., Inc., 91 M.C.C. 183 (184-5)*; similarly, intent to conduct operations is not enough to meet the "bona fide operation" test. Traffic pattern shown does not justify statewide authority; granted for commodities transported and points shown to have been served before and since the critical

date.—Northwest Fisheries Transp., Inc., 89 M.C.C. 324 (326)*.

To justify a grant of territorial "grandfather" authority, there must be a reasonable showing of bona fide operations from and to representative points throughout the territory sought. In the light of the criteria specified, record justifies statewide authority from one origin to three States; as to remainder of applicant's operations, only point-to-point authority is warranted.—Denton Produce, Inc., 89 M.C.C. 301 (302)*.; likewise, while applicant seeks statewide "grandfather" authority to transport bananas from Miami and Tampa, Fla., to 34 States and the District of Columbia, it has served multiple destinations in only four States named, and is entitled to territorial authority to points in Tennessee only on and east of named highway. Outside those States, continuous operations warrant a grant to eight specified points; also, despite a gap in service, there appears to have been a continuous operation from Miami to three other named points; granted accordingly.—White's Trucking Service, Inc., 91 M.C.C. 454 (458-9).

In light of the criteria connoting a "bona fide operation" required by the statute, applicant is not entitled to "grandfather" authority from Oregon and Washington to Colorado when no service was performed from Oregon during a 3-year period commencing prior to the "grandfather" date and none from Washington during a 2-year period subsequent to that date. Such interruptions cannot be overlooked by viewing those operations together with applicant's bona fide operations from California, under an area-of-service concept; to be properly so considered, evidence must show past and continuous operations from representative points throughout a growing area; and record discloses a fatal lack of diversity and continuity in applicant's service from those two States. Moreover, Washington-Oregon points previously served are over 450 miles from those served in California, which further dispels any semblance of oneness in applicant's operation from the coast States. Granted in part.—W. J. Digby, Inc., 89 M.C.C. 122 (123-4)*.

Although "bona fide operations" is not susceptible of exact definition, the commission has construed it to mean substantial, as distinguished from incidental, infrequent, or sporadic, service. Application of that criterion warrants grant of "grandfather" authority to applicant for transportation of frozen fruits, berries, and vegetables between points and areas specified; other operations claimed do not meet the statutory criteria because they were either infrequent or sporadic, or lack the requisite continuity of performance both on or before and since the critical date. —Watkins Motor Lines, Inc., 92 M.C.C. 455 (458)*.

Applicant has conducted a substantial and continuous territorial operation in transportation of frozen fruits, berries, and vegetables from western New York to numerous points scattered throughout New Jersey, Pennsylvania, and Ohio; likewise, operations to points in Maryland, Massachusetts, and Virginia in transportation of frozen fruits, and in transportation of frozen vegetables to Massachusetts, have been territorial in scope; consistency requires grant of statewide authority to latter three States as well as to the first-mentioned three; that applicant did not object to proposed grant of specific-point authority to certain States should not be considered a waiver of his rights, which are statutory.—Hollebrand, 88 M.C.C. 685 (687)*.

And a lapse in service of 6 months or more to certain points does not mean that the operation is not continuous as to those points; overall, applicant's operations were never interrupted, and a lapse of 13 months in service at a specific point has been found not to preclude grant of authority to serve it.—Id., p. 687.

Applicant was in bona fide operation as a for-hire carrier of bananas during the critical period, although the major portion of his transportation was performed for a broker who ships to wholesale outlets and he sometimes supervised loading of bananas at New Orleans for the broker and in return obtained the best loads it had to offer, when he was not an employee of that shipper and consignees paid the transportation charges. Granted in part.—Holomon, 92 M.C.C. 8 (13).

Railroad protestants' contention that shipments of frozen fish and poultry in mixed truckloads with frozen fruits, berries, and vegetables are not covered by the "grandfath-

er" provisions of §7(c) of Transportation Act of 1958 was explicitly rejected by the commission in 82 MCC 755.—Hale Distributing Co., Inc., 89 M.C.C. 361 (365)*.

Inasmuch as applicant was granted specific authority in 1957 to transport agricultural commodities in mixed shipments with nonexempt commodities, and the decision in 141 F. Supp. 588, aff'd 352 US 884, held that frozen fruits and vegetables were "agricultural commodities" the transportation of which was exempt from economic regulation under §203(b6), the certificate since its issuance has authorized transportation of mixed loads of frozen fruits, berries, and vegetables. Therefore, since the amendment of §203(b6) by Transportation Act of 1958 has not affected that authority, applicant may lawfully continue such operations.—Chesapeake Motor Lines, Inc., 89 M.C.C. 237 (239-40).

As to applicant's other claimed operations, which were not conducted pursuant to any of its existing authority, evidence does not show the continuity of service required (except in transportation of frozen fruits, berries, and vegetables from Jersey City and Philadelphia to Baltimore) to support a finding that applicant has been in bona fide operation on and since the critical date. Applicant is not entitled to "grandfather" rights to provide service which it has merely held out, but has not actually performed. Granted in part.—Id., p. 240.

"Grandfather" right to transport exempt commodities in mixed shipments with those made nonexempt by the 1958 amendment (as to which "grandfather" rights are confirmed) is not established by showing of transportation of about a dozen such loads prior to the statutory date, when there is no proof that applicants were participating in such traffic after that date, thus the evidentiary requirement as to subsequent continuous operation is not met.—Produce Transport Dispatch, 88 M.C.C. 198 (200)*.

Under the "interim" provisions of §7(c) of Transportation Act of 1958, a mere showing of past operations is insufficient; applicant must establish that continuance of such operations is required by public convenience and necessity. Furthermore, authority granted must be restricted to service actually provided during the interim period from May 1 to August 12, 1958; therefore, shipments handled prior to May 1 have no probative value. And the provisions allowing continuance of operations pending determination of an "interim" application refer only to those actually conducted during the "interim" period.—Yeary Transfer Co., Inc., Extension, 88 M.C.C. 473 (477, 478).

Also, finding in applicant's "grandfather" application proceeding, 84 MCC 469, that no "grandfather" rights may be granted for transportation of banana puree, is equally applicable to "interim" authority sought therefor.—Id., p. 475, note.

The commission's consistent construction of the "grandfather" provisions of §7(c) of the Transportation Act of 1958 as extending solely to the 11 commodities specifically named in §7(a) thereof was approved in 190 F. Supp. 350, affirmed 368 US 5.—Hughes, 89 M.C.C. 471 (477)*.

Shipments handled in 1953 and 1954 are too remote from the statutory date to support a grant of "grandfather" authority.—Cox, 89 M.C.C. 545 (548)*; and shipments handled prior to January 1, 1957 are too remote from the statutory date to have any probative value in determining "grandfather" rights.—Home Transfer & Storage Co., 88 M.C.C. 223 (226)*.

Banana shipments transported prior to Jan. 1, 1957, are too remote to support finding that applicant was in bona fide operation on May 1, 1958. While principal shipper may have relied on availability of applicant's service to and from whole area involved, grant of "grandfather" authority must be based on actual service and not mere holding out. Applicant handled involved traffic from only 3 ports and grant to serve other ports would be completely gratuitous; service to New England destinations not sufficient to warrant statewide authority; granted in part.—M. D. Cressy Co., Inc., 91 M.C.C. 211 (215-16).

And "grandfather" authority to originate shipments at airports is denied when applicant has never performed this type of service and apparently never contemplated it until filing of exceptions, nearly 4 years after statute under which it claims to be entitled to such authority.—Id., p. 215.

Although applicant transported numerous shipments of bananas in private carriage, his claim for "grandfather" authority is based only on shipments for which there is an identifiable transportation charge and upon which Federal transportation tax was paid. Presumption is strong that remaining shipments, including those originally claimed by applicant's general manager, were transported in private carriage and applicant has not demonstrated that he transported them as a for-hire carrier; moreover, all for-hire shipments to Wichita, Kans., were transported after the critical date and authority for this point must be denied; granted in part.—Lowrance, 91 M.C.C. 440 (442, 443)*.

General manager's application denied because he failed to show any operations as for-hire carrier; shipments he claimed to have transported were obtained through his position as an employee of another applicant who performed the actual motor carrier service involved.—Id., p. 441, 442.

Language of §7(b) of the Transportation Act of 1958 is plain and obviously evolved out of the complex history of conflicting commission and court interpretations of §203(b6); in amending §203(b6) to exclude from the partially exempt group certain commodities, among them frozen fruits, berries, and vegetables, which the commission originally considered subject to requirements of part II, Congress recognized the effectiveness of outstanding authorities granted on proof of public need or consistency with public interest. Applicant may therefore continue transporting frozen fruits and vegetables under its existing authority to transport "general commodities" and "frozen fruits and vegetables."—Home Transfer & Storage Co., 88 M.C.C. 223 (227-9)*.

But since applicant's authority for "fruits and vegetables" has been specifically interpreted not to embrace frozen fruits and vegetables, and thus never authorized transportation of property returned to economic regulation by the 1958 act, §7(b) is inapplicable thereto; there is no indication in the 1958 act or its legislative history that Congress intended in any manner to alter the commission's past interpretation of such authority and accord to carriers holding such authority additional rights predicated neither on a showing of past bona fide operation under §7(c) nor on a past showing of public need or consistency with public interest. In addition, since prepared food products such as frozen french-fried potatoes are not within exemption of §203(b6), and their inclusion in a shipment with exempt commodities renders the entire shipment subject to the act, no "grandfather" rights accrued to applicant from any shipment wherein such prepared foods were transported without appropriate authority.—Id., pp. 229-30.

While the term "bona fide operation" is incapable of precise definition, it is recognized as contemplating substantial as distinguished from sporadic or infrequent operation. A finding of past bona fide operation depends to some extent on nature of the traffic handled and the routes and territories involved in its transportation; however, since a mere holding out is insufficient to warrant such a finding, applicant should be granted "grandfather" authority only to extent justified by its actual operations on and continuously since May 1, 1958. Lists of representative shipments of commodities involved handled by applicant prior and subsequent to the critical date, and submitted by it in support of "grandfather" authority sought, discussed and analyzed; granted in part.—Id., pp. 229-33.

Fish, including shellfish: [Vols. 16, 19].—Inasmuch as the second proviso of §203(b6), added by the Act of 1958, specifically exempts cooked or uncooked (including breaded) fish or shellfish, whether frozen or fresh, if not otherwise treated for preserving, and some of such commodities were listed in Administrative Ruling No. 107 as nonexempt, the Bureau of Motor Carriers issued Administrative Ruling No. 110 interpreting No. 107 in the light such amendments and listing nine fish or seafood commodities which in its opinion must now be considered exempt. Though many commodities listed in Ruling No. 110 contain ingredients other than fish or shellfish, legislative intent of Congress as evidenced by history of the 1958 amendment is in harmony with opinions shown in ruling No. 110; the fish and shellfish commodities listed as exempt from economic regulation in Ruling No.

110 are correctly so designated.—Hughes, 89 M.C.C. 471 (485-6)*.

While seafood or fish dinners involve packaging of ordinarily nonexempt commodities such as cooked vegetables in the same container, the main ingredient is the fish course, and the accompanying food items are complementary and secondary; so long as the fish dinners share a common initial wrapper or container, and retain the characteristics of a fish or seafood dinner in the usual sense, the exemption applies; however, the same items (other than fish or seafood) moving in separate packages in the same vehicle would come within principle of 84 MCC 393 and the exemption would not apply.—Id., p. 486.

Applicant's representations that it handled frozen fish and fish products in the same vehicles with frozen fruits and frozen vegetables, in the absence of more definite evidence or identification of specific shipments, is not sufficient to justify issuance of authority to handle fish in mixed shipments with commodities for which authority is sought under the "grandfather" provisions of Transportation Act of 1958.—Northwest Fisheries Transp., Inc. 89 M.C.C. 324 (327)*.

Fruits, juices, and vegetables: [Vols. 18, 19].—Since transportation of fresh or green fruits and vegetables in straight truckloads is within exemption of §203(b6) and no operating authority therefor is required from the commission, there can be no violation of certificate requirements of the act in transportation of intrastate shipments thereof between Pennsylvania points over authorized routes through New Jersey and Delaware.—Pennsylvania Public Utility Comm. v. Jones Motor Co., 89 M.C.C. 605 (609, 612)*.

Livestock; poultry; products thereof: [Vols. 16, 19].—Since poultry is a so-called exempt agricultural commodity, motor transportation thereof is only subject to economic regulation when moving with regulated commodities. And while applicant seeks authority to transport poultry and poultry byproducts (in addition to prepared foods, including frozen foods), all of shipper's examples of latter commodity are poultry products. Commodity description "poultry when moving in mixed loads with prepared foods" is sufficiently broad to embrace frozen and unfrozen poultry when moving in mixed loads with either frozen or unfrozen prepared foods; granted accordingly.—Blythe Extension, 96 M.C.C. 546 (549).

As Administrative Ruling No. 107, incorporated into the statute by the 1958 amendment, lists poultry feathers as "Exempt," transportation of that commodity is not subject to economic regulation when not moved in the same vehicle with other regulated commodities; and, while Ruling 107 contains no specific reference to poultry blood or offal, since those commodities are natural byproducts of processes by which fowl is killed and readied for sale as dress poultry, they are found similarly exempt. Ruling No. 107 lists dressed poultry, fresh or frozen, as "Exempt," although processing beyond removal of blood and offal is frequently involved; and, thus, it would seem illogical to find poultry blood and offal are not exempt (because they cannot be considered unmanufactured agricultural commodities) while at the same time the statute clearly states that ultimate end products of the same and added processing, i.e., dressed poultry, are exempt under §203(b6). It is significant also, though not controlling, that two informal opinions of the Bureau of Motor Carriers stated that poultry offal is an exempt agricultural commodity. Proposed transportation of considered commodities is within the §203(b6) exemption; application dismissed.—Labertew Trucking, Inc., Extension, 96 M.C.C. 370 (371-2).

55. Transportation under common control, management, etc.—[Vols. 9, 11-15].—While prior commission findings, that the "common arrangement" for through transportation excepted from the §203(b8) exemption is an arrangement between carriers, are consistent with the Supreme Court's holding in the Munson case, 283 US 43, that the common arrangement between rail and water carriers contemplated by §1(1)(a) must be one between the carriers themselves, §203(b8) is not limited by its own terms to carriers as is §1(1)(a); therefore, neither the cited case nor the past commission decisions govern the issue presented concerning scope and applicability of the exception in §203(b8) to pickup and delivery services rendered within a commercial zone for a shipper association which,

as a freight forwarder, is expressly excluded from regulation.—Atlanta Bonded Whse., Inc., 91 M.C.C. 104 (108-9).

Obviously, the primary intention of Congress in enacting amendments to the act, which added §§203(b7a) and 202(c) and later included terminal area services performed for regulated forwarders in §202(c), was to exempt purely local terminal operations from the licensing requirements of part II and, absent some clear manisfestation of Congressional intent, the commission would not be justified in extending those requirements to local cartage operators; moreover, while a relatively narrow interpretation of §203(b8) is indicated, a restrictive interpretation of the exception therein does not make the language nugatory. Thus, since nothing in §203(b8) indicates that the excluded common arrangement must be between carriers subject to the act, local pickup and delivery operations come within the exception where the "common arrangement" has been effected by a carrier not subject to regulation.—Id., pp. 109-10.

However, the exception should not be construed to include arrangements with shippers who have no beneficial interest in the goods transported, such as a bona fide unincorporated shippers' association which is not a carrier and has no existence apart from its shipper members. Applicant's local cartage operations within Atlanta commercial zone, under arrangements with a shipper "co-op" which is such an association, are performed as a matter of law for the individual shipper members—the co-op acting as their agent in perfecting the common arrangements for continuous carriage—and, therefore, are within the §203(b8) exemption.—Id., pp. 110, 111.

When a carrier performing the line-haul intercity transportation of a pool truckload also performs the intracity assembly or distribution of the individual shipments, the entire movement is under common control, management, or arrangement for continuous carriage, and the portion performed within the commercial zone is subject to regulation under the act, including publication provisions of §217 and those of §216 dealing with justness and reasonableness. But where there is no such common arrangement for continuous carriage, a local carrier which picks up or delivers freight within a commercial zone under an arrangement made by it with an individual shipper or receiver is within the §203(b8) exemption, even though such shipper or receiver had also arranged for the prior or subsequent line-haul movement by a regulated mode of transportation. Under such circumstances regulated carriers may compete with exempt carriers for the same traffic.—Distribution Rates in Eastern Central Terr. Cities, 319 I.C.C. 410 (414-5).

56. Wrecked vehicles, emergency towage.—Applicant carrier is operating within the "emergency" exemption of §203(b10) when towing accidentally wrecked or disabled motor vehicles from, and their replacements to, the site of the wreck or disablement; however, distinct authority is required for the transportation, although by wrecking equipment, of tractors or trailers to points where the wrecked or disabled vehicles have been transported subsequent to the accident and, also, for any further movement of such wrecked or disabled vehicles, since such later transportation is too remote from the "emergency" towing to which the exemption is aimed.—Arrow Towing Service Corp., 98 M.C.C. 436 (439).

In amending §203(b) by addition of subsection (10), the congressional purpose was to permit more rapid, efficient, and flexible towtruck service by exempting from economic regulation the emergency transportation of accidentally wrecked or disabled motor vehicles by towing; and, to extent that authority is sought for such emergency movements, proposed operations are exempt from the certificate and permit requirements of the act. Also, it seems clear that transportation of replacement vehicles, incidental to the emergency transportation, was similarly exempt by that amendment since, if the purpose of its enactment is to be realized, provisions must be made for movement of replacement vehicles to actual site of the wreck or disablement; transportation of replacement vehicles is often an integral part of the specifically exempt operations and thus is closely akin to other situations where the commission has found incidental transportation not to require specific authority; to require such specific authority

would, in most instances, nullify Congress' intent to exempt the emergency transportation.—Werner, 95 M.C.C. 387 (390-2).

However, proposed transportation of stolen and repossessed vehicles is not within that exemption.—Id., p. 392; Hovanes, 95 M.C.C. 504 (505-6); nor is proposed normal, or nonemergency, transportation of wrecked or disabled motor vehicles by use of wrecker equipment exempt.—Reilley's, Inc., 95 M.C.C. 608 (610-1); Heckinger, 95 M.C.C. 668 (670-2); similarly, proposed service for wrecked or disabled automobiles, not by towing, but by movement on applicant's platform wrecker-carrier truck is not within the §203(b10) exemption.—Flora, 95 M.C.C. 673 (674-5).

60. Commercial zones.—[Vols. 9, 11-19].—The commission's denial of one protestant's petition to reopen commercial zone proceeding for the purpose of considering whether §203(b8) exemption extended to Rockville, Md. (through extension of Washington, D.C. zone to include Rockville and its environs) should be removed, not such an error as would require remand of cases under review for further commission proceedings on that issue. None of the protesting carriers raised or even suggested the possibility of removal from exemption and, though numerous petitions for reconsideration and oral hearing were filed, only one contained a petition to reopen for consideration of removal. Furthermore, no showing was made by that petitioner, or any of plaintiffs in actions to set aside the commission decisions, as to the actual economic effect and impact upon them of the extension of the Washington zone—an indispensable requirement for removal from exemption. Orders of the commission sustained.—Tidewater Express Lines, Inc. v. United States, 281 F. Supp. 995 (997)*.

See also Sea-Land Service, Inc. v. United States, §202(c), n. 5*Terminal*.

A commercial zone exists about a municipality as an economic fact and the commission's function in a proceeding defining commercial zone limits is to recognize economic boundaries which already exist. While industrial growth and development of an area will sometimes alter commercial zone boundaries, zone boundaries will not be altered in order to foster development which has not occured; and any need for additional service in considered area, which petitioners seek to have included in Pittsburgh, Pa., commercial zone, must be established in a proper appplication proceeding. In view of the geographic considerations (including the area's distance from Pittsburgh and its separation from Beaver County portion of the present zone by a natural boundary) together with the absence of specific data linking commerce of the area with that of the base municipality, redefinition of the Pittsburgh commercial zone is not warranted; petition denied.—Commercial Zones and Terminal Areas, 96 M.C.C. 180 (183)*.

Extension of St. Louis-East St. Louis commercial zone to include new industrial park area (Tree Court Industrial Park) on western boundary thereof is justified when business firms formerly located in St. Louis, or within the present commercial zone, have relocated in the industrial park because of unavailability of suitable sites within the zone limits; those firms continue to receive basically the same utility, transportation, banking, and other municipal business services as they did at their former locations; and their employees reside in St. Louis or within present zone limits. In view of the trade practices, use to which considered area is put, and the geographical and political considerations, inclusion of the new industrial park within the commercial zone is warranted. In order to simplify new zone description and avoid interpretive problems, commercial zone is redescribed to include the park and certain undeveloped areas surrounding it.—St. Louis, Mo.—East St. Louis, Ill., Commercial Zone, 105 M.C.C. 193 (196-7)*.

Although Kansas City, Mo., and two contiguous municipalities had recently extended their corporate limits, the Kansas City, Mo.-Kans. commercial zone was not automatically enlarged by such corporate boundary changes since that zone had been specifically defined in prior commission reports and, unlike most commercial zones, not determined under the mileage-population formula. However, in view of provisions of §203(b8), it is not necessary to go into commercial characteristics of the recently incorporated areas in order to include them within the redefined Kansas City zone; also, a fourth municipality, which be-

came contiguous to Kansas City by reason of latter's extended corporate limits, is found to be commercially a part of the base municipality by reason of its contiguity within terms of the statute and because of the intraterminal character of transportation between it and Kansas City.—Kansas City, Mo.—Kansas City, Kans., Commercial Zone, 100 M.C.C. 75 (82-3)*.

However, with respect to four other communities proposed to be included within the Kansas City zone, those points are geographically separated from industrially developed areas within the present zone and they function as independent municipalities which offer industry the essential municipal and business services on which commercial growth depends. Therefore, since commercial and industrial activity in those four communities is not sufficiently related to the base municipality so as to make them, as an economic fact, commercially a part of Kansas City, inclusion of those communities in the redefined commercial zone is not warranted.—Id., pp. 84-5.

On reconsideration, redefinition of Baltimore, Md., commercial zone to include narrow industrial corridor, 1.5 by 4 miles, recently rezoned for commercial use, is justified in view of the accelerated industrial and commercial development therein. Industry's attention has been directed to the corridor because of unavailability within present zone of land suitable for development of sites desired by firms seeking access to the Baltimore market. While a commercial community of interest with the base municipality, not just with another point within existing zone, must be shown to warrant a zone expansion, manifest business orientation of the 55 firms and industries located in the corridor is toward Baltimore; commercial zone redefined in certain respects.—Commercial Zones and Terminal Areas—Baltimore, 99 M.C.C. 572 (576-7)*.

For determination of effect on pre-existing commercial zones and terminal areas of the annexation by Orange, Tex., of a narrow semicircular strip of land in Orange and Jefferson Counties that encloses a large unannexed area, a rulemaking proceeding could be instituted to define specifically the commercial zone of each point served by defendants in those counties; however, that would require redefining commercial zones of all municipalities contiguous to, or served by carriers whose terminal areas encompass a portion of, present municipality of Orange; and such proceeding would necessarily embrace not only points served by defendants, but also points served by other carriers which may, or may not, be the same as those served by defendants. Also, since commission rules provide that carriers authorized to serve unincorporated points have a right to serve points within a defined area based on the mileage-population formula, the problem of determining those service points which would enable authorized carriers to reach the annexed strip appears to be an impractical, if not impossible, administrative task.—Central Freight Lines, Inc. v. East Texas Motor Freight, 96 M.C.C. 150 (155)*.

Removal of exemption, see NTP, n. 5.

Boundaries: [Vols. 15, 18].—Selective territorial descriptions of commercial zones, such as a deviation from a county line to include a particular shopping center, are not generally proper.—Cincinnati, Ohio, Commercial Zone, 88 M.C.C. 789 (794, note)*.

The boundary of a commercial zone is an economic fact to be determined on basis of existing conditions. Area approximately 2 miles square, between present western boundary of St. Louis-East St. Louis commercial zone and a proposed circumferential expressway and south of a line formed by Chicago, R.I. & P. right-of-way and Dorsett Road is unquestionably being utilized for industrial purposes and should be included in that zone. While that area, as described in terms of existing or proposed roads as boundaries, will encompass some undeveloped land, this is more desirable than using boundaries which arbitrarily excise small portions of that developing industrial area.—St. Louis, Mo.-East St. Louis, Ill., Commercial Zone, 96 M.C.C. 691 (696-7)*.

Although proposed redefinition of St. Louis-East St. Louis commercial zone to include a portion of the Village of Cahokia, Ill., which is contiguous to and commercially integrated with Monsanto, Ill., located within the zone, would encompass some 250 acres of undeveloped land, readily ascertainable boundaries must be selected; and in general

the addition of bizarre boundaries to a relatively uncluttered perimeter should be avoided. The boundaries proposed by petitioners meet both of those objectives and, therefore, should be adopted.—Id., 95 M.C.C. 519 (523)*.

Carriers affected: [Vol. 14].—While enlargement of Philadelphia commercial zone to include a large part of Fort Washington Industrial Park will increase the number of carriers who may serve that area and thus compete with carriers now authorized to serve the industrial park, existence of a commercial zone must be recognized as an economic fact, and considerations respecting availability of existing service are therefore not material to determination of whether the present zone should be enlarged.—Philadelphia, Pa., Commercial Zone, 94 M.C.C. 172 (178)*.

Commercial zone defined: [Vols. 14, 15].—Exemption of §203(b8) contemplates an area within which motor transportation can be considered essentially intraterminal in nature, rather than line-haul. The commission does not create or establish such an area; it exists about a municipality by reason of trade practices, uses to which the area is put, and geographical and political considerations.—Chicago, Ill., Commercial Zone, 88 M.C.C. 329 (333)*.

Extent of the zone adjacent to and commercially a part of a given point is not an issue to be decided in relation to any public need for the exempt transportation. A commercial zone is not "established" or "created" by the commission, but already exists by reason of trade practices, uses to which a proposed area is put, and geographical and political considerations; and the boundary of a zone is an economic fact to be determined on basis of existing conditions. Thus, neither a shipper's desire to have transportation services available to it exempt from regulation, nor a land developer's attempts to enhance value of his property, nor the adequacy of existing services, is a proper factor for consideration. On the other hand, where newly developing industrial areas are as an economic fact a part of the commercial zone, the inclusion of undeveloped areas embraced thereby, parts of which can be used for additional industrial sites, is warranted.—St. Louis, Mo.-East St. Louis, Ill., Commercial Zone, 96 M.C.C. 691 (695-6)*.

While intervening carrier's opposition to extension of St. Louis-East St. Louis commercial zone (because it fears a diversion of some of its traffic) is not ignored, it is well settled that commercial zones exist about any municipality as an economic fact; hence, in defining the limits of a zone it would be error on the commission's part to consider instead the potential effect on operations of a protesting motor carrier.—Id., 95 M.C.C. 519 (523-4)*.

Construction generally: [Vols. 16-19)].—Provisions of §203(b8) establish no basis of obtaining determination of the single-State exemption under §204(a)(4a), but rather establish a clear exclusion of application of part II to transportation in interstate commerce which takes place wholly within a municipality, contiguous municipalities, or commercial zone thereof, in absence of administrative determination that such transportation should be regulated; and exclusion of §203(b8) is operative only if the carrier is lawfully engaged in intrastate commerce over entire length of its interstate routes.—Flanzbaum v. M & M Transp. Co., 203 F. Supp. 365 (368-9)*.

Local terminal trucker performed no transportation under "arrangement for continuous carriage" beyond the local area; his activity in receiving goods from shipper for repacking and further handling and later engaging authorized common carrier to transport those goods to interstate destinations, although involving assumption of common carrier responsibility to shipper, does not of itself impose the duty to obtain a motor carrier certificate.—Id., p. 369.

The existence of a zone adjacent to and commercially a part of a municipality such as Washington, D. C. is an economic fact which the commission must recognize in construing the §203(b8) exemption and, for that reason, identification of the boundaries of such a zone must be made independently of any consideration of the effect of such determination on the parties. Thus, in passing on petition seeking expansion of the Washington commercial zone so as to include city of Rockville, Md., and its environs, arguments raised by several

motor carriers authorized to serve both Washington and Rockville that they should not be exposed to increased competition from exempt haulers are inapplicable; likewise, the arguments by shippers and line-haul carriers tending to show need for direct service by latter to Rockville are of no weight in the determination on whether the commercial zone should be expanded.—Washington, D. C., Commercial Zone, 98 M.C.C. 106 (111)*.

A commercial zone is not "established" or "created" by the commission, but already exists by reason of trade practices, uses to which the area is put, and geographic and political considerations, and the limits thereof are an economic fact to be determined on basis of existing conditions. Extent of a particular zone is not an issue to be decided in relation to any public need which may or may not exist for the transportation service which would be partially exempted from regulation thereby; nor is the desire of a shipper or shippers to avoid economic regulation by having included within the zone facilities which are planned to be constructed or maintained a proper factor for consideration.—Chicago, Ill., Commercial Zone Extension—Sag Area, 94 M.C.C. 568 (570)*; Cincinnati, Ohio, Commercial Zone, 88 M.C.C. 789 (794)*.

Existence of a commercial zone about a particular point is an economic fact, and the statutory partial exemption from regulation is independent of any need for the exempted transportation or for enlargement of terminal areas of line-haul carriers authorized to serve the municipality. Metropolitan areas defined by the Census Bureau, which are principally geographical groupings rather than economic units, and exempt areas created by State authorities, which are based on intrastate considerations not involving interpretation of the statutory requirement that the area involved be "adjacent to and commercially a part of" the base municipality, are likewise irrelevant factors in determining existence of a commercial zone.—Syracuse, N.Y., Commercial Zone, 92 M.C.C. 100 (104)*.

No authority is required for delivery within Atlanta commercial zone, to consignees named in shippers' manifests, of pool-car or pool-truck shipments forwarded to applicant warehouse company by individual out-of-State shippers, since the service is performed at direction of the individual shippers.—Atlanta Bonded Whse., Inc., 91 M.C.C. 104 (105, 106).

And since, in considering applicant's pick-up of freight consigned to a "co-op," there is no warrant in fact or law for distinguishing between the co-op as a bona fide unincorporated shippers' association and individual members thereof, that service also is within exemption of §203(b8). Though applicant is employed and paid by the co-op, its members have not lost their identity as shippers, and in dealing with the co-op as their agent applicant's services are performed as a matter of law for the individual shippers.—Id., p. 111.

Doe Run, Ky., is neither a town nor an unincorporated community and therefore has no commercial zone, since it has no post office, the area is entirely rural, and the name is officially shown on map prepared by State highway department with cooperation of U.S. Bureau of Public Roads as being only the designation of a creek extending some 5 miles south from its mouth on Ohio River. Its designation as an origin point in certificates issued vendee apparently intended to authorize service from a plant on west bank of the creek, the origin of the commodities described. Such authority therefore does not permit service from vendee's terminal located at a highway intersection some 2.75 miles from the plant site.—Liquid Transporters, Inc.—Purchase—Black, 93 M.C.C. 423 (428-9).

Since Westbury, N.Y., is not within New York City commercial zone and continuity of interstate movement of ex-rail shipments is not broken by applicant's storage thereof prior to delivery, transportation of such shipments to Westbury from its terminal facility in Queens is not exempt from regulation.—Paul Marckesano & Sons, Inc., Extension, 86 M.C.C. 727 (732).

Contiguous municipalities: [Vols. 14, 18, 19].—Ordinance of Orange, Tex., annexing a circular strip of land enclosing a large unannexed area declares that the annexed strip is for all purposes a part of the city of Orange; that strip reaches within 5 miles of Beaumont, which under the commission's regulations has a commercial zone extending 5 miles beyond its corporate limits; thus, a part of Orange is

within service area of carriers operating out of Beaumont, who under the commercial zone rules may serve the entire city of Orange. In outlining those rules the commission acted in a quasi-legislative capacity, and carriers subject to them have a right to expect that they will be observed; the commission should not in instant case set aside its former rulings, because such action is in nature of a retroactive proceeding which may work a hardship on those affected. The commission's ruling that carriers authorized to serve Beaumont may not serve Orange by virtue of the annexation, set aside and the case remanded for further proceedings.—Yellow Transit Freight Lines, Inc. v. United States, 221 F. Supp. 466 (466-7, 468)*.

Authority to serve Rochelle Park, N.J., permits service at Lodi, N.J., which is contiguous to Rochelle Park and, therefore, within the commercial zone thereof; however, since Moonachie, N.J., is at least 3.5 miles from Rochelle Park, it does not fall within latter's commercial zone.—Connell Transport Co., Inc., Conversion Application, 95 M.C.C. 312 (315).

Under the formula established in 46 MCC 665, applicant authorized to serve all intermediate points on and within 2 miles of highway between Lewistown and Harrisburg, Pa., may serve points within corporate limits of Harrisburg if any part of that municipality falls within commercial zone of any such intermediate point; such implied authority, however, does not authorize service, including interchange of freight, at points beyond corporate limits of Harrisburg.—Noerr Motor Freight, Inc., Extension, 89 M.C.C. 589 (591).

Carrier claiming right to operate from Knoxville, Tenn., under authority to serve the nearby point of Warcer has burden of showing that Knoxville is within the commercial zone of Warcer, since if Warcer has less than 2,500 population and is not within 2 miles of any part of Knoxville, the latter may not be served. As Warcer is not shown on latest Road Atlas and evidence does not show its distance from Knoxville, the claimed right is not established.—Blue Ridge Transportation Co., Inc., Extension, 89 M.C.C. 616 (619).

Distance from a base point: [Vols. 17, 19].—By virtue of the annexation by Orange, Tex., under Texas law, of a narrow semicircular strip enclosing a large unannexed area, the strip so annexed became part of the municipality of Orange "for all purposes." Therefore, defendants authorized to serve Beaumont and other nearby Texas points may serve Orange because it is a municipality included within the commercial zones of those points under the mileage-population formula, a portion of the annexed strip being within the mileage radii of those points as specified in the formula. And those commercial zones also include Pinehurst and West Orange, in the unannexed area, because under the commission's regulations the commercial zone of the base municipality, such as Beaumont, includes municipalities wholly surrounded by a municipality (Orange) which is in the base municipality's commercial zone by virtue of a portion of the Orange municipal limits being within 5 miles of Beaumont. Defendants' terminal areas, which are coextensive with the commercial zones of those Texas points they are authorized to serve, therefore include Pinehurst and West Orange as well as Orange.—Central Freight Lines, Inc. v. East Texas Motor Freight, 96 M.C.C. 150 (157)*.

However, as the unannexed area is largely unincorporated, defendants authorized to serve Beaumont and the other nearby base municipalities may not serve that unincorporated area except to the extent that it is within the commercial zone of the base municipality as determined by the mileage-population formula. Thus, a carrier specifically authorized to serve Beaumont may serve as part of its terminal area only that portion of the encircled unincorporated area which is within 5 miles of the Beaumont city limits; and carriers authorized to serve Orange may serve all municipalities wholly surrounded by Orange, all others any part of which is within 4 airline miles of Orange, and all unincorporated areas within 4 airline miles of Orange measured both from the inside and from the outside limits of the annexed strip.—Id., pp. 157-8.

Since the commercial zone of Rochelle Park, N.J., under the mileage-population formula, extends only 3 miles from its corporate limits, Moonachie, N.J., which is at least 3.5 miles therefrom is not within that commecial zone.—Connell Transport Co., Inc.,

Conversion Application, 95 M.C.C. 312 (315).

Expansion and enlargement of limits: [Vol. 16].—Since it is consistently recognized that a commercial zone is an economic fact or condition existing because of trade practices, uses to which the area is put, and geographical and political considerations, the same matters must be considered in connection with enlargement or redefinition of a particular zone. The city of Pueblo, Colo., is fully responsible for maintenance and upkeep of a 3,500-acre area sought to be included in the Pueblo zone, consisting of an airport and some 810 acres available for industrial sites; a number of concerns are doing business in that area, and all persons employed therein reside in Pueblo or immediately adjacent areas; inclusion of entire area is warranted.—Commercial Zones and Terminal Areas, 92 M.C.C. 753 (755)*.

The commission has never hesitated to make appropriate adjustments in commercial zone boundaries whenever it appears that industrial development or other changed conditions have altered the character of an area so as to bind it more closely to the base municipality. The growing number of Washington, D. C. firms attracted to the Tyson's Corner, Va., area, its immediate proximity to the present zone boundary and, also, to a beltway located almost entirely within the zone, are factors indicating that considered area is economically a part of Washington and that traffic moving between Washington and the area is intraterminal rather than line-haul transportation; therefore, limits of the Washington commercial zone should be extended to include the 2-square mile area about Tyson's Corner described.—Washington, D. C. Commercial Zone, 95 M.C.C. 305 (308-9)*.

The industrial development underway at Fort Washington Industrial Park in Upper Dublin Township, Pa., is clearly related to Philadelphia. A portion of the development is already within the Philadelphia commercial zone, and Philadelphia firms predominate among companies which have located in the larger section now outside the zone, their principal reason for so locating being the lack of sufficient land within the zone to permit construction of the low level, "horizontal" structures deemed necessary for economical operation of their businesses. Nature of the traffic also favors inclusion of considered area in the zone: opposing carriers now serving the industrial park have failed to establish line-haul character of their Philadelphia-Fort Washington traffic; on the contrary, the evidence indicates that transportation between Philadelphia and the industrial park is intraterminal in nature. Boundaries of the Philadelphia zone should therefore be redefined to include that portion of Upper Dublin Township where industrial development has taken or is about to take place.—Philadelphia, Pa., Commercial Zone, 94 M.C.C. 172 (177-8)*.

Enlargement of Chicago commercial zone to include a 4-mile strip of land at confluence of three waterways which serve Chicago proper, which already contains three industrial plants and encompasses large terminal dock and storage facilities as well as rail connections with accommodation for 300 to 400 cars, is warranted since its proximity to Chicago makes the area a strategic location for commercial and industrial development. Substantial quantities of commodities in great variety move to the area from the Chicago zone as presently defined, and shippers using storage facilities in the area also maintain operations in the existing zone; this interdependence of commercial and industrial operators in the two contiguous areas is significant as showing that the considered site is in fact industrially developed and commercially related to Chicago to an extent justifying its inclusion within the commercial zone thereof.—Chicago, Ill., Commercial Zone Extension—Sag Area, 94 M.C.C. 568 (569-70, 571)*.

That the actual industrial site at junction of the three canals is separated from the existing Chicago zone boundary by a forest preserve does not preclude the redefinition sought. It is clear that commercial development along those canals at any location nearer to the existing zone than that proposed as made impossible by existence of the forest preserve, and possibility that land for commercial expansion could have been found within the existing zone boundaries is of no real relevance.—Id., p. 571.

Redefinition of Syracuse commercial zone is warranted to include a new industrial center being developed in area largely beyond the 5-

mile radius authorized by the mileage-population formula, and just beyond a lake extending northwest from Syracuse and New York Thruway running east-west just north of the lake. Area involved is clearly commercially a part of Syracuse, being the only area northwest of the city having adequate power and other facilities for commercial needs; other industrial facilities occupy intervening areas along the highway route beside the lake, and transportation between the industrial center and points in existing commercial zone is essentially intraterminal in nature.—Syracuse, N.Y., Commercial Zone, 92 M.C.C. 100 (101, 104)*.

Evidence warrants inclusion in St. Louis-East St. Louis commercial zone of a portion of proposed Missouri area east of projected circumferential expressway approximately 1-1/2 miles west of present western boundary of the zone. In addition to 10 of 11 supporting shippers whose plants are or shortly will be located in that portion of the proposed area south of a line including the Chicago, R.I. & P. right-of-way, numerous other industries are situated therein, and there is no question that those industries look to the zone for their banking needs, maintenance and service, and public utilities, that their employees reside within the existing zone limits, and that such portion, in light of its proximity to the present zone, is being utilized for industrial development. However, the portion north of that line, including plant of one supporting shipper located almost 2 miles north of the Rock Island right-of-way, is patently not a part of the development area and is excluded from redefinition of the zone.—St. Louis, Mo.-East St. Louis, Ill., Commercial Zone, 96 M.C.C. 691 (693, 696)*.

The portion of Cahokia, Ill, sought to be included in St. Louis-East St. Louis commercial zone shares a common boundary with Monsanto, which is in Illinois portion of the zone, and is wholly within a 5-mile radius of both St. Louis and East St. Louis post offices. While there has been no unusual industrial development in the area such as would normally indicate its commercial integration with the base municipalities, the composition of a particular commercial area can sometimes be unique and, then factors normally considered as prompting a redefinition of the zone limits may be superseded by one or more factors which have a particular relevance to the special situation.—Id., 95 M.C.C. 519 (521, 523)*.

The situation at Cahokia is anomalous: both petitioners maintain large industrial establishments located partly within the present zone, yet the definition of that zone erects an artificial barrier between a portion of each industry and those points determined to be commercially a part of St. Louis-East St. Louis. The loading terminal of one is actually astride the zone boundary, and although barge facilities of the other's pipeline terminal are in Monsanto, its storage tanks are in the considered portion of Cahokia. In the particular geographical circumstances involving those petitioners there is no justification for dividing their properties and excluding portions of them from the zone; proposed expansion of the zone is therefore warranted. And though a portion of the pipeline property is used as farmland, it is not large, and petitioner's holding of it is consistent with future development of its terminal facility; therefore, that tract is also included in the redefinition.—Id., pp. 521, 523.

Notwithstanding absence of the normal indicia of an outlying community's commercial integration with a base municipality, record as a whole justifies inclusion of considered Butler County area within limits of Cincinnati commercial zone. Replacement and expansion of terminal facilities for motor carriers interchanging freight at Cincinnati is of primary importance to the city's commercial development, and availability of suitable locations is limited by traffic congestion and by increasing assignment of industrial land to other uses such as new highways. Unique accessibility of considered area to highways now under construction makes it a logical choice for terminal purposes, promoting efficiency and reducing congestion; as the terminals will be used only by carriers authorized to serve Cincinnati, and interchange of line-haul freight can be accomplished only under such authority, the area in which the terminals will be located must be deemed commercially a part of Cincinnati.—Cincin-

nati, Ohio, Commercial Zone, 92 M.C.C. 180 (182)*.

Although the State of Ohio has included in Cincinnati intrastate commercial zone a portion of the area sought to be included in the interstate zone, since that determination was made by a different regulatory body which may well have employed different criteria, the scope of the intrastate zone can have no bearing on whether definition of the interstate zone should be enlarged. Also, in view of the rather large area involved, evidence that certain specific areas are to some extent commercially dependent upon Cincinnati is not sufficient to demonstrate that the extensive area described should be within commercial zone thereof; supporting evidence of record is too meager to warrant the zone expansion sought. —Id., 88 M.C.C. 789 (793, 794-5)*.

Although the normal indicia of an outlying community's commercial integration with a base municipality are lacking as to Bridgeview and Hickory Hills, Ill, both should be included in Chicago commercial zone when their unique accessibility to Illinois Toll Road makes them logical choices for location of projected truck terminals which, by avoiding movement of over-the-road equipment into the city, will promote efficiency and reduce congestion; expansion and replacement of such facilities is of primary importance to commercial development of Chicago, but availability of suitable locations is limited by congestion and increasing assignment of industrially zoned land to other uses; and as the terminals will be used only by carriers serving Chicago, who can interchange line-haul freight only because of such authority, the described areas must be held to be commercially a part of Chicago.—Chicago, Ill., Commercial Zone, 86 M.C.C. 735 (739)*.

In view of the uniquely desirable features of the acreage involved, postponement of enlargement of the zone until actual terminal construction has taken place would serve no useful purpose, but would undoubtedly impede the progress of construction, and is not warranted by the evidence.—Id., p. 739-40.

In determining whether the Chicago commercial zone should be expanded to include the village of Elk Grove, Ill, consideration of the mileage-population formula prescribed in 46 MCC 665 would be inappropriate because of the specific exception for Chicago on account of unusual conditions prevailing there. And possible effects on operations of protestant motor carriers are likewise not a proper consideration, though such evidence would be important in determining whether the exemption should be removed in whole or in part.—Id., 88 M.C.C. 329 (333)*.

While Elk Grove has been incorporated and has experienced a marked population growth, including a large number of residents employed in Chicago, that is a natural and expected development (common to suburban communities throughout the country) and has not been recognized as a determinative factor in defining commercial zones generally; its industrial growth is not directly related to Chicago; and since volume and types of present or anticipated traffic moving between Elk Grove and Chicago are not shown, none of such traffic may be considered as intraterminal. Far from integrating it with Chicago, Elk Grove's residential and industrial development establish it as an independent, self-reliant community linked by expressways to numerous shipping and receiving points of which Chicago is only one. Therefore, extension of Chicago commercial zone to include Elk Grove is not warranted.—Id., pp. 333-4.

While the commission has prescribed precise boundaries for commercial zones previously determined by mileage-population formula, because of changes in the political or geographical situation or in growth of the area, in each case some extraordinary event was involved, such as construction of new transportation facilities, need to direct industrial development in a particular direction, or establishment of a large industrial complex at a particular point, which is dependent on and considered a part of the base point. No such element is present in area sought to be included within commercial zone of Nashville; that area contains only one large industrial facility, which has been located there for several years, and its relation to economic life of Nashville is not clear. Since determination of a commercial zone must reflect a situation existing as an economic fact, present redefinition of the Nashville zone is not war-

ranted.—Nashville, Tenn., Commercial Zone and Terminal Area, 92 M.C.C. 73 (75-6).

Intrastate transportation: [Vols. 15, 19].—While a Missouri intrastate regular-route carrier may serve commercial zones or areas defined by State law only under specific grants, authority granted by the commission to serve specified points also authorizes service (without a separate grant) to the commercial zones of such points, unless territorial limitations are imposed. Indeed, a carrier authorized to serve a point has implied obligation to serve the commercial zone thereof; and while vendee may serve commercial zones of only four Missouri points under its intrastate authority, to withhold authority to serve zones of other points, in granting certificate for continuance of its former single-State operations, would be inconsistent with that principle, difficult for shippers to interpret in light of general practice of other interstate carriers, and difficult to police—all inimical to the general public interest. Certificate granted therefore contemplates service to commercial zones of all authorized points, with service to St. Louis zone restricted to the Missouri portion thereof.—Dodds Truck Line, Inc.,—Purchase—Strain, 93 M.C.C. 229 (236, 238).

Municipality: [Vols. 14, 17-19].—The commission has no power to set aside an ordinance of a municipality by saying that the ordinance doesn't mean what it declares itself to mean. Ordinance of Orange, Tex., annexing a circular strip of land reaching within 5 miles of Beaumont and enclosing a large unannexed area declares that the annexed land is for all purposes part of the city of Orange. Even if the city acted arbitrarily and capriciously in thus extending its borders, in attempting to determine the correct boundaries of Orange for purposes of the commercial zone rules the commission extended its quasi-judicial power beyond any conferred on it by Congress. The commission's ruling that the annexed strip should not be considered part of the municipality of Orange, set aside and the case remanded for further proceedings consistent with the court's opinion.—Yellow Transit Freight Lines, Inc. v. United States,221 F. Supp. 466 (468)*.

Since the Borough of Lansdale, Pa., is incorporated and has a local government providing governmental services, it is a municipality within meaning of §203(b8) and, based upon the population, its commercial zone includes all areas within 3 miles of the corporate limits. Therefore, opposing motor carrier holding authority to serve the borough may serve supporting shipper's new plant, located within 2.5 miles of corporate limits thereof, as a point within the borough commercial zone.—Dealers Transit, Inc., Extension, 98 M.C.C. 297 (302).

"Townships" or other political entities into which a county is subdivided for administrative purposes are not municipalities having commercial zones, as defined in 46 MCC 665, when they do not possess such population density, society, and commerce as is found in incorporated municipalities to which the statute refers. Therefore, authority to serve all intermediate points on route traversing the county does not permit service, under the commercial zone definition, at a plant site that is located four miles from the highway but within a township contiguous to a township lying along the authorized route.—Cross Transp., Inc., Interpretation of Certificate, 91 M.C.C. 51 (53).

It is neither practical nor feasible to amend the definition of municipality in 49 CFR 170.16 in order to determine the extent of the commercial zone of Orange, Tex., or those of adjacent Texas municipalities, as enlarged by that city's annexation of a narrow semicircular strip of land enclosing a large unannexed area. Problems raised by Orange's annexation procedures appear to be local in nature and to apply, at a maximum, to only four areas in Texas. Furthermore, Texas has recently amended its statutes concerning annexation procedures of "home rule" municipalities, and future annexation of a strip of the nature and proportion annexed by Orange appears to be precluded by the new procedures. Not only would formulation of a special rule, or amendment of the present regulation, to cover the limited situation presented be difficult, it at all possible, but interpretations which could flow therefrom could cause greater administrative problems than those sought to be resolved. Therefore, although result of application of the present rule may be other

than the commission intended or than what it is believed Congress intended in enacting §203(b8), that in itself does not justify changing an otherwise sound regulation.—Central Freight Lines, Inc. v. East Texas Motor Freight, 96 M.C.C. 150 (155-6)*.

Texas allows certain of its municipalities to annex territories encompassing areas not annexed, and there is no question that under Tecas law the territory thus annexed by any municipality so empowered becomes part of that municipality "for all purposes." And while New England type townships have been excluded from the statutory meaning of "municipality" (even though such townships may be municipalities under laws of the State in which located), that interpretation of the statute is not available with respect to Orange and other similar Texas municipalities. In view of the impracticability of defining on an ad hoc basis the commercial zone of each city in the area involved, or in determining indirectly the terminal areas of carriers serving unincorporated municipalities therein, there is no other course but to dismiss the complaint to the extent that defendants can provide the challenged service under their existing authorities.—Id., p. 156.

New England-type towns: [Vols. 17-19].—Applicant may not serve East Millinocket, Maine, as a point within commercial zone of contiguous township of Medway; while authority to serve a New England point which is the name of both a "town" and a community within that town has been construed as conferring the right to serve all points in the town unless certificate specifically indicates otherwise, and applicant's authority to serve the named point "Medway" includes all points in the town of Medway, it may not serve points beyond the territorial limits of that town, since New England type towns were specifically excluded from the term "municipality" in 46 MCC 665, and therefore have no commercial zone.—Border Exp., Inc., Extension, 88 M.C.C. 491 (493).

Passenger carriers: [Vols. 16, 19].—Terminal areas of passenger carriers are confined to corporate limits of their authorized points, unlike those of property carriers which are normally coextensive with municipal commercial zones; thus, since defendant's authority to transport passengers between New York City and Long Branch, N.J., authorizes it to serve all areas within Long Branch municipal limits, it may leave such municipal limits and operate for about 25 feet over a private road (which originates within those limits) so as to render service to an area within the Long Branch limits which cannot otherwise be reached. The commission's jurisdiction is confined to the use of public highways; and as defendant enters on the private roadway within its authorized territory, it does not violate the commission's regulations in performing service beyond the municipal limits by use of that private road; such determination, previously made as to property carriers, is applicable for the same reasons to passenger carriers.—Asbury Park-N. Y. Transit v. New York, K., L. B. Bus Line, 95 M.C.C. 452 (454-6).

Population basis: [Vol. 18].—See Dealers Transit, Inc., Extension case, under *Municipality*, above.

Territorial operating authorities: [Vols. 16-19].—Certificates which grant authority limited to a described territory do not authorize service to any point outside that territory, even though the point in question may be within commercial zone of a municipality within the described territory.—United States v. W. J. Dillner Transfer Co., 315 F. 2d 107 (109).

Although vendee's Missouri intrastate authority specifically authorizes it to serve the St. Louis commercial zone, its past interstate service in the St. Lous area under former single-State proviso must have been confined to Missouri points, since the State regulatory authorities have no power to authorize operations in the Illinois part of the defined St. Louis-East St. Louis commercial zone, and furthermore, any operations by vendee across the State line would have nullified its right to claim benefit of the proviso. Therefore, certificate granted vendee under §207 for continuance of its former proviso operations authorizes service only at Missouri points in that zone; and following unification of those rights with vendors' rights between St. Louis and Arkansas it may transport shipments from, but not to, all points in the zone.—Dodds Truck Line, Inc.—Purchase—Strain, 93

M.C.C. 229 (236-7, 238).

A grant of authority to serve Neville Island, an island in the Ohio River near Pittsburgh, is territorial in scope and, thus, applicant's authority to serve it is not broadened by the commercial zone concept. "Neville Island" is merely a geographic expression, not an incorporated municipality or an unincorporated community; therefore, applicant may serve only the territorial island itself and may not serve Pittsburgh as a point within claimed "commercial zone" thereof.—Lattavo Bros., Inc., Extension, 89 M.C.C. 600 (602-3)*

On reconsideration, however, applicant's authority to serve "Neville Island" is regarded as being ambiguous, inasmuch as it cannot be determined with absolute certainty whether the words were intended to describe a community located on the island, or all points on the island itself as a specifically defined territory. The situation is analogous to that which prevails with respect to New England-type towns; in such cases a point name, which describes both a New England town and a community within that town, has been construed as authorizing service at all points within the New England town; by analogy, then, applicant's authority should be construed as territorial, encompassing all points on the island but having no terminal area beyond that island. Therefore, although southernmost tip of the island is only a little over a mile from the Pittsburgh municipal boundary, applicant may not use Pittsburgh as a common point for tacking its regular and irregular-route rights on the theory that it is within a commercial zone or terminal area of Neville Island.—Id., 91 M.C.C. 643 (644, 645-6)*.

Unincorporated urban communities: [Vols. 14, 19].—"Unincorporated community" means those settlements or aggregations of homes and businesses which, though without local governments or definite corporate limits, are similar from a transportation standpoint to incorporated communities wherein bona fide collection, delivery, or transfer service—incidental to intercity or intercommunity line-haul transportation—is performed. While the existence or lack of a post office of the same name is of some significance in determining status of unincorporated areas, that is not the only criterion; commercial zone of such an area (and terminal area of carriers serving it) can be defined by reference to its recognized business center.—Cross Transp., Inc., Interpretation of Certificate.—91 M.C.C. 51 (55-6).

Therefore, since Levittown, Pa., is a housing development which, though having one overall name, bears no more similarity to a municipality from a transportation standpoint than does a military reservation, it does not comprise an unincorporated community of the type contemplated by 54 MCC 21. Levittown has no business center and, while it has a post office of the same name, presence of a second post office with a different name indicates that it is not regarded locally as a unified geographical point; moreover, commercially and politically its residents look in several different directions for shopping, governmental services, and transportation and, thus, there is no "community" of Levittown with respect to those functions. Therefore, Levittown has no commercial zone which may be measured by the distance from post office of that name.—Id., pp. 54, 56-7.

Since authority to serve all intermediate points on U.S. Highway 11 between Mattawamkeag and Ashland, Maine, includes the unincorporated community of Medway which is located on the highway, applicant may, under the mileage-population formula, serve all points within 2.5 miles of the post office in that community, whether they are within or without the "town" of Medway.—Border Exp., Inc., Extension, 88 M.C.C. 491 (493).

See also Public Service Coordinated Transport v. Red Arrow, case, §212(a). n. 1.

Particular Zones, by Name

Chicago, Ill.: Existing zone redefined to include a narrow strip of land about 4 miles long, extending southwesterly from Willow Springs in the zone along banks of Chicago Sanitary and Ship Canal and Illinois and Michigan Canal, including junction of those waterways with Calumet Sag Channel.—Chicago, Ill., Commercial Zone Extension—Sag Area, 94 M.C.C. 568*.

Zone adjacent to and commercially a part of the city, contemplated by §203(b8), enlarged and redefined so as to include the villages of Bridgeview and Hickory Hills, Cook

County, Ill.—Chicago, Ill., Commercial Zone, 86 M.C.C. 735 (739, 741)*.

Cincinnati, Ohio: Boundaries of commercial zone as previously defined, modified to include described portion of Butler County, Ohio.—Cincinnati, Ohio, Commercial Zone, 92 M.C.C. 180 (182-3)*.

Order redefining the commercial zone limits in Ohio and Kentucky, and enlarging the zone in certain respects, revised by redescribing zone boundaries so as to exclude all of Florence, Ky., except that portion lying within industrial site of the Northern Kentucky Industrial Foundation, from the commercial zone.—Id., 94 M.C.C. 766 (768).

Houston, Tex.: As result of city ordinance modifying the eastern corporate boundary of Houston and de-annexing certain lands, the municipalities of Baytown, La Porte, and Lomax, situated along the Houston Ship Channel and formerly included in the Houston commercial zone, are now beyond that zone as computed under the mileage-population formula. Since the entire area from Houston to the channel mouth is for all practical purposes one solid industrial complex, and the record evidences the closely knit civic, economic, social, and political relationship of Houston and those three municipalities, they form a single integral community. Definition of the Houston commercial zone to include Baytown, La Porte, and Lomax in addition to the area included under the commercial-zone formula is therefore warranted.—Houston, Tex., Commercial Zone, 92 M.C.C. 325 (339)*.

Kansas City, Mo.—Kansas City, Kans.: In order to correct ambiguity in description of the zone in prior report, which was inadvertently created by following language in a previous description, the commercial zone description, as clarified, is restated in full. And since the entrace to Lake City Arsenal is not a point within the zone area, the arsenal should not be construed as a part of the commercial zone.—Kansas City, Mo.—Kansas City, Kans., Commercial Zone, 103 M.C.C. 19 (20)*.

New York City, environs: Restoration of exemption (removed in 53 MCC 451) to embrace transportation of traffic between defined Kearny, N. J., area and New York zone as originally defined in 1 MCC 665, limited to that having prior or subsequent rail movement, is warranted when Pennsylvania R. is the only major railroad serving New York area whose TOFC terminal is outside the exempt (original) zone, and is handicapped by fact that shippers using its plan III TOFC service must employ certificated motor carriers to move their trailers to and from its Kearny terminal, whereas those using like service of its competitors can use unregulated carriers whose charges are lower; extension of exempt zone will enable it to compete, in its plan III service, on same equality it now enjoys in respect of plan II and boxcar service.—New York, N.Y., Commercial Zone, 88 M.C.C. 336 (338, 339)*.

The Pennsylvania is an important segment of rail transportation between eastern port cities and the Midwest, and its continued strength and vigor is of legitimate interest to the commission. Also of legitimate concern is whether denial of its petition would be other than a temporary benefit to protestants; the Pennsylvania owns land within the exempt zone, as well as a bridge giving access thereto from Kearny, and upon denial would extend its Kearny terminal into that zone, thereby leaving the regulated motor carriers in no better position trafficwise than if its petition were granted.—Id., pp. 339, 340.

Orange, Tex.: By virtue of Orange's annexation, under Texas law, of a narrow semicircular strip enclosing a large unannexed area, the strip so annexed became part of the municipality of Orange "for all purposes." Therefore, carriers holding specific authority to serve Orange may serve that strip, all municipalities wholly surrounded by Orange, and, under the mileage population formula, all other municipalities any part of which is within 4 airline miles of Orange, and all unincorporated areas (including those encircled) within 4 airline miles of Orange, measured from its corporate limits both from the inside limits of the annexed strip and from the outside limits thereof.—Central Freight Lines, Inc. v. East Texas Motor Freight, 96 M.C.C. 150 (158)*.

Philadelphia, Pa.: Fort Washington Industrial Park, located just outside Philadelphia commercial zone at Fort Washington

Interchange with Pennsylvania Turnpike in Upper Dublin Township, is clearly related commercially to Philadelphia, Definition of the present zone in terms of township boundaries does not provide for industrial development along that major transportation artery; therefore, as transportation between Philadelphia and the industrial park is intraterminal in character, the Philadelphia zone is redefined to include that portion of Upper Dublin Township where industrial development has taken or is about to take place.—Philadelphia, Pa., Commercial Zone, 94 M.C.C. 172 (177-8)*.

Pueblo, Colo.: Commercial zone redefined to include, in addition to all points within a 4-mile radius of the corporate limits, entire area, consisting of about 3,500 acres, known as Pueblo Memorial Airport.—Commercial Zones and Terminal Areas, 92 M.C.C. 753 (756)*.

St. Louis, Mo.-East St. Louis, Ill.: Commercial zone redefined to include an area in Missouri approximately 2 miles square, immediately west of present western boundary of such zone.—St. Louis, Mo.-East St. Louis, Ill., Commercial Zone, 96 M.C.C. 691*.

In the particular geographical circumstances presented, limits of the commercial zone are redefined and extended to include described portion of the village of Cahokia, Ill., which is contiguous to and industrially integrated with Monsanto, Ill., located in the Illinois portion of present zone.—Id., 95 M.C.C. 519 (523-5)*.

Syracuse, N.Y.: Commercial zone redefined to include, in addition to the radial area authorized by the mileage-population formula, points beyond the 5-mile radius in the unincorporated towns of Geddes and Van Buren, as described.—Syracuse, N.Y., Commercial Zone, 92 M.C.C. 100 (105)*.

Washington, D. C.: Commercial zone limits redefined to include Rockville, Md., and environs, an area which, as an economic fact, is commercially a part of Washington. Although trade practices and uses to which that area was put were not previously such as to warrant conclusion that it was commercially a part of Washington, the commercial and industrial area of Rockville has become virtually indistinguishable from the area immediately south thereof which is within the zone as presently described; also, consideration of the nature of the traffic, shown to be intraterminal transportation of the type intended to be covered by the §203(b8) exemption, favors inclusion of Rockville within the zone limits. —Washington, D. C., Commercial Zone, 98 M.C.C. 106 (111-112)*; for similar reasons, further extension of the commercial zone boundary to include 0.4-square mile area immediately north of boundaries as last redefined, where Sears Roebuck & Co's new warehouse and distribution center is located, is justified.—Id., 103 M.C.C. 256 (257-60)*.

Commercial zone limits redefined to include a 2-square mile area about Tyson's Corner, Va., which has become economically a part of the Washington metropolitan area.—Id., 95 M.C.C. 305 (308-9)*.

Regulations of the Commission

27 FR 4810, May 22, 1962, Part 170: Commercial Zones, §170.1 New York, N.Y., revised, effective June 22, 1962.

27 FR 9329, Sept. 20, 1962, Part 170: Commercial Zones, §170.22 Cleveland, Ohio, revised, effective Oct. 22, 1962.

27 FR 10296, Oct. 20, 1962, Part 170: Commercial Zones, §170.22 Cleveland, Ohio, commercial zone description corrected since it has been rendered inaccurate as to area formerly known as Willoughby Township and now known solely by names of its eight constituent parts, effective Oct. 22, 1962.

28 FR 2236, March 7, 1963, Part 170: Commercial Zones, §170.7 Cincinnati, Ohio, commercial zone description revised, effective April 12, 1963.

28 FR 2685, March 19, 1963, Part 170: Commercial Zones, §170.34 Houston, Tex., added, describing Houston commercial zone, effective Apr. 22, 1963.

28 FR 5579, June 6, 1963, Part 170: Commercial Zones and Terminal Areas, amended by adding §170.56 Pueblo, Colo., describing Pueblo commercial zone, effective July 11, 1963.

28 FR 14268, Dec. 25, 1963, Part 170: Commercial Zones and Terminal Areas, §170.6 Philadelphia, Pa., commercial zone description revised, effective Jan. 26, 1964.

29 FR 105, Jan. 4, 1964, Part 170: Commercial Zones, §170.6 Philadelphia, Pa., revised (corrected order), effective Jan. 31, 1964.

29 FR 2543, Feb. 18, 1964, Part 170: Commercial Zones, §170.7 Cincinnati, Ohio, revised, effective 30 days from date of service of order.

29 FR 3363, Mar. 13, 1964, Part 170: Commercial Zones, §170.7 Cincinnati, Ohio, redefined and enlarged commercial zone revised, effective Mar. 13, 1964.

29 FR 3769, Mar. 26, 1964, Part 170: Commercial Zones, §170.2 Chicago, Ill., commercial zone redefined, effective May 18, 1964.

29 FR 6283, May 13, 1964, Part 210: Exemptions, §210.40 Motor transportation of property incidental to transportation by aircraft, added, effective June 24, 1964.

29 FR 7425, June 9, 1964, Part 170: Commercial Zones, Chicago, Ill., extension, order of Mar. 12, not having become effective, it is stayed by filing of petition for reconsideration.

29 FR 7510, June 11, 1964, Part 170: Commercial Zones, Chicago, Ill., Extension, order of March 12, 1964 reinstated, the petition for reconsideration having been denied, effective, July 20, 1964.

29 FR 7511, June 11, 1964, Part 170: Commercial Zones, §170.4 Washington, D.C., revised, effective July 20, 1964.

29 FR 9539, July 14, 1964, Part 170: Commercial Zones, §170.4 Washington, D.C., order (29 FR 7511) corrected.

29 FR 11129, July 31. 1964, Part 170: Commercial Zones, §170.3 St. Louis, Mo.-East St. Louis, Ill., commercial zone redefined, effective Aug. 28, 1964.

29 FR 11183, Aug. 4, 1964, Part 210: Exemptions, §210.45 Motor transportation of passengers incidental to transportation by aircraft, added, effective Sept. 15, 1964.

29 FR 13074, Sept. 18, 1964, Part 210: Exemptions, §210.45 Motor transportation of passengers incidental to transportation by aircraft, effective date of order (29 FR 11183) postponed from Sept. 15, 1964 to Oct. 30, 1964.

30 FR 795, Jan. 26, 1965, Part 170: Commercial Zones, §170.3 St. Louis, Mo.-East. St. Louis, Ill., commercial zone redefined, effective Feb. 26, 1965.

30 FR 2401, Feb. 24, 1965, Part 170: Commercial Zones, §170.4 Washington, D.C., commercial zone redefined, effective March 26, 1965.

30 FR 2712, March 3, 1965, Part 170: Commercial Zones, §170.4 Washington, D.C., boundaries of zone (30 FR 2401) corrected.

30 FR 3163, Mar. 6, 1965: Retention periods, records, motor carriers exempt under §203(b) of IC Act, 49 CFR 191.10, 194.3, 194.6, 195.8, 195.9, 196.2, 196.7.

30 FR 7248, May 29, 1965, Part 170: Commercial Zones, order of Feb. 5, 1965 redefining Washington, D.C., commercial zone (30 FR 2401, 2712) reinstated, effective July 6, 1965.

30 FR 11757, Sept. 15, 1965, Part 170: Commercial Zones, §170.57 Warren, Ohio, added, effective 30 days from date of service of order.

30 FR 13263, Oct. 19,1965, Part 170: Commercial Zones, §170.21 Baltimore, Md., revised, effective Nov. 15, 1965.

30 FR 14493, Nov. 19, 1965; Part 170: Commercial Zones, §170.21 Baltimore, Md., effective date of order of Sept. 29, 1965 (30 FR 13263) stayed pending disposition of petition for reconsideration.

30 FR 14529, Nov. 20, 1965, Part 210: Exemptions, §210.45 Motor transportation of passengers incidental to transportation by aircraft, amended by adding thereto paragraph (d) Exempt zones and operations—(1) Dulles and Friendship International Airports. Effective Dec. 20, 1965 [100 M.C.C. 58].

30 FR 14853, Dec. 1, 1965: Part 170: Commercial Zones, §170.8 Kansas City, Mo.-Kansas City, Kans., Commercial Zone limits redefined, effective Dec. 31, 1965.

30 FR 17169, Dec. 31, 1965; Part 170: Commercial Zones, §170.8 Kansas City, Mo.-Kansas City, Kans., effective date of order of Nov. 12, 1965 (30 FR 14853) stayed pending disposition of petition for reconsideration.

31 FR 829, Jan. 21, 1966, Part 170: Commercial Zones, §170.21, Baltimore, Md., order of Sept. 29, 1965 (30 FR 13263) reinstated, effective March 3, 1966, the petition for reconsideration having been denied.

31 FR 4067, Mar. 8, 1966: Retention periods, records, motor carriers exempt under §203(b) of IC Act, 49 CFR 191.10, 194.3, 194.6, 195.8, 195.9, 196.2, 196.7.

31 FR 8312, June 14, 1966, Part 170: Commercial Zones, §170.10 Davenport, Iowa; Rock Island and Moline, Ill., Order Sep. 8, 1960 vacated, revised order substituted, effective July 18, 1966.

31 FR 7392, May 21, 1966, Part 170: Commercial Zones §170.7 Cincinnati, Ohio, Order March 5, 1964 vacated, revised order substituted, effective June 20, 1966.

31 FR 14080, Nov. 3, 1966: Part 170: Commercial Zones, §170.8 Kansas City, Mo-Kansas City, Kans., Commercial Zone limits redefined, effective Nov. 25, 1966.

32 FR 76, Jan. 6, 1967, Part 170: Commercial Zones, 170.4 Washington, D.C., revised, effective Feb. 10, 1967.

32 FR 3664, Mar. 2, 1967: Retention periods, records, motor carriers exempt under §203(b) of IC Act, 49 CFR 191.10, 194.3, 194.6, 195.8, 195.9, 196.2, 196.7.

32 FR 3884, March 9, 1967, Part 170: Commercial Zones, §170.4 Washington, D.C., order of Dec. 16, 1966 (32 FR 76) not having become effective, and petition for reconsideration having been filed, order is stayed pending disposition of the petition, effective on date of order.

NOTE: For recodification, see 49 CFR, Editorial Note, 32 FR 5606, April 5, 1967.

32 FR 9231, June 29, 1967, Part 270 [formerly Part 170]: Commercial Zones, §270.3 St. Louis, Mo.-East St. Louis, Ill., revised; commercial zone limits redefined, effective July 21, 1967.

32 FR 13930, Oct. 6, 1967, Part 270 [formerly Part 170]: Commercial Zones, §270.8 Kansas City, Mo.—Kansas City, Kans., revised; commercial zone limits redefined, effective Nov. 1, 1967.

33 FR 698, Jan. 19, 1968, Part 1048 [former Part 270 formerly Part 170]: Commercial Zones, §1048.7 Cincinnati, Ohio, commercial zone limits of Cincinnati revised, effective March 1, 1968.

33 FR 4067, Mar. 1, 1968: Retention of records, exempt carriers, transferred to Dept. of Transportation.

33 FR 4626, March 16, 1968, Part 1048 [former Part 270 formerly Part 170]: Commercial Zones, §1048.3 St. Louis, Mo.-East St. Louis, Ill., commercial zone limits redefined, effective May 6, 1968.

33 FR 6771, May 3, 1968, Part 1048 [former Part 270 formerly Part 170]: Commercial Zones, §1048.26 Minneapolis-St. Paul, Minn., commercial zone limits redefined, effective June 3, 1968.

Section 203. (c) [§*303(c) U.S.C.*] Certificate or permit.—[Unchanged. See vol. 18, p. 14274.]

Notes of Decisions

Volume 19—p. 15506.

2. Construction and interpretation.—[Vol. 19].—The statute explicitly authorizes the commission to eliminate transportation which, though carried on in the guise of private carriage, is in effect for-hire carriage which may lawfully be carried on only by an authorized common or contract carrier. The section merely codifies the "primary business" test developed by the commission, prior to enactment thereof, as a standard for determining whether a particular "buy-and-sell" arrangement was a device to evade regulation or was, in fact, private carriage conducted in connection with a bona fide nontransportation business. No outright prohibition of backhauling practices is embodied in §203(c); rather, the statutory scheme recognizes that mere availability and use of backhaul capacity may in certain cases by completely consistent with the bona fide conduct of a noncarrier business.—Red Ball Motor Freight v. Shannon, 377 U.S. 311 (313-4, 318)*.

Terms of the Interstate Commerce Act are sufficiently comprehensive to encompass all those who, no matter what form they use, are in substance engaged in the business of transportation of property on the public highways for hire; intent of the statute is highly remedial and it is to be liberally construed to effectuate its purpose in the public interest. United States v. Aides, Inc., 211 F. Supp. 122 (124); I.C.C. v. Teeter, 228 F. Supp. 479 (481).

Since §203(c), prohibiting for-hire carrier operations without first obtaining appropriate authority, condemns only the conduct of a carrier, and §222(c) prohibits conduct of related nature by a shipper only if he (a) receives some rebate or concession or (b) is guilty of some fraudulent conduct in an attempt to evade regulation, defendant shipper is not constituted an "aider or abbettor" merely because it employed defendant carrier to haul its goods. There is no evidence that shipper induced unlawful operations, or that it paid other than the normal tariff charges of authorized carriers for like transportation; no rebates, concessions, or "kick-backs" were involved. Where alleged violation of §203(c) necessarily contemplates joint action by shipper and carrier, a knowing participation by shipper (a member of the class protected from carrier abuse by regulation of motor carriers), without more, does not make such person an aider or abettor; it merely makes it possible for the carrier to violate the law.—United States v. Wiliamson, 235 F. Supp. 836 (837-9).

The primary business test, as codified in §203(c), clearly precludes all transportation conducted in connection with a commercial enterprise unless it is within the scope and in furtherance of a primary business other than transportation, without regard to identity of the actual shipper or shippers for whom the goods are being transported; accordingly, any contention that that test is in some way controlled by, or must yield to, a finding as to identity of the persons for whom the transportation is being rendered must be rejected.—Morgan Packing Co., Inc.—Investigation of Operation, 92 M.C.C. 48 (59-60).

In adopting the "primary business" test in the Transportation Act of 1958, Congress codified the test previously followed by the commission and approved by the courts; and

in referring to "a" primary business, rather than "the" primary business, the statute recognizes that a bona fide private carrier may be engaged in diversified lines of industrial or commercial activity, thus it is limited to a single "primary business." All that §203(c) requires is that the noncarrier enterprise or enterprises be primary to any related transportation activity, and that such related transportation be in furtherance of the primary activity or activities.—Smith Grain Co., Inc., Investigation of Operations, 86 M.C.C. 767 (769-771).

The Brooks case, 93 F. Supp. 517, held that existence of an identifiable transportation charge is not determinative of carrier status, and the congressional committees reporting on the present language of §203(c) disclaimed any intention to jeopardize or interfere with bona fide private carriage as recognized in that case, even if a charge is made.—Jackson and Plunkett—Investigation of Operations, 88 M.C.C. 671 (679).

The definitions of the three types of carriers, common, contract, and private, must not only be read and considered together, but must be considered in connection with §203(c) as amended; the committee reports on the 1958 amendment plainly indicate that one of the evils sought to be abolished was the backhauling by private carriers of merchandise for sale to others for the sole purpose of receiving compensation for the otherwise empty return of their trucks; that announced intention of Congress is not to be thwarted by mere fictions.—Cahaba Steel Co.—Investigation of Operations, 86 M.C.C. 759 (764)*.

On the evidence of record, there is no doubt as to illegality of applicant's activities in transporting exempt commodities southbound and then "leasing" its vehicles to shipper for northbound transportation of considered traffic (in "private carriage") with the same drivers used purportedly as shipper's employees for duration of the northbound movement. Under such "lease" arrangements, applicant is engaged, and abetted by shipper, in transportation of shipper's traffic, for compensation, without the interstate authority required therefor. Applicant and shipper are admonished to discontinue all operation under such arrangements unless and until appropriate authority is secured, and admonished further that continued operations of type described will subject both to criminal sanctions.—Interstate Distributing Co., 91 M.C.C. 36 (41-2)*.

3. For-hire transportation business.—[Vol. 19].—Record is not persuasive that backhaul movement of sugar by appellees, dealers in livestock and in various commodities (including sugar), was for-hire transportation. Their assets are not in large part composed of transportation facilities, nor is transportation a major item of expense of the sugar movement in question; also, while they warehouse only a small stock of sugar, that is a perishable commodity and their warehouse is not equipped for its preservation. Evidence does not sustain the commission's finding that considered transportation is a related or secondary enterprise conducted with the purpose of profiting from the transportation itself.—Red Ball Motor Freight v. Shannon, 377 U.S. 311 (319-21)*.

A transportation service is not immunized from prohibitions of §§203(c) and 206(a)(1) by the mere fact that the only thing transported is a motor vehicle which itself furnishes the motive power. Since 1200 vehicles a year move under auspices of defendant's business of providing drivers for transporting an owner's automobile to place where the driver wishes to go, and that activity is hardly eleemosynary, a "for-hire" transportation business is obviously being conducted by someone. While record shows that the dirvers are not engaged in transportation as a regular occupation or business, and therefore would be within the §203(b9) exemption, there is nothing "casual, occasional, or reciprocal" in defendant's operations. Neither the dictum in 64 MCC 475 (which was shortly thereafter corrected), nor other decisions cited by defendant, support the claim that it operates as an employment agency and that the for-hire transportation was conducted solely by drivers it provided for "drive-away" movement of owners' automobiles.—I.C.C. v. AAA Con Drivers Exchange, Inc., 340 F. 2d 820 (824-6)*.

Since defendant fixes the rate owner must pay the driver, and the higher that rate the more defendant can get from the driver, it has

as much interest in the transportation payments as it it collected from owners and paid the dirvers; its position differs from that of an employment agency which collects a fixed fee or a fixed percentage of salary set by the employer, or a combination thereof. Moreover, defendant sets all terms of the owner-driver relationship; owner and driver do not make their own arrangments as is normally done between employer and employee. One who holds himslef out and acts as defendant does cannot be said to have effectively placed himself beyond a rational construction of the prohibitory language of the statute, which Congress entrusted the commission to administer. Looking through form to substance, the commission rationally could (and its decisions show that it would) conclude that defendant led its customers to believe that it, not the drivers, was getting their cars from one place to another.—Id., pp. 824, 825-6.

Report and order in issue, finding that respondent (plaintiff) has ben engaged in for-hire transportation of sugar without requisite authority and requiring it to cease and desist therefrom, shows that the commission relied for both legal standards and factual comparability on its decision in 81 MCC 337; however, that decision was set aside in 219 F. Supp. 781 which was affirmed in 377 US 311 by a full opinion which declared a number of signigicant principles. Therefore, as the court must be certain that the commission has evaluated record in instant proceeding in light of the correct standards, the order is vacated and proceeding remanded for further hearing, consideration, and report. Other than statements that present record may be used and that the court's impression is that much more factual information will be helpful, if not required, proper proceedings on remand is left to the commission's discretion.—Shelby Biscuit Co. v. United States, 255 F. Supp. 475 (475-6)*.

Defendant by his advertisements holds out to the general public to transport automobiles by driveaway for individual owners, and by such holding out and his verbal representations to each owner establishes an expectation on the owner's part that he assumes to perform a transportation service. Although it is made to appear that the owner contracts with the driver for transportation and delivery of his car, drivers are not only selected by defendant, but are under his supervision and control as agents or employees during course of the transportation; and for each automobile transported he charges and receives from the owner a definite sum of money which constitutes compensation within meaning of Part II. Fact that the charge for the service is related to distance traveled discredits contention that such charge is for screening a driver; and the contracts or agreements used (apparently designed to avoid application of the act) are of no legal effect since their terms are contrary to the facts. Defendant's acts constitute unauthorized common carriage in violation of §206(a); permanent injunction issued.—I.C.C. v. Teeter, 228 F. Supp. 479 (482).

The Motor Carrier Act is comprehensive enough to bring within its purview all those who are in substance engaged in a business of for-hire transportation of property on the public highways. Operations of defendant nonprofit shippers association constituted an unauthorized for-hire transportation business, in violation of §§203(c), 206, and 209, when it transported goods of its shipper members in vehicles leased for the trip and, since those services were performed for compensation, it could not be classified as a private carrier acting in furtherance of a primary non-transportation business.—I.C.C. v. International Shipper Ass'n. of New Jersey, Inc., 249 F. Supp. 66 (69-70)*.

See also Federal Shippers Assn. case, §212(a), n. 35.

In determining the status of a lessor of motor equipment when vehicles are used by a shipper, the courts have disregarded form, and look only to the substance; the actual modus operandi of the parties must be examined to determine if for-hire transportation or private carriage is involved. In the dual test developed by the commission and prescribed by the Supreme Court's approval thereof in 368 US 370, the first test is one of control, direction, and domination of the transportation, and the second looks to the substance of the transportation. The purpose of these tests is to determine whether or not one who has hired the instrumentalities of transportation from another has assumed in signigicant

measure the characteristic burdens of the transportation business.—United States v. Wormsbacher, 240 F. Supp. 716 (718, 719).

Although lease arrangement between vehicle owner and shipper provided that shipper would have exclusive possession, control, and use of the tractors, and that drivers would be its employees and subject to its rules and direction, in actual practice drivers were hired and instructed by lessor, and latter, rather than shipper, assumed most of the burdens of the transportation business. Testimony of three drivers shows that shipper's control, direction, and domination of the transportation were slight compared to lessor's. Further, lessor retained substantial financial burdens in connection with the vehicles, as he was responsible for their maintenance and paid fuel and oil costs, had invested capital in them and suffered any loss from their nonuse, and absorbed cost of their empty return after making delivery for shipper. The arrangement under which defendants operated constituted for-hire transportation in interstate commerce without appropriate authority from the commission, in violation of §203(c).—Id., pp. 718-9.

While individual's purported lease of his tractors to meat company for transportation of its products in its trailers provides for lessee's exclusive direction and control of vehicles and that it will furnish its own drivers, in the actual operation he exercises substantial control through lessee's purported dispatcher who is actually his employee (he pays three-fourths of her salary), since she dispatches the vehicles, hires and discharges drivers, keeps their logs, arranges for northbound movement of agricultural commodities for lessee's account and for southbound transportation of its meats, instructs drivers concerning movements, and handles their accounts. Also, lessor assumes a substantial amount of the characteristic burdens of a transportation business such as maintenance and repair, operating supplies, insurance, etc. Defendant lessor thus acts as an unauthorized contract carrier within meaning of 368 US 370; he and his employees, etc., are therefore permanently enjoined from engaging in such operations unless and until appropriate authority is obtained from the commission.—I.C.C. v. Moore, 236 F. Supp. 168 (170-1, 173).

Defendants throughout their operation have retained the identifying characteristics of a for-hire motor carrier; by coordinating activities of drivers, shippers, and consignees they were the common denominator for each of the separate shipments, an issuance of checks to the drivers by shippers or consignees and "trip lease" or "spot lease" agreements executied were but a specious salutation to the regulations applicable to their interstate motor carrier business. Defendants have retained direction, control, and responsibility for the vehicles and drivers at all times, and have supplied incidental services normally attributed to for-hire transportation; their customers have been offered and delivered transportation at a fixed rate of compensation without assumption of financial risk or the characteristic burdens of a transportation business; defendants' business is thus unauthorized for-hire carriage in violation of§§206(a), 209(a), and 222(b).—I.C.C. v. Arpel, Inc., 211 F. Supp. 370 (373, 374).

See also I.C.C. v. All American Association; Northwest Agricultural Coop. Ass'n v. I.C.C.; and I.C.C. v. Nelson Cooperative Marketing Assn., cases, §222(b), n. 11.

Although plaintiff contends that shipper-lessees exercise direction and control over details of the transportation performed with vehicles leased from and drivers supplied by plaintiff, the Supreme Court in 368 US 370, in considering a substantially similar factual situation, expressly affirmed the commission's consistent position that such control is not incompatible with for-hire carriage by lessor; under that decision, in determining that considered operation was for-hire carriage by plaintiff, the commission quite properly did not rely entirely on the "control" test but looked at the totalities of the situation. Decision cited is controlling and the commission's action must be affirmed.—John J. Casale, Inc. v. United States, 208 F. Supp. 55 (56, 59-60)*.

See also I.C.C. v. Dudgeon, §202(a), n. 2.

By leasing fully-serviced vehicles to a corporation under a bona fide lease arrangement, which vehicles were used in lessee's private carrier operations, carrier of exempt agricultural commodities was not functioning as a

common or contract carrier of property for compensation. Carrier was engaged in, and intended to continue, transportation of exempt commodities; corporation's activities were not changed from those of a private carrier merely because the lease arrangement called for lessor to use the units in its exempt transportation when lessee did not need them or because drivers of the vehicles, who were lessee's employees, were obtained from among lessor's experienced drivers.—I.C.C. v. Schultz Transit, Inc., 207 F. Supp. 749 (751-2, 754).

See also I.C.C. v. Piedmont Sales Co., and Studna v. United States cases, §203(a)(17), n. 5.

Respondent manages, coordinates, and promotes a nationwide, one-way, rental system for utility trailers owned by its trailer-renting members; and, to further equitable distribution of available vehicles—so that each member has an adequate supply to rent and no one station accumulates trailers beyond its renting capacity—respondent redistributes trailers when and where required with its own equipment and drivers. Record does not show what revenues respondent derives solely from transporting utility trailers, but it does show that almost 50 percent of its annual income is spent on the redistribution transportation; nor does the record show what portion of such transportation has been, or is, in interstate commerce; in fact, respondent's redistribution operations only occasionally cross State lines. Therefore, since the basic issue of whether the redistribution transportation constitutes an unlawful for-hire transportation service cannot be resolved without such information, respondent's request for a declaratory order adjudging the operations involved to be private carriage is denied.—National Trailer Rental Assn.—Declaratory Order, 94 M.C.C. 526 (531).

Defendant shipper association has been engaged without authority in for-hire motor carriage subject to the act, in transporting nonexempt commodities of which it was neither owner, lessee, nor bailee in interstate commerce by motor vehicle for "charges" or "rates." Such "charges" or "rates" may, even if only reimbursement for operating costs rather than profitmaking constitute "compensation" (citing 308 F 2d 888). As defendant performed transportation service for some 65 to 100 member shippers, and solicited and moved loads for a shipper which did not become an association member, the service performed was common carriage; and though defendant's activities in nonprofit consolidation and distribution of freight for its members are excluded from regulation by §402(c), that exclusion does not authorize the performance of any motor carriage subject to the act. Cease-and-desist order entered.—Natl. Motor Frt. Traf. Assn., Inc., v. Internatl. Shippers, 94 M.C.C. 440 (446-7).

Though record does not permit detailed analysis of respondents' practices, it is apparent that corporate respondent, a purported shippers' association, is a business device whereby one individual respondent, who with a second acted as its agents, performed operations he could not lawfully perform in his own name, and those individuals received the profits from the operation in form of payments for procuring lease of equipment for each shipment transported. The corporation was treated as the carrier by its member shippers, was identified as such on most of the bills of lading, and bore risk of loss or damage in all instances; as lessee of the vehicles with direction and control over them, it cannot divest itself of a carrier's mantle; it has been performing an unauthorized contract-carrier service for its members, and individual respondents participated in the scheme by performing the indispensable function of locating and leasing the equipment used. Cease and desist order entered.—Western Shippers Assn., Inc.—Investigation, 88 M.C.C. 575 (577).

Such analysis of the facts should not be construed to preclude a finding on a more ample record that the owner-operators actually used are also partners in the joint enterprise and thus equally engaged in provision of unlawful contract carriage.—Id., p. 577-8.

Supporting conclusion that principal respondents' sugar operations are for-hire carriage are facts that in case of sales arranged through respondent brokerage company the latter assigns orders received from customers to either principal respondent according to availability of their equipment, and that many

customers to whom those respondents have delivered and biltdd shipments have no knowledge of their business and do not regard them as sugar dealers; if those respondents had no motor equipment, the broker would have no reason to make them parties to previously arranged sales.—Stewart—Investigation of Operations, 89 M.C.C. 281 (287); and respondent broker is interested in the principal respondents' unauthorized operations when it profits therefrom to extent that they enable it to broker more of the refinery's sugar, and it receives a commission from the refinery on all sugar purchased by them, whether deliveries are made to their own or to broker-arranged customers.—Id., p. 287.

Dairy company's transportation of sugar to consignees who, though nominally its customers, are actually customers of refineries from which it purchased the sugar and have been solicited by brokers for the latter, is unauthorized for-hire carriage performed for purpose of receiving compensation for the otherwise empty return of its vehicles.—Meinerz Creamery Co.—Investigation of Operations, 88 M.C.C. 77 (78, 84).

That title to the goods remains in the transporter until transportation is completed, that is assumes risk of damage or loss thereof while in transit, or that it maintains a place of storage where some of the goods are held to await future purchasers are not entirely controlling in determining status of steel company's buy-and-sell operation in transporting salt as return loads in trucks used for outbound transportation of its steel products. It is the effect of the plan, or what is actually being done, rather than the designation of it by person concerned, which must govern the determination. Evidence shows that, in transporting considered shipments of salt, respondent is engaging in for-hire transportation subject to certificate or permit requirements of the act; cease and desist order entered.—Cahaba Steel Co.—Investigation of Operations, 86 M.C.C. 759 (764-5)*.

Holding in 368 US 370 that shipper control over leased equipment is not alone determinative of whether the transportation performed is private carriage or for-hire operation by lessor and that the test is one of substance involving question of which bears the characteristic burdens of transportation, imposes a sharp limitation both on purported private carriers who seek to avoid those burdens and on lessors who assume them yet strive to remain outside the regulatory scheme. However, the Court recognized, at least implicitly, that there may be a genuine leasing and employment arrangement; and ordinarily, a lessee of vehicles does not bear the burden of capital investment and risk of premature depreciation or loss. Operations performed under respondent's present leasing arrangements with shippers, wherein he assumes costs of ownership, operation, and maintenance of the equipment, while shippers pay all other expenses, supervise and completely control the transportation service, and employ and control the drivers, are bona fide private carriage and not unlawful.—Lovell—Investigation of Operations, 92 M.C.C. 728 (733-6).

Though this conclusion is predicated on certain changes made in the leasing arrangements and methods of operations shortly before hearing, such changes were not made as mere paper compliance to avoid regulation; record is persuasive that respondent and his shipper-lessees have been fully cooperative with commission field em,loyees and have endeavored to bring their operations into full compliance with commission regulations. While any prior unlawfulness in operations as conducted prior to those changes is not condoned, in light of their continued evident willingness to comply with the commission's requirements and fact that they are now doing so, entry of a cease-and-desist order would be inappropriate.—Id., pp. 735, 736.

In applicant's claimed operations with leased vehicles as a private carrier of surgical supplies from Chicago to New Orleans and as a for-hire carrier of bananas northbound, it appears that arrangements between applicant and lessor are more flexible than terms of their written agreements, and, considering applicant's lack of control over the northbound transportation, it is possible that it is receiving an unauthorized service in the southbound movements; if arrangements on latter amount to a lease of equipment with drivers, such transportation if for-hire carriage subject to regulation. Though record

does not permit definition of exact legal effect of their agreement on southbound trips, applicant and lessor should examine their operations to determine whether their actual practices conform to the requirements of the act and the commission's regulations thereunder. —Kendall Co., 88 M.C.C. 364 (368).

Lease of equipment with drivers by a carrier to a shipper, in absence of showing to the contrary, raises a presumption that the transportation is for-hire carriage subject to regulation; however, record does not warrant finding that practices of carrier and equipment lessor respondents constituted unauthorized for-hire transportation. Respondent leasing company leased equipment to the shipper, but record does not indicate that either it or the carrier participated in furnishing the driver, although latter is regularly employed by the carrier; evidence is undisputed that carrier was unaware that its driver was also employed as an occasional driver by shipper; and record is far from conclusive that respondents engaged in deliberate and concerted efforts to evade regulation in that regard. Terms of the vehicle lease are not of record, and absence of other pertinent facts precludes a positive determination of for-hire carriage in accordance with principles of 27 MCC 191 and 368 US 370.—Silver Lines, Inc., Investigation and Revocation, 96 M.C.C. 173 (176-7).

Respondent trip-leasing equipment to shippers for return movements to Miami never relinquishes actual control of the vehicles. Argument that shipper must contact a driver's service overlooks availability at origin of such backhaul movement of a driver who has completed a northbound haul for another shipper-leasee at Miami. The equipment is dispatched to shipper's premises in response to a single request, over-the-road transportation is performed, and after unloading at destination the driver's employee status and the lease terminate. By respondent's instructions the equipment is then driven to its Miami facility or to an agent beyond for cursory reassignment as it directs. It is almost impossible to differentiate between such service and that of any for-hire carrier: any difference of form, such as calling the transportation contract a lease, separate employment of drivers by shipper, computing of charges on a somewhat different basis, and shifting of some of the burdens to shipper, do not suffice to divest control of the equipment from respondent and place it with shippers. The operations considered are unlawful for-hire carriage; cease-and-desist order entered.—American Equipment Rental, Inc.—Investigation, 96 M.C.C. 383 (385-6).

Review of all circumstances surrounding questioned transactions, including execution and implementation od documents involved, in convincing that respondents (a vehicle leasing company and one purporting to furnish drivers to shippers), in concert with one another and with vehicle owners or operators such as respondent meatpacker, offer shippers what is essentially a for-hire carrier service. While secondary respondents seemingly arrange for leasing equipment, employment of drivers, and cargo insurance, actually they are insulated from the transportation itself and exercise no more control over it than they would over operations of any for-hire carrier whose service they might use; thus, their employer relationship with the driver is illusory. Though primary respondents may be separate organizations, they jointly took part in plan for shippers' coordinated use of drivers and vehicles; fact that shipper may call both, rather than vehicle lessor, to obtain complete service, does not change ultimate effect thereof; performance of such conjunctive service constitutes unauthorized for-hire carriage on part of both.—Transport Rental Systems, Investigation, 94 M.C.C. 402 (408-12).

In determining the status of a motor carrier operation, the economic reality behind the arrangement, and not its form, is crucial. In instant proceeding the only duty falling upon secondary respondents was to forward checks to individual drivers and to lessor of equipment in amounts that were pre-determined by latter in accordance with an established one-way mileage scale; and record shows that payment of drivers' wages was merely a convenient financial adjustment under which shipper paid a part of the transportation expenses. Shipper's assumption, qua employer, of this responsibility did not transform the operation into private carriage when it was, in fact, a for-hire transportation. —Id., p. 410.

See also the Spencer case, §203 (a)(14), n. 1b.

After vendee holding one-way bulk-liquids authority leased tank trucks to vendor, a general-commodity carrier which had never transported bulk liquids, all such traffic was generated by and handled under control of vendee, which retained 85 percent of revenues therefrom; such service, being unrelated to vendor's normal operations but directly complementary to vendee's bulk operations, was clearly conducted as an adjunct of the latter for purpose of gaining additional traffic, particularly backhauls, with vendor serving principally as a conduit of revenues owing to vendee for its service. Such arrangement was an unauthorized lease of a portion of vendor's operating rights and, in absence of a lawfully effective lease thereof, vendee has been conducting unauthorized for-hire common carrier operations in violation of §206(a).—Tank Lines, Inc.—Purchase—S & N Freight Line, Inc., 90 M.C.C. 381 (384-5)*.

Although respondent entered into certain agreements whereby he is purportedly an agent or employee of shipper respondents, shippers exercise no effective control over transportation of their products. Respondent dispatches equipment, supervises and pays the drivers, pays the expenses of operation of his own and leased vehicles, carries insurance and assumes responsibility for loss or damage from theft or negligence. Shippers enjoy use of interstate motor service, are guaranteed a fixed cost for such transportaton, and are totally disassociated from risks and obligations normally incident to private carrier status (368 US 370). Thus, respondent has been providing motor carrier transportation for shipper respondents and others as a for-hire carrier without appropriate authority.—Kapke Investigation of Operations and Practices, 91 M.C.C. 377 (385, 386).

Under leasing arrangements between respondent shipper and owner-operators, which contemplate use of latter's vehicles from time to time for movements from California to Washington, shipper has no control over southbound movements of exempt commodities which vehicle owners undertake in their own behalf; "directing" the vehicle owner to appear at point A for a northbound haul of commodities to point B is extent of shipper's interest and responsibility until delivery of the cargo. Carrier assumes responsibility for maintenance of the vehicle, payment of the driver, protection of the public, and safe delivery of the goods; shipper assumes only liability for transportation charges under the contract; the leases are thus merely a guide for determining compensation due the owners when and as their vehicles are utilized. Under such arrangements respondent equipment owners act as independent contractors who from time to time perform a given service for a lump-sum compensation, thus are engaged in unauthorized for-hire operations subject to the act; and respondent shipper is aiding and abetting continuance of such unlawful operations; cease-and-desist order issued against all respondents.—United Retail Merchants' Stores, Inc.—Investigation, 89 M.C.C. 183 (187).

Respondent's occasional transportation of automobilies as "good will" to west coast dealers who have purchased them in Kansas City area, using drivers seeking low-cost transportation, is unauthorized for-hire carriage when he admittedly retains the $25 deposit he requires of each driver, as compensation. His contention that he is not a for-hire carrier because he does not hold out to serve the general public is without merit; investigation was begun to determine whether he was operating unlawfully either as a common or a contract carrier and it is immaterial whether he has been serving a single shipper or all shippers who desire his service. Cease-and-desist order entered.—Studna Investigation of Operations, 88 M.C.C. 52 (53,55)*.

In arranging for interstate transportation of automobiles from Detroit for dealers or private owners, using casual drivers, respondent holds out by personal solicitation and by newspaper advertisements and telephone listing to deliver automobiles anywhere; he retains as his fee all or part of the deposit required of each driver selected by him; and, while it is made to appear that the owner contracts with driver for transportation of his car, initial terms and conditions of each movement are prescribed by respondent, and representations made to owners establish expectation that transportation service is being performed

by respondent. Such operation is not within the exemption of §203(b9), but is unauthorized for-hire carriage in violation of §206(a) or §209(a).—Orleman Investigation of Operations, 91 M.C.C. 285 (288-9)*.

Furthermore, even assuming that respondent's long-standing arrangements with dealers throughout the country, under which the price paid drivers is standardized according to destination, establish an ostensible principal-agent relationship between the dealer and respondent, the underlying reason therefor is delivery of dealer's automobiles by the driveaway method, which cannot be considered private carriage. Cease-and-desist order entered, and respondent is referred to the decision in 89 MCC 33, and cases cited therein, for standards to govern his future conduct.—Id., pp. 87, 88, 89.

Respondent's transportation of automobiles belonging to military personnel between Wrightstown, N. J., and ports of entry at Philadelphia and in New York commercial zone is unauthorized for-hire carriage; he holds himself out to transport automobiles, advertises his service, has no title to property transported, and charges an amount readily identifiable as a transportation charge, with rates the same as those of a competing for-hire service. That respondent's for-hire transportation activities indirectly benefit his nontransportation business by giving him sales contracts with potential purchasers of automobiles does not bring his for-hire activities within scope of his automobile business. Cease-and-desist order entered.—Cherkos Investigation of Operations, 91 M.C.C. 535 (535, 541)*.

Although respondent has or assumes little actual control over or responsibility for over-the-road transportation of private automobiles for their owners, and physical movement is accomplished through use of drivers who apparently are bona fide travelers and as casual transporters would themselves be exempt under §203(b9) if not part of an overall patern indicating a for-hire carrier business, respondent's holding out of an automobile transporting and delivery service in newspaper and telephone-book advertisements, plus (1) its participation in arrangements vital to accomplishment of that which is held out, (2) realization of the transportation objective of owners approaching it within terms of the holding out, and (3) receipt of something of value by both the driver and respondent, is sufficient to compel conclusion that respondent is engaging in an unauthorized for-hire transportation business in violation of §§203(c) and 206(a).—Service Associates, Inc.—Investigation of Operations, 89 M.C.C. 33 (35, 36).

The substantial effect of respondent's holding out and participation is the service which those using it want and really pay for, namely, transportation of automobiles from one point to another. Because their compensation is their transportation, drivers may be considered, despite the wording of the various forms of agreement, as temporary employees or agents of respondent, or as partners with it in a joint venture in which the act or declaration of one is the act or declaration of all or any of them. And the complications of form of an arrangement do not change the overall substance or character of a for-hire operation; jointly, respondent and drivers accomplish the transporation which the public seeks, and exclusive direction and control thereof does not remain in the car owner. Respondent is in substance engaged in a common-carrier transportation business without the certificate required by the act; cease-and-desist order entered.—Id., pp. 36-7.

Furnishing of drivers alone may constitute a for-hire transportation service. Where there are continuing arrangements whereby drivers in employ of one person are furnished to a second and ostensibly used by latter to accomplish private transportation of its own traffic, a presumption arises that the transportation is performed by the person which under such arrangements provides the drivers and that, as a consequence thereof, that person is a carrier for compensation and the transportation is subject to the commission's regulation; however, that presumption will yield to a showing that the shipper has the exclusive right and privilege of directing and controlling the transportation service. [78 MCC 389.]—Schirmer Transp. Co., Inc.—Investigation, 91 M.C.C. 869 (875)*.

That presumption is not rebutted where, under agreement with respondent mining company, respondent MTS furnishes drivers

who operate the mining company's vehicles in transportation of its fuel oils from Superior, Wis., to its Minnesota plant and storage facilities, and record clearly establishes that the real responsibility for direction and control of the operation is vested in MTS and its affiliate and alter ego, respondent carrier, which was denied authority for the service involved. MTS recruits and trains the drivers, carries them on its payroll, instructs and directs them in their day-to-day operations, undertakes nearly all matters relating to compliance with safety regulations, maintains the vehicles used, and generally, except as to liability insurance protection, bears the risks of the operation.—Id., pp. 872, 876.

The mining company's reservation of authority over vehicles operating within its plant site cannot be deemed control over the entire operation, and its retention of certain personnel records, logs, and trip reports is not shown to aid in any way in supervision or control thereof. Its provision of liability insurance and occasional assertion of some degree of oversight are insufficient to offset the more persuasive indicia of control by MTS; nor would its placing of one of its own employees as dispatcher of the operation in itself warrant a different conclusion. And possibility of internal labor problems making it undesirable for the mining company to maintain the drivers on its own payroll must be regarded as one of the characteristic burdens a shipper must assume if it is to enter into bona fide private carriage. Involved operations constitute unauthorized for-hire carriage and, though there is no evidence of a willful attempt by respondents to evade regulation, issuance of a cease-and-desist order is appropriate.—Id., p. 876.

In "leasing" buses to groups for transportation to points outside California, with drivers regularly used in his intrastate charter operations, respondent is transporting passengers in interstate commerce, in charter service, without authority in violation of §206(a); and lease provisions designed to place ostensible control in the passenger group do not alter essential nature of the service thus provided. Even though the group pays the driver and cost of insurance, such practice is merely a financial adjustment under which the group pays part of transportation expenses which carrier respondent otherwise must pay. Consideration of the operation as a whole indicates that purpose of the leasing plan is to evade regulation under the act; cease-and-desist order entered.—Roesch Investigation of Operations, 91 M.C.C. 824 (826).

Individual respondent, wife of the president of carrier respondent, leases equipment owned by her to shipper, and also leases same equipment to the carrier; when it is to be used by shipper, it must first be released by the carrier, and on occasion latter's equipment has been used; other relations between those respondents transcend the lease of equipment between them, and the facts clearly indicate that they cooperate in an overall plan to provide their complementary services as one service for transportation of traffic beyond scope of the carrier's commodity authority.—Zirbel Transport, Inc., Investigation and Revocaton, 91 M.C.C. 705 (706-7, 709).

Moreover, though carrier's drivers purportedly become shipper's employees while transporting its traffic, and shipper pays them directly, they maintain a vital economic relation with carrier throughout the arrangements, and it cannot be found that they are in fact subject to shipper's exclusive direction and control. In substance, the service rendered does not differ from ordinary common carrier service; conclusion is inescapable that those respondents are in concert providing an unauthorized interstate for-hire service; cease-and-desist order entered.—Id., pp. 707, 708-9.

Although agreement between shipper and lessor purports to cover an equipment rental operation which does not supply drivers, vehicles involved were stationed at lessor's garage and were subject to use, often with drivers on that shipper's payroll, for movements on behalf of other shippers; conclusion is inescapable that, regardless of the lease terms, the vehicles were not assigned to shipper's exclusive use and possession, but reverted to lessor's control for use in other activities, and that in many instances the drivers maintained an economic relation with lessor in which they depended on it for employment. Even if shipper bore all the usual responsibilities of an employer with respect to drivers, the real service offered by lessor for that and

other shippers is in substance for-hire carriage subject to Part II; as shipper has benefited from its participation in the unauthorized operations, cease-and-desist order is directed to both respondents.—G & W Transfer Co., Inc.—Investigation of Operations, 89 M.C.C. 251 (253-4)*.

Transportation with vehicles leased to shipper is for-hire carriage by lessor when method of leasing and releasing provides no way of determining when and what vehicles are being used by lessor or lessee; shipper orders their use only when it has products to ship, and after they are unloaded does not know where the vehicle is or for what it is used; drivers selected by lessor are employed by shipper only when it needs transportation and then go off its payroll and revert to lessor; when shipper requires a one-way movement, though it pays on a basis of a round trip, one-half the expense is charged back to lessor, thus guaranteeing one-way transportation at a fixed cost per mile. Entire design and purpose is to evade regulation under the act; both lessors, and shipper cooperating with them, are in substance engaged in unlawful for-hire transportation; cease-and-desist order entered.—Schultz Transit, Inc., Investigation of Operations, 89 M.C.C. 305 (310-1)*.

Shipper's traffic manager, in leasing vehicles to his employer for purported private-carrier operation, exercises a substantial degree of control over the drivers; he not only employs them for shipper and chooses those to be assigned to each trip, but when the operation began drivers who formerly worked for him were merely switched to shipper's payroll, and there is reason to believe that they would cease working for shipper if the equipment lease were terminated. Those factors, coupled with the traffic manager's almost complete control over operation of the vehicles, and shipper's assertion that proposed contract-carrier operation by a corporation controlled solely by him would be similar to that presently conducted, compels conclusion that the present operation is illegal for-hire carriage, which should be discontinued.—Frost Motor Exp., Inc., 89 M.C.C. 155 (157-8).

Though, following finding in 82 MCC 820 that respondent's leasing of vehicles to building supply company (for use in distributing brick and cinder blocks) was unlawful for-hire carriage, he twice altered the arrangement by new lease agreements, such changes did not affect substance of the arrangement; recitations of the duties of each party, no matter how closely they conform to established requirements concerning purported private carriage, must yield to consideration of actual practices of the parties in conducting the transportation. Regardless of the lease terms, considered transportation is unlawful for-hire carriage by respondent when it is he who recommends drivers to be employed, determines which should be assigned to each trip, prepares the entire payroll, and acts as indispensable intermediary in distributing checks drawn by lessee; conclusion is inescapable that lessee lacks the exclusive right and privilege of directing and controlling the service performed. — Huffman — Investigation of Operations, 88 M.C.C. 437 (439, 440-1).

And the same conclusion is warranted as to transportation of paper products under similar lease arrangement with another shipper. Motor carrier operations must be conducted in good faith without shadow of subterfuge or attempted evasion of the letter or obligation of the law; no characteristic of present arrangement is shown which distinguishes it from service respondent formerly offered admittedly as a trucker; and its entire purpose is plainly to evade regulation under the act, which cannot be permitted to succeed. Mere shift of same drivers from respondent's to shipper's payroll, without some positive showing that shipper has assumed their sole direction and control, cannot strip respondent of the badge of an unauthorized for-hire carrier. Cease-and-desist order entered.—Id., pp. 441-2.

Respondent found to be unlawfully operating as a for-hire carrier in eastbound transportation of wine from California has also engaged in unauthorized for-hire carriage of lard from Omaha to California destinations by leasing vehicles with drivers to shipper under arrangement which does not give shipper exclusive control over operation of the equipment, and under which shipper does not bear the characteristic economic burdens of private carriage. However, whether the parties

have undertaken a joint enterprise unlawfully to effect reciprocal transportation of type condemned in 79 MCC 727 need not be considered, since, regardless of shipper's participation, the unlawful transportation in each instance is fully attributable to respondent. Cease-and-desist order entered.—Center America Corp.—Investigation of Operations, 88 M.C.C. 740 (743-4).

5. Primary business test.—[Vol. 19].—Record in commission investigation proceeding does not support the issuance of a cease and desist order against plaintiff corporation, based on the commission's conclusion that plaintiff's motor carrier operations constituted unlawful for-hire carriage rather than transportation incidental to its primary business of dealing in grain and feed and ingredients, when the evidence did not show any illegal activities by the corporation itself, but only illegal operations conducted by its major stockholder (and predecessor in interest) before the corporation was organized. Moreover, the commission's conclusion cannot be based on its finding that plaintiff was the alter ego of its predecessor stockholder when, there being no substantial evidence to show it to be a sham, or a mere shell, the record does not justify disregarding its corporate entity. Accordingly, order entering the cease and desist order against the corporation is reversed and set aside.—Farmers Feed & Supply Co. v. United States, 267 F. Supp. 72 (75-6)*.

The record clearly indicates that plaintiffs are in a general mercantile business buying and selling many items, including sugar; they purchase sugar in Louisiana in their own name, haul it to San Antonio in their own trucks, assume risks of damage or loss in value due to price fluctuations, and maintain a reasonable inventory of sugar at their place of business. There is no evidence in the record showing that plaintiffs make any identifiable transportation charge to buyers of the sugar, that they hold out to the general public to haul sugar for any compensation, or that it is their general practice to obtain orders for sugar from their customers before purchasing it in Louisiana. Thus there is no substantial evidence to support the commission's finding that plaintiffs have been and are engaging in unauthorized transportation of sugar in interstate commerce as a common or contract carrier in violation of §206 (a) or §209(a); the commission's cease-and-desist order permanently enjoined.—Shannon v. United States, 219 F. Supp. 781 (782)*.

In determining whether a particular transportation operation is private or for-hire carriage, the statements of the law must be considered in light of the pertinent facts. The criteria to be applied are (1) ownership of the property to be transported; (2) preexisting orders of respondent's customers' (3) extent of respondent's use of warehousing facilities, if any; (4) financial risks involved; (5) difference in price of the goods to respondent and its charge to the customer, and whether it appears that such charge consists mainly of something equivalent to a transportation charge; (6) extent of respondent's transportation for others; (7) nature of any advertising; (8) extent of respondent's investment in transportation and duties of its personnel; (9) performance of any real service other than transportation; (10) use of equipment on a backhaul basis; (11) respondent's use of for-hire carriers; (12) economic purpose of the operations. And there is nothing in decision in 377 US 311 limiting the commission's consideration of those criteria so long as they are weighed in balance.—Farmers Feed & Supply Co.—Investigation of Operations, 96 M.C.C. 409 (414-6, 417)*.

Under criteria developed in 82 MCC 65 and 94 MCC 458, defendant's activities in transportation of crude petroleum appear to be within scope and in furtherance of its business as a petroleum marketer. It holds title to the oil it transports, and though, in view of its contract with an oil company covering latter's purchase of an agreed amount per day at a fixed price, it must be deemed to have received a purchase order prior to acquiring the oil, thus minimizing its risk of ownership, nevertheless, if under its contract with the producer it were unable to obtain the quantity required it would still be obligated to satisfy its commitments to its purchaser, thus assuming an economic burden beyond scope of for-hire carriage. Defendant advertises as a marketer of crude oil, and neither transports nor holds out to transport for anyone but itself;

the $0.35 differential between cost of the oil to it and its selling price to the oil company cannot be strictly identified as a transportation charge; and while its transportation equipment is the largest part of its business investment, its business is newly organized and its services and facilities are geared to current needs thereof.—Northern Tank Line v. Petroleum Marketers, Inc., 96 M.C.C. 276 (279-80).

While movement of the oil from the producer's well site to a customer's refinery or drilling rig is an extremely important feature of defendant's service, it is also responsible for testing and gauging of the oil prior to shipment to ensure that the product delivered meets its customers' minimum standards of quality; and though the same type of testing and gauging service is obtainable from complainant at no extra charge to shipper, those services are nontransportation services not normally required or expected of a for-hire carrier. Moreover, defendant's transportation of crude oil is not coordinated with return movement of any commodity, and the financial success of its marketing business is neither concerned with nor dependent on any type of backhaul movement; additionally, it has used services of a for-hire carrier for interstate movements to drilling sites.—Id., 280, 281.

And though defendant only recently leased a storage tank and has used it for only a small portion of its business, its need for warehousing facilities only recently became manifest, since none were needed for its direct service from the well sites to its contracting purchaser, the oil company. That it obtained such a facility when feasibility of its use became apparent lends support to conclusion that defendant has not participated in any violation of the act; and as new developments occur and the services and facilities offered by it increase and expand, the true nature of its petroleum marketing activities should become more apparent. On the record, defendant is not shown to be engaging in a for-hire transportation service; complaint dismissed.—Id., pp. 279, 280-1.

Considered transportation of asphalt and oils from refineries direct to customers or customer-designated jobsites is within scope, and in furtherance, of applicant's primary noncarrier business of buying and selling road oils; applicant assumes entire risk of loss due to price fluctuations, risks loss in transit, performs additional services of providing storage tanks and reheating oil, and holds himself out as a supplier of oil rather than of transportation for compensation; also, he extends credit to his customers, and while distance of a movement is considered in quoting delivered price, it is not a controlling factor. Moreover, no exception was taken to the examiner's finding that transportation to applicant's storage depot is private carriage, and no substantial difference is discernible when applicant locates his storage facility adjacent to point of delivery. In neither case does title pass to the purchaser until oil is delivered to purchaser's facility.—Schnuerle, 91 M.CC. 231 (233, 234).

Respondent partnership's transportation of petroleum products owned by oil company from Port Wentworth, Ga., to Aiken, S. C., for which it receives a per-gallon hauling allowance, is private carriage within scope and in furtherance of its primary business of operating the oil company's bulk plant at Aiken and acting as its commission sales agent in that area. Although, in requesting informal ruling by Bureau of Motor Carriers as to propriety of such operation, the oil company stated that the hauling allowance would equal the published common-carrier rate, and that the partnership derives some profit from the transportation, such assumption requires no different conclusion in light of applicable precedents. See 17 MCC 658 and 82 MCC 417.—Jackson and Plunkett—Investigation of Operations, 88 M.C.C. 671 (676-8, 679).

Regardless of purpose of the hauling allowance, a finding of unlawfulness may not be predicated merely on its existence or size; substance of the arrangement must be considered rather than its contractual form; if the transportation were in fact the dominant element in the partnership's business, it would be unlawful; and even if not the dominant element, it must be so functionally related thereto that it cannot be separated without fragmenting an essentially unitary commercial enterprise. Should the allowance be eliminated, or even should it be doubled, economic

relationship of the parties would remain virtually unchanged; therefore, since the partnership would continue to transport and sell the oil company's gasoline, conclusion is warranted that the transportation activities are an integral part of its petroleum distributorship and were undertaken to better serve its customers and to promote sales.—Id., pp. 678, 679.

To be in furtherance of a primary nontransportation enterprise, transportation performed must not be too remote from that primary business; while efficiency of operation is important to many enterprises, unauthorized transportation subject to part II cannot be justified on the basis that it is simply an effort to achieve efficiency and substantial economies. Nor does mere duplication or close similarity between commodities dealt in as a primary business and those involved in the challenged operation dictate the result; all facts must be studies to determine whether particular operations are within scope and in furtherance of a primary noncarrier business, or whether their real purpose is to profit from the transportation as such.—Wallace—Investigation of Operations, 89 M.C.C. 593 (596-7)*.

Respondent's transportation of range and fuel oil from out-of-State origins directly to several small-volume consignees is more closely identified with his primary business as a petroleum dealer and distributor than with any transportation enterprise; although oil transported does not move through his storage facilities and itself involves no great financial investment, in some cases he may assume greater than normal risks by submitting competitive bids and, in one instance, he performs additional service (untypical of carrier operation) of checking storage level of consignee's oil tanks; such transportation is private carriage not conducted for purpose of profiting therefrom. And, though gross profit from direct service rendered a manufacturing concern is considerable, respondent's lack of storage facilities for the grade of fuel oil required, coupled with fact that he also serves that consignee from his local storage facilities and bids on part of its business, compels conclusion that that direct service is within scope and in furtherance of his primary business.—Id., pp. 597, 598.

But direct service rendered two other consignees is solely that of a transporter and not in furtherance of respondent's primary business when he performs no other services indicating that they rely on him in any noncarrier capacity; both are dealers operating businesses similar to his own and undertook their arrangements with him to replace common-carrier service; such operations are conducted for purpose of profiting from the substantial amount of transportation involved, in violation of §§203(c) and 206(a) or 209(a); cease-and-desist order entered.—Id., p. 598.

The problem of determining whether transportation performed ostensibly in furtherance of a primary noncarrier business is bona fide private carriage is one to be solved by practical common sense rather than by theoretical abstractions or by excursions into juristic semantics. When applicant whose primary business is predelivery processing of new automobiles delivers vehicles directly to dealers for whom predelivery services have been performed, the transportation is accomplished by applicant as bailee of the vehicles and as an incident to its primary business, whether or not the dealer's place of business is, like applicant's, within the New York commercial zone.—Car Services, Inc., 92 M.C.C. 595 (599-600).

But in seeking determination of status of proposed delivery service to dealers' customers outside New York commercial zone applicant has not indicated extent that its charges to dealers would be increased over its present flat rate to points in New York metropolitan area, or what effect denial of authority sought for backhaul transportation of used cars would have on its costs; applicant's charges—particularly relation to the total charge of that part attributable to transportation—are important in determining scope of its primary business; absent such essential facts for proper determination of the issue, motion to dismiss its §207 application must be denied. This does not preclude possibility of finding on a more adequate record that deliveries to points just outside New York commercial zone would be in furtherance of applicant's primary business, assuming no substantial change in its basic predelivery service charge due to transportation cost factors; but deliv-

ery to dealers' customers at such distant points as Harrisburg, Pa., and Albany or Utica, N. Y., would seem to result in transportation being the dominant part of its business.—Id., pp. 600-1.

Principal respondent is engaged primarily in packing, selling, and merchandising canned and related food products at both wholesale and retail, and its transportation of canned foods and related grocery products (other than sugar) from its principal location at Austin, Ind., and of factory and supermarket materials and supplies (including sugar) in reverse direction is clearly authentic private carriage. Also, its occasional transportation of canned goods and similar grocery items purchased for direct resale to its customers appears to be more closely identified with its status as a food packer and distributor than with any transportation activity beyond scope of its primary noncarrier commercial enterprise, and must therefore be likewise considered private carriage.—Morgan Packing Co., Inc.—Investigation of Operations, 92 M.C.C. 48 (56-7).

But respondent's transportation of sugar other than that used in its packing plant or retailed in its supermarket is unauthorized for-hire transportation not within scope of its primary business. It does not operate an independent bona fide sugar wholesaling business in pursuit of which it performs that transportation; it does not trade in sugar on its own account for purpose of obtaining profit from any differential or variation in the market price. Its mere taking of title to the sugar transported, assumption of certain negligible risks of ownership, and quotation of a single delivered price without itemizing a separate transportation charge do not alter the basic facts that in those sugar dealings it performs no service other than transportaion from which it can profit, that its markup to its customers is equivalent to transportation cost, and that it is therefore performing transportation for compensation.—Id., p. 57.

Nor is the considered sugar transportation within scope and in furtherance of respondent's food packing and distributing business. While undeniably related thereto in some respects, separation of its buy-and-sell sugar activities therefrom would not result in fragmentation of an essentially unitary business enterprise. Though wholesaling of sugar may supplement and indirectly benefit that business by helping to retain present customers and obtain new ones, its basic purpose is to provide an expense-defraying backhaul for outbound transportation of canned and related food products. Resulting transportation savings are the only important link between respondent's sugar hauling and its primary noncarrier business, and any compensation it receives from returning sugar to the Austin area or to points along its return routes, which reduces the cost of its outbound hauls, constitutes a profit from the transportation of sugar as such.—Id., p. 58.

While it is true that most of respondent's sugar customers are also purchasers of its canned goods and its sugar sales may function in part as a "loss leader" or advertising vehicle, and also that a bona fide private carrier may not be denied ipso facto to economic benefits or operational efficiencies of a backhaul operation, the unauthorized provision of transportation subject to regulation under Part II cannot be justified as a business effort necessary to achieve efficiency and economy. Benefits claimed to result from such transportation may not be too remote from, but must relate directly to, the transporter's primary business; establishment of an additional advertising or sales medium and generation of customer goodwill is not so directly related to respondent's food packing and distributing business as to unite that and its sugar operations into a single primary noncarrier enterprise in furtherance of which its unauthorized sugar transportation may lawfully be performed; any contrary conclusion would effectively nullify the primary business test.—Id., pp. 58-9.

Respondent's buy-and-sell sugar activities have benefited the sugar refiners, who might otherwise be required to absorb part of the freight cost on shipments moving in lawful for-hire carriage, and afford them a substitute method of marketing which enables them to compete in an area where they might otherwise be at a geographical competitive disadvantage; their agent brokers have benefited in receiving commissions on sugar which, absent respondent's operations, might not have

been sold in their marketing areas; and respondent's customers have benefited in receiving efficient and economical store-door delivery of l.c.l. quantities. Such transportation of sugar not actually consumed or retailed by respondent has been conducted, with respect to its primary business, as a secondary enterprise for purpose of profiting therefrom, and requires authority from the commission. Cease-and-desist order entered.—Id., pp. 60-1.

"Plan 1" operations of respondent, a licensed Missouri wholesale automobile dealer, in transporting automobiles he has purchased to west coast points for sale there to other dealers at regularly scheduled auctions, are an integral part of his wholesale business and therefore private carriage. [See 86 MCC 529.] But his transportation of automobiles under "plan 2" as "good will" to west coast dealers who have purchased them in Kansas City area is not private carriage, since it not only adds nothing to his primary business but in a competitive sense conflicts therewith; that his activities under plans 1 and 2 are similar does not make the latter in furtherance of the former; and whether one plan or the other involves the greater part of his total transportation is not controlling; they must be treated as distinct operations.—Studna Investigation of Operations, 88 M.C.C. 52 (54-5)*.

Although no one or combination of the criteria summarized in 82 MCC 651 for determining whether particular transportation meets the "primary business" test of §203(c) can be considered controlling, since each case is necessarily decided on its own facts, the criterion of whether the carrier performs any real service other than transportation from which it can profit is especially significant in determining character of the operation involved.—Stewart—Investigation of Operations, 89 M.C.C. 281 (285); in connection with their wholesaling and retailing enterprises, in which merchandise other than sugar is sold and distributed in area of their places of business, the principal respondents, in order to stock their warehouses with a minimum of inventory, operate line-haul equipment to pick up such commodities from their sources of supply as need arises; such transportation is in furtherance of their primary businesses and is lawful private carriage.—Id., p. 288.

But although respondents in their sugar operations contract with the refinery for purchases over periods of 1 to 3 months, mere taking of title to shipments does not establish private carriage; while they claim never to have preexisting orders prior to "purchase" under the contracts, it is not shown that the refinery allocates in its warehouse the kind and quantity of sugar contracted for. Respondents dispatch vehicles to pick up sugar only after receipt of orders, and dates of pickup at the refinery and ultimate delivery are relatively close; this phase of their operations emphasizes furnishing of transportation rather than speculation in price fluctuations. Moreover, though deliveries of sugar so purchased are routed by way of their warehouse locations, the sugar is not stored but is delivered in same vehicle by same driver that picked it up at the refinery; warehousing of a small percentage, apparently to supply needs of local customers, probably would not occur in absence of the other sugar operations. Contention of one respondent that the contracts vest ownership in him when made and consequently are equivalent to storage of the sugar in his own warehouse in untenable.—Id., pp. 285-6.

While respondents assume certain risks of ownership such as market price fluctuations and loss or damage in transit, latter are ordinarily assumed by any bailee for compensation, including for-hire carriers. Other assumed risks not ordinarily assumed by authorized carriers may be undertaken in furtherance of an unlawful transportation business as well as a noncarrier enterprise; further, neither respondent ordinarily extends credit to customers for longer periods than that given it by the refinery. Such risks are not controlling on whether a transporter is a private or a for-hire carrier.—Id., pp. 287.

That respondents ordinarily pick up sugar from a nearby refinery for movement to consignees in vicinity where they obtain other merchandise for their primary enterprises compels conclusion that the sugar operations are performed solely to achieve a profit-yielding two-way movement. Their delivered prices on sugar, though without an itemized transportation charge and unrelated to distances traveled, cannot be correlated with any

real noncarrier service from which they can profit; markup to customers is clearly equivalent to a transportation charge. In the circumstances, their advertising activities and recent efforts to increase customer solicitation, or occasional use of regulated carriers to transport sugar from refinery to warehouse, are entitled to little weight. Considered sugar operations constitute unlawful for-hire carriage; cease-and-desist order entered.—Id., pp. 288-9.

In applying the primary business test of §203(c), the first question to be determined is whether respondent's primary business is transportation or some noncarrier commercial enterprise; in view of efforts of buy-and-sell operators to camouflage unauthorized transportation with the forms of bona fide private carriage, each case is necessarily determined on its own particular facts; the problem is one to be solved, not by theoretical abstractions or excursions into semantics, but by practical common sense.—Smith Grain Co., Inc., Investigation of Operations, 86 M.C.C. 767 (769-70).

Applying the common-sense criteria of 82 MCC 651 to respondent's operations as detailed in appendix A, its primary business is clearly not transportation, and it is not important that expansion of the scope of its primary business in recent years was motivated to some extent by desire to operate its vehicles with maximum efficiency. Prudent and efficient operation is not determinative of carrier status; the question is not what respondent's primary business was some years ago, but what it is today.—Id., p. 770.

Viewing respondent's current business in its totality, its primary business (or businesses) must be defined as that of a dealer in feed and flour ingredients and in wholesale grocery items; its transportation of the challenged commodities, including sugar sold directly to its customers without the intervention of a broker, has been conducted within the scope and in furtherance of its primary business enterprise or enterprises. However, record clearly shows that respondent's primary economic function in sugar transactions, where sales are not made directly by it but are arranged by a broker who receives a commission from the refinery and asks respondent to handle the sale, is to provide transportation for the broker or his customer; this is unauthorized for-hire transportation; cease and desist order entered.—Id., pp. 771-2.

Although respondent is the owner of the transported commodity, the mere taking of title is not sufficient to establish private carriage, when the mutual understanding between respondent and its customers is tantamount to the receipt of orders, when respondent's articles of incorporation indicate that its intent is to profit from such transportation, when its only investment is in its transportation vehicles, and when two of its three employees are drivers almost exclusively engaged in a transportation service.—O'Fallon Gas Co. of St. Charles County-Investigation, 98 M.C.C. 634 (639).

In determining whether particular buy-and-sell operations are in furtherance of a legitimate nontransportation primary business enterprise, the commission must consider, in addition to criteria enumerated in 82 MCC 651, (1) whether the transportation is coordinated with opposite-direction movement of other products so that empty vehicles are not dispatched for one-way haul; (2) whether respondent ever engages for-hire carriers to effect delivery of the products; (3) whether the products are delivered directly from shippers to consignee; (4) whether such operations are undertaken in order to balance trucking operations with a profit-yielding backhaul; and (5) whether such operations cannot profitably undertaken but for availability of equipment which otherwise must be deadheaded incident to opposite-direction transportation.—Utley Lumber Co., Inc. Investigation of Operations, 94 M.C.C. 458 (462-3).

Considering instant factual situation in the light of all those criteria, respondent carrier's primary business with respect to considered buy-and-sell sugar transactions is transportation, and its transactions are motivated by the profit to be made from the transportation of sugar. Therefore, respondent's direct truckload transportation of sugar from refinery to customer-consignees constitutes unlawful for-hire carriage.—Id., pp. 463-5.

While respondent diary company's transportation of sugar from New Orleans to its warehouse at Clinton, Mo., for use in its

cheese-processing business is clearly bona fide private carriage, its transportation thereof directly to customers in southeastern Missouri within 125 miles of Clinton is unauthorized for-hire carriage conducted for purpose of profiting from the transportation performed. The dairy company is not engaged in the business of wholesaling sugar, does not actively solicit customers for or advertise sugar, and has transported only that purchased under preexisting orders arranged by respondent sugar broker; it has no investment in facilities other than vehicles and employs no salesmen or other personnel except drivers; the only identifiable service it performs in its sugar dealings from which it derives a profit is transportation, and if it had no vehicles the broker respondent would have had no reason to make it a party to previously arranged contracts of sale.—Clearfield Cheese Co., Inc.—Investigation, 92 M.C.C. 504 (508)*.

The only relation between such backhaul sugar movements and respondent's primary commercial enterprise is the reduction in cost of its legitimate transportation activities; however §203(c) makes clear that transportation may not be considered as furthering a noncarrier business merely because it yields revenues of ultimate benefit thereto or makes possible more profitable employment of transportation equipment used in the primary business. Even though respondent's sugar transportation is related to its primary business, it is merely a secondary enterprise conducted for purpose of profiting from the transportation as such. And though respondent contends that, had its modus operandi not been largely dictated by the sugar broker and refiners, it would have bought the sugar direct for resale under its own label, its operations must be assessed as they have been conducted, not as they might have been performed. Measured against the statutory standards, its sugar transportation activities fall within the prohibition of §203(c); cease-and-desist order entered.—Id., pp. 508-9.

But as question of lawfulness of respondent's transportation of salt and canned good has been subordinated to the larger and economically more important question of lawfulness of its sugar operations, the facts bearing on that issue are not sufficiently developed of record to permit effective analysis, and respondent's transportation of canned goods apparently ceased 2.5 to 3 years before the hearing, no findings concerning such transportation are made at this time.—Id., p. 509.

Respondent's transportation of sugar, whether to its warehouse or to customers solicited by it or by sugar brokers, is for-hire carriage not in furtherance of its primary business of buying and selling dairy products, and its taking of title to such shipments is not controlling; it transports sugar only as a backhaul,and would not be in the sugar business if it could not do so; its main purpose is to provide a backhaul for its outbound transportation of dairy products, and its backhaul operation is typical of that condemned by the congressional committees in reports relating to amendment of §203(c) to its present form.—Meinerz Creamery Co.—Investigation of Operations, 88 M.C.C. 77 (84, 85).

Sale of a product compatible with respondent's line of dairy products may indirectly further its dairy-products business, but its transportation of sugar more directly furthers that business by reducing cost of transportation performed as a part thereof, such reduction being the purpose of the backhaul operation; sugar transportation primarily furthers its transportation of dairy products by reducing cost thereof and thus falls within the prohibition of §203(c). Also, respondent's warehousing of sugar, as well as its purchase of small quantities thereof from local refineries to supply customers when its warehouse inventory is exhausted, must be considered incidental to and in furtherance of its sugar transportation business, rather than a primary business enterprise. Thus, with respect to its primary business, all of respondent's interstate transportation of sugar has been conducted as a secondary enterprise for the purpose of profiting from the transportation; constitutes for-hire carriage for which authority is required.—Id., pp. 84-5.

Although respondent originally transported repossessed automobiles as an incident to his repossession business, such transportation steadily increased as he undertook to perform it for numerous finance companies, until such activities were no longer in furtherance of a primary nontransportation business but for-

hire transportation constituting almost his entire business; for some years respondent has in essence held out to perform a for-hire carrier service, without authority, and has solicited automobile traffic. Cease-and-desist order entered.—Nash—Investigation of Operations, 89 M.C.C. 463 (468-9).

The principal business of respondent operating ostensibly as a broker or purchasing agent of California wines is transportation for compensation, and its eastbound transportation of wine is unauthorized for-hire carriage, when it normally has a specific order from a buyer before it makes a purchase at a California winery, its business investment appears to be entirely in instruments of transportation, and it maintains no storage or warehouse facilities.—Center America Corp.—Investigation of Operations, 88 M.C.C. 740 (741-2, 743).

Letter from respondent's secretary-treasurer summarizing its position respecting buy-and-sell operations in transporting return loads of salt in vehicles used for outbound movement of its steel products clearly shows that handling of salt is not a primary business of respondent and would not be continued if movement of steel to origin areas of the salt were to cease; while delay in bringing the case to hearing since initial investigation has afforded opportunity for changes in invoicing, evidence is convincing that no important change has been effected in respondent's manner of purchasing, transporting, and selling salt and that it is acting as a for-hire rather than a private carrier in such transportation; cease-and-desist order entered.—Cahaba Steel Co.—Investigation of Operations, 86 M.C.C. 759 (763, 764)*.

Section 204. (a)(1) [*§304 (a)(1) U. S. C.*] Powers and duties of commission—(a) Powers and duties generally.—[Unchanged. See vol. 9, p. 7905.]

Historical notes, see vol. 9, p. 7905; vol. 11, p. 9377; vol. 12, p. 10360; vol. 13, p. 11054; vol. 14, p. 11572; vol. 15, p. 12174; vol. 16, p. 12814; vol. 17, p. 13505; vol. 19, p. 15514.

Cross References

Section 103(g) of the National Traffic and Motor Vehicle Safety Act of 1966, Pub. Law 89-563, 80 Stat. 720, provides that the commission, in prescribing safety regulations covering motor vehicles subject to Part II, shall not adopt or continue in effect any safety regulation which differs from a motor vehicle safety standard issued by the Secretary of Commerce under Title I thereof, except that the commission is not prohibited from prescribing for such a vehicle a safety regulation which imposes a higher standard of performance subsequent to its manufacture than that required by the applicable Federal standard at the time of its manufacture.

Provisions of Public Law 88-201, Dec. 13, 1963, 77 Stat. 361, regarding minimum safety standards for seat belts used in motor vehicles, specifically do not apply to motor vehicles of carriers subject to safety regulations under part II of the Interstate Commerce Act.

Historical Notes

The commission recommends that part II be amended so as to authorize the commission to exempt from the requirements, or any provision, thereof, such service and transportation as may be determined in appropriate rulemaking proceedings to be of such nature, character, or quantity as not substantially to affect or impair uniform regulation of motor carriers engaged in interstate or foreign commerce in effectuating the national transportation policy.—Annual Report, 1963, p. 13, Annual Report, 1964, p. 68.

The commission recommends, in view of prohibitions in 18 USC §1001, that the IC Act and various related acts be amended to eliminate the mandatory requirement that certain reports, applications, and complaints be filed with the commission under oath, and that such oath provisions be made discretionary with the commission.—Annual Report, 1962, p. 209; renewed, Annual Report, 1963, p. 21.

Notes of Decisions

Volume 9—p. 7905; Volume 11—p. 9378; Volume 12—p. 10360; Volume 13—p. 11054; Volume 14—p. 11572; Volume 15—p. 12174; Volume 16—p. 12814; Volume 17—p. 13505; Volume 18—p. 14275; Volume 19—p. 15514.

1. Construction and interpretation.—[Vols. 9, 11-19].—The commission's duties to regulate exempt carriers relative to qualifications and maximum hours of service of employees and safety of operations or standards of equipment encompass the power to require the carriers to keep records, reports and logs. Carrier engaged solely in carrying agricultural commodities, and therefore partially exempt from regulation under §203(b6), was not exempt from keeping the records (driver's daily logs) in question; hence the trial court did not err in refusing the grant appellant's motion for acquittal.—United States v. Handfinger, 364 F. 2d 800 (802).

Section 204(a)(1) authorizes the commission to establish reasonable requirements for continuous and adequate service by motor common carriers, and it is a condition of each certificate that the holder render reasonably adequate and continuous service thereunder; but in determining what is "reasonably adequate and continuous" service, the overall economic situation, not only desires of the shipping public, must be considered. Though lack of more frequent service than defendant's 3-days-per-week schedules has caused concerns in Reno area to lose business to other points, defendant shows that, despite its effort to generate additional traffic, volume available between Reno and points involved is insufficient for operation of its vehicles at capacity even on thrice-weekly schedules; in the circumstances, defendant is complying with requirement of its certificate.—Reno C. of C. v. Consolidated Freightways Corp. of Del., 88 M.C.C. 796 (799-800).

2. In general; and definitions.—[Vols. 9, 12-14, 16, 19].—Order of November 25, 1936, requires every motor common carrier subject to the commission's jurisdiction to show on every bill of lading or receipt issued by it a description of the articles transported, and order of November 17, 1954, requires every for-hire carrier operating under authority granted pursuant to the act to display on each vehicle operated with own power the name of the carrier under whose authority it is being operated. Since respondent is a common carrier of passengers and of express in same vehicles, operating under authority from the commission, it is clearly subject to requirements of both orders; but the record is replete with evidence, including admissions of respondent's own witnesses, that prior to investigation of its operations in February 1961 it was neither furnishing a description of articles transported on face of its express receipts, nor identifying equipment trip-leased from other carriers in the prescribed manner. —Safeway Trails, Inc.—Investigation and Revocation, 91 M.C.C. 936 (942, 943-4)*.

Although the 1954 order does not apply to passenger carriers using vehicles of others in through service under a continuing interchange of equipment, provided the vehicle owner's name and certificate number is displayed on the leased or interchanged vehicle and the carriers file with the district director and post in each terminal or ticket agency on the route a schedule showing points between which each assumes and bears complete control and responsibility for operation of the vehicle, it is obviously impractical if not impossible for bus companies to post such information in their terminals and ticket agencies when trip-leased vehicles are used. Therefore it is imperative that trip-leased vehicles used in transportation of either passengers or property display prominently the name of the carrier under whose authority they are being operated, so as to advise the commission's field representatives, other carriers, and the public generally of the trip lessee's control over and responsibility for the operation.—Id., p. 944.

5. State regulation.—[Vols. 9, 11, 16, 18].—Argument that exercise of the commission's jurisdiction over vehicles and facilities used sometimes in interstate, and at other times in intrastate, commerce is in effect regulation of intrastate commerce has no validity. The commission has full power over regulation of both vehicles and facilities of carriers engaged in interstate commerce, and to extent that such regulation affects strictly intrastate matters, such effect is incidental.—United States v. Pioneer Motor Service, Inc., 204 F. Supp. 611 (613).

Since the commission's authority to promulgate and enforce safety regulations does not extend to motor vehicles operated solely in intrastate commerce, the important area of regulation, so far as rail-crossing accidents

are concerned, is left to the States. While §192.3 of the commission's safety regulations requires compliance with laws and regulations of the jurisdiction in which the vehicle is operated, so that, if a State law requires a particular vehicle to stop at a grade crossing and the vehicle is subject to the commission's jurisdiction, failure to stop violates §192.3, the commission lacks both personnel to enforce that regulation and the power to arrest, with result that there is no actual enforcement. But if, conversely, State laws were adopted prohibiting use of State highways except in compliance with commission regulations, so that a violation of latter would also violate State law, the resulting uniformity could be very helpful in enforcement and acceptance of the regulations and would be of material help to motor carriers operating in more than one State.—Prevention of Rail-Highway Grade-Crossing Accidents, 322 I.C.C. 1 (68, 73-4)*.

Although only a small proportion of grade-crossing accidents involve motor vehicles hauling flammable liquids or other dangerous commodities, because of serious consequences of such collisions State and local as well as federal authorities should make special efforts to strictly enforce all existing safety laws and regulations, and State legislatures should consider adoption of rigid driver licensing laws and regulations and should require that whenever possible such vehicles be rerouted over grade crossings outside of congested areas, where hazards are at a minimum.—Id., pp. 86, 89.

As schoolbuses normally do not operate across State lines, responsibility for safe transportation of schoolchildren rests with State and local authorities. Notwithstanding importance of entrusting safety of schoolchildren only to the most competent and responsible bus drivers, there is lack of adequate supervision and selection of such personnel. The commission recommends that State and local authorities responsible for operation of schoolbuses carefully investigate and screen all driver applicants respecting their character, competence, and responsibility. Program of State of New Mexico for selection, training, and supervision of drivers and regulation of schoolbus operations, which has resulted in an excellent safety record, discussed.—Id., pp. 43-5, 87, 89.

10. Safety of operation and equipment.—[Vols. 9, 11-19].—Definition of scope of the commission's regulatory field in §203(a)(19) as embracing all vehicles "used" in transportation in interstate commerce does not mean "only while being so used"; to construe "used" in such manner that fair standards of safe maintenance and operation normally applicable to a vehicle used in interstate commerce may or may not apply at particular times, depending on points of origin and destination of a single lading, would be a disservice to the need for public safety on the highways, would place a limitation on application of the safety regulations not imposed by the legislators, and would allow a particular shipment to characterize the entire use of the vehicle.—United States v. Pioneer Motor Service, Inc., 204 F. Supp. 611 (612).

It is therefore wholly immaterial whether a vehicle operated by a for-hire interstate carrier is empty at time of violation of particular safety regulation, or is being used to transport a commodity in intrastate commerce, or if its contents and origin and destination thereof are unknown; proof that the vehicle in question is one used, in ordinary meaning of the word, in transportation of property in interstate commerce is all that is required to bring it within the commission's jurisdiction.—Id., pp. 612, 613.

Defendant admitted that at time of accident his truck had no clearance lamps on its rear, and in absence of any evidence tending to show some impracticability in mounting the clearance lamps so as to indicate the extreme width and height of the truck, it is a necessary inference from his own description of his truck that he was in violation of §§193.12 and 193.20 of the commission's safety regulations; such violation constituted negligence. Jury's finding of no negligence on defendant's part was therefore contrary to the evidence; plaintiff's motion for new trial granted.—Natoli v. Deal, 210 F. Supp. 389 (390).

While the commission lacks authority to require or regulate protective devices for rail-highway grade crossings, it has authority under §204 to prescribe, and has prescribed, regulations for safe operation of motor vehicles under its jurisdiction; §192.10 of the regu-

lations requires stopping at grade crossings of vehicles transporting passengers or specified dangerous commodities, while §192.11 requires exercise of care at crossings in movement of other vehicles. However, though present regulations are not shown to be materially deficient and are reasonably adequate for promotion of safe operation at rail crossings if effectively enforced, inadequate enforcement has generated a tendency on part of drivers to ignore those requirements. Strict enforcement of safety laws and regulations is essential to reduction of grade crossing accidents; therefore, in cooperation with State and local authorities, the commission will make an intensified effort immediately to enforce all laws and regulations affecting grade crossings.—Prevention of Rail-Highway Grade Crossing Accidents, 322 I.C.C. 1 (48-9, 74, 87, 90)*.

While only a small portion of grade-crossing collisions between trains and motortrucks involves vehicles transporting flammable or explosive materials, severity of such accidents is increased by danger of fire; also, while present regulations require stopping at rail crossings of vehicles used to haul only those flammable commodities with a flashpoint of 80° Fahrenheit or below, a number of serious accidents have involved flammable liquids with considerably higher flashpoints. Therefore, the safety regulations, particularly §192.10, should be amended to require stopping at grade crossings also of vehicles, loaded or empty, that are used to transport commodities having a particular fire hazard but not described as flammable in present regulations, such as tank vehicles used to haul liquids having a flashpoint below 200°. Fahrenheit; such vehicles should also be required to display a sign indicating that they stop at all railroad crossings. A rulemaking proceeding to that end will be promptly instituted.—Id., pp. 66-7, 88, 90.

Purpose of relief granted by §192.10 from the stopping requirement at identified "exempt" crossings is to avert rear-end collisions on the highway when sudden, unexpected stops are made at little-used crossings by heavy commercial vehicles; also, because of their weight and slow acceleration, such vehicles may be unable to complete a crossing, after stopping, in time to avoid collision with an approaching train. The Government advisory group recommended to be established should adopt standards, such as those of California, for classification and indentification of "exempt" crossings, to be clearly marked, where motor vehicles would not be required to stop but rail traffic would be required to stop and proceed only when protected by a flagman; or in lieu of flagmen a three-light traffic-control system such as those used at highway intersections could be installed. Elimination of stops at such crossings would expedite vehicular traffic and lessen danger of train-truck collisions, and would not be a deterrent to enforcement of stopping at more hazardous crossings.—Id., pp. 84-5, 89.

Amendment of §192.10 of the Motor Carrier Safety Regulations to require motor tank vehicles, loaded or empty, used for transporting flammable liquids with flashpoints under 200° Fahrenheit to stop at railroad grade crossings would be in the public interest and would promote safety; while number of accidents covered by the amendment is small, serious nature and consequences thereof warrants its adoption. However, evidence of record as to the value of requiring such tank vehicles to also display a sign warning that they stop at all grade crossings is insufficient to justify adoption of such a requirement. Also, the record is not convincing that an amendment of §192.11, which would limit the speed of all regulated motor vehicles (except those required to stop) to 25-miles per hour when approaching railroad grade crossings, would add anything to requirements of the present regulations; accordingly, §192.11 is retained without such amendment.—Qualifications of Employees and Safety of Operation, 98 M.C.C. 741 (746-7)*.

Proposed rule 195.13 providing for declaring out of service of drivers who are in violation of the safety regulations is reasonable and necessary in the public interest; no reason appears why commission personnel charged with responsibility of supervising and inspecting operations of motor carriers for purpose of determining whether or not they are in compliance with the regulations should not be authorized to declare a noncomplying driver out of service in the same manner that they

now declare vehicles found to be in a dangerous state of noncompliance out of service; adopted. In addition, proposed new §195.1 designating responsibility for compliance, being found reasonable without discussion, is adopted.—Id., 89 M.C.C. 19 (21, 27-28).

A motor carrier employing trip-leased equipment with drivers is required to obtain medical certificates, logs, and vehicle condition reports from such drivers as well as its own, and to retain them in its files for stated periods. Respondent, which trip-leases equipment with drivers from other passenger carriers, admitted in a letter to a commission safety inspector that, since its trip lessors are willing to make all relevant vehicle condition reports and drivers' medical certificates and logs immediately available upon request, it has not deemed it necessary prior to his investigation to maintain those records in its own files; its past failures to observe those requirements were clear violations of §§191.10, 195.8, and 196.7 of the safety regulations, and though respondent has taken prompt action to correct those deficiencies, together with reasonable steps to prevent their recurrence, cease-and-desist order is entered.—Safeway Trails, Inc.—Investigation and Revocation, 91 M.C.C. 936 (941, 943, 950)*.

Although the record does not require any finding as to necessity for instituting a two-man operation in long-haul transportation of jet-thrust units of which explosives are a basic element, the regulations governing transportation of explosives are applicable, and applicants are reminded of their unvarying responsibility to observe all applicable rules and regulations in meeting shipper's requirements.—Baggett Transp. Co. Extension, 88 M.C.C. 3 (10)*.

15. Qualifications and hours of drivers, employees.—[Vols. 9, 11, 12, 15, 16, 18, 19].—See also Wirtz v. Tyler Pipe & Foundry Co., Fair L.S., 29 USC §§213, 215, n. 1.

In action to recover damages growing out of collision of two tractor-trailer combinations, plaintiff without objection introduced evidence showing that defendant's driver had violated the commission's hours-of-service regulations, but there was no contention that such violation was a causative factor in the accident; therefore, even though the judge did not mention the regulation in his charge to the jury, plaintiff suffered no substantial prejudice which would warrant a new trial.—Snyder v. Macaluso, 204 F. Supp. 370 (373-4).

See also United States v. Dixie Grain Co., §222(a), n. 15.

The overriding purpose of the hours-of-service regulations is to decrease the possibility of disastrous accidents arising from employment of tired or overworked drivers to operate extremely heavy and potentially dangerous vehicles on the public highways; and §195.2(a) thereof defines "on duty" as including time a driver is required to be in readiness to work. Although respondent's extra-board drivers are free to use sleeping accommodations available to them in rest facilities, they have no predetermined time in which to rest, but are at all times subject to call and required to be in readiness to work; thus the extra-board drivers are "on duty" within meaning of §195.2(a) while standing by in rest facilities awaiting assignment. Respondent's instruction to its drivers to log as "off duty" time spent by them at terminal facilities awaiting assignment violates that section, and its persistence in such violations after admonitions by commission representatives must be characterized as willful. Compliance order entered.—Safeway Trails, Inc.—Investigation and Revocation, 91 M.C.C. 936 (946-7, 950)*.

If respondent feels that the definition of "on duty" time in §195.2(a) of the safety regulations is too strict or imposes an undue hardship, it may seek relief by filing an appropriate pleading in Ex Parte No. MC-40 (Sub-No. 1). The fact that exception permitting certain drivers in the petroleum industry to accumulate off-duty time while resting in sleeping accommodations required entry of an amending order indicates necessity of similar action if a like exception is to be created for motor passenger carriers.—Id., p. 947.

Proposed rule 195.3(a) prohibiting driving for more than 10 hours following 8 consecutive hours off duty, or more than 2 hours after being on duty more than 13 hours following 8 consecutive off-duty hours, would not prohibit daily overall on-duty periods exceeding 15 hours, but merely further driving duties after the 15-hour maximum on-duty period, and would not prohibit further nondriving activi-

ties by a driver after a permissible 10 hours of driving in a period of 15 consecutive hours following 8 hours off duty. While compliance will necessitate changes in operations of some carriers, drivers should not be permitted to operate heavy vehicles on the highways after 15 consecutive hours on duty; fatigue factors are present in sufficient quantity after such a period, whether of driving or nondriving duties, to make performance of further driving operations undesirable from a safety standpoint. Such rule is reasonable and necessary in public interest; adopted.—Qualifications of Employees and Safety of Operation, 89 M.C.C. 19 (21,23).

Since new §195.3(a) represents a change from the "24-hour concept" to a concept based on observance of an 8-hour off-duty period prior to performance of driving duties, it is necessary to make the "exception" in §195.10 consistent with the new rule; §195.10 is revised accordingly.—Id., p. 23.

Proposed changes in maximum-hours regulations would be extremely difficult of application to drivers of companies providing various specialized services to the petroleum drilling and producing industry; due to peculiar needs of that industry, field operations of service companies are similar to those of oilfield haulers and are not susceptible of advance scheduling with any reasonable accuracy; considered driver-technicians of service companies are excepted from general provisions of new §195.3 However, no exemption from §195.3(a) is granted such drivers as to purely driving duties; exemption granted applies only to driver-technicians employed exclusively in the manner described; and drivers used in ordinary over-the-road operations are not eligible therefor.—Id., pp. 28-30.

But operation of carrier engaged in transportation of salt for ice control purposes are not in same category as those of oilfield and petroleum-servicing carriers, and record does not afford sufficient reason for extending to salt transporter's drivers the same exemption as granted to drivers of oilfield and petroleum-servicing carriers.—Id., p. 25.

Retention of present seasonal exemption from the maximum driving time and on-duty time provisions of drivers of vehicles engaged solely in making deliveries for retail stores during the period December 10 to 25, inclusive, of each year is unopposed and appears necessary in the public interest.—Id., p. 31.

Other proposed new or revised provisions of §§195.2, 195.3, and 195.7, being unchallenged or found reasonable without discussion, adopted.—Id., pp. 21, 25, 31.

In determining whether activities of refrigeration mechanics affect safety of operation and thereby subject them to the commission's jurisdiction, fact that an employee is a mechanic by trade is not decisive; true test is what the employees does, not what he is qualified to do. Trailers with modern mechanical refrigerating units presents obvious and serious safety hazards in operations on the highways; inspection, repair and maintenance of such units to ensure continued safe operation remedies defects which might have direct causal connection with safe operation of the equipment unit as a whole. Work of refrigeration mechanics in detecting and repairing defects which might result in an accident therefore has direct relation to safety; mechanics performing such work who are employed by common, contract, or private carriers, subject to Part II, are within classes of employees for whom the commission may prescribe qualifications and maximum hours of service. —Maximum Hours of Service of Motor Carrier Employees, 88 M.C.C. 710 (712-3)*.

18. Driver's log.—[Vols. 9, 11, 13, 14, 16-18].—Provision of recommended rule 195.8(j) that a carrier desiring its drivers, in preparation of daily drivers' logs, to use an alternative noon-to-noon basis in lieu of midnight-to-midnight basis specified, shall give written notification of its election to the district director of district in which its principal office is located is preferable, from an administrative standpoint, to giving of notice to district director of district in which the terminal electing to use the optional reporting method is located, and would appear to be more satisfactory to carriers since it would require but one notification, as might be necessary in the case of carriers maintaining terminals in a number of districts; proposal adopted as recommended.—Qualifications of Employees and Safety of Operation, 89 M.C.C. 19 (26).

The "forwarding" of daily logs required by §195.8(r) does not mean that logs must be

mailed to driver's home terminal each day; requirement is met if driver personally returns the log to his home terminal at approximately the same time it would have been received if mailed; if driver's tour of duty is of such duration that he cannot personally return his log in about the same time, then it should be forwarded by mail; adopted.—Id., p. 26.

Proposed new §195.8(t) exempts drivers whose duties do not take them beyond a 50-mile radius of their home terminal from the daily-log requirements; elimination of the 12-hour provision in present §195.8(b), so that drivers otherwise within that category need not keep daily logs, is a justifiable relaxation of present regulations; adopted. However, this class of drivers must still comply with the weekly on-duty provisions, and carriers must maintain required on-duty time records of such drivers.—Id., p. 27.

Other proposed new or revised provisions of §195.8, being found reasonable without discussion, adopted.—Id., p. 31.

See also Safeway Trails case, n. 10, above.

20. Accidents and accident reports.—[Vols. 9, 11, 16-19].—Although written reports of highway accident by driver of tractor-trailer to the owners of the equipment and to defendant-lessee thereof, the carrier, shortly after collision with plaintiff's automobile were made pursuant to the commission's motor carrier safety regulations, those reports were not privileged under the regulations pertaining to reports from carriers to the commission. Lower court's denial of plaintiff's motion for production of those reports was an abuse of discretion, good cause for their production having been shown.—Goosman v. A. Duie Pyle, Inc., 320 F. 2d 45 (50-3).

While carriers' delegation of responsibility for reporting accidents to agents located near scene thereof is unobjectionable insofar as it expedites filing of accident reports, in view of frequent failure of regional agents to forward copies to carriers' headquarters revision of pertinent safety regulations to redefine accidents, personal injury, and property damage and require carriers to maintain a central file or "accident register" of indexed copies of reports of all accidents for 3 years from date of each is desirable to promote increased accident consciousness among carriers and reduced delays in conduct of field investigations. While such registers need not be filed with commission, they must be available for inspection and are "reports" required by the commission; §220(f) provides ample protection against their use in civil suits arising out of motor carrier accidents.—Qualifications of Employees and Safety of Operation, 91 M.C.C. 141 (144-5, 146-7)*.

Requirement that carriers operating in interstate or foreign commerce report and record accidents occurring in course of their intrastate operations will not interfere with power of the States to regulate intrastate commerce and is desirable as a practical and efficient means of evaluating a carrier's entire accident record in judging overall safety standards and qualifications of individual carriers to perform interstate operations. However, carriers who do not at any time engage in interstate or foreign commerce, or whose operations therein are occasional or sporadic, need not report intrastate accidents.—Id., pp. 145-6.

The primary cause of grade-crossing accidents is failure of the motor-vehicle operator to stop or exercise due caution and to comply with existing laws and regulations and obey warning signs or signals; and truck drivers and carriers engaged in intrastate operations not subject to commission regulation are responsible for the major portion of such accidents involving commercial vehicles. While the heavy types of vehicle are involved in the more serious accidents, regulated carriers generally present no problem, the principal offender against safety being the exempt, unregulated, or irresponsible carrier; and though any type vehicle may be involved in a serious accident, the most severe are those involving vehicles hauling flammable, explosive, or other dangerous commodities. Intensified and coordinated enforcement of all existing safety laws and regulations by Federal, State, local, and other responsible bodies is essential to reduction of grade crossing accidents; other recommendations outline.—Prevention of Rail-Highway Grade-Crossing Accidents, 322 I.C.C. 1 (13-15, 63-8, 73-4, 86-9)*.

30. Carriers otherwise exempted under the act.—[Vols. 9, 19].—While 10 MCC 533 ex-

cepted vehicles and drivers used wholly within a commercial zone from safety regulations other than drivers' hours, to avoid conflict with municipal regulations, such conflict relates to technical rather than operational aspects of safety regulation; requirement that for-hire motor carriers record and report, and private carriers record, all accidents occurring in commercial zones is of latter type and will not impede enforcement of State or municipal regulations. Keeping of prescribed accident registers is necessary to aid the commission in evaluating carrier's entire accident experience and in assessing need for more active safety regulation in such areas, and in view of increased minimum property-damage requirement will not unduly burden carriers.—Qualifications of Employees and Safety of Operation, 91 M.C.C. 141 (148)*.

35. Highway transportation of motor vehicles.—[Vols. 9, 11, 13].—See Bell Transp. Co., Extension, case, §207(a), n. 25 *Truckaway*.

Regulations of the Commission

27 FR 6091, June 28, 1962, Part 193: Parts and Accessories Necessary for Safe Operation; §193.44 Front brake lines, protection, amended, effective on date of service of order.

27 FR 6716, July 14, 1962, Part 195: Hours of Service of Drivers, effective date of order of March 29, 1962 (27 FR 3553) postponed to Sept. 5, 1962, effective on date of order.

27 FR 7094, July 26, 1962, Part 195: Hours of Service of Drivers, Form BMC-59 Driver's Daily Log, required by §195.8, revised, effective Sept. 5, 1962.

27 FR 8119, Aug. 15, 1962, Part 195: Hours of Service of Drivers, §195.2(a) amended by adding thereto subparagraph (9) relating to specially trained drivers of specially constructed oil well servicing vehicles, effective on date of order.

27 FR 8550, Aug. 25, 1962, Parts 190, 194: Motor carrier safety regulations, §190.33 Applicability of regulations, amended, effective on date of order; also, title of Part 194 is amended and §§194.2 through 194.9 vacated and similarly numbered new regulations substituted in lieu thereof, effective Jan. 1, 1963.

27 FR 9103, Sept. 13, 1962, Part 193: Parts and Accessories Necessary for Safe Operation, §193.71 Coupling devices and towing methods, driveaway-towaway operations, paragraphs (a) and (c) amended, effective on date of service of order.

27 FR 3553, Apr. 13, 1962, Part 195: Hours of Service of Drivers, §§195.1, 195.2, 195.3, 195.4, 195.5, 195.7, 195.8, and 195.10 eliminated and new §§195.1, 195.2, 195.3, 195.7, 195.8, 195.10, and 195.13 substituted in lieu thereof, effective July 16, 1962.

27 FR 3813, Apr. 20, 1962, Part 193: Parts and Accessories Necessary for Safe Operation, §193.75(a) and (b) deleted and paragraph (c) redesignated (a), and §§193.50, 193.51, 193.65(e)(1), 193.66, 193.70(f), 193.76(a) and (h)(2), 193.77(c)(3), 193.78(a), 193.82, 193.90, and 193.96(c)(7), amended, effective Dec. 31, 1962.

27 FR 10585, Oct. 31, 1962, Part 195: Hours of Service of Drivers, paragraph (a) of §195.3 Maximum driving and on-duty time, revised, effective on date of order.

27 FR 12843, Dec. 28, 1962, Part 193: Parts and Accessories Necessary for Safe Operation, §§193.41(a), (b), and (c), 193.52, 193.71,(c), and 193.76(a) amended, effective Dec. 31, 1962.

28 FR 409, Jan. 16, 1963, Parts 7, 195: Hours of Service of Drivers, §§7.60 and 7.60A, Forms BMC-60 and BMC-60A, canceled, and §195.9(a),(b),(c), and (d) amended, effective July 1, 1963.

28 FR 1050, Feb. 2, 1963, Part 190: Motor Carrier Safety regulations, §190.40(b) amended to provide that carriers located in the Yukon Territory, Canada, shall file accident and hours of service reports at Anchorage, Alaska, effective Mar. 15, 1963.

28 FR 2236, March 7, 1963, Part 195: Hours of Service of Drivers, §§195.3(a) and 195.8(j) and (r) amended, effective March 30, 1963.

28 FR 4198, Apr. 27, 1963, Part 95: Hours of Service of Drivers, to permit operations of commercial vehicles, and provide service, under many adverse conditions in Alaska, §§195.3(a) and (b) and 195.10 amended, and new §195.3(e) added, effective on date of service of order.

28 FR 6509, June 25, 1963, Parts 7 List of Forms, and 196 Inspection and Maintenance: §7.63 Form BMC-63 Driver equipment compliance check, and §7.64 Form BMC-64 "Out-of-service" sticker, prescribed; and §196.5 Commission inspection of motor vehicles in operation, amended, effective on date of service of order.

28 FR 9208, Aug. 21, 1963, Part 195: Hours of Service of Drivers, §195.2(h) Driver-salesman, added, and §195.3(b) amended, effective Sept. 15, 1963. Corrected order published 28 FR 10263, Sept. 19, 1963.

29 FR 3088, Mar. 5, 1964: Retention periods, records, motor carriers exempt under §203(b) of IC Act, 49 CFR 191.10, 194.3, 194.6, 195.8, 195.9, 196.2, 196.7.

29 FR 8420 July 3, 1964, Parts 191, 193, 194, and 195: Qualifications and Maximum Hours of Service of Employees of Motor Carriers and Safety of Operation and Equipment, §194.6 is vacated, and §§191.2(b), 191.8, 191.10, 193.20, 193.95(f)(4), 195.2(b), and 195.8(r) are amended, effective 5 days after date of order.

29 FR 14495, Oct. 22, 1964, Part 191: Qualifications of Drivers, §191.2 Minimum requirements, introductory paragraph amended and a new paragraph (e) added, effective Dec. 31, 1964.

29 FR 15578, Nov. 20, 1964, Part 193: Parts and Accessories Necessary for Safe Operation, §193.70(f) Safety chains amended, and restated, effective on date of service of order.

29 FR 16256, Dec. 4, 1964, Part 192: Driving of Motor Vehicles, §§192.10 and 192.11 amended, effective Dec. 31, 1964.

30 FR 4481, Apr. 7, 1965, Part 193: Parts and Accessories Necessary for Safe Operation, §193.70(f) Requirements for safety chains or cables, revised, effective on date of service.

30 FR 7491, June 8, 1965, Part 192: Driving of Motor Vehicles, §§192.10 and 192.11 amended, effective July 9, 1965.

30 FR 7522, June 9, 1965, Part 193: Parts and Accessories Necessary for Safe Operation, §193.71(c) and §193.42(b) amended, effective June 7, 1965

30 FR 9206, July 23, 1965, Part 193: Parts and Accessaries Necessary for Safe Operation, §§193.43(a) and (b), 193.60(a), 193.61(a) and (c), 193.85, and 193.95(f) and (k) amended, effective on date of service.

30 FR 9881, Aug. 7, 1965, Part 193: Order previously published at 30 FR 9206 corrected.

30 FR 11103, Aug. 27, 1965, Parts 7 and 195: List of Forms and Hours of Service of Drivers, §7.60 Form BMC-60 cancelled and Form BOC-60 prescribed, and §195.9 amended insofar as it relates to revision of the form. Paragraph (b) of §195.9 revoked, and paragraphs (c) and (d) redesignated as (b) and (c), effective on date of service.

30 FR 14106, Nov. 9, 1965, Part 193: Parts and Accessories Necessary for Safe Operation, §193.50 and §193.77 revised, effective Dec. 31, 1965.

31 FR 6374, Apr. 27, 1966, Par 191: Qualification of Drivers, §191.2 Minimum requirements, §191.2(e) amended by adding (i), (ii), and (iii) to subparagraph (4), by adding new subparagraphs (8) and (9) thereto, and changing the language of subparagraphs (4) and (5), effective June 30 1966.

31 FR 8920, June 28, 1966, Part 193: Parts and Accessories Necessary for Safe Operation, Paragraph (i) of §193.95 Emergency equipment on all powr units, amended, effective June 30, 1966.

31 FR 10469, Aug. 4, 1966, Part 193: Parts and Accessories Necessary for Safe Operation, §193.12(a) and §193.13(a) amended to read as set forth, effective on date of order.

31 FR 12720, Sept. 29, 1966, Part 193: Parts and Accessories Necessary for Safe Operations, §193.26(e)(4) Requirements for Reflectors, amended, effective Nov. 1, 1966.

31 FR 16318, Dec. 21, 1966, Part 190: Motor carrier safety regulations, until further order of the Commission, provisions of §190.33 retain the currently effective provisions as to exemption from the requirements specified in Parts 191, 192, 193, and 196, and applicability provisions of §190.33 are amended to read as set forth in the table, effective Jan. 1, 1967. Ex Parte No. MC 40 reopened as set forth.

31 FR 16495, Dec. 24, 1966, Part 190: Effective date of order of Dec. 15, 1966 (31 FR 16318) postponed until March 1, 1967.

32 FR 719, Jan. 21, 1967, Part 191: Qualifications of Drivers, §§191.8 Original physical examinations of drivers, amended, 191.9 Periodic physical examination of drivers, amended, 191.10 Certificate of physical examination, amended, 191.11 Doctor's certificate, amended, effective March 1, 1967.

32 FR 3467, March 2, 1967, Part 190: General, effective date of order amending §190.33 Applicability of regulations (31 FR 16318) further postponed until June 1, 1967.

32 FR 3774, Mar. 7, 1967, Part 193: Parts and Accessories Necessary for Safe Operation, paragraphs (f), (g), (h), and (i) of §193.95 Emergency equipment on all power units, amended, effective April 1, 1967.

32 Fr 5424, Mch. 31, 1967, Part 193: Effective Date of order of March 7, 1967 (32 FR 3774) postponed pending determination of petitions for reconsideration.

NOTE: For recodification, see 49 CFR, Editorial Note, 32 FR 5606, April 5, 1967.

32 FR 5625, April 6, 1967, Part 293 [formerly Part 193]: Parts and Accessories necessary for Safe Operation; Driveaway-Towaway Operations, miscellaneous amendments, effective on date of service of order.

32 FR 7128, May 11, 1967, Parts 290 [formerly 190], 291 [formerly 191], 293 [formerly 193], 294 [formerly 194], 295 [formerly 195], and 296 [formerly 196]; Motor carrier Safety Regulations. Miscellaneous amendments, issued pursuant to §12(a) of Department of Transportation Act, P.L. 89-670 (80 Stat. 931), concerning only locations necessary for filing reports, directing communications, changes in designation of forms, and changes in organizational designation.

32 FR 7956, June 2, 1967, Part 293 [formerly 193]: Motor Carrier Safety Regulations, Driveaway-Towaway Operation, miscellaneous amendments, issued pursuant to §12(a) of Dept. of Transportation Act, to clarify status of the commission's order of March 22, 1967 which amended the regulations, effective June 2, 1967.

Section 204. (a)(2) [§*304 (a)(2) U.S.C.*] Contract carriers.—[Unchanged. See Vol. 9, p. 7919.]

Notes of Decisions

Volume 9—p. 7919; Volume 11—p. 9382; Volume 12—p. 10361; Volume 14—p. 11575; Volume 17—p. 13507; Volume 18—p. 14277; Volume 19—p. 15518.

10. Safety of operation and equipment.—[Vols. 9, 12, 14].—See Prevention of Rail-Highway Grade-Crossing Accidents, and Qualifications of Employees and Safety of Operation, cases, §204(a)(1), n. 10.

See also Qualifications case, 91 MCC 141, §204(a)(1), n. 20, 30.

15. Qualifications and hours of drivers, employees.—[Vols. 9, 12, 18].—When members of the commission's investigative staff requested respondent contract carrier's president to produce drivers' logs and medical certificates for the period prior to March 1962, he advised that such records were unavailable, and admitted that past compliance with those and other safety regulations had been a "hit and miss" affair; evidence of numerous such infractions of the regulations indicates willful and deliberate disregard of them. Respondents are therefore admonished that any future violations of the nature shown will weigh heavily in favor of imposition of drastic penalities.—C&R Trucking Co.—Investigation of Control, 93 M.C.C. 669 (680-1).

See also Qualifications of Employees and Safety of Operation, and Maximum Hours of Service, cases, §204(a)(1), n. 15.

20. Transporting United States mail under contract.—[Vols. 11, 17-19].—In absence of any clear holding that extensive interstate carriage of mail (concedely contract carriage subject to the commission's regualtion were the contracting authority other than the Post Office Department) is not contract carriage subject to such regulation solely because the Post Office Department is the contracting authority, the question of whether defendant's truck drivers are exempt from §7 of the Fair Labor Standards Act because its operations are subject to the commission's regulation has not been settled finally by the courts within meaning of §16(c) of that statute. Therefore, the court has no jurisdiction of action brought by the Secretary of Labor to recover, for benefit of those drivers, additional overtime compensation.—Wirtz v. Highway Transportation, Inc., 310 F. 2d 643 (644-6).

In deciding that the issue is one which has not been finally settled, the court does not consider administrative interpretation, or other material bearing upon proper construction, of the Motor Carrier Act or the Fair Labor Standards Act; and no opinion on merits of the claim is intimated.—Id., p. 647.

25. Safety; dangerous articles.—[Vols. 9, 11].—See Prevention of Rail-Highway Grade-Crossing Accidents, case, §204(a)(1), n. 10.

Regulations of the Commission

See Regulations following §204(a)(1).

Section 204. (a)(3) [*§204(a)(3) U.S.C.*] Private carriers.—[Unchanged. See vol. 11, p. 9382.]

Amendment, see footnote, vol. 11, p. 9383.

Historical Note

The commission recommends that §204(a)(3) be amended to make more definite the commission's authority to prescribe regulations governing the safety of operations and equipment of private carriers of property by motor vehicle.—Annual Report, 1962, p. 204; renewed, Annual Report, 1963, p. 20, Annual Report, 1964, p. 70-1.

Notes of Decisions

Volume 9—p. 7921; Volume 11—p. 9383; Volume 12—p. 10362; Volume 13—p. 11056; Volume 14—p. 11576; Volume 16—p. 12818; Volume 17—p. 13507' Volume 18—p. 14278; Volume 19—p. 15519.

1. Construction and interpretation.—[Vols. 9, 11-14, 16, 19].—Plaintiffs, during period covered by each of their claims for unpaid overtime compensation, were subject to the commission's regulatory power with respect to qualifications and maximum hours of service of employees, and safety of operation and equipment of private carriers, since they performed duties which substantially affected the safety of operation of defendant's trucks in interstate commerce. Defendant, a private carrier within meaning of pertinent statutes, employed plaintiffs to drive pump trucks used in its business of servicing oil and gas wells in

several States, to load and unload portable job equipment, operate the pumps, and to do routine maintenance work on the trucks and generally keep them in safe operating condition; thus, their duties directly affected safety of operation of the pump trucks. Such employees being expressly excluded from provisions of the Fair Labor Standards Act, neither of them has any claim for overtime compensation thereunder.—Harshman v. Well Service, Inc., 248 F. Supp. 953 (956-7, 958-60)*.

5. Qualifications and hours of drivers.—[Vols. 9, 11, 12, 16, 19].—In interest of protecting the public, activities of all driver-salesmen employed by private carriers should be made subject to weekly on-duty limitations of new §195.3 of the hours-of-service regulations, and all operations with vehicles having more than 2 axles and a gross weight exceeding 10,000 pounds subjected to driving-time limitations thereof; that will permit 10 hours of driving in a total on-duty period of 15 hours, following 8 consecutive hours off duty, and only nondriving work after the 15-hour period. Considering radical change in many driver-salesman operations, modern merchandising techniques, and development of vehicles able to carry heavy loads, existing exemption is no longer justified. And in view of trade practices and use of the same limitation in other provisions of present regulations, the selection of 10,000 pounds as limit beyond which a vehicle will be considered "heavy" is reasonable and not arbitrary.—Qualifications of Employees and Safety of Operation, 89 M.C.C. 19 (24).

See also Southland Corporation (Cabell's Dairy Division) v. Shew, Fair LS, 29 USC §§213, 215, n. 1 *Motor*.

In conducting transportation of automobiles with transient drivers, found to be private carriage, respondent has not attempted to comply with regulations concerning qualifications of employees or other safety requirements, and his failure to require his drivers to submit either doctor's certificates or daily logs is a clear violation thereof; respondent is admonished to comply with the safety regulations governing private carriers.—Studna Investigation of Operations, 88 M.C.C. 52 (53, 55)*.

See also Maximum Hours of Service case, 88 MCC 710, §204(a)(1), n. 15.

6. Driver's log.—[Vols. 11, 16, 19].—Provisions of new rule 195.8(s) for preservation of daily drivers' logs should cause meatpackers no concern; their method of operating fleets of equipment from various plant locations does not differ materially in physical aspects from that followed by for-hire carriers generally in operating fleets from strategically located terminals. Reason for desiring logs to be kept on file at a carrier's regional or terminal office for a specified time is to facilitate inspection by commission field personnel; forwarding and keeping of logs at the companies' chief executive offices, which might not be practicable, is not necessarily contemplated; if a company maintains plants in several supervisory districts, arrangement could be worked out with Director of Bureau of Motor Carriers for Preserving the logs at some chosen office in each district.—Qualification of Employees and Safety of Operation, 89 M.C.C. 19 (26-7).

Evidence concerning train-truck collisions at rail-highway grade crossings, especially those involving flammable or other dangerous commodities, conclusively shows that the principal offender against safety on the highway and at crossings is the exempt, unregulated, or irresponsible carrier, and such carriers, being independently operated, are difficult to identify because of lack of markings on their vehicles. For purpose of a realistic curbing of rail-crossing hazards, prescription of rules requiring such carriers to placard their vehicles so that they can be more readily identified, particularly when safety regulations are violated, would be of material aid. Accordingly, definite and conclusive action should be taken in pending rulemaking proceeding providing for placarding, reporting, and registration of motor vehicles operated by private carriers engaged in transportation of explosives and other dangerous articles in interstate or foreign commerce.—Prevention of Rail-Highway Grade-Crossing Accidents, 322 I.C.C. 1 (71-3, 90)*.

Under amended safety regulations, private carriers conducting operations in interstate commerce are required to maintain accident registers containing specified information on recordable accidents, as therein defined, in-

cluding those involving vehicles or drivers used wholly within commercial zones; required brief entries will not prove unduly burdensome and will enable commission's representatives to evaluate private-carrier accident-prevention programs. However, such carriers need not file accident reports with the commission; as the accident-recording requirements will affect a substantial segment of the motor-carrier industry for the first time, it is desirable that they be designed to remedy only immediate needs.—Qualifications of Employees and Safety of Operation, 91 M.C.C. 141 (149)*.

Notes of Decisions

Volume 15—p. 12178; Volume 16—p. 12819; Volume 19—p. 15521.

2. Construction and interpretation.—[Vols. 15, 16, 19].— The commission has the broad power under §204(a)(6) to administer, execute, and enforce all provisions of Part II, to make all necessary orders in connection therewith, and to prescribe rules, regulations, and procedures for such administration. Determination of the area of a statutory exemption through case-by-case adjudication, or by general rule subject to case-by-case application, is within the commission's competence.—Wycoff Co., Inc. v. United States, 240 F. Supp. 304 (309)*.

While it is well settled that an administrative agency does not have carte blanche to adopt any rule it may fancy, and its regulations must be consistent with the purposes of the statute and reasonably adapted to carry them out, it is equally well settled that the commission has power to adopt regulations to carry out the policies of the laws it administers, if such regulations have a reasonable and rational basis, even though the statute contains no specific authority to promulgate regulations on the subject. Thus, even though §208(b) cannot be construed as authorizing a regulation governing designation of a regular alternate route which may become the carrier's principal route between the cities involved, such provisions in §211.1(c)(8) of the deviation rules are consistent with purposes of the Motor Carrier Act, reasonably adapted to carry out those purposes, and therefore within the commission's general rulemaking powers.—Greyhound Corp. v. United States, 221 F. Supp. 440 (444)*.

Whether an administrative tribunal may lighten or increase the burden of its administrative duties by a particular order, does not ordinarily present a justiciable question which one subject to regulation by that tribunal may put in issue.—Carolina Scenic Stages v. United States, 202 F. Supp. 919 (922)*.

The commission was empowered to issue considered order rejecting complainant's tariff, because it published rates on commodities for which carrier held no interstate operating authority, under its general powers to make all necessary orders to administer, execute, and enforce all provisions of the statute.—W. J. Dillner Transfer Co. v. United States, 214 F. Supp. 941 (946).

See also Studna v. United States, §12(1), n. 7.

Although the definition of interstate commerce as set out in §203(a)(10) does not specifically mention commerce moving partly by air, and there is no provision therein conferring specific authority to determine what motor operations come within the §203(b7a) partial exemption, the very extent of the commission's duty under §204(a)(6) "to administer, execute, and enforce" the act incontrovertably depends on, and is limited by, the scope of any exemption from regulation which the act provides. Clearly, there must of necessity be included in those duties the power to determine the scope of any partial exemption; moreover, there are abundant commission precedents dealing with highway movement of airfreight, and the commission's position finds impressive judicial support in the decision in 289 F. (2d) 770. Respondents' argument that the commission lacks jurisdiction in matter under investigation, rejected.—Film Transit, Inc., and Air Dispatch, Inc.,—Investigation, 98 M.C.C. 145 (149-50).

While no statutory provision confers "specific" authority on the commission to determine what motor operations come within the §203(7a) exemption, the commission's duty under §204(a)(6) "to administer, * * * regulate * * * make all necessary orders * * * and to prescribe rules and regulations" includes the power to define the terms used in the act in accordance with legislative intent. The very extent of that duty depends on and is limited by the scope of any exemption from regulation which the act provides; and clearly, the commission's power "to administer" the act and "to regulate" must include the power to determine scope of the partial exemption of motor transportation "when incidental to transportation by aircraft."—Motor Transp. of Property Incidental to Air, 95 M.C.C. 71 (80-1)*.

Although several of the parties assert that

the commission is attempting to regulate air transportation, a review of the sections of the Federal Aviation Act and the IC Act cited is convincing that the adoption of rules governing scope of the incidental-to-air exemption and, also, the use of regulated motor carriers by air freight forwarders, is in accordance with the national transportation policy and past decisions of the commission, and that such action does not conflict with provisions of the FAA, or with existing rules of the CAB. Furthermore, the interpretation of the §203(b7a) exemption conforms to the general practice of strictly construing any exemption; any broader construction would, without justification, serve only to divert traffic from regulated motor carriers and thereby defeat various sections of the act and the national policy stated therein.—Id. pp. 90-1.

See also Ayers v. Northern Tank Line, §204(c), n. 25.

Administrative rulings of the Bureau of Motor Carriers are made in response to questions propounded by the public, are tentative and provisional, and at time of issuance are made in absence of an authoritative decision. —National Auto Transporters Assn.—Declaratory Order, 91 M.C.C. 395 (396); such rulings are informal opinions intended to assist the commission's field staff and the public in interpreting the various provisions of the act and the rules and regulations promulgated thereunder, in absence of definitive decisions. They are not binding on either the commission or other persons.—Hughes, 89 M.C.C. 471 (485)*.

The power conferred by §204(a)(6) to enforce provisions of Part II by promulgation of general rules or regulations is coterminous with the scope of agency regulation and extends to the transportation of passengers and property by motor vehicle engaged in interstate or foreign commerce and to the procurement and provision of facilities for such transportation [344 US 298].—Discrimination—Interstate M. Carriers of Passengers, 86 M.C.C. 743 (745)*.

Regulations of the Commission

28 FR 9435, Aug. 28, 1963, Part 9a: Administrative Interpretations, §9a. 1 Authorization for adjustment of claims for damages resulting from misrouting. New part and section added, effective on date of order.

29 FR 4914, April 8, 1964, Part 500: New Subchapter E—Intermodal Transportation, Part 500 Practices of For-Hire Carriers of Property Participating in Trailer-on-Flatcar Service, §§500.1-500.8, added, effective July 6, 1964.

29 FR 6283, May 13, 1964, Part 210: Exemptions, §210.40 Motor transportation of property incidental to transportation by aircraft, added, effective June 24, 1964.

29 FR 8421, July 3, 1964, Part 500: Practices of For-Hire Carriers Participating in Trailer-on-Flatcar Service, effective date of order (29 FR 4914) postponed pending further order.

29 FR 11126, July 31, 1964, Part 51: New Part 51—General Requirements, added under the heading Parts 51-59, Consolidation, Finance, and Reorganization, effective Oct. 1, 1964.

29 FR 11273, Aug. 5, 1964, Part 500: Practices of For-Hire Carriers Participating in Trailer-on-Flatcar Service, effective date of order (29 FR 4914) fixed as Sept. 11, 1964.

29 FR 12508, Sept. 2, 1964, Part 500: Effective date of order (29 FR 4914) as amended (29 FR 11273) postponed until further order.

31 FR 8573, June 21, 1966, Part 6, Fees for Service Performed in Connection with Licensing and Related Activities, amended, effective July 22, 1966.

Amendments, see footnotes, vol. 11, p. 9389.

Section 204 (b) [§ *304(b) U.S.C.*] Classification of motor carriers.— [Unchanged. See vol. 11, p. 9390.]

Amendment, see footnote, p. 9390.

Notes of Decisions

Volume 9—p. 7929; Volume 11—p. 9390; Volume 12—p. 10365; Volume 13—p. 11057; Volume 14—p. 11577; Volume 15—p. 12178; Volume 16—p. 12820; Volume 17—p. 13508; Volume 18—p. 14280; Volume 19—p. 15522.

1. Construction and interpretation.—[Vols. 9, 11, 13-18].—Argument that the act does not recognize a distinction between regular- and irregular-route carriers was put to rest in the Brady case (47 MCC 23) and by the district court's holding in 80 F. Supp. 110 that the criteria established in that case constitute a reasonable classification. The act contemplates existence of the two types of common carriers and gives the commission broad discretion to establish the demarcation; thus the Brady criteria are not immutable, and if conditions in transportation should so change as to render all or some of them unrealistic or useless it is within the commission's authority to make whatever changes are necessary for fair and impartial regulation of the several carriers and to fulfill the other mandates of the national transportation policy.—Motor Common Carriers of Property—Routes and Service, 88 M.C.C. 415 (428-9).

5. Types of property carriers.—[Vols. 9, 15].—Historically, armored-car operators have engaged in guarding, protecting, and transporting monies, currency, and other valuables; their services are largely local, involving pickup and delivery at banks and business houses, with long-haul movements for Federal Reserve banks and United States Mint, using specially designed, bulletproof vehicles and trained and bonded drivers. Their principal service was in the protective custody given the items transported, rather than the transportation as such. Through the years they have been granted considerable leeway in performance of a complete service for banks in general, not being considered serious competitors of other carriers, and their operations have consistently been found to be contract carriage, even though the number of persons served might be considerable.—Armored Carrier Corp. Extension, 92 M.C.C. 336 (359-60).

However, armored-car operators' expansion of their services in recent years into such fields as transportation of business documents, film, and dental or optical supplies does not involve service of same nature as that offered to banks or financial institutions for transportation of their intrinsically valuable commodities. Business records and the like have no intrinsic value, and while their loss could be catastrophic, they do not require guards or special vehicles for transportation; and though they may be stored in safes or vaults pending pickup by the carrier, proposed transportation in panel trucks suggests that such measures are not essential for their protection. Other special services offered, such as pickup after normal working hours, are often provided by common carriers for their customers. Performance of such nonprotective services, in which prompt and dependable service is all that is required, should be classed as common carriage.—Id. pp. 360-1. [But see dissent.]

To extent that such finding is at variance with such past decisions as 77 MCC 433, 78 MCC 191, and 303 ICC 781, those decisions failed adequately to consider the difference between protective, armed-guard service and the variety of nonprotective services performed by so-called armored-car carriers. Review of history and development of armored-car service and expansion of such carriers into areas other than their traditional province is convincing that a distinction must now be clearly drawn between those two very

different types of service.—Id., pp. 357, 361.

Although Railway Exp. Agency has not shown to what extent it will perform intercity line-haul highway movements of loaded containers under proposed rates, its motor-carrier authority is sufficiently broad both territorially and commoditywise to be used for such movements unless prohibited by restriction of its general-commodity authority to shipments moving "in express service." That authority may be regarded for ratemaking purposes as coextensive with its authority as an express carrier under §1(3)(a), and, if considered transportation at nonpremium rates of traffic not shown to move more expeditiously than in ordinary l.t.l. freight service or to require any special handling or protection were held not to be "express service" within meaning of REA's certificates, it would seem to follow, in case of containers moved by rail, that an ordinary l.c.l. freight service is performed under Part I without commission approval of pooling arrangements between REA and the underlying rail carriers.—Freight, All Kinds, L.C.L. Container Charges—U.S.A., 323 I.C.C. 468 (477)*.

Conclusion that a highway express carrier of general commodities is not prohibited from handling any particular type of traffic nor required to publish any particular level of rates, but that an express carrier must move all the traffic it handles in express service, and may publish any level of rates for express service that is compensatory and otherwise lawful, is supported by commission precedent, by practical considerations of administration and enforcement of the act, and by the national transportation policy. A contrary conclusion would make it extremely difficult for REA to continue to provide a nationwide express service.—Id., pp. 477-8.

6. Types of property-carrier services.—[Vols. 9, 11-19].—Historically, common carriers of motor vehicles and heavy haulers have constituted two separate and distinct segments of the motor carrier industry; the distinction was recognized by the commission as early as 2 MCC 703, wherein it defined "carriers of motor vehicles" and "carriers of heavy machinery" (latter of which later became the heavy haulers), and again in 61 MCC 209, wherein the commission determined that, while authorities of carriers of motor vehicles may be described in terms of classes of vehicles, authorities of heavy haulers are most appropriately described in terms of service, including requirements of special equipment, without specification of commodities.—United Transports, Inc. v. United States, 214 F. Supp. 34 (40-2)*.

Distinction between regular and irregular route operations, made by the commission under its authority to classify carriers, was a necessary incident to the discharge of its duty under the "grandfather" clause to grant certificates authorizing operations which conform with those relied on as requiring the grant. A carrier granted only irregular-route authority to which its prior operations entitled it, may not operate a regular-route service without further authorization.—Railway Exp. Agency, Inc. v. United States, 205 F. Supp. 831 (837)*.

See also Winter Garden Co. v. United States, §203(b), n. 50 *Act of 1958*.

The five specific ultimate requirements of a bona fide express service, as set forth in 63 MCC 573, are practical and concrete criteria intended for guidance of highway express carriers and are controlling in defining express service. However, those criteria do not support the proposition that express service can be differentiated from ordinary freight service on basis of particular traffic, a particular weight of shipment, or particular rates. The generally higher level of express rates is not designed to protect general freight carriers from competition, but rather to compensate express carriers for providing additional or expedited service under less favorable conditions than those of ordinary freight service, and such attributes of express service as transportation of small shipments at premium rates are descriptive rather than limiting in nature, as most shipments attracted by the holding out of a true express service will weight less than 500 pounds, and cost of moving them expeditiously will be greater than if they were held for aggregation into truckloads.—Freight, All kinds, L.C.L. Container Charges—U.S.A., 323 I.C.C. 468 (479-80)*.

It is undisputed that Railway Exp. Agency's operations satisfy the criteria for express service, and it is clear that it moves the con-

tainer traffic in issue just as expeditiously as its other traffic, often in same cars or trucks. Historically, REA has handled shipments weighing over 500 pounds, including carloads; it had no reason to believe that it was required to justify proposed rates on containerized shipments in terms of some arbitrary weight limit, and to impose such an unexpected burden on it would be improper. Moreover, even assuming that it would be desirable to define "express service" in terms of a specific weight limit, the factual basis for such a limitation could be established only in a general investigation or ex parte proceedings.—Id., pp. 480, 481-2.

A definition of "express service" in terms of perishability, fragility, or value of commodities transported could not be articulated with the precision required for tariff publication; and to define it with reference to whether or not particular shipments require expedited handling would be wholly impracticable. Such a definition could not be enforced; no shipper would be likely to admit that a shipment he tendered to REA did not require expeditious handling, and, if REA were required to investigate and make such a determination as to each shipment, it would be required to substitute its judgment for that of its patrons, and many shipments requiring expedition would be delayed.—Id., p. 482.

"Express service" is a relative concept, rooted in shipping public's need for a special transportation service and common carriers' responsive duty to meet that need; it connotes certain distinct characteristics, particularly the expedited handling, in regular-route service, of comparatively small individual shipments, which common carriers or ordinary freight usually do not wish to, or cannot, provide; it contemplates a bona fide holding out and ability to transport any commodity that can safely be carried on ordinary van-type equipment, including those which require maximum degree of care or security, or both; and its superiority to ordinary motor freight service requires payment of premium charges. Express service therefore is not susceptible of precise definition, because its inherent attributes must be judged in comparison with services and rates of common carriers of ordinary freight.—Railway Exp. Agency, Inc., Extension, 91 M.C.C. 311 (322-3, 324)*.

While evidence indicating that average weight of shipments transported by Railway Exp. Agency throughout the nation is about 50 pounds, contrasted with average single-shipment weight of 200 pounds for one protestant, does not establish conclusively a firm division of small and large parcel traffic between REA and motor carriers of ordinary freight in all circumstances, those figures indicate strong probability that such historical cleavage still prevails, and, as the only such figures of record, fall far short of sustaining protestants' fears of encroachment by REA on their field through extensions of its authority to provide all-motor service in lieu of discontinued passenger-train service.—Id., pp. 323, 326-7.

Vendee's operations as an express carrier meet criteria of the Arrowhead case (61 MCC 131, 63 MCC 573), notwithstanding claim that it does not meet the criterion of transportation at premium rates; due to the 100 pounds' minimum charge maintained by general freight carriers to discourage light shipments, it is not unusual for an express carrier's rates on such shipments to be lower.—Mistletoe Exp. Service—Purchase—Central News Exp., Inc., 90 M.C.C. 797 (803).

Automobile haulers are a specialized group engaged in transportation of new and used motor vehicles including automobiles, trucks, trailers, chassis, bodies, and automotive display vehicles. Initial movement of new automobiles, trucks, and trailers is usually a radial irregular-route service, originating at a place of manufacture or assembly and ending with either final delivery to a consignee or interchange with another carrier. Transportation of used vehicles, display vehicles, and both new and used chassis, also new vehicles not moving from a point of manufacture or assembly, is generally nonradial, involving outbound, inbound, and crosshaul movements from to, and between unlimited origin or destination points within the carrier's authorized territory, and is regarded as a secondary movement.—National Auto. Transporters Assn.—Declaratory Order, 91 M.C.C. 395 (397-8, 409).

Grants of authority restricted to initial or

secondary movements, as defined in Administrative Ruling No. 75, were intended to keep those different spheres of activity separate and distinct. However, shifts in the method of distributing the traffic, following development of rail TOFC and multilevel-car service, have confronted both common and contract motor carriers (including holders of secondary as well as initial authority) with necessity of utilizing substituted rail service in order to retain traffic which they formerly handled in all-motor service; and under present interpretation of Ruling No. 75 as applied to such substituted service, the use thereof would in many cases require modification of carriers' outstanding certificates or permits; procedure for filing petitions for such modification, outlined,—Id., pp. 399-401, 415-6.

If proposed authority to transport small shipments of general commodities is granted, applicant must lose its present identity as a transporter of motion picture films and related commodities and eventually become a transporter of small shipments of general commodities.—Transway, Inc., Extension, 89 M.C.C. 513 (521).

None of the eight criteria set forth in the Brady case (47 MCC 23) as identifying regular-route operations is, standing alone, necessarily conclusive, except possibly the observance of definite, published schedules. Although defendants' operations under their irregular-route authorities undoubtedly have some elements indicative of regular-route service, when analyzed in light of the surrounding circumstances they are not of such character as would clearly justify conclusion that defendants have unlawfully converted them to regular-route operations. Their operations have not reached the stage of a predetermined plan, and there is no evidence that either observes fixed schedules of service or of departures or deliveries; while shippers can anticipate second-morning deliveries on shipments between Kansas City and Chicago, that is a reasonable service between such points and results from the practical aspects of motor carrier operation rather than from any apparent design of defendants; and though certain routes are predominantly used, there is no habitual use of fixed routes, and defendants do not instruct their drivers as to the routes to be taken.—Ship-By-Truck Co. v. Crouch Bros., Inc., 93 M.C.C. 89 (95-6).

However, in the area involved the difference between operations of an irregular-route carrier favored with a consistent and substantial volume of traffic and those of regular-route carriers is hardly discernible. In such border-line cases it is the obligation of the irregular-route carrier either to check the tendency of its operations to take on a regular-route character, and thus preserve its status, or to obtain appropriate regular-route authority. Defendants have chosen the latter course, and their applications have been favorably considered; complaint dismissed.—Id., p. 96.

Although a bona fide irregular-route carrier may conceivably do many things suggestive of regular-route service without unlawfully converting its operation into one over regular routes, when the number of such practices is substantial, and they are not explained or justified by special circumstances, they cumulate and compel the conclusion that such a conversion has been accomplished. However, no general rule can be laid down for determining the regular- or irregular-route character of all operations; each case must be judged by its own special circumstances.—United Parcel Service, Inc., Extension, 89 M.C.C. 709 (743-4)*.

The use of fixed routes is the outstanding characteristic of regular-route carriers, but this does not necessarily mean that rigid and inflexible use of a particular route or routes makes an irregular-route carrier into a regular-route one. On the other hand, fact that an irregular-route carrier habitually uses the only practical highways from one point to another does not mean that the test may not be applied; it is merely one of several circumstances to be weighed in determining the true nature of the operation. And the maintenance of a terminal at a point other than its base by an irregular-route carrier is another factor to be weighed in light of other surrounding circumstances; the maintenance of such a terminal, along with consistent movement of a substantial volume of l.t.l. shipments, strongly suggests an operation of fixed regularity and according to plan rather than call-on-demand.—Hart Motor Exp., Inc. v. Midwest Motor Exp., Inc., 88 M.C.C. 525 (530)*.

Also, while strict adherence to a fixed published arrival-and-departure schedule, regardless of available traffic, is a rare practice among regular-route carriers of property, there is an equivalent general regularity in arrivals and departures of equipment in their operations which is not characteristic of carriers operating only on call and over irregular routes. It is not required, however, that pinpoint accuracy be observed in providing a regular-route service; if a pattern of performance is established that results in an operation possessing a rhythm which may be predicted and relied on by shippers, the operation is essentially regular-route in character. Facts and circumstances surrounding the operations complained of, viewed in their entirety, establish conclusively that such operations are regular-route in nature.—Id., p. 531.

Proposal which would allow irregular-route carriers to conduct operations without regard to whether their service partakes of one or more of the 8 criteria established in the Brady case (47 MCC 23) as indicative of a regular-route type of service would effectually eliminate distinction between regular- and irregular-route services and permit irregular-route carriers to provide service of type hitherto considered the exclusive province of regular-route carriers. The Brady decision has been in effect for a number of years and carriers have come to rely on its terms and obey its mandate to seek conversion of their authority in appropriate circumstances; examination of cases involving conversion of irregular- to regular-route authority indicates that the Brady criteria have not been particularly troublesome to carriers to which they apply, and that fear of Irregular Route Conference that their continued observance would prevent logical development and improvement of irregular-route service is unfounded.—Motor Common Carriers of Property—Routes and Service, 88 M.C.C. 415 (427, 432, 433).

Though there can be no general rule for application of the Brady criteria to all operations, since to much depends on peculiar character of each operation and its surrounding circumstances, distinction made in that case was intended to apply to operations of irregular-route carriers authorized to transport general commodities or a large number of diverse commodities, rather than a limited range of special commodities; it was never intended to apply to operations involving special service or special commodities or both, such as those of carriers of packinghouse products or motion picture films, which have historically and consistenly been considered within the legitimate service area of the irregular-route, special-commodity carrier. Even if an operation involves handling of a large proportion of l.t.l. shipments for a number of shippers, entailing performance of some services noted as indicia of regular-route service, it may properly be considered an irregular-route service where shipper's particular needs require such a service.—Id., pp. 430-1.

Regardless of whether there has been a change in pattern of irregular-route carriers' operations since the Brady decision, criteria enumerated therein are not now obsolete. Position of such carriers remains completely different from a geographical standpoint from that of regular-route carriers; as their authority is normally described in terms of territories, they may serve a great number of cities of varying size and economic importance, over any highway they choose; if considered proposal were adopted, they could provide service or withhold it, depending on attractiveness of the available traffic, and thus compete for the most desirable of scheduled traffic without being required, like regular-route carriers, to handle less desirable traffic over designated service routes. Reasons summarized in the Brady report for maintaining the distinction between the two types of service thus remain the same.—Id., pp. 429, 432-3.

Though in regulation of a changing industry regulatory practice must keep pace with technological and economic development, and precedents must be reconsidered from time to time, fact that a principle has been followed for many years entitles it to a presumption of validity; principles of the Brady case have become accepted guideposts for the motor carrier industry, and to depart from them now would cause unwarranted blunting of distinctions between two types of motor carrier service which have been recognized since beginning of Federal regulation; abolition or modification of those principles is not justified

at this time.—Id., pp. 433-4.

7. Classification of carriers; commodity basis.—[Vols. 9. (par. (c) in v. 9), 11-19].—It is no longer open to question that the commission may employ an "intended use" test in construing a carrier's certificates; and its outline of circumstances under which plaintiff may accept a shipment as "building materials" or "construction materials" without investigation to ascertain the actual intended use of the articles shipped was a valid exercise of its discretion.—Mitchell Bros. Truck Lines v. United States, 225 F. Supp. 755 (760)*.

Principle that the commission's interpretation of words, terms, or phrases used in its own certificates should prevail unless arbitrary, capricious, a plain abuse of discretion, or violative of established law is especially applicable to meaning to be given terms denoting generic classifications of commercial products relating to industrial transportation under the regulatory purposes of the act.—McKenzie Tank Lines, Inc. v. United States, 211 F. Supp. 876 (877, 878)*.

Where the final issue was whether C & S containers are closer to packages or to tanks, the commission's holding that such containers are package-like when treated as packages, i.e., tendered to and received from the carrier when filled, is unexceptional. And since a conventional truck may be temporarily converted into a tank truck when a C & S container is premounted on it so that, without any packaging by shipper, a fungible, flowable commodity may be dumped, pumped, or poured into it, the commission's holding that the service provided to shipper becomes substantially different because of the new element of post-loading packaging of commodities traditionally carried by bulk carriers is convincing. There is little distinction, practically or transportationwise, between a tank truck and a flat-bed trailer on which is mounted a Sealdbin filled with liquid; latter becomes a medium of transportation of type specially adapted for service by tank-truck operators. As a judgment of legal significance, the package-tank differentiation as found by the commission is rational and its application to the facts as found is reasonable; sustained.—Railway Exp., Inc. v. United States, 213 F. Supp. 868 (874-6)*.

Although the commission has previously held that where similar functions were performed by two units of transportation one might be the "practical equivalent" of the other and thus require similar legal treatment, and other decisions have limited the "special equipment" category to situations where carrier provided something more than an ordinary vehicle and ordinary over-the-road transportation, the commission is firmly bound by neither line of decision; the court has no concern with the findings made in other proceedings before the commission.—Id., p. 875, Note 28.

Interpretation of commodity descriptions in a carrier's operating authority is not controlled by the commodity classification for rate purposes. In determining whether an article is embraced within a particular commodity description, great weight must be given to what the article is considered to be in the industry.—Plastics, Sirup & Washing Compounds, Del. to N.Y. & N.J., 315 I.C.C. 351 (353).

Record in proceeding granting respondent authority to transport heavy machinery, contractors' equipment, and parts and accessories, "in quantities of not less than 10,000 pounds" is convincing that "quantities" may properly be construed to mean "shipments," and that less than 10,000 pounds may be transported on a vehicle if it is part of a larger shipment tendered at one time and one place, but which respondent in prudent conduct of its operations determines should be handled in a separate vehicle. Thus, the minimum weight restriction does not prohibit transportation of combined loads of the authorized commodities, provided total weight of the shipment is not less than 10,000 pounds.—Ray Carter, Inc.—Investigation and Revocation, 91 M.C.C. 653 (655-6).

The commission in granting authority must attempt to describe the commodities to be transported so that the authority is sufficiently inclusive as to allow the carrier to meet present and foreseeable future transportation needs of the public; and, for purposes of transportation classification, it has long maintained a classification relative to prefabricated buildings and their component accessories

and parts which classification is clearly distinct from the generic description "building materials." Respondent's certificate primarily describes the transportation of prefabricated houses and buildings and certain related commodities and, when read in the light of commission usage of terminology therein, clearly shows intent to restrict the authority granted to the field of prefabricated to houses and buildings, while allowing the holder thereof to provide a complete service to shippers of prefabricated structures.—Whitehouse Trucking, Inc., Investigation and Revocation, 99 M.C.C. 621 (625, 627, 629)*.

See also Renner Motor Lines, Inc., case, §212(a), n. 1.

In interpreting operating authorities containing generic commodity descriptions such as "iron and steel articles," the lists formulated in the *Descriptions* case (61 MCC 209), although not controlling, should be considered even when no restrictive reference is made thereto and irrespective of whether the authority was granted before or after formulation of those lists. The lists should be considered because they include commodities which carriers, specializing in their transportation, have been hauling for many years.—Eagle Motor Lines, Inc., Investigation and Revocation, 94 M.C.C. 704 (707)*.

Movement of paint, packing, and insulating materials under "iron and steel articles" authority is unlawful unless they are an integral part of and shipped with such articles in quantity consistent with their being of an incidental nature; and, while record is not clear as to whether respondent's past transportation of those items so qualified, it is cautioned to observe those criteria in future movements. However, since the fifteen other commodities specified are not embraced by the iron-and-steel-articles classification, those items are not within the scope of such authority; therefore, respondent's past transportation of those commodities was unlawful.—Id., pp. 705, 706-7, 709.

Every carrier whose operations are subject to the act is charged with knowledge of the commission's decisions interpreting scope of a commodity description in its operating authority.—C & E Trucking Corp.—Modification of Permit, 88 M.C.C. 391 (394).

For purposes of transportation classification, the commission has formulated a general rule of interpretation that commodity descriptions in its operating authorities are to be construed on the basis of industry or trade usages and practices and common understanding in the transportation industry, rather than on the basis of academic or literal definitions to be found in dictionaries.—Mushroom Transp. Co., Inc. v. Midwest Emery Freight, 94 M.C.C. 51 (55); and in determining whether a particular commodity comes within a generic description, reference must be had in many cases to the understanding of the terms when the authorities were issued.—National Trailer Convoy, Inc., Extension, 91 M.C.C. 259 (262); also, the commission customarily considers whether the words used in a carrier's authority have acquired a meaning in the trade or industry which is different from their ordinary academic meaning and, in addition, often considers definitions in accepted dictionaries.—Melton Truck Lines, Inc., Extension, 88 M.C.C 723 (733).

Under the rule of reasonableness announced in 61 MCC 666 respecting carrier's duty to inquire as to intended use of a commodity, authority for transportation of which is governed by reference to its intended future use, the carrier may assume, unless it has knowledge to the contrary, that commodities used predominantly or almost exclusively in the particular activity referred to in its authority are actually to be used in that activity, and may transport all such commodities without making investigation as to their actual ultimate use. However, it is the prodominant use of the particular article or commodity that governs, not that of the generic class to which such article or commodity may belong; and if carrier has knowledge or notice of some other likely use for a particular shipment, it has the burden of acquiring knowledge of the actual intended user.—Mayfield Sons Trucking Co. —Interpretations, 92 M.C.C. 167 (169, 171)*.

No such assumption may be indulged in respecting commodities having general utility in many lines of work; such commodities may be transported only after they have in some way been earmarked for the use referred to in the carrier's authority (as by consignment to such a user),so that the carrier can be reason-

ably certain that, at time of transportation, such use is intended. A carrier may not close its eyes to facts within its possession that would raise reasonable doubt that a commodity is to be used in the activity specified in its authority, and investigation is required if it is apparent that a shipment is destined to a class or type of consignee not normally using or dealing in the commodity in question. Moreover, the commodities, whether of general utility or those predominantly used in an activity, must at time of transportation be in form or condition to be used, without further processing or manufacturing, in the particular activity specified.—Id., pp. 169-70.

Under strict application of the intended use test, only those commodities described in carrier's authority which, at time of movement, are intended for use in the type of activity, enterprise, or place specified in the description, and are in form and condition to be so used without further processing or manufacturing, may be transported. However, application of that test has presented many problems and, to ease carriers' burden of predetermining the use of commodities tendered for movement under such authority, it has been relaxed to permit transportation of those which (1) are known by the carrier to be, or are ascertained by it with reasonable certainty to be, intended for the particular use involved, or (2) are predominantly used in or have virtually no other use than in the particular activity, without specific inquiry as to their intended use, provided the carrier has no actual knowledge or notice of some other intended use of the shipment.—Great Western Motor Lines, Inc.—Investigation, 96 M.C.C. 522 (526); however, carrier may not ignore facts in its possession which would cause a reasonable man to doubt that the commodity is to be used in the specified activity.—Mitchell Bros. Truck Lines—Investigation, 91 M.C.C. 267 (269-70)*.

"Intended use" commodity descriptions have not been abandoned, and will continue to be used where appropriate; such descriptions afford flexibility to meet needs of consignees, which in certain instances offers more advantages from standpoint of public interest than broad generic descriptions or enumerations of a large number of individual items. Thus, if certain of applicant's "grandfather" authority in fact embodies an intended use test, it is not on that account bad and need not be rephrased to eliminate that test; the Classification case, 2 MCC 703, requires no different conclusion.—I. L. & C. Corp. Modification of "Grandfather" Authority, 89 M.C.C. 161 (164).

Acids: See also *chemicals*, below.

"Acids" has a generally accepted trade or industrial meaning which is substantially more limited in scope than its academic definition, and which clearly does not embrace vinegar or other liquid food products. Although all vinegars contain varying percentages of acetic acid, they are not generally considered acids in transportation parlance, any more than are fruit juices containing citric acid. It is also significant that vinegar is neither listed under acids in National Motor Freight Classification nor included in list of acids and chemicals in appendix XV to the Descriptions case, 61 MCC 209.Thus authority to transport acids does not embrace vinegar.—Erickson Transport Co. Extension, 92 M.C.C. 122 (123).

Classification of vinegar for transportation purposes is governed by decision in 88 MCC 635; discussion of "liquid chemicals" authority therein applies with equal force to transportation of vinegar under authority for bulk acids. Shipper concerned is a producer and processor of foodstuffs, not of acids and chemicals, and ships various types of vinegars as foodstuffs; while its vinegars undoubtedly contain acid, there can be no serious contention that they may be transported under bulk acids authority. And though its distilled white vinegar is shipped in concentrated form and contains a higher percentage of acid than the others, it is considered by shipper and its consignees to be, and is shipped as, vinegar, and no good reason is shown for treating it differently for transportation purposes than shipper's other vinegars; therefore it may not be transported under authority for acids.—Arisona Pacific Tank Lines Extension, 91 M.C.C. 906 (909).

Agricultural commodities; [Vols. 9, 14, 15, 17-19].—See also §203(b), n. 50.

The commission was correct in concluding that, under certificates issued before 1958

authorizing transportation of "agricultural commodities" and "farm produce," plaintiff could not continue transportation (in mixed loads) of frozen fruits, berries, and vegetables which, though previously held to be within the §203(b6) exemption, were specifically made subject to regulation by §7 of Transportation Act of 1958. Purpose of "agricultural commodities" certificates can only be to authorize transportation of items otherwise exempt under §203(b6) in mixed loads with non-exempt goods; and there is no indication that the 1958 act intended to deal with regulation of exempt and non-exempt commodities when transported in mixed loads.—Lester C. Newton Trucking Co. v. United States, 264 F. Supp. 869 (876-7)*.

Informal ruling of Bureau of Motor Carriers that, as used in grants of authority, "agricultural products" and "agricultural commodities" are synonymous was correct; any other conclusion would create a purely artificial distinction. Though in the past such authority was granted on a policy no longer followed by the commission, where those terms appear in outstanding certificates or permits they do not authorize transportation of any commodity not within the §203(b6) exemption. Applicant cannot lawfully transport butter and meat, fresh or frozen, under authority for "agricultural products."—Yeary Transfer Co., Inc., Extension, 88 MC.C.C 473 (478).

Canned water clearly does not come within the generally accepted meaning of "agricultural commodities" and may not be transported under authority therefor. "Agricultural commodities," as used in authorities issued by the commission, means those within exemption of §203(b6) and does not embrace canned goods in hermetically sealed containers. Neither canned fruits nor canned vegetables are considered agricultural commodities by Administrative Ruling 107 (incorporated by reference in that section), and no reason appears for any different treatment of canned water. —Lester C. Newton Trucking Co. Extension, 91 M.C.C. 919 (921-2).

Applicant may not transport frozen fruits and vegetables under authority for "fruits and vegetables"; that description is synonymous with "fresh fruits and vegetables" and has consistently been used in motor-carrier operating rights to describe fresh fruits and vegetables in their natural unfrozen state.—Home Transfer & Storage Co., 88 M.C.C. 223 (229)*.

Airplanes, parts, etc.: [Vols. 18, 19].—Following decision in 86 MCC 327, in which the entire commission determined not to extend the ordinary meaning of "airplane" or "aircraft" to include a missile, a unit designed as a component part for a missile cannot be found to be an aircraft part; moreover, considered jet thrust (JATO) units for pilotless interceptor missiles are not shown to be interchangeable with any similar component parts of aircraft; therefore, such units may not be transported under authority for aircraft parts. —Baggett Transp. Co. Extension, 88 M.C.C. 3 (8, 11)*.

Alcoholic and malt beverages: [Vols. 16-18]. —From the commodity description it would appear that vermouth may be transported as a "wine," and that conclusion is supported by the dictionary definition of vermouth as "an aromatized white wine in which herbs, roots, barks, bitters, and other flavorings have been steeped." Cases cited by applicant primarily deal with question of whether certain potable alcoholic beverages can be transported as liquid chemicals and, therefore, cannot reasonably be considered as controlling on the issue of whether vermouth, made from a wine base, comes within the generic commodity description "wine." On instant record, no reasons are advanced to show why vermouth should not be considered as being a wine; applicant may petition for further hearing to present evidence to establish the nature of vermouth for transportation purposes.—Southern Tank Lines, Inc., Extension, 92 M.C.C. 423 (424, 425).

Automobiles, etc.; parts, accessories: [Vols. 9, 11, 12, 14-19].—Certificate description "trailers designed to be drawn by passenger automobiles" describes a class of trailers; sectionalized homes, which are permanently located after delivery, do not qualify as trailers merely because the sections are placed by manufacturer on intergrated undercarriages equipped with hitch balls. While commission decisions show that that commodity description was intended to provide a field of service flexible enough to embrace developments in

the mobile home industry, they also show that newly developed commodities do not automatically come within it because of a superficial resemblance or common characteristic: the identity of each new commodity must be examined to determine its classification. The commission's decision that sectionalized homes, which are not built in single units and are not intended to retain any mobility, are not trailers is reasonable; a half-house in process of delivery, though moving, is not a trailer but rather is half of a house. Sustained. —National Trailer Convoy, Inc. v. United States, 240 F. Supp. 286 (288-9)*.

It is the commission's general practice in issuing certificates and permits to distinguish between vehicles and each type of vehicle, by naming each separately in a grant of authority; consequently, authority to transport a specific type of automotive vehicle should not be subjected to a strained interpretation for the purpose of including vehicles not intended to be included. Since "tractor" as used in certificates and permits means a vehicle for drawing or propelling others, authority to transport tractors does not embrace such functionally distinct single purpose self-propelled vehicles as the considered road rollers and streetsweepers, which are designed from the ground up for highly individual purposes only and not for pushing, hauling or propelling others.—Daily Exp., Inc.-Investigation of Operations, 98 M.C.C. 661 (670, 672).

Two generic commodity descriptions of trailers have evolved: (1) those designed to be drawn by passenger automobiles, which includes the various types of house trailers however equipped (including those equipped for commercial purposes) whether towed by passenger automobiles or other means such as light trucks; and (2) those not so designed, including not only commercial freight trailers used for transporting property from place to place, but also those adapted to other uses such as missile, shop, tank, and electronic trailers. However, not all traffic tendered, transported, and delivered on wheels automatically comes within description of either of the two categories of trailers.—National Trailer Convoy, Inc., Extension, 91 M.C.C. 301 (303)*.

Authority to transport trailers designed to be drawn by passenger automobiles embraces transportation of shrimp boat mobile kitchens, mobile egg factories, mobile motel units, and portable coin-operated laundries which are constructed in house-trailer shells and mounted on a house-trailer chassis or a wheeled undercarriage, since those structures are self-contained and enjoy the same substantial characteristics as house trailers even though, in some instances, the undercarriage is removed and returned to shipper upon delivery. But sectionalized manufactured homes constructed and shipped in two or more sections, which are designed to be joined together at destination to form a complete house, are not embraced within such authority; they are not single units nor are they sold to customers as mobile units, but as stationary, factory-built houses.—Id., p. 304.

Sections of "mobile homes" attached to undercarriages equipped with A-frames and fitted for towing by tractors are not within authority to transport house trailers designed to be drawn by passenger automobiles, or freight-type trailers which are not so designed; no basis is shown for finding that all traffic integrated with, tendered, transported, and delivered on wheels necessarily comes within either classification of trailers. Except for undercarriages, considered structures possess no characteristics of house-type trailers; they are not self-contained units suitable for immediate use on the highways, but are designed to be joined together at destination and become part of consignee's real estate. Moreover, their tender on wheels does not change identity of the structure from a house to a trailer; rather, the wheeled undercarriages and A-frames are the trailers used to transport the houses.—Id., 91 M.C.C. 259 (261-2).

"Commercial freight trailers" includes the several types of military and other governmental trailers applicant has been transporting for the military and postal services. History of that commodity description shows that "commercial" was not intended to be applied narrowly to trailers utilized only in a profit-making venture, but is much broader in scope; and more recent descriptions, in granting such authority, have been phrased "trailers other than those designed to be drawn by

passenger automobiles" in order to avoid confusion.—Dealers Transit, Inc., Extension —Clarification, Augusta Kans., 88 M.C.C. 369 (371-2).

Brick, clay, tile: [Vol. 18].—Authority to transport such commodities as "clay products," "brick," and "clay brick" does not authorize transportation of refractory products, or refractories, which are not composed principally of clay. Commodities must be formed of a particular material in order to be described as a "product" of that material; and, on the other hand, "products" in a certificate cannot be interpreted separately but must be considered together with other language therein, particularly its limiting adjective. Record shows that a number of refractories do not contain any clay and that the percentage of clay used in others has been substantially diminished; moreover, the numerous formulas used in refractory production are trade secrets not generally disclosed. Since substantial protion of refractories produced by supporting shippers are not composed principally of clay, authority to transport "clay products" is not generally sufficient for their transportation.—Pennsylvania-Ohio Exp., Inc., Extension, 96 M.C.C. 449 (451-3).

Building materials, roofing: [Vols. 9, 17-19]. —While any commodity listed as a building material in Appendix VI to the Descriptions case, 61 MCC 209, may be transported under authority for "building materials" if the carrier has no knowledge of an intended use other than as a building material, carrier may not close its eyes to facts giving rise to a reasonable doubt. Respondent should have known that it was highly unlikely that furniture manufacturers and electric power companies would use veneers and cables as building materials; at the very least, some notice (that listed commodities may not be intended to be used as building materials) exists if it is apparent that shipment is destined to a class or type of consignee who does not normally use or deal in building materials, and proper intended use must then be affirmatively established by the carrier.—Mitchell Bros. Truck Lines—Investigation, 91 M.C.C. 267 (269-70)*.

"Building materials" are those in a form and condition to be used in construction or repair of a building withoug further processing or manufacture; neither glue stock, which requires further processing nor furfural residue, a component of glue, qualifies as a building material. The same is true of glue and veneers used in making products used in building; commodities which may be used in manufacture of products ultimately used as building materials may not be transported under building materials authority.—Id., p. 271.

For the same reasons, veneers and glue cannot qualify as construction materials. However, "construction materials" includes building materials, and under authority thereof a carrier may transport any commodity which has virtually no other use than as a construction material, as well as any in the building materials list, provided it has no knowledge or notice of an intended use other than as a building or construction material. In addition, carrier may transport any other commodity if at time of transportation it is affirmatively established that it is intended for use as a building or construction material; thus, electric cables, transformers, and regulators may be transported to power and light companies if it is established that they are intended for use in construction of new power transmission lines and to be permanent parts thereof.—Id., p. 272.

But since cable, transformers, and regulators are listed as electric equipment and parts in Appendix VII to the Descriptions case they are not building materials and may not be transported under authority for building materials, including girders, boilers, "and other commodities of similar nature."—Id., p. 274.

Urethane forms which respondent would carry under its authority for building materials must be further processed by cutting to appropriate shapes and sizes before they can be used, and while they may ultimately be used in buildings, they may also be used as insulating material for a number of other objects such as refrigerated trucks or freezers. There is thus no "reasonable certainty" at time of transportation that they will be used as building material; therefore, under principles of 86 MCC 447 and 91 MCC 267, respondent may transport urethane forms only when they are used directly, in form tendered to

respondent for shipment, as building materials. Although shipments have moved solely to fabricators in the past, urethane is a new product for respondent's shipper and record indicates that it might be precut and shipped directly to jobsites for use as insulation in buildings; such transportation would be within scope of respondent's authority.—Building Materials, Middle Atlantic and New England, 322 I.C.C. 710 (711-13).

Controlling interpretations of commodity description "building materials" are well established, and high-pressure cement pipe may not be transported under that authority unless carrier, before accepting it for transportation, ascertains its intended use as building material; such authority does not embrace pipe used predominantly in construction of water or sewer systems.—Ace Lines, Inc., Extension, 91 M.C.C. 559 (565).

Authority to transport building materials utilized and for use only in logging, mining, and contracting operations embraces only building materials whose intended future use is in connection with one of those three types of commercial operation. Manufacture of wood products is not a logging or mining operation, nor is it a contracting operation as the term is used in commodity descriptions; thus glue may not be transported to such a shipper's plant under carrier's building materials authority.—Zirbel Transport, Inc., Investigation and Revocation, 91 M.C.C. 705 (707, 708).

Authority to transport "composition shingles" does not embrace rolls of composition roofing or roofing paper and articles used in installation thereof. Such rolls are not simply large shingles, as supporting shippers claim; shingles are cut comparatively small and customarily shipped flat, whereas prepared roofing and roofing paper are produced in long sheets and invariably shipped in rolls; also, since prepared roofing is the material from which shingles are cut, it would be illogical to hold that authority for shingles includes the right to transport rolls of uncut roofing. Roofing paper is not used as an outer covering, but as an underlayer, thus has an entirely different function than shingles; and while nails and roofing cement used in installation of shingles are customarily shipped at the same time, they are not parts of shingles and cannot be considered within authrity therefore.—Melton Truck Lines, Inc., Extension, 88 M.C.C. 723 (733-4).

Buildings: See *Prefabricated buildings*, below.

Bulk commodities;See also *In bulk*, below.

Authority for dump-truck transportation of "such bulk commodities" as can be unloaded by dumping does not embrace pig iron, which is of substantial size and weight and lacks the homogeneity and fungibility generally associated with bulk commodities; it can be and occasionally is unloaded piece by piece, and is not susceptible of handling by pouring, scooping, or shoveling in any practical sense; therefore it is not a bulk commodity.—McFeeley Extension, 92 M.C.C. 769 (771)*.

Canned goods: [Vols. 11, 14-19].—See also *Preserved foodstuffs*, below.

As used in motor carrier operating authority, "canned goods" has acquired a well established meaning; the commodity must be a sterile, bacteria-free food and its container must be hermetically sealed to maintain its first and intended state. Without these two indispensables of "canned goods" the commodity is not of that category. The commission's application of that definition to complainant's permit, to determine lawfulness of its questioned operations, was not in error; sustained.—Zuzich Truck Line, Inc. v. United States, 224 F. Supp. 457 (462, 463)*.

The commission's conclusions that, in light of "canned goods" definition in 61 MCC 311, plaintiff's authority to transport canned goods does not include transportation of peanut butter, that that commodity does not need to be enclosed in an air-impervious container for its preservation, and that inclusion of peanut butter in commodity lists in rate tariffs is not controlling on interpretation of operating authority, were not arbitrary, capricious, or unreasonable. Those determinations are firmly based; the first two lie in evidence, and the last in divergence in purpose between the tariffs and certificate specifications; sustained.—Archie's Motor Freight, Inc. v. I.C.C. 226 F. Supp. 487 (489-90)*.

The commission has long used "canned goods" in operating authorities to describe foods or potable liquids which have been

processed and enclosed in hermetically sealed containers for preservation; both the processing and use of hermetically sealed containers must be for purpose of preservation. Water is an inorganic potable substance used as nourishment for the body, and canned water (for use in civil defense programs or by campers or sportsmen) is embraced by "canned goods" authority, since both the elements of processing and placing in sealed containers for preservation are present. Moreover, it is a product of the canning industry and will move to many consignees of canned vegetables and be charged for at the canned-goods rates.—Lester C. Newton Trucking Co. Extension, 91 M.C.C. 919 (920-1).

However, canned water clearly does not come within accepted meaning of "canned vegetables" and may not be transported under authority therefor, since "vegetable" is defined as a plant of any kind, more specifically an herb used chiefly for culinary purposes.—Id., p. 921.

Cement, products: Since concrete is an aggregate of cement, sand, and water which, when allowed to harden into a finished form, may be considered a cement product, authority for "cement" does not include the right to transport ready-mix concrete.—New England Transp. Co. Extension, 88 M.C.C. 703 (708).

Chemicals: [Vols. 17-19].—See also *Liquid chemicals*, below.

Authority to transport chemicals as defined in the Maxwell case (63 MCC 677), in bulk in tank vehicles, does not include dry chemicals; that decision defines only liquid chemicals, and omission of the qualifying adjective "liquid" in applicant's certificate is of no consequence in absence of explicit language indicating that the authority granted is intended also to embrace dry commodities.—Bell Extension, 92 M.C.C. 276 (279).

But authority for "chemicals, liquid and dry," as defined in the Maxwell case, in bulk in tank or hopper-type vehciles, although it refers to the Maxwell definition, explicitly provides for transportation of dry commodities and therefore unquestionably authorizes transportation of both types. Also, authority for chemicals in bulk in tank and hopper-type vehicles (except finished or end products intended at time of transportation for packaging and sale to the general public without further processing), while not specifically referring to the Maxwell definition, incorporates its intended use test in apparent effort to make that definition applicable to both liquid and dry chemicals, and therefore provides for transportation of both types.—Id., pp. 279-80.

While the definition of liquid chemicals in the Southern Tank Lines case, 88 MCC 127, was held to apply also to dry commodities in 91 MCC 683, and there can be no doubt that considered slag and slag aggregates (formed as byproducts of smelting of ore) are produced by both physical and chemical processes employed in the chemical industry, the Southern Tank Lines case recognized that certain commodities, though chemically produced, are excluded from the liquid chemicals classification by common usage. Considered commodities are not listed as chemicals in the Motor Freight Classification, are not commonly considered chemicals for transportation purposes, and fall within that category of chemically produced commodities excluded from the chemical classification by common usage.—Dreyer Extension, 96 M.C.C. 343 (345-6).

Authority to transport "acids and chemicals," without further description, authorizes transportation of both liquid and dry chemicals. However, since authority to transport "chemicals as defined in the Maxwell case" was held to include only liquid chemicals in 92 MCC 276, the only dry chemicals that may be transported under opposing carrier's authority to transport "acids and chemicals as defined in the Maxwell case, 63 MCC 677" are dry acids.—Slay Transp. Co., Inc., Extension, 96 M.C.C. 47 (49).

Since salt has extensive utility without further processing and is a basic raw material in contradistinction to substances resulting from a chemical or physical change, it is not a chemical for transportation purposes, whether in dry or liquid form, and bulk salt can not be transported under chemicals or liquid chemicals authority. Although technically all materials might be classed as chemicals or combinations of them, the generic term is used generally to signify "products" of the chemical industry used in connection with other manufacturing "processes." Any impli-

cation in 83 MCC 773 that bulk salt is a "chemical" for transportation purposes is incorrect.—Chemical Leaman Tank Lines, Inc., Extension, 91 M.C.C. 683 (684, 685-6).

Construction materials: See *Building materials*, above.

Contractors' equipment, building materials, and supplies: [Vols. 14-19]. In interpreting plaintiff's authority to transport contractors' machinery and equipment as embracing transportation of all forms of machinery and equipment which are, at time of movement, intended to be used by a contractor, but as not authorizing such transportation when the machines and equipment, at time of movement, are intended for use by persons other than contractors, the commission did not properly apply the "intended-user" test. In view of conflicts in interpretations of record, plaintiff's authority is uncertain, indefinite, and vague as to what type of transportation service it may perform; case remanded for clarification, and establishment of definite guide lines that are not ambiguous, so that plaintiff may continue its operation without jeopardizing its certificate.—W.T. Mayfield Sons Trucking Co. v. United States, 211 F. Supp. 619 (624-6, 628)*.

Authority to transport "contractors' machinery, tools, and equipment" is broad enough to encompass hoist engines, piledrivers, stonecrushers, crane booms, dragline buckets, bulldozers, motor graders, concrete mixers, boilers and stacks, rollers, ditchers, back hoes, air compressors, and drill pipe.—Jetco, Inc., Extension, 91 M.C.C. 673 (677, 678).

Commodity description "contractors' equipment" is adequately explained in 62 MCC 586. While shipments of trucks, tractors, and other equipment to dealers are not automatically beyond "contractors' equipment" authority, respondent's movements of such commodities consigned to government agencies were not in any way connected with a contractor. Where the predominant use of articles is not necessarily by contractors, respondent was not justified in assuming without investigation that they were intended for use by contractors, but should have predetermined actual use to be made of them at time of shipment.—Ray Carter, Inc.—Investigation and Revocation, 91 M.C.C. 653 (656, 657).

Under authority for "contractors' machinery and equipment" a carrier may transport all forms of machinery and equipment predominantly used by contractors when consigned to contractors, or to distributors of or dealers in those commodities, without investigation as to ultimate use to be made of them, so long as it does not know or have some notice that the items transported are likely to be used by someone other than a contractor. In the absence of such knowldge or notice, carrier is justified in assuming that such commodities ultimately will be used by contractors. On the other hand, if it has such knowledge or notice, carrier would not be justified in assuming that shipment is intended for use by a contractor, and it could not transport such shipment unless it established that, at time of movement, shipment was actually intended for use by a contractor; and it is immaterial that consignee would use the machinery or equipment as a contractor would use it, since the use intended at time of movement must be by a contractor.—W. T. Mayfield Sons Trucking Co.—Interpretations, 92 M.C.C. 167 (170-1)*.

Dairy products: [Vols. 12, 14, 17-19].—Though the generic description "dairy products" includes poultry and eggs, it does not include baby foods, powdered mushrooms, and Metrecal produced by a creamery company.—Bilyeu Refrigerated Transport Corp. Extension, 92 M.C.C. 633 (640).

Dangerous articles: [Vols. 15, 18].—Nitro carbo nitrate is a blasting agent and, as such, may be transported under authority for "Classes A and B explosives and blasting supplies, materials, and agents"; however, amonium nitrate which is not intended to be mixed with a carbonaceous material to form NCN, nor to be mixed with other materials to form other explosives or blasting agents, cannot be considered a material or component of a blasting agent, nor is it a blasting agent or supply in itself. Therefore, amonium nitrate may not be transported under such authority unless at the time of shipment it is known that it will be used as a material or component of an explosive.—Monkem Co., Inc., Extension, 94 M.C.C. 749 (753, 755-6).

Furthermore, since definitions of amonium nitrate-carbonate mixtures and NCN disclose them to be entirely different commodities in chemical structure, and the regulations governing transportation of explosives permit bulk transportation of the former (subject to certain loading requirements) but not of the latter, motor carriers may not transport NCN in bulk under authority for that specific commodity; however, under authority embracing amonium nitrate without organic coating, carriers may transport bulk shipments of amonium nitrate in either closed vehicles with wooden floors and sides, or in all-metal open vehicles.—Id., pp. 756-8.

Although jet thrust unit for interceptor missiles is largely constituted of a solid propellant designated a class B explosive, purpose of the explosive is, not to dissipate energy in an explosion, but to furnish controlled propulsion, and purpose of the complete unit is to propel the missile from its launching site; therefore, even though commission's rules governing transportation of explosives must be observed, it is not within the "explosives" category; the explosives regulations relate to safety precautions necessary for movement of dangerous articles and do not control construction of commodity authority in certificates and permits; transportation of such units was not unauthorized transportation of explosives.—Baggett Transp. Co. Extension, 88 M.C.C. 3 (9, 11)*.

Irradiated fuel elements shipped in lead casks are properly classified as class D poisons within regulations governing transportation of dangerous articles (§73.391).—Dealers Transit, Inc., Extension, 88 M.C.C. 375 (379).

Dump-truck commodities: See also *Bulk commodities*, above.

Authority to transport such commodities as are ordinarily transported in dump trucks and can be unloaded by dumping does not authorize transportation of soda ash, since it is not the type of commodity ordinarily carried in dump vehicles.—Coastal Tank Lines, Inc., Extension, 94 M.C.C. 206 (210, 211-12); for the same reason, authority limited to commodities ordinarily transported in dump trucks does not include transportation of polypropylene polymer.—Chemical Leaman Tank Lines, Inc., Extension, 95 M.C.C. 394 (398).

Transportation of dry fluorspar, in bulk, is beyond scope of protestant's authority to transport "such commodities as are ordinarily transported in dump trucks and can be unloaded by dumping." That authority defines the commodities protestant may transport, but does not restrict it to the use of dump-type vehicles alone; and although fluorspar is a fungible, dry commodity that can be unloaded by dumping, it is not such a commodity as is ordinarily transported in dump trucks. Description of dump-truck operations in 2 MCC 703 clearly does not encompass transportation of dry fluorspar, bearing in mind its susceptibility to loss and damage and its relatively high value. While fluorspar is one of numerous commodities which can be, and occasionally are, transported in dump trucks, it is not "ordinarily" so carried. Any other interpretation of protestant's authority would embrace transportation of an infinite number and variety of materials, approaching "general commodities," which would go beyond the obvious intent of the grant thereof.—Coastal Tank Lines, Inc., Extension, 92 M.C.C. 149 (153-4).

Equipment: see *Fixtures and equipment, Special equipment*, below.

Express: [Vols. 16, 17, 19].—Definition of "general commodities moving in express service," in 61 MCC 737 and 63 MCC 573, as embracing any commodity which may be safely transported in ordinary van-type equipment, including those requiring a maximum degree of care or security or both, but excluding transportation of liquid commodities in tank vehicles, commodities requiring special equipment, or household goods as defined by the commission, is not inconsistent with an approach that recognizes inherent error in interpreting "express" authority strictly from a commodity viewpoint. The excluded commodities fundamentally require use of special equipment by specialized carriers, and their exclusion is based on consideration of the traditional movement of express in ordinary van-type equipment (albeit equipped with mechanical refrigeration for perishables or with safes for valuable items), and is designed to reflect the true nonspecialized nature of

express service, which limits the type of equipment that may properly be used under authority for commodities moving in express service.—Railway Exp. Agency, Inc., Extension, 91 M.C.C. 311 (322, 324-5)*.

That the nature of the cases cited required those interpretations to be finally directed to the particular certificates involved does not alter their general import; they are exemplary of conditions that have existed since inception of motor transportation of express and are illustrative of the meaning the commission has always intended in issuing certificates for express service. Fact that Railway Exp. Agency may have published tariffs purportedly reflecting broader operating authority is immaterial, and exception of bulk commodities or those requiring special equipment in certain of its certificates was mere inadvertent surplusage. Existing definitions of "general commodities moving in express service," or similar terms, which apply with full force to REA's certificates, are a realistic and practical reflection of the nature of express service as the commission has always conceived it, and are not shown to be in need of alteration or replacement at this time.—Id., pp. 326, 327.

Protestants' position that "express" in Railway Exp. Agency's certificates is intended to authorize only a service noncompetitive with ordinary freight service of general-commodity carriers, but competitive with express service latter are also authorized to (but seldom) perform, and that, should ordinary freight service improve to where it compares favorably with express service, competitive operations by REA would be unlawful, cannot be sustained as a matter of either certificate interpretation or compliance with the national transportation policy. Intercity hauls of REA and motor freight carriers are performed with same general type of equipment; both are governed by same speed limits; and, since freight carriers are authorized and able to provide service no less expeditious than REA's, latter's service would under protestants' theory would expand when that of its competitors deteriorated or their rates were increased, and would contract when their service improved or their rates were reduced. The commission never intended that, as a matter of managerial discretion, REA's competitors could determine scope of its operating authority or that it would be voidable at their option.—Freight, All Kinds, L.C.L. Container Charges—U.S.A., 323 I.C.C. 468 (482-3)*.

Changed transportation conditions over the years have permitted freight carriers so to improve their operations as to be substantially equivalent to express service, thus blurring the distinction between express and ordinary freight service; but that should not deprive REA of its preexisting rights to conduct express operations in a manner consistent with the criteria prescribed in 63 MCC 573; nor should it be prevented from applying new and advanced techniques and methods of handling its traffic or of pricing its service, which may directly or indirectly benefit the public.—Id., pp. 483-4.

However, while REA's authority for "general commodities moving in express service" permits it to publish nonpremium rates on containerized shipments not shown to move more expeditiously than in ordinary l.t.l. freight service or to require any special handling or protection, it may not publish rates for service which does not conform to the prescribed criteria of bona fide express service.—Id., p. 481.

Fertilizer, fertilizer materials: [Vols. 18, 19].—Though applicant's authority to transport "fertilizer, in bulk, in hopper-type vehicles" is unrestricted as to the form, whether liquid or dry, in which shipments may be hauled, traditionally, carriers of dry bulk commodities have used a variety of, including "hopper-type," vehicles and carriers of liquid products have used tank vehicle equipment for bulk shipments. However, new tank-type vehicles specially adapted to transport bulk commodities such as fertilizer, in either liquid or dry form, have been recently developed; and, while they differ from ordinary "tank vehicles" in their loading and unloading devices, the new vehicles appear to be sufficiently close in function, if not design, to "hopper-type" vehicles to be so classified whether the commodity hauled therein be in dry or liquid form. Therefore, to extent that it uses vehicles which are properly so classified, carrier's authority for "fertilizer, in bulk, in

hopper-type vehicles" allows it to transport bulk liquid fertilizer.—Truck Transport, Inc., Extension, 95 M.C.C. 597 (599-600).

Fixtures and equipment: [Vols. 16-18].—Authority to transport corsets, etc., "and equipment used in the manufacture thereof" does not allow transportation of sewing machines without any restriction that they be used in commercial manufacture or destined to a commercial manufacturer; commodity description "equipment" takes color from the substance and purpose of the main portion of the grant, i.e., authority to transport the specified foundation garments, and grant of additional authority to perform an auxiliary service transporting materials, supplies, and equipment used in their manufacture must be construed strictly. Plain meaning of such a description, as used by the commission and as recognized generally in the transportation industry, confines coverage of that portion of the description to equipment which reasonably is expected to be used in manufacture of the specified commodities, and not equipment which conceivably could be so used but which indifferently may be or not.—I. L. & C. Corp. Modification of "Grandfather" Authority, 89 I.C.C. 161 (164).

And authority for photographic equipment and parts thereof does not permit transportation of electronic equipment; the question is foreclosed, adversely to applicant, in 74 MCC 58 and 78 MCC 823.—Id., p. 165.

Foodstuffs: [Vols. 18, 19].—While "foodstuffs" has been found to connote only those things which are used for human consumption as foods, that definition includes not only any substance used as a food by human beings, but also those substances which are used in preparation of foods for human consumption. The commission has accepted the following definition of food: that which is eaten or drunk for nourishment; aliment (as distinguished from condiment), nutriment, in the scientific sense; any substance that, being taken into the body of animal or plant, serves through organic action to build up normal structure or supply the waste of tissue. Although flavored or phosphated beverages may have limited nutritional value, they are nevertheless potables for human consumption which serve the biological purpose of maintaining the fluid balance needed for sustenance of normal body functions; therefore, they are embraced in commodity description "foodstuffs, raw or manufactured." It follows that flavoring extracts and syrup used in preparation of such beverages are also embraced in that authority. Decisions in 64 MCC 689 and 74 MCC 129, distinguished.—Mushroom Transp. Co., Inc. v. Midwest Emery Freight, 94 M.C.C. 51 (56-7).

Authority to haul "food products" does not embrace fresh meats; while that description covers manufactured or processed commodities, it does not include the raw or basic commodity.—Bilyeu Refrigerated Transport Corp. Extension, 92 M.C.C. 633 (639).

Lecithin oil, used primarily as an additive in foods and not considered edible except when combined with other food ingredients, is not within authority for "foodstuffs and articles generally sold in grocery stores."—Southern Tank Lines, Inc., Extension, 88 M.C.C. 387 (388, 389).

Frozen foods, vegetables: [Vols. 16, 18, 19].—Under its authorities to transport frozen foods, issued by the commission before 1958, plaintiff may continue transportation of frozen fruits, berries, and vegetables in straight loads. The certificates authorized transportation of commodities in straight loads which, though formerly held to be exempt under §203(b6), was made subject to regulation by §7 of the Transportation Act of 1958; however, savings clause in §7(c) of the 1958 act was provided to give effect to such certificates issued prior to enactment thereof.—Lester C. Newton Trucking Co. v. United States, 264 F. Supp. 869 (876-7)*.

Since any vegetable which has been cooked to point of material change in texture of the raw articles or has undergone infusion of a foreign substance is no longer a vegetable, but a prepared food, "grandfather" authority granted for "frozen vegetables" will not permit the transportation of cooked vegetables; restriction to "frozen uncooked vegetables" is therefore unnecessary.—Home Transfer & Storage Co., 88 M.C.C. 223 (233)*.

Finding in 81 MCC 649 that commodities which have undergone such extensive physical change as frozen french fried potatoes cannot properly be described as frozen vege-

tables, and would not be embraced in "grandfather" or "interim" authority granted under §7 of Transportation Act of 1958, is equally applicable to authority granted under §207(a) to transport frozen and cold-packed vegetables; thus, such authorities do not embrace transportation of frozen, prepared potato products or frozen baby foods.—Midwest Coast Transport, Inc., Extension, 88 M.C.C. 587 (597)*. [But see dissent.]

Furniture: [Vols. 9, 14, 16-19].—Respondent's authority to transport "new furniture, uncrated" and "new furniture, new office and store fixtures, * * * " does not authorize transportation of supermarket service carts or shopping carts. Webster's dictionary defines a "cart" as a "small, open carriage," and a "carriage" as a "wheeled support carrying a burden"; and, while shopping carts involved are sometimes used for display purposes and with some modification they may be used as tables, the evidence shows that their primary use is as "carriages" for merchandise purchased by customers of stores or supermarkets. Therefore, since it is concluded that considered shopping carts are "carriages," it is evident that authority to transport "new furniture" does not include transportation of such carts.—North American Van Lines, Inc., Investigation, 94 M.C.C. 663 (666-7).

While authority to transport "new furniture" does not embrace transportation of pianos, a piano case or cabinet is not a piano, as protestants assert, but becomes part of one only after the instrumental mechanism is installed. The conclusion that generic commodity description "new furniture" includes new piano cabinets is clearly analogous to prior interpretations thereof as including cabinets for radio, television, talking machine without mechanisms, and other similar items; applicant's authority to transport new furniture embraces transportation of considered new piano cabinets.—Blodgett Uncrated Furniture Serv. Extension, 89 M.C.C. 503 (505-6).

Transportation of new pianos under authority to transport "new home furnishings" or "new household furnishings" is lawful. [66 MCC 519, 75 MCC 97.]—Trans-American Van Service, Inc., Extension, 89 M.C.C. 48 (50, 51).

Laboratory equipment and laboratory furniture generally would not be included within generic term "new furniture"; however, many items in the "laboratory furniture" catagory may be indistinguishable from those that can be hauled as "new furniture" and, under certain circumstances, commodities common to both catagories (counters, cabinets, tables, etc.) may be transported pursuant to either authority. Significantly, though, many laboratory items are not included in the "new furniture" list, and it was stated in the Descriptions case, 61 MCC 209, that the furniture list does not include articles which are to be permanently affixed to a building. Therefore, since a substantial portion of considered items (shipped as a complete laboratory installation) are custom built and are designed to be permanently affixed to buildings, they are not such items as would be included in the commodity description "new furniture" in operating authorities.—S & S Trucking Co. Extension, 91 M.C.C. 239 (242-4).

Authority to transport "office furnishings" does not embrace voting machines which are not a commodity used in furnishing homes or commercial establishments such as an office. A polling place is not an office, nor does temporary installation of voting machines in courthouses and commercial establishments warrant conclusion that such machines are furniture, office furnishings, or office equipment, and without clear evidence that voting machines are included in those generic terms, such interpretation would be a clear distortion of their ordinary meaning.—North American Van Lines, Inc., Extension, 91 M.C.C. 292 (293-4).

Gases, compressed, etc.: [Vol. 19].—Authority to transport compressed gases allows the transportation of liquid oxygen, liquid nitrogen, and liquid hydrogen; as held in 84 MCC 221, the adjective "compressed" refers to spatial compression achieved either by pressure or cooling or both and cryogenically liquefied gases are compressed gases.—Younger Bros., Inc., Extension, 95 M.C.C. 1 (16-7)*.

General commodities: [Vols. 9-16, 18, 19].—See also *Express*, above.

Under its authority to transport general commodities, issued by the commission before 1958, plaintiff may continue transportation of frozen fruits, berries, and vegetables in straight loads. The certificate authorized transportation of commodities in straight loads which, though formerly held to be exempt under §203(b6), was made subject to regulation by §7 of Transportation Act of 1958; however, savings clause in §7(c) of the 1958 act was provided to give effect to such certificates issued prior to enactment thereof. —Lester C. Newton Trucking Co. v. United States, 264 F. Supp. 869 (876-7)*.

The commission's finding that authority to transport general commodities "except liquid petroleum products, in bulk, in tank trucks" does not authorize transportation of petrochemicals, being supported by substantial evidence, is sustained.—Consolidated Freightways Corp. of Del. v. United States, 237 F. Supp. 391 (392)*.

Respondent's heavy-hauling authority may be joined at common points of service with her general-commodities authority even though latter is restricted against heavy hauling; however, the service common to both authorizations is extremely limited, and the "twilight zone" between general-commodities and heavy-hauling services is confined to situations where, owing to inherent nature of commodities transported, special equipment is required only for loading and is not provided by carrier.—Heavy Mach., Equip. & Supplies between Wis. and Ill. and Minn., 318 I.C.C. 545 (548).

In delimiting the fields of service relative to transportation of automobiles, a line of commission interpretations has developed the rule that while general-commodity carriers whose rights are modified by the usual "special equipment" exception may transport one or more automobiles in an ordinary trailer, such a carrier may not invade the automobile haulers' distinctive field of operations by using the carryall type of trailer to transport such traffic, since when it does so it is for all practical purposes providing a specialized service of type excluded by the usual exceptions to a general-commodity certificate. See discussion as to distinctions between general-commodity and specialized carriage in 84 MCC 585 and as to characteristics of automobile-hauling service in 91 MCC 395.—Motor Vehicles—Idaho, Nevada, and Utah Origins, 318 I.C.C. 859 (865).

Defendant's authority to transport general commodities (except household goods and articles of unusual value) within a described area, which restricts service to or from points on Federal or State highways to service requiring use of special equipment, does not limit latter service to "heavy hauling," and does not limit commodities which may be transported therein (other than those specifically excluded), so long as special vehicular equipment of any type is required and used.—Whitefield Tank Lines, Inc. v. Springer Transfer Co., 96 M.C.C. 285 (288-9).

The "special equipment" phrase, in its normal use as one of the "usual" exceptions to general-commodity authority, has reference to any commodity whose transportation or handling requires use of special equipment. This broad interpretation is equally applicable where that phrase is used inclusively in such a description; consequently, as used in defendant's certificate, it applies to all classes of commodities not expressly excluded, and merely prohibits transportation to or from points on Federal or State highways of those not requiring special equipment. Thus, under that authority, service involving use of special equipment, including transportation of bulk petroleum products in tank vehicles, is permissible at points both on and off the described highways. To extent that the decision in 83 MCC 319 is inconsistent with this conclusion, it is overruled.—Id., pp. 289-90, 291.

Electrical transformers and plate glass of large sizes may be transported under authority for general commodities, except those requiring special equipment, when ordinary over-the-road vehicles are used and loading and unloading is performed by consignor and consignee. Drop-frame trailers used for overheight shipments are used by general commodity carriers for a wide variety of articles, thus are not special equipment, and bracing and blocking in upright position is merely for protection of the commodities and for operational safety, and is common practice among such carriers. Moreover, carriers may use modern laborsaving devices in mechanically

handling shipments that can be carried in ordinary vehicles.—Schreiber Trucking Co., Inc. —Investigation, 91 M.C.C. 91 (99-102)*.

Exclusion of "commodities which because of size or weight require special equipment" from general-commodity authority is intended to preclude such carriers from performing heavy hauler type of service, and is not intended to bar transportation of items which might fit either type of service.—Id., p. 100.

Use of accessories such as rollers and pallets does not constitute a service by "special equipment" which cannot be performed by transporters of commodities generally.—Colonial Refrigerated Transp., Inc., Extension, 91 M.C.C. 369 (372).

A general-commodity carrier whose authority excepts commodities requiring special equipment may transport 40-foot lengths of reinforcing steel, provided it does not use special vehicular equipment.—Case Driveway, Inc., Extension, 89 M.C.C. 633 (635)*.

Palletized shipments of glass-lined or galvanized silo sections may be transported by general-commodity carriers when destined to industrial users who perform unloading with their own equipment; since, though loading and unloading of such shipments requires special equipment, the carrier does not perform that service, and only ordinary flat-bed equipment is required for over-the-road movement, such transportation falls within the "twilight zone" discussed in 64 MCC 229. —C & H Transp. Co., Inc., Extension, 88 M.C.C. 285 (292)*.

But movement of palletized silos to farm sites requires use of drop-nose trailers in connection with winch-equipped tractors for unloading, and it is not shown how general-commodity carriers could feasibly unload accompanying heavy silo unloaders without special equipment; it follows that they may not perform such service since it requires use of special unloading equipment which carrier must provide.—Id., p. 292.

Since shipments of irradiated fuel elements in lead casks weighing up to 20 tons can be loaded and unloaded by shipper- and consignee-operated cranes, and can be transported on reinforced flat-bed trailers not considered special equipment, they may be handled by general-commodity carriers as well as heavy haulers; under proposed loading conditions those commodities would not be injurious or contaminating to other lading.—Dealers Transit, Inc., Extension, 88 M.C.C. 375 (379).

That protestant's general-commodity authority is restricted against transportation of "commodities injurious or contaminating to other lading" does not necessarily prevent it from transporting shipper's empty oil drums, even if covered with oil or grease. Such restriction is primarily for carrier's protection, and the decision that a particular shipment will not be contaminating is one which can be left to carrier's reasonable managerial discretion. Furthermore, a literal interpretation of the language of the restriction might preclude a carrier from transporting such commodities at any time, but since it is intended to meet wishes of carriers desiring to refuse to handle such articles when they would be injurious to traffic being transported in the same vehicle at the same time, it does not apply to possibly contaminating commodities when transported in a separate vehicle.—Herr's Motor—Exp., Extension, 95 M.C.C. 696 (698).

As result of the commission's Order No. 61 reclassifying smokeless powder for small arms, in quantities not exceeding 100 pounds net weight in one motor vehicle, as a flammable solid for transportation purposes, that commodity in such quantities is no longer a class B explosive and may be transported by general commodity carriers whose authority is restricted to exclude such explosives, unless their authority is also restricted against transportation of flammable solids.—West Motor Freight, Inc., Extension, 94 M.C.C. 793 (797).

Since the commission, prior to decision in 114 F. Supp. 599, had always regarded "general commodities" as embracing frozen fruits and vegetables which it had theretofore considered beyond purview of the §203(b6) exemption of unmanufactured agricultural commodities, and Congress in enacting the 1958 amendment of that section recognized the effectiveness of authorities issued, prior to effective date thereof, for commodities thereby subjected to requirements of Part II, applicant may lawfully continue transporting frozen fruits and vegetables under its existing

authority for general commodities.—Home Transfer & Storage Co., 88 M.C.C. 223 (228-9)*.

Transportation of silver bullion is beyond the scope of the operating authorities of motor common carriers of general commodities when their authorities are restricted against the transportation of "articles of unusual value." As was held in 84 MCC 779, two factors must be considered in determining what constitutes articles of "unusual value" within that restriction, protective service required for the article and its actual value. Although the need for protective service is usually relative to the degree of value of the commodity, the asserted lack of need for protective service by a shipper cannot negate the fact that a commodity is one of unusual value. Conceding that "unusual value" is not a wholly definitive standard, nevertheless, there can be no doubt, that a truckload of silver bullion valued in excess of one-half million dollars is of unusual value.—Navajo Freight Lines, Inc., Extension, 95 M.C.C. 551 (557-8).

As cooked and smoked meats and bacon are groceries, they may not be transported under general commodity authority which specifically excludes groceries.—Nebraska Eastern Exp., Inc., Extension, 94 M.C.C. 799 (802).

General commodity authority restricted against transportation of commodities in bulk or those requiring special equipment does not authorize transportation of loose, flowable, and fungible commodities when tendered in a premounted collapsible container. Therefore, when evidence indicates that the collapsible containers to be used would be premounted on the vehicle and filled and emptied by a pump, applicant requires authority for proposed transportation of liquid and dry commodities, in collapsible tanks.—Los Angeles-Seattle Motor Exp., Inc., Extension, 89 M.C.C. 621 (624)*.

Groceries: [Vols. 11, 12, 14-19].—See also *Canned Goods, Foodstuffs*, above.

Bananas are clearly embraced within definition of "groceries" in 61 MCC 311 as articles for human consumption which are customarily served as food or used in preparation of food, except fresh meats.—Subler Transfer, Inc.—Purchase—Zanghi, 90 M.C.C. 911 (916).

Authority for "such general merchandise as is dealt in by wholesale and retain grocery and food business houses" does not embrace radio receiving sets, television sets, talking machines, proprietary deicing preparations, drugs or medicines, paints, varnishes, lacquers, solvents, and the like. Respondent's claim that it may transport any commodity whatever provided the shipper or consignee in the slightest degree buys or sells food or groceries is untenable. While it is common knowledge that grocery stores, especially chain stores, have expanded their operations to include such diverse lines as hardware, drugs, and items of furniture and clothing, those expanded lines are either in nature of sidelines not part of a normal grocery or food business, or may have become such an integral part of the business as to change its character to that of a department store or supermarket; the mere fact that a firm handles, sells, or processes articles normally dealt in by wholesale and retail grocery and food business houses does not thereby make it a grocery and food business house.—Various Commodities, Illinois to Denver, 322 I.C.C. 554 (555-6, 558).

Hardware: Authority to transport such commodities as are dealt in by wholesale or retail hardware stores does not limit the holder to goods intended for sale in hardware stores, but only to goods of kind generally sold in such stores as distinguished from those specializing in other types of merchandise. Thus there is sufficient doubt to preclude finding, on record in proceeding involving only substitution of TOFC service for part of applicant's authorized motor service, that its transportation of coal, glass bottles, lumber, sheet steel, clocks, books, transformers, and steel containers, all of which it claims are dealt in by hardware stores, is beyond scope of its hardware authority.—Houff Transfer, Inc., Extension, 92 M.C.C. 702 (704).

Sheet steel and steel bars and tubing are within authority to transport merchandise such as is dealt in by wholesale and retail hardware stores; number of hardware stores handling those commodities is substantial and widely spread, particularly those serving pre-

dominantly agricultural areas. That those items may not always move to or from a hardware store is immaterial; it is essential only that they be generally handled by such establishments. Nor is it controlling that such items may require some further processing; that hardware stores handle many articles not strictly "hardware" is not only common knowledge but is supported by affirmative evidence, and fact that considered commodities may also be termed plumbing materials is not important; further, it would be impractical to impose any gage or length limitations.—Momsen—Investigation and Revocation of Certificates, 88 M.C.C. 343 (345, 350).

But aluminum, zinc, zinc alloy and brass ingots, aluminum flux, magnesium sticks, and metallic sodium are rarely handled by wholesale hardware houses and even more seldom by retail stores; those commodities are customarily purchased by foundries and other metal processors from smelters, steel companies, or mill supply houses, and fact that finished products thereof may be items customarily dealt in by hardware business houses does not confer the right to transport the base materials, ingredients, or parts unless they themselves are dealt in by such establishments; to construe authority for such merchandise as is dealt in by hardware businesses as permitting transportation of every item so infrequently handled would approach "general commodities."—Id., p. 351.

Heavy haulers: [Vols. 9, 11, 15, 17-19].—See also *Special equipment*, below.

Past commission decisions show that the test of services authorized to be performed by a heavy hauler is whether or not special equipment is required for loading, unloading, or transporting the particular commodity, even in the "twilight zone" wherein the same commodity may properly be transported by a general-commodity carrier. Effect of the commission's application of the "15,000-pound rule" prescribed by it in 79 MCC 285, in finding that heavy hauler (under authority to transport contractors' equipment and commodities which because of size or weight require special equipment) was entitled to transport Army cargo trucks weighing over 15,000 pounds each, although no special equipment was required or used, was to establish a test different from that commonly applied in the past and to enlarge that carrier's operating authority in a manner not prescribed by law. The commission's finding is clearly erroneous and in excess of its statutory authority; the order set aside and declared a nullity.—United Transports, Inc. v. United States, 214 F. Supp. 34 (42-3, 44)*.

Heavy hauler authority to transport commodities requiring special equipment does not carry with it the incidental right generally to perform any specialized service outside the recognized heavy-hauler field of operations simply because specialized vehicular equipment of any type is used. Transportation of bulk commodities in tank vehicles is a specialized service that does not fall within the ambit of heavy-hauler service.—Road Paving Materials between Points in New England, 319 I.C.C. 95 (97).

Heavy-hauling authority does not include transportation of self-propelled road rollers and streetsweepers which can be loaded and unloaded under their own power and are transported on ordinary equipment. A heavy hauler cannot satisfy his special handling requirement by using a crane to load or unload commodities that can be loaded and unloaded by conventional means; and where a crane is used for commodities moved on conventional equipment, they lawfully may be transported only when the special handling implicit in crane loading or unloading is required by the inherent of the commodity transported, as distinguished from industry practice.—Daily Exp., Inc.—Investigation of Operations, 98 M.C.C. 661 (673-5).

Transportation of palletized bags of bonding mortar is beyond scope of heavy-hauling authority, since mortar clearly does not require palletization by reason of size or fragility. Also, transportation of ferro alloys in tilt-top pallet boxes is not shown to be "required" by inherent nature of the commodity; even assuming that tilt-top boxes could be considered special equipment, there is no indication that they are used other than as a convenient method of handling the material at shipper's plant.—W. J. Dillner Transfer Co. Extension, 91 M.C.C. 667 (670-1).

Specific authority to transport commodities reasonably related to those requiring special-

ized handling or equipment is not essential so long as movement thereof is incidental to the related heavy-haul movement. Therefore, since evidence of each supporting witness categorized and described the type of service sought by shippers in that manner, it must be concluded that applicant's present authority to transport commodities which require specialized handling or rigging because of size or weight also embraces related machinery and parts, or related contractors' materials and supplies, when their transportation is incidental to transportation of the specifically authorized commodities.—Leroy L. Wade & Son, Inc., Extension, 92 M.C.C. 451 (453-4).

Since early "grandfather" certificates bearing such commodity descriptions as "heavy machinery" were intended to authorize continued operations by carriers holding out to transport all heavy or bulky articles requiring special equipment (61 MCC 209), respondent's certificate for "heavy machinery, equipment, and supplies" authorizes a complete heavy-hauling service, including transportation of related equipment and supplies when incidental to movement of such heavy or bulky items. However, the terms "equipment and "supplies" cannot be taken out of context and construed as if they stood alone, and that authority does not allow separate transportation of many individual items in respondent's tariff which do not require special equipment.—Heavy Mach., Equip. & Supplies between Wis. and Ill. & Minn., 318 I.C.C. 545 (546-7).

While heavy-hauler authority includes authority to transport parts of the basic machinery which are moving in connection therewith and at the same time, it does not include authority to handle independent shipments of parts or of mixed shipments of parts and basic machinery to different consignees, unless such parts themselves are of such size or weight as to require the use of special equipment.—Home Transp. Co., Inc., Extension, 88 M.C.C. 265 (271)*.

It is well settled that silos may be transported under unrestricted heavy hauling authority; the silo itself is an edifice used as a large storage container, and as such has no mechanical function characteristic of machinery. Restriction of heavy-hauling authority to exclude farm machinery does not preclude handling of silos merely because shipments include silo unloading machines; the unloading machine is an accessorial device which, when installed, becomes a permanent part of the silo and its use does not change the nature of the silo or its function in farming operations. —International Transport, Inc., Extension, 91 M.C.C. 717 (719-20).

Heavy-hauler authority embraces transportation of palletized shipments of glass- or enamel-lined silo sections, and of galvanized silo sections; because of lined sections' fragility and galvanized sections' susceptibility to bending, palletization is a definite requirement for handling considered commodity, and the loaded pallets are of such weight as to require use of special equipment for their loading and unloading.—C & H Transp. Co., Inc., Extension, 88 M.C.C. 285 (291-2)*.

Though in determining whether a commodity requires special equipment and handling consideration normally is given only to weight of the individual article and not aggregated weight of the commodity and its container, considered spent fuel elements, because of their radioactive nature, inherently require protective lead casks (weighing up to 20 tons) for transportation and handling; combined weight of the irradiated fuel elements and casks brings such shipments within scope of authority of heavy and specialized carriers; recognition of aggregate weight of such shipments is consistent with principles of 78 MCC 319 and 81 MCC 515.—Dealers Transit, Inc., Extension, 88 M.C.C. 375 (379).

Transportation of 40-foot lengths of reinforcing steel is within a heavy hauler's authority, but it may not transport such steel in mixed shipments with shorter lengths.—Case Driveaway, Inc., Extension, 89 M.C.C. 633 (635)*.

Transportation of jet thrust units of which a basic element is a solid propellant designated a class B explosive, and which require special equipment and handling for loading and unloading, may be performed by a heavy hauler whose certificate is not restricted against transportation of dangerous explosives.—Baggett Transp. Co. Extension, 88 M.C.C. 3 (10)*.

Household goods: [Vols. 11-16, 18, 19].—Although "household goods" is not defined in motor carrier certificates authorizing such operations, meaning of that term is derived from rule 1 of the commission's regulations governing transportation of household goods (49 CFR §176.1); for more than 20 years that rule has delineated the scope of moving activities which holders of household goods certificates are allowed to engage in. Requirement in the redefinition of "household goods" in the rule, that change of householder's dwelling or relocation of business establishment must be involved, narrows that term by excluding certain types of services previously thought to be within the meaning of those words; order of the commission, insofar as it relates to rule 1(a)(1) or 1(a)(2), annulled and set aside and enforcement thereof enjoined.—Movers Conference of America v. United States, 205 F. Supp. 82 (84, 86)*.

The court's earlier order was not appealed from and no petition for modification thereof was filed. Instead, the commission, on further consideration and without receiving any additional evidence, promulgated an order almost identical to the one enjoined in the court's earlier opinion; only change was to add as exceptions certain examples of household goods movements cited in the earlier report. There is no room for error in interpreting the spirit and scope of the injunction; if the commission believed it was too broad, it should have applied to the court for modification rather than to proceed with a second redefinition of "household goods" in rule 1 of its regulations (49 CFR §176.1) which is clearly violative of the injunction. Challenged order of the commission redefining and clarifying meaning of "household goods" ordered vacated, insofar as it relates to rule 1(a)(1) or 1(a)(2).—Id., 251 F. Supp. 882 (884-5)*.

To fall within the purview of subsection (3) of the definition of household goods in §176.1(a) of commission's regulations, articles must be of such unusual nature, by reason of their fragility, delicateness, intrinsic value, or other characteristics, as to require the specialized handling and equipment usually employed in moving household goods. Interpretation of that definition in recently revised §176.1(b) makes no material changes in prior interpretations, except to stress that crating or noncrating is not important respecting articles actually embraced therein; and the interpretations in §176.1(b) of the definitions in §176.1(a)(1) and (2) are not intended to apply in any manner to articles embraced in subsection (3).—Neptune Storage, Inc., Extension, 88 M.C.C. 25 (31).

Supporting shippers' photographic and X-ray machines and equipment, like the microfilming equipment considered in 110 F. Supp. 273 and tabulating machines in 67 MCC 319 and 73 MCC 381, require the specialized handling and equipment usually employed in moving household goods for their transportation, thus come within authority for household goods as defined in rule 176.1(a)(3).—Id., p. 32. [But see dissent.]

In bulk: [Vols. 16, 19].—Transportation of any commodity, such as ferroalloys, in dismounted hopper-type containers, filled by shipper prior to placement on vehicles and unloaded by consignee subsequent to removal from the vehicles, cannot be termed bulk transportation. While the term "in bulk" is defined in 250 ICC 101 as a loose mass poured or thrown into a vessel or vehicle without regard to order and restrained during transportation only by bottoms and sides of the carrying vessel, it is clear that, taken in context, the term "vessel" therein refers to ships or barges operated by water carriers, not to wood hopper containers.—Ligon Specialized Hauler, Inc., Extension, 91 M.C.C. 254 (256).

Further, scrap iron and steel are not bulk commodities and may not be transported under "in bulk" authority. Metal waste or scrap metal materials vary in size, shape, and weight, and lack the homogeneity and fungible quality that is generally associated with bulk commodities; moreover, typical shipments of scrap involved are not to be poured, scooped, or shoveled in any practical sense but rather can be, and are, loaded and unloaded piece by piece. To the extent that decision in No. MC-119777 (Sub-No. 3), wherein the recommended report became effective without exceptions, differs from interpretation in instant proceeding, it is incorrect.—Id., pp. 256-7.

Iron and steel articles: [Vols. 12, 15, 17-19].—In the transportation industry, "iron and

steel articles'' means a list of rough or semi-finished articles made principally from iron or steel; however, not every item made of iron or steel is included in that classification. A legitimate iron and steel article, within operating authority containing such a generic commodity description, must be either a finished product uncomplicated in design or manufacture or in the rough or semifinished stage and requiring further processing, the amount of further processing required being relative to the complexity of the particular article in question; if very complex, a considerable amount of further processing is necessary, but if very simple, little, of any, further processing is necessary.—Eagle Motor Lines, Inc., Investigation and Revocation, 94 M.C.C. 704 (707)*.

Thus, lavatories, sinks, and bathtubs, which have been extensively finished by complicated nd specialized process not typical of the iron and steel industry may not be transported under authority for iron and steel articles. And though processes involved in manufacture of grease traps, fittings, plumbers goods, and freeze roll cylinders are not sufficiently disclosed for a determination as to them, obviously the first three could not be transported under such authority as items incidental to lavatories or bathtubs. Also, fire hydrants, iron body valves, cotton gin machinery consisting of complex and assembled parts, fully assembled band saws, and circular band saws, and circular band saw blades, because of the varied processes involved in their manufacture, are not the type of commodity produced by ordinary iron and steel producers and fabricators and are not within the iron and steel articles classification.—Id., p. 708.

But in view of finding in 43 MCC 585 that knocked-down steel houses are iron and steel articles, steel door frames may properly be so classified; and fact that such items may also be listed under building materials does not preclude their transportation as iron and steel articles. Likewise, manufacture of tractor-trailer couplers involves nothing which could not be provided by a typical iron and steel producer, and they are embraced in that authority.—Id., p. 709.

Under established trade and industrial usage, "structural steel" refers to a group of steels shaped by the rolling process and identified as "structural steel" regardless of intended use or application; steel beams, channels, tees, zees, and angles are rolled steels considered by the trade and industry to be structural steels and may properly be transported under authority for structural steel. But steel bolts and nuts, steel rings (rough), and steel wire, rivets, or screws are not rolled steel and therefore do not qualify as structural steel; sheet steel is an item not commonly understood to be structural steel, and therefore items produced therefrom, such as steel stampings, washers, tubing, forms, lathing, and grounds, do not fall within that category; nor are steel bars, round and flat, or steel welding rods included in the generic term "structural steel"; those items may not be transported under structural steel authority. —Simpson—Modification of Certificate, 94 M.C.C. 120 (127-8).

Protestant's presently held authority to transport "iron and steel products" does not embrace transportation of considered commodities, i.e., "lift trucks" and "cranes."—Home Transp. Co., Inc., Extension, 95 M.C.C. 128 (132).

Following decision in 86 MCC 440, respondent's authority to transport iron and steel products embraces the transportation of finished iron and steel rolling mill rolls; cease-and-desist order vacated as to that commodity.—Transportation Activities of McGaughey Bros., Inc., 89 M.C.C. 159 (160)*.

Liquid chemicals: [Vols. 18, 19].—Opposing carriers' authorities to transport "liquid chemicals," "acids and chemicals as defined in appendix IV of the *Descriptions* case, 61 MCC 209," and "acids and chemicals as defined in the *Maxwell* case, 63 MCC 677," respectively, all authorize the transportation of liquid chemicals only; holders of such authority may not transport dry chemicals thereunder.—Slay Transp. Co., Inc., Extension, 96 M.C.C. 47 (49).

Authority to transport "liquid chemicals," most recently defined in 88 MCC 127, authorizes transportation of liquid oxygen and liquid nitrogen which are substances resulting from a physical change induced by a process (distil-

lation) generally employed in the chemical industry. Liquid hydrogen may also be transported under such authority since, whether obtained by fractional distillation of petroleum, partial oxidation of natural gas, electrolysis of water, or by reacting oil, coal, or iron with steam, it is a chemically produced commodity. Moreover, all three commodities are well-known products of the chemical industry, and no basis is afforded in instant proceeding for excluding any of them from the "liquid chemicals" classification by common usage.—Younger Bros., Inc., Extension, 95 M.C.C. 1 (14-16, 17)*.

Report in the Maxwell case, 63 MCC 677, when read in entirety, supports construction of the language excluding from the definition of "liquid chemicals" such finished or end products as are intended, without further processing, "for packaging and sale to the general public" as requiring only that the excluded commodities be intended for some form of packaging and sale to the public in the retail trade. That report nowhere indicates an intention to exclude chemical substances shipped in bulk to industrial users; nor is there any requirement that substances be subjected to further processing by the user to qualify as a chemical.—Southern Tank Lines, Inc., Extension, 88 M.C.C. 127 (138)*.

Therefore, in order to be classified as a "liquid chemical" under the Maxwell case definition, a commodity must result from a chemical or physical change induced by processes employed in the chemical industry; it may be the product of analytical or synthetic chemistry, but not a substance in its raw or natural state; and the process need not be used in a chemical plant so long as it is a chemical process. In addition, the commodity must not be a finished or end product known to be moving to a distributor for packaging and retail sale to the public, and which as such has assumed a separate and distinct identity of its own.—Id., p. 139.

Under such interpretation of the Maxwell case definition, the liquid adhesive paste for which authority is sought is properly classified as a liquid chemical, since it is a substance resulting from processes employed in the chemical industry and, when tendered for shipment, it is not intended for packaging and retail sale, but for further plant use by consignee-manufacturer.—Id., pp. 133, 140.

There is a separate category of commodities, such as molasses and finished potables like vodka, which, although they might logically come within the Maxwell case definition because they are the product of processes similar to those used in the chemical industry, are by common usage not considered chemicals and therefore cannot with reason be classified as such. Since this category amounts to a deviation from the general rules of interpretation above set forth, its application should be limited to products not in fact produced by companies engaged primarily in the manufacture of chemicals or producing chemicals as a byproduct of a manufacturing process.—Id., p. 139-40.

Furthermore, it has become apparent during past several years that the commodity description in the Descriptions case, as supplemented by the Maxwell case, has not resolved the liquid chemical commodity description problem; it is likewise clear that a broader and more realistic description, which would permit motor carriers to provide a dull and complete service for the chemical industry, is desirable and should be adopted. Revised commodity description for motor carriers serving the chemical producers, "liquid chemicals, in bulk, in tank vehicles," and a revised definition or interpretation of commodities embraced therein which is the same as the Maxwell case definition, minus the so-called intended use test, found to be proper and reasonable.—Id., pp. 129-33, 141-4.

A mixture of liquid caustic soda and gluconic acid remains a "liquid chemical" as that term is used in operating authorities, whether or not the gluconic acid produces a chemical change in the liquid caustic and whether or not the mixture is to be used as a cleaning compound; no basis is adduced for concluding that the caustic soda, either before or after addition of the gluconic acid, is in category of commodities which by common usage are not considered liquid chemicals.—Stillpass Transit Co., Inc., Extension, 89 M.C.C. 38 (40).

Considering the definition of "liquid chemicals" set forth in 88 MCC 127 in light of the meager and vague testimony submitted by

applicant, evidence of record is insufficient for a determination as to whether or not liquid yeast is a liquid chemical within that definition. Applicant could have presented expert testimony as to the nature of liquid yeast without revealing any trade secrets connected with supporting shipper's production thereof; and, having failed to establish that liquid yeast is a liquid chemical, it has no basis to complain of the commission's resulting inability to make a finding thereon.—Slay Transp. Co., Inc., Extension, 95 M.C.C. 659 (661).

Authority to transport liquid chemicals as described in the Maxwell case, in tank trucks, authorizes transportation of all chemically produced substances except such finished or end products as are intended, at time of transportation and without further processing, for packaging and sale to the general public.—Los Angeles-Seattle Motor Exp., Inc., Extension, 89 M.C.C. 621 (624)*; and conclusion that the definition of "liquid chemicals" in the Maxwell case excludes paint only when intended, without further processing, for sale to the public in containers is buttressed by discussion in 88 MCC 127, which eliminated the intended-use test and laid down a "common usage" test for identification of excluded commodities. Paints, varnishes, and lacquers, all well-known products of the chemical industry, are not excluded by common usage when shipped in bulk to industrial users, and coating and molding resins are synthetic resins of type clasified as chemicals by the Maxwell case; thus, all those commodities are embraced in both the Maxwell and revised definitions of liquid chemicals.—Commercial Oil Transport Extension, 91 M.C.C. 129 (134-6).

Nitric acid not sold to the general public as such, but used in etching of metal plates by the printing and engraving industry, is within authority for liquid chemicals; its inclusion in list of acids and chemicals in appendix XV to the Descriptions case (61 MCC 209) cannot be ignored.—Walker Hauling Co., Inc., Extension, 88 M.C.C. 607 (609).

Description "liquid chemicals" is comprehensive in scope and intended to include all basic liquid chemicals and liquid chemical products produced by the chemical industry. However, as many chemical companies engage in other widely diversified manufacturing activities, the Maxwell case definition should not be applied so as to produce a result clearly at variance with common usage, and finding in 88 MCC 127 that such exceptions should be limited to commodities not in fact produced by the chemical industry was not intended to exempt all commodities transported for chemical companies from the "common usage" test, but only those shipped by such companies in their capacities as producers of chemicals and chemical products.—Southern Tank Lines, Inc., Extension, 88 M.C.C. 635 (640).

Thus, a particular commodity may be excluded from the liquid chemicals category by common usage even though producer technically qualifies as a member of the chemical industry, if the commodity is not directly connected with its activities in the chemical field; status of a commodity not generally recognized as a chemical is fixed, and should not vary according to the character of the company that produces it; to hold otherwise would render ambiguous the status of such clearly recognized nonchemicals as vodka and molasses, contrary to intentions and policy of the commission in reaffirming the "common usage" category in 88 MCC 127.—Id., p. 640.

Though whiskey contains ethyl alcohol, which is chemically produced and is listed as a chemical in the Descriptions case (61 MCC 209), it is a potable liquid which has a name, character, and use separate and distinct from the general category of "liquid chemicals" as understood in transportation parlance; therefore, whiskey may not be transported under authority for "chemicals" or "liquid chemicals"; and the same conclusion is warranted as to other popularly known beverages and liquid foodstuffs.—Id., p. 640.

Nothing in present record warrants disturbing conclusion in 82 MCC 432 that tall oil, a byproduct of coniferous wood, is a liquid chemical.—Hearin Tank Lines, Inc., Extension, 88 M.C.C. 189 (196)*.

Basic intent of the Maxwell decision (63 MCC 667) was to define all chemically produced substances as liquid chemicals except those finished or end products intended, without further processing, for packaging and sale

to the general public; there is no requirement therein that substances be subjected to further processing by industrial users to qualify as chemicals; a shipment of a liquid substance in bulk, in a tank vehicle, from the plant of a chemical manufacturer to another manufacturing plant may be presumed to be a liquid chemical in absence of actual knowledge to the contrary.—Refiners Trans. & Term. Corp. Extension, 88 M.C.C. 611 (613).

Protestant's authority for chemicals as defined in the Maxwell case cannot be considered insufficiently comprehensive to meet all of shipper's requirements (except for transportation of liquid chemicals derived from petroleum) when record does not disclose with certainty what specific commodities would be tendered as "finished or end products" within the Maxwell definition, what volume thereof would move in bulk, or what consignees would receive them for packaging and retail sale; however, that authority excludes "chemicals derived from petroleum," and protestant may not transport those known by it at time of tender to be in fact petroleum derivatives.—Id., pp. 613-4.

Authority to transport "liquid chemicals" embraces transportation of considered denatured rum; rum in question is a substance resulting from a process (distillation) generally employed in the chemical industry, and is to be used as an ingredient of flavoring sirup used in processing tobacco. Though potable rum, which is to be bottled and sold as a beverage, generally would not be considered a chemical, and only difference between drinkable rum and considered denatured rum is the denaturant added to exempt it from alcoholic beverage tax, it is important that considered rum is to be used in bulk by an industrial user in processing a product, rather than packaged and sold to the public in original form.—P. B. Mutrie Transp., Inc., Extension, 88 M.C.C. 597 (600-1); Southern Tank Lines, Inc., Extension, 88 M.C.C. 594 (595-6).

Since definition of liquid chemicals, as revised in 88 MCC 127, embraces all liquid chemicals in bulk without regard to intended-use test embodied in Maxwell case definition, 63 MCC 677, such authority, unqualified by reference to the Maxwell case, includes varnish produced by combining synthetic resin and various oils, gums, and solvents, even though usable as a decorative finish and protective coating in its present form; moreover, varnish shipped in bulk for plant use was held to be a liquid chemical in 91 MCC 129. However, considered varnish may not be transported under authority for styrene and synthetic resins, since though composed largely of styrene it is not a synthetic resin but a resin product; and authority for specific base or raw materials does not permit transportation of derivatives or products thereof.—Maxwell Co. Extension, 91 M.C.C. 392 (393-4)*.

Though nature of considered molding resins is not established with certainty, shipper is a manufacturer of chemicals, which produces the molding resins from synthetic resins and ships them in bulk in tank vehicles to manufacturing plants where they are baked, shaped, and formed into products for the retail trade. These facts raise a presumption under the Maxwell case, which is not rebutted by probative evidence, that the molding resins are chemicals; consequently, transporters of liquid chemicals are entitled to presume that the molding resins are within their authority. —Ruan Transport Corp. Extension, 88 M.C.C. 643 (646); the molding resins are not finished or end products which have los their identity as chemicals, and thus are not within exception to the Maxwell definition, since they are not sold to the public as such, but are used by other industries in manufacture of entirely different products.—Id., p. 646.

Protestant's authority for liquid chemicals as defined in the Maxwell case includes fertilizers and fertilizer solutions, having been granted specifically to meet a shipper need for transportation of fertilizing and ammoniating solutions to agrarian users; moreover, 88 MCC 127 specifically held that substances need not be subjected to further processing by users to qualify as liquid chemicals; protestant may handle shipments delivered directly to shipper's customers, as well as interplant shipments.—Petroleum Transit Co., Inc., Extension, 88 M.C.C. 399 (401-2).

Authority to transport liquid chemicals as defined in the Maxwell case does not include petrolatum and white oil. Such commodities are pure petroleum products and fact that they are so listed in Appendix XIII to the

Descriptions case, but are not included in list of acids and chemicals in Appendix XV thereto, indicates that they are not to be considered chemicals, in furtherance of the policy against encroachment by chemical transporters upon the rights of carriers of petroleum products.—Milk Transport, Inc., Extension, 91 M.C.C. 280 (281, 283). [But see dissent.]

Petroleum coke, though resulting from a physical change induced by a process employed in the chemical industry and intended for use as a carbon black ingredient, is one of those basic petroleum products which are not within authority for liquid hemicals.—York Interstate Trucking, Inc., Extension, 88 M.C.C. 680 (684).

Authority to transport liquid chemicals does not embrace lecithin oil. "Common usage" test of 73 MCC 404 applies; recovery of lecithin from soybean oil is accomplished by methods similar to recovery from cane juice of molasses therein considered; moreover, lecithin oil is produced, not by a company engaged primarily in manufacture of chemicals or chemical products, but by a cereal and animal food producer, which does not consider it a chemical.—Southern Tank Lines, Inc., Extension, 88 M.C.C. 387 (389).

Lumber: [Vols. 9, 15-19].—As wooden veneer is only a thin lumber which is, among other things, used in making plywood, authority to transport "lumber" includes wood veneers. But since "forest products" has been construed to include only raw products and not rough or finished lumber or processed products derived from raw forest products, veneer (a lumber) and furfural residue (a product of a chemical or industrial process) may not be transported under authority to transport "forest products."—Mitchell Bros. Truck Lines—Investigation, 91 M.C.C. 267 (272)*.

Machinery, machinery parts:[Vols. 11, 16-19].—Defendant's authority to transport "machinery" and "heavy machinery" (originally issued to its predecessor in 1939) is interpreted as including interstate transportation of fork-lift trucks, which the commission seeks to enjoin, when record in the original application proceeding clearly shows that fork-lifts, and other such vehicles designed for use in warehouses and storage yards, were considered as "machinery" or "heavy machinery" when the certificate was originally issued. Furthermore, the fact that the commission's current policy of distinguishing between fork-lifts and "machinery" or "heavy machinery" was first started about 16 years after considered certificate was issued, must not be overlooked.—I.C.C. v. Michell Bros. Truck Lines, 250 F. Supp. 636 (638-9).

The commission's interpretation of "machinery," as used in certificates issued by it, as embracing only mechanical devices which have not, through manufacturing or assembling process, been transformed into a new and different object which is itself considered to be a separate and distinct commodity, such as automobiles, airplanes, refrigerators, and farm tractors, received the approval of the courts as early as 1948, long before plaintiff commenced hauling cable, transformers, and regulators, and its decision that such articles do not fall within the description "machinery" was in line with the decisions cited.—Mitchell Bros. Truck Lines v. United States, 225 F. Supp. 755 (759)*.

Binder and baler twine may not be transported under authority to transport " farm machinery and parts thereo." while certain types of farm machinery use twine to tie bundles of various agricultural commodities such as hay, and the twine is thus used in connection with the machinery, it is not a part of the machine and does not become such when the machine is operated, but remains with the processed bundle.—Ace Lines, Inc., Investigation and revocation, 94 M.C.C. 96(98)*; and though rake teeth and harrow teeth are obviously farm machinery parts, separate shipments of those items alone may not be transported under authority to transport "farm machinery and parts thereof"; no other conclusion can properly flow from the commission's prior decisions cited.—Id., pp. 99-100.

Authority to transport road construction machinery and equipment as described in appendix VIII to report in the Descriptions case (61 MCC 209) embraces transportation of independent or mixed shipments of parts, accessories, and attachments to extent such articles are specifically described therein. Though description "road construction ma-

chinery and equipment" embodies an intended use test, manufacturers of type of machinery and equipment designed to be used in road construction need not inquire as to actual intended use unless the reasonable assumption of ordinary future use is negatived by known facts and circumstances to the contrary.—Home Transp. Co., Inc., Extension, 88 M.C.C. 265 (271).

Authority to transport "heavy machinery" does not permit performance of a complete heavy-hauling service. Although "heavy machinery" and "commodities which because of size or weight require use of special equipment" (heavy-hauler description) are analogous, they are not synonymous; any commodity transported under "heavy machinery" authority must be machinery. Cables, transformers, and regulators, which are listed under electrical equipment in appendix VII to the Descriptions case, cannot properly be considered machinery and may not be transported under such authority.—Mitchell Bros. Truck Lines, Investigation, 91 M.C.C. 267 (273-4)*; likewise, mine or pit cars may not be transported under "heavy machinery" authority.—Case Driveway, Inc., Extension, 89 M.C.C. 633 (634)*; and "machinery" as used is such operating authorities may not be construed as authorizing transportation of commodities (automobiles, airplane parts, automatic refrigerators, and farm tractors) which have lost their identity as machinery in the process of assembly into a new and different article.—C & H Transp. Co., Inc., Clarification of Authority, 88 M.C.C. 87 (94).

"Heavy machinery" has been given a more restricted interpretation than "commodities which because of size or weight require special equipment." The generic term "machinery" should be construed as meaning substantially less than its academic definition, and is limited to articles within a reasonable construction of the term. Commodities which have lost their identity as items of "machinery" and have been transformed into a new and different article may not be transported under such authority, nor may "parts and accessories" of such commodities.—Ray Carter, Inc. —Investigation and Revocation, 91 M.C.C. 653 (656).

Army tanks, army personnel carriers, cargo and GI trucks, tractors and truck tractors have clearly lost their identity as items of "machinery" and are not within purview of respondent's authority. And neither forklift trucks nor buildings used to house machinery may be moved under "heavy machinery" authority.—Id., pp. 656-658.

Meats, packinghouse products: [Vols. 11-13,15, 17-19].—It is well settled, by both court and commission decisions, that carriers possessing permits or certificates authorizing them to transport "packinghouse products" are limited to transportation of such commodities as come within meaning of that term (listed in 61 MCC 209) and, then, only when they are produced or distributed by, and transported for, or to, a meat packinghouse. Where not clearly erroneous, the commission's application of that definition to complainant's permit, to determine lawfulness of its questioned operations, did not deprive it of rights without due process of law; sustained.—Zuzich Truck Line, Inc. v. United States, 224 F. Supp. 457 (462, 463)*.

Certificates or permits of carriers serving meatpacking and dairy industries which authorize transportation of property by specific reference either to parts A or B of appendix to the Modification case, 46 MCC 23, or to parts A or B of appendix I to the Descriptions case, 61 MCC 209, shall be interpreted as authorizing transportation of commodities listed in such without regard to who manufactured or initially distributed such commodities. In contrast, authority framed by reference to part C of the Modification appendix, or to parts C or D of the Descriptions appendix I, shall be construed as authorizing transportation of such commodities subject to limitations inherent in the titles to those parts; that is, part C commodities may be transported only when they have been manufactured or initially distributed by meat packinghouses, while part D authorizes transportation of commodities used in the meat packing business when destined to or for use of meat packers. And the parts A and B interpretation extends to all such authority whether granted separately or in conjunction with specific authority to handle part C commodities.—Argo-Collier Truck

Lines Corp. Extension, 99 M.C.C. 591 (599-601)*.

However, the unconditional interpretations expressed do not apply to generic terms such as "packinghouse products" and, in accordance with principles established in 63 MCC 625 and 86 MCC 337, activities under authorities thus framed, regardless of whether reference is made to either of the appendixes, will remain limited to transportation of commodities produced or initially distributed by meat packinghouses.—Id., pp. 601-2.

Authority to transport meat products and byproducts as described in section A of appendix I to the Descriptions case (61 MCC 209) does not embrace vegetable oils and vegetable oil shortenings. Section A is headed by the generic description "Meats, Meat Products, and Meat Byproducts," and the list of items following that heading is clearly intended as a specification of those commodities deemed to be embraced by that description and must be interpreted in context thereof. Therefore the designation of "oils" without qualification in the section A list must be construed to embrace only those derived solely from animal matter. While "vegetable oils" and "vegetable-oil shortening" are included in the commodity list comprising section C of appendix I under the generic heading "Articles Distributed by Meat-Packing Houses," defendant's certificate does not authorize transporation of commodities listed in section C, and its transportation of vegetable oils and shortenings has therefore been unlawful.—Modern Truck Line, Inc. v. Colonial Refrigerated, 94 M.C.C. 149 (151).

And since a blend of vegetable and animal oil or fat is a hybrid product not derived solely from animal matter, authority to transport "oils" as described in section A of appendix I likewise does not authorize transportation of oils and shortenings produced by blending of vegetable oils and animal oils and fats. That some shippers classify the involved commodities as "meat and meat food products" is not controlling; otherwise the scope of commodity descriptions in the commission's certificates and permits would be subject to varying and inconsistent interpretations without regard to the systematic plan of regulation which has been established under the act.—Id., p. 152.

Metals: [Vols. 17-19].—Interpretation of authority for "metal pigs" as "all virgin or secondary metal which is to be melted for reuse" would amount to a partial revocation of petitioner's authority; while most pig metal is undoubtedly remelted, some industries work it directly, without remelting, by rolling, forging, or otherwise; further, "pig" implies a level of refinement attained by pouring metal directly from a smelting device into molds, creating a product in rough cast form; such authority embraces transportation of all metals in a rought cast form which are the direct product of a smelting process and are to be further worked into usable form.—Pittsburgh & New England Trucking Co. Modification, 88 M.C.C. 632 (633-4)*.

Missiles, parts, etc.: [Vol. 19].—Though a solid propellant designated a class B explosive constitutes a basic element of jet thrust (JATO) unit designed as a component for interceptor missile, purpose of the explosive is to furnish controlled propulsion, and purpose of the complete unit is to propel the missile from its launching site; it is an integral part of the missile and separated from it only when its propulsive capacity has been expended, and therefore falls more appropriately within the category "missile part" than that of "explosives."—Baggett Transp. Co. Extension, 88 M.C.C. 3 (9)*.

Oilfield commodities:[Vols. 15-19].—Authority to transport oilfield commodities as described in the Mercer case, 74 MCC 459, does not authorize transportation of pipe meant for use in water, sewerage, and irregation systems and as casing for cables. Part 2 of the Mercer description must be read with, and as subject to same intended-use limitation as, part 1; therefore, such authority authorizes transportation of pipe intended for use in the transmission of natural gas or petroleum or their products or byproducts.—C & H Transp. Co., Inc., Extension, 94 M.C.C. 711 (713, 718, 718, 720)*.

Pipe known to carrier at time of shipment to be intended for use in a pipeline right-of-way may not be transported under authority for (1) mine and oilfield machinery and supplies or

(2) machinery, materials, supplies, and equipment incidental to or used in construction, etc., of facilities for discovery, development, and production of natural gas and petroleum. And although pipestringing could be considered ancillary or incidental to transportation of the involved pipe, no ancillary transportation service may be performed unless the principal service to which it is incidental is authorized; moreover, pipestringing has long been considered a transportation service for which specific authority is required, and none is contained in the certificate in question. Since the fundamental transportation of the involved pipe was not authorized, the stringing thereof was likewise unlawful.—Great Western Motor Lines, Inc.—Investigation, 96 M.C.C. 522 (527).

Transportation of pipe and stringing, servicing, etc., of pipelines used for transmission of such byproducts of oil or gas as butane, butadene, ethylene, jet fuel, etc., is within the proper sphere of applicants' authorized operations under the second paragraph of the Mercer description (74 MCC 459).—J. O. (Red) Willett Pipeline Stringing Extension, 89 M.C.C. 427 (432, 435).

Failure to underline "and" in certificate authorizing transportation of "oilfield equipment, machinery, and materials" has no interpretative significance, and that description does not authorize transportation of materials other than those peculiar to or intended for use by the oilfield industry. Failure to repeat the limiting adjective before each noun in the series, where there is only one logical interpretation of the language used, does not manifest lack of intent to consider the words as a single group; even though respondent has found two learned professors of English who agree with its position, those witnesses, while experts in their field, were unfamiliar with regulated motor carriage and thus unaware of the absurdity, in transportation terms, of attempting to interpret respondent's certificate solely from an academic point of view.—J. B. Acton, Inc.—Investigation and Revocation of Cert., 89 M.C.C. 59 (62,63)*.

Oils: [Vols. 18, 19].—Authority to transport specific raw products,such as vegetable oils, does not permit the transportation of derivatives or products of such materials. Therefore, resin plasticizers may not be transported under authority to carry vegetable oils. —Ruan Transport Corp. Extension, 96, M.C.C. 719 (722); similarly, distillation fractions of crude tall oil having been classified as vegetable oil prducts in 84 MCC 506, tall oil rosin obtained from fractionation of crude tall oil is likewise a vegetable oil product and beyond scope of authority for vegetable oils. —McKenzie Tank Lines, Inc., Extension, 88 M.C.C. 554 (557); and since lecithin oil is not merely a grade of soybean oil, but a derivative thereof, it may not be transported under authority for only the base product, soybean oil. Southern Tank Lines, Inc., Extension, 88 M.C.C. 387 (389).

Authority to transport vegetable oils embraces transportation of tall oil and pulpmill liquid. All oils are broadly classified as animal, vegetable, or mineral according to their origin, and tall oil, being a byproduct of coniferous wood, is a vegetable oil [citing 81 MCC 101 and report cited therein]; pulpmill liquid is a volatile oil extracted from coniferous wood. Similar to findings with respect to definition of petroleum products in the Descriptions Case, 61 MCC 209, the advantages of consistency, simplicity, and utility in the transportation industry are persuasive that "vegetable oil" when used in certificates and permits should be construed to embrace tall oil and pulpmill liquid. Hearin Tank Lines, Inc., Extension, 88 M.C.C. 189 (195, 196)*. [But see dissent.]

See also the Modern Truck Line case under *Meats, packinghouse products*, above.

Naphtha, as well as all of the commodities specifically listed as "oils" in appendix XIII of the Descriptions Case, 61 MCC 209, may be transported under authority to transport refined and crude oils; however, there are not sufficient facts of record to determine whether any of the other petroleum products listed there, including toluene, toluol, and xylene, may be hauled under that authority.—Russell Transfer Co., Inc., 95 M.C.C. 412 (419).

Asphalt cutback may not be transported under authority for "oils compounded"; though it and its constituents are petroleum products, they do not possess the physical properties of an oil; and the blended substances may not be considered an oil compound, since a compound results from chemi-

cal action of two or more elements and has its own distinct chemical and physical properties, whereas, in the liquid state in which asphalt cutback is transported, the elements comprising it can be recovered or separated by evaporation; thus it is a mixture rather than a compound.—Asphalt Cutback, Louisville, Ky., to Indiana & Ohio, 315 I. C. C. 439 (440).

Paint: [Vols. 16, 18].—Bureau of Motor Carriers' informal interpretation of authority to transport "paint" as including varnish, shellac, and stain, approved as an appropriate and practical construction. Commerical Oil Transport Extension, 91 M.C.C. 129 (133).

Authority to transport paints, varnishes, lacquers, synthetic resins, oils compounded, thinning compounds, and lacquer and varnish solvents does not embrace asphalt cutback; even considering trade usages and common understanding, rather than scientific definitions, it would be unrealistic to include asphalt cutback, a road paving, among the array of paints and paint materials included in respondent's certificate.—Asphalt Cutback, Louisville, Ky., to Indiana & Ohio, 315 I.C.C. 439 (440).

Palletized shipments: [Vols. 17, 18].—See C & H Transp. Co. case, under *General commodities*, above, and *Special equipment*, below.

Paper, paper articles, products: [Vols. 11, 15, 17-19].—At time of grant of authority for "wrapping paper" commodity involved was so designated by all concerned; though used by consignee as a filler in laminated plastic board and manufactured by shipper solely for that consignee's use, it has all visible characteristics of wrapping paper, and, as it is shipped in rolls, all transportation characteristics thereof; moreover, it may well be that similar paper is used for wrapping. Original shipper's description of the commodity as wrapping paper was reasonable, and it would be a hypertechnical application of dictionary definitions, without regard to actualities, to hold that transportation of such paper was not within authority for "wrapping paper."—Herndon Extension, 89 M.C.C. 278 (279-80).

Parts: [Vols. 17-19].—Specific authority to transport a commodity embraces implied authority to transport parts and accessories used in its installation when transported in connection with, and intended for installation on, the specifically authorized item being transported at the same time.—Ace Lines, Inc., Extension, 91 M.C.C. 559 (565).

Authority for machinery or equipment "and parts thereof" or "parts and accessories therefor" authorizes transportation only of such parts as are necessary to complete the particular shipment of machinery which the carrier is then transporting and does not authorize transportation of separate shipments of such parts or accessories. Decisions cited from a continuity of precedent which should be followed in absence of showing that authority so granted was intended to supply an expressed shipper need for separate transportation of parts; and where the record is searched and the commodity description found to be incomplete, the remedy lies in modification of the certificate, not in arbitrary reversal of prior holdings as to meaning of operating authorities. Although in some recent certificates the restriction against transporting parts separately has been spelled out with more particularity to avoid future confusion, there is no doubt as to the meaning of respondent's older authority, under which parts may be transported only with the article with which they are to be utilized.—Ace Lines, Inc., Investigation and Revocation, 94 M.C.C. 96 (98, 99)*.

Authority to transport an article, with no mention of parts, includes authority to transport parts of that article which are moving in connection therewith and at same time, but does not allow transportation of independent shipments of parts; authority for heavy articles and "parts thereof" likewise does not embrace independent shipments of parts; and while general commodity carriers may handle independent shipments of parts, they may not transport those which require use of special equipment.—Gregory Heavy Haulers, Inc., Extension, 88 M.C.C. 45 (49).

See also Home Transp. Co., Inc., case under *Heavy haulers* and *Machinery*, above.

Petroleum, petroleum products: [Vols. 9, 14-19].—Defendant's authority to transport petroleum products authorizes transportation of helium gas produced from natural gas. In

determining whether helium is a petroleum product, it makes no difference whether the initial raw material is crude oil or natural gas because "petroleum" is inclusive of both sources for purposes of transportation classification.—Navajo Freight Lines, Inc. v. Steere Tank Lines, Inc., 98 M.C.C. 447 (450).

Authority to transport petroleum products embraces transportation of liquid hydrogen produced from petroleum or natural gas, since the hydrogen used for its synthesis is obtained either wholly or predominantly from petroleum sources. Liquified derivatives of natural gas are, for transportation purposes, classified as petroleum products. See 69 MCC 65. However, petroleum-based liquid hydrogen is not a liquefied petroleum gas; it is liquefied by cryogenic methods and, although a volatile commodity, does not have the same transportation characteristics and requirements as commodities generally considered to be liquefied petroleum gases by transportation industry and by established trade and industrial usage. The generally accepted trade or industrial meaning of "liquefied petroleum gas" is more limited than its literal or academic definition, and clearly does not embrace liquid hydrogen.—Younger Bros., Inc., Extension, 95 M.C.C. 1 (16, 17)*.

The authority to transport "petroleum products" authorizes the transportation of molten liquid sulphur which is derived from sour natural gas or crude petroleum; such authority is intended to authorize the transportation of all derivatives of crude petroleum, including liquid petroleum. However, this does not indicate that raw or natural sulphur, which is mined by the Frasch process and maintained in a molten or liquid form for transportation purposes is a petroleum product, or that authority to transport petroleum products includes the authority to transport liquid sulphur derived from sources other than natural gas or petroleum.—Pacific Intermountain Express Co., Extension, 94 M.C.C. 455 (457).

Authority to transport "petroleum products" includes petroleum treating compounds. While a majority of such compounds produced by supporting shippers are composed of at least a 50-percent petroleum base, some types may contain as little as 10 percent; however, the commission does not subscribe to any arbitrary percentage criteria in determining what may or may not be a petroleum product. Since one purpose in designating petroleum products as a commodity class was to simplify the burden on the petroleum industry in selecting motor carriers with proper commodity authority, as well as to allow the carriers to offer a comprehensive service to the industry, no realistic purpose would be served by a narrow construction of existing operating authorities. The involved commodities are closely related to products derived from processing of crude petroleum and resemble petroleum items which are customarily and ordinarily held to be within petroleum products haulers' authorities.—Hugh Breeding, Inc., Extension, 95 M.C.C. 720 (725).

While processes or materials used to produce anhydrous ammonia and nitrogen fertilizers are not disclosed, the former was found to be a petroleum product in another proceeding authorizing service on basis of same shipper's support, and there is no proof that its other products, all of which appear to be derived at least in part from petroleum sources, are not petroleum products. Therefore, all commodities produced at that shipper's plant may be considered "petroleum products" for determination of available service.—Dahlen Transport, Inc., Extension, 91 M.C.C. 609 (612-3, 614).

Crude oil and petroleum have become synonymous in the industry, the former being the residue remaining after removal of the basic sediment, gas, and water through a heating process; however, though "drip gas" or condensate which accumulates in a pipeline through which natural gas is pumped contains some of the elements of crude oil, it cannot properly be called petroleum since, to be commercially usable, it must be either weathered or fractionated at a refinery, thus is the result of a further extraction process from natural gas; may be transported under authority for "petroleum products."—Bridge Extension, 89 M.C.C. 494 (496, 497)*.

Although polypropylene polymer is manufactured from propylene, which is listed as a petroleum product in appendix XIII of the Descriptions Case, 61 MCC 209, it should not be classified as a petroleum product. The

manufacturing process is the reverse of that by which propylene and many other petroleum products are produced, and results in a nonvolatile substance that thas been converted to a solid rather than a gaseous or liquid form. The dry plastic pellets thus produced are not closely related to products formed from the processing of crude petroleum or natural gas and may not properly be classified as petroleum products for transportation purposes.—Chemical Leaman Tank Lines, Inc., Extension 95 M.C.C. 394 (396-8).

While some dry, solid commodities result from the progressive breakdown of crude petroleum or natural gas and have been classified as petroleum products, and 84 MCC 684 found that urea may be transported as a dry bulk commodity under authority for petroleum products urea is also transported in liquid form resembling anhydrous ammonia and nitrogen fertilizer solutions classed as petroleum products. That case should therefore not be construed to mean that any and all end products made from a petroleum product listed in the Descriptions case are classifiable as petroleum products; each commodity must be classified on an individual basis in accordance with the pertinent facts.—Id., p. 398.

Inasmuch as toluene di isocyanate is not listed in appendix XIII to the report in the Descriptions case, 61 MCC 209, and protestant's authority to transport petroleum products is restricted to commodities listed therein, it can not transport toluene di isocyanate under such authority; a grant of authority by reference to a list is specific and limited accordingly.—Chemical Leaman Tank Lines. Inc., Extension, 95 M.C.C. 349 (350-1).

Applicant's authority to transport refined petroleum products, except "residuary petroleum products," does not authorize transportation of asphalt produced from residual petroleum. It is obvious that "residuary" and "residual" are variant forms of the same etymological root and, in the petroleum industry, "residual petroleum" refers generally to the least volatile fraction of crude oil which occurs in the fractional distillation process; since supporting shipper refines residual petroleum to produce its various grades of asphalt, such asphalts are refined products of residual petroleum.—E.B. Law and Son, Inc., Extension, 94 M.C.C. 532 (538-9)*.

Prefabricated buildings: [Vols. 16, 18].—Respondent's authority to transport "prefabricated houses and buildings, prefabricated house and building sections, prefabricated house and building panels, with parts and accessories" authorizes transportation of (1) prefabricated houses and buildings, (2) prefabricated sections and panels which are intended for use in a prefabricated house or building, and (3) parts and accessories intended for use in prefabricated houses and buildings or in prefabricated house and building sections and panels; and its authority includes such items as are commonly identified as "building materials" only to the extent that they are parts and accessories intended for use in prefabricated houses and buildings or in prefabricated house and building sections or panels.—Whitehouse Trucking, Inc., Investigation and Revocation, 99 M.C.C. 621 (626-7, 629-30)*.

Since protestant's authority to transport "buildings, complete, knocked down, or in sections," and "component parts, materials, supplies, and fixtures" of such buildings is limited to transportation of "component parts, etc." of those types of buildings which are themselves capable of being transported at the same time as the buildings, it does not authorize the transportation of the building materials and supplies for which authority is sought.—Oyler Motor Transit Co., Inc., Extension, 94 M.C.C. 638 (640).

Authority to transport buildings and prefabricated buildings includes sectionalized manufactured homes designed to be permanently situated at points of destination; however, mobile kitchens, egg factories, coin-operated laundries, and motel units which acquired separate identities as trailers cannot be considered prefabricated buildings as that term is used in certificates.—National Trailer Convoy, Inc., Extension, 91 M.C.C. 301 (305)*.

Description "prefabricated buildings" is sufficiently broad to encompas silos, since a silo is an "edifice, framed or constructed, designed to stand more or less permanently, and covering a space of land, for use as a storehouse or some useful purpose" within the dictionary definition of "building." And silo unloading devices which become permanent

part of a silo when installed may also be transported by protestant prefabricated building haulers. Fact that freight classification lists do not include silos under the general heading "buildings" is not presuasive, since they omit other structures which would be considered buildings; moreover, such lists in themselves afford no cogent basis upon which to determine commodity interpretations.—C & H Transp. Co., Inc., Extension, 91 M.C.C. 1 (2-3)*.

Structures advertised as "pre-engineered" homes, shipped in two or more sections designed to be joined together at destination to become complete houses and part of consignee's real estate, and tendered for transportation on wheeled undercarriages equipped with A-frames and ball hitch connections for towing, may be transported under authority for prefabricated houses or buildings, which is not restricted against that method of transportation; no reason is shown why trailers drawn with a ball hitch cannot be used as freight-carrying trailers.—National Trailer Convoy, Inc., Extension, 91 M.C.C. 259 (261, 262).

See also Prefab Transit Co. v. United States, §217(a), n. 6.

Preserved foodstuffs: [Vols. 16, 18, 19].—See also *Canned goods*, above.

The authority to transport "canned and preserved foodstuffs" does not authorize the transportation of confectionery, cocoa, cocoa powder, chewing gum, candy and cake topping, and decorations.—Coldway Food Exp., Inc., Extension, 94 M.C.C. 479 (483)*.

Products: [Vol. 18].—The distinction between the terms "products" and "materials", when used in commodity descriptions is that "products" generally refers to that substance made of a specific material or commodity and is not generally used ambivalently to refer also to the type of manufacturer making the "product". The term "materials", on the other hand, generally relates to those terms which might be used or consumed in the course of construction or manufacture. Thus, a grant of authority to haul "refractory materials" would apparently authorize transportation of raw materials which are utilized by the refractory industry in producing its finished product.—Pennsylvania-Ohio Exp., Inc., Extension, 96 M.C.C. 449 (455).

Interpretation of authority to transport a commodity used in a manufacturing process requires consideration of intended use of the end products embraced in the carrier's commodity description. Since principal use of soaps and detergents, as a cleaning agent, is identical, authority for soap and commodities used in manufacture thereof includes crude sulphate of soda used in manufacture of detergents.—Langer Transport Corp. Extension, 91 M.C.C. 933 (934-5).

Rejected shipments: [Vol. 19].—No specific authority is required for return transportation of shipments rejected at time of delivery.—North American Van Lines, Inc., Extension, 91 M.C.C. 292 (294); Paul Markesano & Sons Co., Inc., Extension, 86 M.C.C. 727 (731).

Returned containers: [Vols. 18, 19].—In accordance with 82 MCC 677, no specific authority is required for return transportation of empty containers or other such facilities used in proposed transportation of bagged or packaged cement.—Daniel Hamm Drayage Co. Extension, 89 M.C.C. 563 (566)*; Paul Markesano & Sons, Inc., Extension, 86 M.C.C. 727 (731); Kroblin Refrigerated Xpress, Inc., Extension, 89 M.C.C. 657 (659)*; likewise, no specific authority is required for the return movement of an empty tank vehicle from an authorized outbound movement.—Younger Bros., Inc., Extension, 95 M.C.C. 1 (7)*.

Transportation of empty gas cylinders, restricted to return movement thereof following authorized outbound transportation of gas, requires no specific authority from the commission.—Eagle Motor Lines, Inc., Investigation and Revocation, 94 M.C.C. 704 (710)*.

Return transportation of shipper-owned undercarriages used to transport mobile kitchens, laundries, etc., under authority for trailers designed to be drawn by passenger automobiles can be performed without specific authority; their return is merely incidental to the outbound service, and while the undercarriage, outbound, constitutes an integral part of the trailer being transported, removing undercarriage or wheels from trailers when they have been towed to destination where they will remain for some time is common practice, and where return of the undercarriage is part of a preconceived plan of shipper, the authorized carrier performing the

outbound service should be allowed to return the undercarriage.—National Trailer Convoy, Inc., Extension, 91 M.C.C. 301 (305-6)*.

Silos: See C & H Transp. Co. case, under *Prefabricated buildings*, above.

Soap: *See Solvents*, below.

Solvents: [Vol. 16].—Although "detergent" is not synonymous with either "solvents," "soap" or "soap powder," soaps and detergents are closely related products with similar visible and transportation characteristics and identical principal use as cleaning agents. To hold that authority for "soap" does not embrace detergents would be a hypertechnical application of dictionary definitions without regard to actualities; no realistic purpose would be served by such a narrow construction of operating authority, when it would curtail services of existing carriers and impose on the shipping public a cumbersome duty to distinguish between products with a common identity. Crude sulphate of soda used in manufacture of detergents may therefore be transported under authority for solvents, soap, soap powder, and commodities used in manufacture thereof.—Langer Transport Corp. Extension, 91 M.C.C. 933 (934-5).

Special equipment: [Vols. 9, 11, 14, 16-19].—See also *Heavy haulers*, above.

If "special equipment" as used in carrier's certificate means anything, it is that as a "heavy hauler" it is authorized to transport only those commodities which require the use of special equipment for their loading, unloading, or transportation; as no special equipment was used or required to transport considered shipments of Army cargo trucks, carrier lacked the requisite operating authority and its transportation of such trucks was unlawful.—United Transports, Inc. v. United States, 214 F. Supp. 34 (43, 44)*.

While there is surface plausibility to argument that the "special equipment" exception in general-commodity authority relates only to commodities "requiring" special equipment and not to the type of equipment used, the principle is well established in motor carrier regulation that this phraseology in that context relates to the equipment as well as the commodity; e.g., heavy-hauler authority for commodities requiring special equipment does not confer the incidental right to perform any specialized service outside the recognized heavy-hauler field simply because specialized vehicular equipment of some kind is used. And to hold that the usual special-equipment exception to general-commodity authority does not preclude use of special trailer equipment to transport automobiles, because an automobile is not a commodity requiring special equipment within meaning of heavy-hauler authority, would be a sterile reading of the exception itself and of the regulatory precedent and policy on the point. [Citing 193 F. Supp. 645.]—Motor Vehicles—Idaho, Nevada, and Utah Origins, 318 I.C.C. 859 (866).

And that exception applies equally to convertible "Durabilt" trailers designed for alternative hauling of either multiple loads of automobiles or full payloads of dry freight, the superstructure being removable when not needed for transportation of vehicles. Mounting of the Durabilt superstructure on an ordinary flat-bed trailer converts it into a special-purpose vehicle which is not functionally different in any substantial respect from the standard carryall type trailer; the significant function of such a converted trailer is precisely that of the carryall type, namely, the efficient transportation of multiple loads of new automobiles, and use of such a trailer for that purpose does not differ from use of trailers with permanently affixed superstructures.—Id., p. 867.

Restriction of general-commodity authority to serve points on Federal or State highways in a described area to "instances where such service requires the use of special equipment" does not denote merely a heavy-hauler service, but authorizes transportation of any commodity not expressly excluded from the general-commodity description, so long as specialized vehicular equipment of any type is required and used. The "special equipment" phrase, either in its normal use as one of the exceptions to general-commodity authority or where it is used inclusively rather than as an exception in such a description, is not limited to any particular commodity or class of commodities whose transportation or handling requires use of special equipment. As tank vehicles were found in 84 MCC 585 to be "special equipment," transportation of bulk petroleum products in tank vehicles is within

the considered authority.—Whitefield Tank Lines, Inc. v. Springer Transfer Co., 96 M.C.C. 285 (288, 289-90).

Though variations of the "special equipment" phrase in some operating authorities may connote a type of heavy-hauling commodity description, heavy-hauling authority is not peculiarly designated as such solely by inclusion of such descriptive phrases; in accordance with commission regulatory precedent and policy, a phrase of that type must be examined in the entire context in which it is used in the particular authority. Thus, in the traditional heavy-hauling commodity description, "commodities the transportation of which because of size or weight requires the use of special equipment or handling," the "special equipment" phrase relates to the specific class of commodities enumerated therein, i.e., heavy or bulky commodities, and when employed in that context denotes the recognized heavy-hauler field of service; it does not authorize performance of any specialized service other than heavy-hauling operations merely because "special equipment" is directed to be used, but is construed narrowly in order not to include a dissimilar transportation activity.—Id., p. 289.

In considering restriction to transportation "in special equipment," record underlying grant of authority may be consulted to ascertain what was intended; such restriction of respondent's authority was clearly intended to restrict it to transportation of such heavy machinery and contractors' equipment as can be hauled only on special heavy-hauling equipment. All the commodities authorized by respondent's certificate must be transported in special vehicular equipment during the over-the-road movement.—Ray Carter, Inc. —Investigation and Revocation, 91 M.C.C. 653 (655).

Carriers holding authority for "commodities which, because of size or weight, require special equipment" may transport articles which require special equipment either for loading or unloading or for over-the-road movement; it makes no difference who supplies the special equipment for loading or unloading, so long as it is required; as to over-the-road equipment, vehicles of unusual design or vehicles equipped with additional mechanical devices are recognized as special equipment; in addition, such carriers may transport unitized commodities weighing 15,000 pounds or over, even though the over-the-road equipment used is of ordinary design.—C & H Transp. Co., Inc., Clarification of Authority, 88 M.C.C. 87 (94).

"Special equipment" refers to types not normally used in general-freight service, and includes vehicles of odd or unusual design and those with additional equipment such as winches. Drop-frame trailers with bilevel floors are fairly widely used by general-commodity carriers, are cheaper and less complex than some other types of ordinary equipment, and are readily distinguishable from lowboy vehicles, which are designed for much heavier loads and are "special equipment" by precedence. Moreover, the commission must recognize advances in design of conventional equipment to promote better handling methods and economy and safety of operations. Drop-frame trailers are not special equipment per se, and their occasional usefulness to heavy haulers does not make them such; decision in 79 MCC 572 distinguished.—Schreiber Trucking Co., Inc.—Investigation, 91 M.C.C. 91 (101-2)*.

A flat-bed trailer mounting a special steel cradle for transportation of liquids in 1-ton steel containers does not constitute specilized equipment.—Chem-Haulers, Inc., Extension, 88 M.C.C. 1 (2).

In bundling, aggregating, or palletizing, the commodity itself is the controlling consideration, and only under unusual circumstances may aggregation or bundling result in a situation where such commodities may thereby be recognized as requiring special equipment; involved commodities are not so easily damaged as to require bundling into units large and heavy enough to require special equipment and hence do not come within the exception to the general rule. Since record is convincing that the bundling is for reasons of economy and efficiency, considered shipments, as aggregated, are not within authority to transport commodities which require use of special equipment.—Case Driveaway, Inc., Extension, 89 M.C.C. 633 (634-5)*.

Palletization is a definite requirement in transportation of glass- or enamel-lined silo

sections because of their fragility, and of galvanized sections because of their susceptibility to bending, and the loaded pallets are of such weight as to require use of special equipment for loading or unloading; carriers holding authority to transport commodities requiring special equipment may therefore transport glass-lined or galvanized silos and related equipment.—C & H Transp. Co., Inc., Extension , 88 M.C.C. 285 (291-2)*.

Store; equipment, supplies: [Vols. 17, 18].—Synthetic plastic powder used by meat packer to make film for packaging products, moving to warehouse of wholesale food business, may be transported under authority for merchandise dealt in by wholesale, retail, and food business houses and equipment, materials and supplies, used in conduct of such business.—Plastics and Chemicals from Midland, Mich., to Chicago, 318 I.C.C. 105.

Under its authority to transport "new furniture, new office and store fixtures, new household fixtures and appliances, and new household and office furnishings," respondent may not transport considered shopping or supermarket carts. The carts are not of similar utility as a showcase, table, or wall case; they do not have a fixed position in a store but are removable and used primarily by supermarket customers for moving their merchandise; their limited use as bins or tables for display does not alter their classification; carts involved should be classified as "store equipment."—North American Van Lines, Inc., Investigation, 94 M.C.C. 663 (667-9).

Supplies: [Vols. 12, 14, 16, 18, 19].—"Supplies" are things consumed in or necessary to maintenance and operation of a plant, factory, or business, other than raw materials or ingredients which go into the finished product or structure; and "materials" are things used as ingredients or parts of a finished product. The intended use test definitely applies to commodity descriptions using those terms.—Mon Kem Co., Inc., Extension, 94 M.C.C. 749 (756).

Pipe known to carrier at time of shipment to be intended for use in a pipeline right-of-way may not be transported under authority for mine or oilfield "supplies."—Great Western Motor Lines, Inc.—Investigation, 96, M.C.C. 522 (527).

Trailers: See *Automobiles*, above.

8. Uniformity of commodity descriptions.—[Vols. 16-19].—General-commodity grants usually except four classes of commodities which involve services of a specialized nature: (1) dangerous explosives, because their transportation involves unusual hazards and requires special safety precautions; (2) household goods, because such carriers serve a particular class of shipper requiring expert skills and a knowledge of packing and stowing, and competition among those carriers differs from that among general-commodity carriers; (3) bulk commodities, consisting of liquids not in containers and fungibles such as sand, grain, coal, and cement, which are not adapted to carriage usually performed by general-commodity carriers; and (4) commodities requiring special equipment, which are excepted to prevent general-commodity carriers from invading the heavy-hauler field.—Gillette Motor Transport, Inc.—Control—Voss, 93 M.C.C. 265 (269)*.

Where generic commodity description, such as residuary petroleum products is used in certificates or permits, it must be deemed to embrace all commodities within the designated class and not be limited in each proceeding to certain representative commodities.—E. B. Law and Son, Inc., Extension, 94 M.C.C. 532 (537)*.

Underlying purpose of designating petroleum as a commodity class in motor carrier certificates was to simplify the burden upon the petroleum industry in its selection of motor carriers and to allow such carriers to offer comprehensive service to the industry. Therefore, since no realistic purpose is served by a narrow construction of existing authority to transport petroleum products where such interpretation would limit existing service, complaint, in effect seeking such interpretation, is dismissed.—Navajo Freight Lines, Inc. v. Steere Tank Lines, Inc., 98 M.C.C. 447 (451).

A description of a specific class of commodities is not meaningful unless it represents uniformly the same group of commodities in all operating authority issued, whether used to describe a grant or a limitation of operations; such a description cannot remain generic if through interpretation its meaning be-

comes unique in each proceeding, including only those specific commodities which provided the evidentiary basis for using general descriptive language. Moreover, a generic description is prospective in embracing commodities which fall within the class but were developed after the particular authority was issued; to isolate its meaning in point of time would destroy utility of that method of describing commodity rights. "Petroleum and petroleum products" is such a generic or class term, embracing generally those commodities derived from petroleum; see the Descriptions case, 61 MCC 209.—Consolidated Freightways Corp. of Del. Extension, 92 M.C.C. 443 (447-8)*.

The commodity descriptions in the Mercer case (74 MCC 459) were granted only to the applicants therein, and not to all motor carriers engaged in oilfield operations.—Great Western Motor Lines, Inc.—Investigation, 96 M.C.C. 522 (527).

Considering breadth of the dictionary definition thereof, "materials," when translated into trnasportation parlance, is roughly tantamount to "general commodities." However, a commodity description "materials," without limitation to a particular class of materials, would be unprecedented: when the commission authorizes transportation of general commodities, they are called by that name, and description "materials" is invariably used only in connection with a particular industry. Neither failure to underline "and" in certificate description "oilfield equipment, machinery, and materials," nor failure to repeat the adjective "oilfield" before each noun in the series, justifies respondent's interpretation of that description as permitting what approximates a general-commodity operation under its authority for "materials."—J. B. Acton, Inc.—Investigation and Revocation of Cert., 89 M.C.C. 59 (62, 63)*.

For consistency, authority granted applicant pipestringers for transportation services in connection with construction, etc., of pipelines, other than those used for transmission of natural gas, petroleum, their products and byproducts, water, or sewage, follows form used in paragraph (2) of the Mercer description (74 MCC 459) and will be complementary thereof.—J.O. (Red) Willett Pipeline Stringing Extension, 89 M.C.C. 427 (437).

Although the Southern Tank Lines case (88 MCC 127) treats only of liquid chemicals, it forms a suitable basis for reforming commodity authorities which provide for transportation of both dry and liquid chemicals; the same considerations of public interest which recommend removal of the intended use test for liquid chemicals authority are also pertinent where that test has been incorporated in authority to transport dry chemicals. Applicant's present authority for "chemicals" and for "chemicals, liquid and dry" should be revised to authorize transportation of "chemicals, in bulk, in tank or hopper-type vehicles."—Bell Extension, 92 M.C.C. 276 (280).

Commodity descriptions in operating rights should be intelligible to the average layman, to the shipper, and to the carrier and its employees, as well as of sufficient scope otherwise to enable a carrier to provide the service required; but the ideal commodity description, listing every article embraced therein, entails an almost impossible task; on the other hand, use of generic descriptions such as chemicals, building materials, etc., is productive of many interpretive difficulties and other complications. Revised definition of liquid chemicals, while not a panacea for all problems, should eliminate much controversy and will provide carriers with a commodity description flexible enough to meet changing conditions in the chemical industry.—Southern Tank Lines, Inc., Extension, 88 M.C.C. 127 (136, 142-3)*.

Although the commission has never favored grants of operating authority in terms of intended use of the commodity to be transported, since they present obvious problems of interpretation, that form of authority is often the only feasible means of authorizing a carrier to render a complete service for persons engaged in a particular business, without at same time putting it into position to invade the operational areas of existing carriers. Alternatives of using broad generic descriptions, or of naming all the commodities specifically, are often impracticable; the first would inevitably result in grant of more authority than that shown to be required, and the second, with the almost certain omission of some commodities of varied uses and with

no provision for newly developed commodities, would inevitably result in grant of authority too narrow to allow the carrier to perform the needed service.—Mayfield Sons Trucking Co.—Interpretations, 92 M.C.C. 167 (168)*.

Commodity descriptions embodying the intended use test have been employed to authorize the carrier to offer a consignee a complete service in transportation of all commodities required in furtherance of the consignee's business enterprise, resulting in an extremely broad description covering everything in the enterprise involved, subject only to the limitation that at time of shipment the commodities must be intended for such use; it is thus a consignee-oriented description. Although that test may at times be difficult of application, it is usually enough for the carrier and shipper to exercise a reasonable amount of care in ascertaining that the actual intended use of articles transported comports with that envisioned in the pertinent commodity description.—C & H Transp. Co., Inc., Clarification of Authority, 88 M.C.C. 87 (93).

The alternatives, where a consignee of a particular class or type shows need for a complete commodity service, would be (1) to attempt a broad generic description without an intended use test, which would inevitably result in grant of more authority than is shown to be needed, or (2) to list the specific commodities, with risk of omitting some items that should be authorized, thus preventing the carrier from meeting the consignee's reasonable need for a complete service.—Id., p. 93.

Description "road and bridge building machinery and equipment," which like "contractors' equipment and supplies" (explained in 62 MCC 586) embodies an intended use test, appears reasonably clear and definite in meaning; owing to the extremely specialized nature of much machinery and equipment of this type, it falls almost automatically within the commodity description under a reasonable interpretation of the intended use test, and inquiry as to actual intended use is superfluous unless the reasonable assumption of future use is negatived by known facts or circumstances to the contrary.—Id., p. 93.

Liquid chemicals: Continuing growth of the chemical industry and increasing use of tank-truck transportation call for a broader and more realistic and reliable commodity description of liquid chemicals; see discussion of historical development of descriptions in outstanding authorities, pp. 129-133. Definition in the Maxwell case, 63 MCC 677, does not permit complete service required by large shippers; promulgation of a revised description broadening that definition, with appropriate provision for modification of outstanding authorities of chemical carriers to conform therewith, will eliminate necessity for a rule-making proceeding, will be in public interest and consonant with the national transportation policy, and is long overdue.—Southern Tank Lines, Inc., Extension, 88 M.C.C. 127 (137, 141, 143)*.

Carriers attempting to afford a complete service under authority to transport chemicals and chemical products should hold such authority as will cover any such commodities irrespective of their intended use or other hairsplitting considerations. An appropriate revised commodity description for such carriers would be "liquid chemicals, in bulk, in tank vehicles," and a reasonable definition of commodities embraced will be "those substances or materials resulting from a chemical or physical change induced by processes employed in the chemical industry, including uniting, mixing, blending, and compounding." Although phrased in term of chemicals, the definition is intended to cover all acids which are, in fact, chemicals. While, realistically construed, the revised definition does not include petroleum items customarily falling within authorities of petroleum haulers, such as gasoline, kerosene, and fuel oil, it is not intended at the same time to exclude therefrom the basic petrochemicals produced in the petroleum industry.—Id., p. 142.

Regulations of the Commission

29 FR 6324, May 14, 1964, Part 176: Transportation of Household Goods in Interstate or Foreign Commerce, §§176.3(c) 176.7 and 176.8, amended, §§176.9 and 176.10, revised, and §176.14 Claims for loss or damage, added, effective July 10, 1964.

29 FR 7390, June 6, 1964, Part 176: Transportation of Household Goods in Interstate or Foreign Commerce, §176.1 Definitions, revised, effective July 20, 1964.

29 FR 8481, July 7, 1964, Part 176: Transportation of Household Goods in Interstate or Foreign Commerce, effective date of order (29 FR 6324) postponed to Nov. 10, 1964.

29 FR 9711, July 18, 1964, Part 176: Transportation of Household Goods in Interstate or Foreign Commerce, §176.1 Definitions, effective date of order (29 FR 7390) postponed from July 20, 1964 to Oct. 1, 1964.

29 FR 9835, July 22, 1964, Part 176: Transportation of Household Goods in Interstate or Foreign Commerce, corrections of order (29 FR 6324) in §176.8(c) and §176.12(a) and (b).

29 FR 14173, Oct. 15, 1964, Part 176: Transportation of Household Goods in Interstate or Foreign Commerce, effective date of order of May 6, 1964 (29 FR 7390) further postponed to Nov. 30, 1964.

29 FR 15289, Nov. 14, 1964, Part 176: Transportation of Household Goods in Interstate or Foreign Commerce, §176.3(c), 176.7, 176.8, 176.10, and 176.12 amended, and §176.14 Claims for loss or damage, added, effective Feb. 1, 1965.

29 FR 16125, Dec. 3, 1964, Part 176: Transportation of Household Goods in Interstate or Foreign Commerce, effective date of order of May 6, 1964 (29 FR 7390) postponed to Dec. 30, 1964.

29 FR 19107, Dec. 30, 1964, Part 176: Transportation of Household Goods in Interstate or Foreign Commerce, effective date of order of May 6, 1964 (29 FR 7390) further postponed to Feb. 1, 1965.

30 FR 3597, Mar. 18, 1965, Part 176: Effective date of order of May 6, 1964 (29 FR 7390) postponed to April 2, 1965.

30 FR 6117, Apr. 30, 1965, Part 176: Effective date of order of May 6, 1964 (29 FR 7390) postponed until further order, effective on date of order.

30 FR 16203, Dec. 29, 1965, Part 176: Transportation of Household Goods in Interstate or Foreign Commerce, effective date of regulations prescribed by order of May 6, 1965 (29 FR 7390) having been indefinetely postponed, currently effective regulations are published.

31 FR 8915, June 28, 1966, Part 176: Transportation of Household Goods in Interstate or Foreign Commerce, §176.1 Definitions, revised, effective August 1, 1966.

31 FR 8916, June 28, 1966, Part 176: Transportation of Household Goods in Interstate or Foreign Commerce, §§176.3(c), 176.7, 176.8 revised; §176.9 (b) and (c) revoked and §176.9 (d) renumbered as paragraph (b); §176.10 (a) and (c) revised, §176.10 (d) is renumbered as §176.10 (f) and new rules numbered §176.10(d), (e), and (g) are added; §176.12 is amended, and a new rule numbered §176.14 is added, effective Sept. 30, 1966, and will apply only on household goods removed from shipper's premises on and after effective date.

31 FR 10193, July 28, 1966, Part 176: Transportation of Household Goods in Interstate or Foreign Commerce, effective date of regulations prescribed by order of June 7, 1966 (31 FR 8916) postponed effective date to Jan. 1, 1967.

31 FR 13446, Oct. 18, 1966, Part 7: List of Forms, Part II, I C Act, Form BOC 101, prescribed as required by §176.10(e); §7.101 BOC 101, Form BOC 101 to report to the Commission all instances in which actual charges exceed written estimates by 10 percent or more, pursuant to §176.10(e), effective Jan. 1, 1967.

31 FR 14879, Nov. 24, 1966, Part 176: Transportation of Household Goods in Interstate or Foreign Commerce, §176.10(f), amended, Estimates of Charges, Reweighing, effective on date of order.

32 FR 16084, Nov. 22, 1967: Guide to Restrictions and Descriptions in Motor Carrier Operating Rights, Appended to report in 106 MCC 1 (Appendix II), published for information.

Section 204. (c) [§ 304 (c) *U.S.C.*] Investigation of complaints; orders.—[Unchanged. See vol. 11, p. 9391.]

Amendment, see footnote, p. 9392; historical notes, vol. 13, p. 11058, vol. 14, p. 11580.

Notes of Decisions

Volume 9—p. 7936; Volume 11—p. 9392; Volume 12—p. 10367; Volume 13—p. 11058; Volume 14—p. 11580; Volume 15—p. 12184; Volume 16—p. 12831; Volume 17—p. 13519; Volume 18—p. 14310; Volume 19—p. 15552.

25. Scope of issues.—[Vols. 9, 11, 12, 14, 17, 19].—Part I, §13(1), n. 46.

The mere fact that plaintiff's assertion in extension proceeding of right to operate over Garden State Parkway in East Orange and Bloomfield, N.J., under its "grandfather" authority to operate over city streets in those municipalities was accepted without question did not make that issue unassailable in subsequent complaint alleging unlawful operation by plaintiff or in court review of the commission's determination therein.—DeCamp Bus Lines v. United States, 224 F. Supp. 196 (205-6)*.

Although complaint alleging that carrier had engaged in an unreasonable practice in violation of §216(b) refers to past shipments and alleges damages, it clearly shows that complainant requests issuance of an order requiring defendant to cease and desist in the future from such unreasonable practice; thus, in fact, complainant seeks only future relief,

even though its evidence relates to past shipments and details rates charged and those it claims should have been charged, as if it were seeking reparation. And, while complaints concerning unreasonableness of motor carrier rates have been declined prior to institution of court action for damages in the matter, under §204(c) and §216(b), the commission has ample authority to require motor carriers to observe reasonable practices in connection with their rates and classifications and to consider complaints alleging unreasonable practices relating thereto.—Winthrop Laboratories Div., Sterling Drug v. Dorn's, 325 I.C.C. 654 (655).

While the rights of the parties at law must be left for determination in the proper tribunal, the commission has jurisdiction over considered written agreement between complainant's predecessor and defendant carrier, which is alleged to be an unlawful lease from its predecessor of authority now incorporated in complainant's certificate, and the determination of lawfulness of the agreement. Although complainant was not a party to the agreement, as successor to one party thereto, it has a legitimate interest in knowing conditions under which the authority involved may be operated. Furthermore, it is the commission's function to decide what agreements are required by the act to be submitted for approval, and failure to do so in proceeding challenging validity of considered agreement would be an abdication of that statutory function.—Ayres v. Northern Tank Line, Inc., 93 M.C.C. 468 (469, 470).

Contention that examiner's recommended finding, that transportation of binder and baler twine is not authorized by commodity description "farm machinery and parts thereof," goes beyond scope of investigation is invalid, because nothing in order of investigation implies a determination that baler and binder twine are farm machinery parts or that only the circumstances of the transportation were to be questioned.—Ace Lines, Inc., Investigation and Revocation, 94 M.C.C. 96 (99)*.

Although complainant, in connection with allegation of unlawful common control of two carriers, alleges that it had purchased acquired carrier's intrastate authority over a certain route on understanding that vendor would not be competitive between such points, and that, after it had instituted interstate proviso operations over that route, reactivation of vendor's interstate operations over that route under defendant's control had deprived complainant of traffic it had formerly enjoyed, the issue of competition does not in itself form legitimate basis for complaint, since vendor holds a certificate from the commission, and the holder of a dormant certificate may reactivate operations thereunder at any time, unless and until the certificate is revoked under §212(a).—Jimmy Stein Motor Frt. Lines, Inc. v. Mercury Frt., 93 M.C.C. 635 (640-1).

26.——Moot questions.—[Vols. 12, 14-19].——Reduced rate allowed to become effective without suspension having been replaced by an increased rate, investigation of lawfulness of the reduced rate is rendered moot.—Lumber from Cimarron, N. Mex., to Chicago, 315 I.C.C. 534.

28.——Broadening the issues—[Vols. 14-16, 18, 19].—Sufficient cause is shown for broadening of issues in investigation, after submission of examiner's report, to include activities of new truck-leasing company which is and has been leasing equipment to respondent shipper in the same manner, under identical agreements, and under same circumstances as respondent prior lessor, as well as shipper's relation to the transportation thus performed.—Schultz Transit, Inc., Investigation of Operations, 89 M.C.C. 305 (307-8)*.

Tariffs of certain respondents recently converted from contract to common carriers in some instances include cement rates to destinations not involved in contract carrier schedules initially subjected to investigation, and consideration of rates to such subsequently added destinations would broaden scope of the investigation; therefore, only rates in the present tariffs to the same destinations as shown in the prior contract carrier schedules are considered.—Cement and Mortar—Ill. & Mo. to Ill., Ind., Iowa, & Ky., 321 I.C.C. 166 (172).

29.——Related matters.—[Vol. 14].—Although, by complaint alleging that defendant has published rates for transportation of specified commodities not embraced within its

commodity authority, complainants imply that it may have transported such commodities, that is not the basis of their complaint; and in fact, there is no evidence that defendant has actually performed such transportation. However, since it is axiomatic that a motor carrier may perform only those operations for which it has appropriate authority, and since the commission in exercise of its regulatory function has power to interpret a carrier's authority to ascertain whether it is providing or offering to provide service beyond scope thereof, the issue of defendant's authority to transport the considered commodities is appropriately raised in the complaint.—Mushroom Transp. Co., Inc. v. Midwest Emery Freight, 94 M.C.C. 51 (54).

It is logical and appropriate to consider carrier's petition for clarification of its authority and reopening of "grandfather" proceeding before considering issues in investigation proceeding. Operating rights involved, held successively by several predecessors, are based on a "grandfather" grant in 1937, and petitioner seeks modification of its present certificate, wording of which differs somewhat from that of the original grant and of certificates held by its immediate and prior predecessors; purport of the petition and history of the authority indicate that the relief sought cannot fairly be considered without reference to the original grant and successive transfers, particularly in view of the commission's previous informal interpretation of the authority held by petitioner and its immediate predecessor, with which petitioner takes issue; moreover, the commission has held in 66 MCC 413 and 79 MCC 89 that a certificate issued in a "grandfather" proceeding may be challenged by a successor in interest.—Keystone Motor Exp., Inc.—Investigation of Operations, 89 M.C.C. 567 (569-70)*.

In view of the narrow issue raised by petition for declaratory order, which relates solely to legality of pallet-exchange agreement between a shipper and certain carriers, and exchange of pallets thereunder, it would be inappropriate to prescribe a tariff rule as requested by carrier proponents; however, this does not mean that the commission may not suggest lawful tariff provisions to cover the practice.—Legality of Pallet Exchange Agreement—Kraft, 322 I.C.C. 439 (444).

Though revenue-splitting arrangements with owner-operators may hinder efforts to maintain rate levels which are just and reasonable for motor carriers generally, prohibition thereof was not included in the vehicle-leasing regulations as finally promulgated in 68 MCC 553, and record in investigation of respondent's scrap-iron rates is inadequate for determining whether such revenue-splitting should be prohibited or discouraged. If such arrangements are inimical to general welfare of the motor carrier industry or appear inconsistent with basic objectives of the national policy, no appropriate remedy can be fashioned in isolated rate cases; such proceedings should not be made the vehicle for establishing a new, broad, and highly controversial policy concerning proper economic arrangements between hundreds of motor carriers and thousands of small entrepreneurs; the matter should be made the subject of a proceeding in which carriers, shippers, and all interested persons would have right to participate.—Iron or Steel Scrap from Conn., Mass., and R.I. to Pa., 318 I.C.C. 567 (576).

31.——Only matters in issue determined.—[Vols. 17-19].—Investigation instituted to determine whether respondent has been operating in violation of §206(a) is not an appropriate proceeding for requesting correction of its certificate. While respondent's claim that the certificate should be modified to include "store furnishings" authority inadvertently omitted by the commission from its consolidated certificate may have some merit, any modification of such certificate should be sought in the proceeding where issued; therefore, respondent's petition for correction of its certificate is dismissed without prejudice, so that it may pursue that course.—North American Van Lines, Inc.—Investigation, 94 M.C.C. 663 (669).

Since the only issue in investigation proceeding is the propriety of respondents' operation in transportation of fuel oils from Superior, Wis., to two Minnesota points, adequacy or inadequacy of existing service is not a matter for consideration.—Schirmer Transp. Co., Inc.—Investigation, 91 M.C.C. 869 (874)*.

Order instituting investigation to determine

whether respondent had been operating in violation of §206(a) raised no issues respecting respondent's fitness from a safety standpoint, and examiner exceeded scope of the investigation by considering evidence of safety violations and recommending an order in that proceeding directing respondent to cease and desist from practices in violation of the commission's safety regulations; therefore, his recommendations in related application proceedings, being based on compliance with an improper recommended order in the investigation, were also unwarranted. Issue of respondent's fitness to operate, and evidence of safety violations, are properly before the commission only in the application proceedings, which have been reopened to consider applicant's fitness.—T.I. McCormack Trucking Co., Inc.—Investigation, 89 M.C.C. 5 (7-8)*.

50. Evidence; admissibility, in general.—[Vols. 9, 11-19].—It is unnecessary to determine whether the parties' stipulation that twine, rake teeth, and harrow teeth are not farm machinery, but parts or items necessary to proper functioning of farm machinery, was one of fact or law or mixed fact and law, since the stipulation is not conclusive. Commission examiner was not clearly erroneous in determining that twine was not "parts" of farm machinery.—Ace Lines, Inc. v. United States, 239 F. Supp. 804 (806)*.

Although joint board refused, under the hearsay rule, to receive testimony of a State highway patrol officer concerning statements made to him by defendant's driver purportedly naming his employer, the testimony in question could properly have been received, not to establish the truth or falsity of the facts asserted, but merely to indicate that such statements were made. However, in light of submission of an offer of proof indicating that, had the officer been permitted to testify, the employer would have been identified as defendant's president, together with evidence subsequently developed, the board's ruling did not prejudice presentation of complainant's case.—Northern Tank Line v. Petroleum Marketers, Inc., 96 M.C.C. 276 (277).

Weight to be accorded certain exhibits of Bureau of Inquiry and Compliance pertaining to specific allegedly unlawful operations of respondent, in light of any deficiencies, was a matter addressed to the sound discretion of the examiner and the commission. Examiner clearly considered such evidence in light of other evidence of record, and the record as a whole adequately supports his findings of fact, which the commission adopts.—Farmers Feed & Supply Co.—Investigation of Operations, 96 M.C.C. 409 (411, 412-3)*.

The commission need not rule on admissibility of 27 challenged exhibits when its conclusions are based on the testimony of record, rather than the exhibits, and its decisions would not be altered if such exhibits were considered.—Natl. Motor Frt. Traf. Assn., Inc., v. Internatl. Shippers, 94 M.C.C. 440 (448).

Informal opinions expressed by any of the commission's bureaus within their sphere of competence and responsibility are admissible as evidence. Bureau of Motor Carriers' informal opinion, relied on by complainants in their quest for formal determination of scope of defendant's "foodstuffs' authority, is properly submitted as an element of their proof. However, as that opinion expresses only the Bureau's view of the matter, which has no binding effect on the commission or the examiner, it must be weighed, as an evidentiary element, with all other relevant matters and is not entitled to special weight because of its source.—Mushroom Transp. Co., Inc. v. Midwest Emery Freight, 94 M.C.C. 51 (54-5).

Statement in stipulation of respondent and Bureau of Inquiry and Compliance that binder twine, rake teeth, and harrow teeth are not farm machinery, but are "parts or items necessary to the proper functioning of farm machinery," obviously involves a conclusion of law. Since rule 1.69 of Rules of Practice permits stipulation of facts only, the commission is obliged to accept only the factual elements in the stipulation and will draw its independent conclusions therefrom. Respondent's request that portions of examiner's report dealing with the proper commodity classification of baler and binder twine be stricken as contrary to the stipulated facts is therefore rejected.—Ace Lines, Inc., Investigation and Revocation, 94 M.C.C. 96 (98, 99)*.

Statement of facts attached to petition, filed after submission of examiner's report and

joined in by all parties of record, for inclusion of new truck-leasing company as respondent in investigation proceeding, is received in evidence and made part of the record when it merely brings up to date the primary facts set out in the examiner's report.—Schultz Transit, Inc., Investigation of Operations, 89 M.C.C. 305 (308)*.

Interveners' motion to strike testimony of a representative of one of them, called by petitioner as a hostile witness, overruled; such evidence is in no way prejudicial to interveners and although of little weight is relevant to determination of the bona fides of petitioner's operation.—Service Trucking Co., Inc.—Declaratory Order, 94 M.C.C. 221 (224)*.

Traffic manager of complainant chamber of commerce was qualified to testify regarding market competition encountered by members of that association from shippers in other States when as a part of his official duties he is called on to ascertain whether prevailing level of rates from South Dakota origins would permit members to compete in common markets, and to negotiate with carriers for rates which would enable them to compete effectively; in discharging these duties he is necessarily aware of market competition encountered by members.—Traffic Bureau of Sioux Falls v. Barber Transp. Co., 316 I.C.C. 325 (329-30).

Oral testimony of a commision safety inspector that about 65 percent of 200 express receipts issued by respondent and inspected by him did not identify contents of shipments, as required by commission order, was properly received even though the underlying receipts were not available for inspection at the hearing. While the receipts themselves might be deemed the "best evidence" of the violations, the inspector's testimony related to matters within his personal knowledge; also, respondent was afforded opportunity to cross-examine the witness and to offer rebutting testimony, but submitted no evidence contravening his allegations—indeed, its own witness corroborated them. And since the inspector further testified that the express receipts were not readily obtainable from respondent, to compel their production in investigation would place an unnecessary and undesirable burden on the Bureau of Inquiry and Compliance in discharge of its enforcement functions.—Safeway Trails, Inc.—Investigation and Revocation, 91 M.C.C. 936 (942)*.

Exhibits submitted by the Bureau to show hours-of-service violations do not lack probative value because based on respondent's monthly reports rather than on specific drivers' logs. The safety regulations impose on all motor carriers responsibility for filing of truthful and accurate hours-of-service reports, and the filing carrier certifies the truth and accuracy of the information contained therein. Respondent has the burden of making such checks in advance of its reporting as may be necessary to ensure that data underlying its reports are accurate. Any instances of excessive hours of service shown in its monthly reports are clearly admissible to show extent of its compliance or noncompliance with hours-of-service regulations.—Id., p. 945.

Respondent's advertising brochure was properly admitted in investigation of lawfulness of his transportation services; and letters of inquiry which were routinely received either in response to the advertising folder or otherwise in the regular course of business should also have been admitted. However, other documents contained in advertising folder are not entitled to consideration when some appear to be copies and others to have been devised solely to support respondent's application.—Cherkos Investigation of Operations, 91 M.C.C. 535 (538)*.

Report of Texas Legislative Council dealing with problems of municipal annexation is relevant to consideration of the effect of an annexation of land by Orange, Tex., on commercial zones of that and nearby cities, and should be admitted to aid in understanding the overall situation; while the hearsay character of the report might be such as to preclude its consideration in a court of law, the commission as an administrative body may exercise considerable discretion in dealing with the admission of evidence.—Central Freight Lines, Inc. v. East Texas Motor Freight, 89 M.C.C. 637 (640).

And ordinance of nearby city of Port Neches, purporting to show annexation of a certain area, clearly is admissible as a public document; also, it is relevant for the limited pur-

pose of trying to show that Orange's claim to the annexed strip is not undisputed.—Id., p. 640.

While the commission has accepted Geological Survey maps as more authoritative than other types of maps in ascertaining distance between two points, because of errors inherent in making of maps and measurements thereon it has also considered other evidence which may be more reliable than use of maps alone. [See 63 MCC 528.] The parties' expert witnesses all made use of Survey maps in measuring dis;tance between northwest corner of Grant Park, Chicago, and shipping docks of plant at Woodstock, Ill.; however, measurement by aerial surveyor (who used surveyed coordinates of "bench marks" close to actual points involved to extrapolate coordinates of the critical points), which indicates that the distance exceeds defendant's authoized radial distance of 50 miles from Grant Park, is the more reliable because it involved corroborating results produced by independent processes based on accepted engineering techniques.—Peet Frate Lines, Inc. v. W.O.D., Inc., 89 M.C.C. 206 (207-8).

Report from Assistant Director of Coast & Geodetic Survey was admissible to show that Lincolnton, Ga., is beyond defendant's authorized radial-territory distance of 100 miles from corporate limits of Atlanta. While that report does not contain attestation by its author verifying the information therein, it was furnished by a Government agency upon request of one of complainant's employees, whose statement contains appropriate attestation, and the report adequately describes the maps used in arriving at the figure of 104.3 statute miles, thereby allowing all parties of record to verify that distance independently. Defendants' objection goes to weight to be accorded the report, not to its relevancy; therefore, their objections to its admissibility are without merit.—Hennis Freight Lines, Inc. v. Ohio Southern Exp., Inc., 88 M.C.C. 168 (170).

And there was no serious error in examiner's use of the latest edition of Rand McNally Road Atlas to determine the distance independently; that atlas is normally available to carriers and the general public and has been used by the commission in computing airline distances in granting radial authority; based on mileage scale shown on map of Georgia, distance between eastern extremity of Atlanta and western extremity of Lincolnton exceeds 103 miles. Distances computed by use of the map of Georgia in the 1959 Rand McNally Commercial Atlas and Market Guide, or the 1960-61 Georgia State Highway Department Map, and scales shown thereon, exceed 104 and 103 miles; both are available to the parties, and former is used by the commission to determine commercial zone boundaries.—Id., p. 171.

While it is not implied that in absence of the Coast & Geodetic Survey report the distances computed from any of the latter three maps would be controlling, they lend strong credence to the Geodetic Survey report, and in absence of any evidence to the contrary, conclusion is warranted that the distance between the eastern extremity of the corporate limits of Atlanta and the western extremity of Lincolnton exceeds 100 miles, and that transportation of shipments from Lincolnton is beyond defendant carrier's authority.—Id., p. 171.

Evidence consisting of the unsupported opinion of one of complainant's employees who was not shown to be qualified in interpretation of defendant's operating authority is insufficient to establish that defendant has transported certain commodities to points beyond scope of its authority, in violation of §203; moreover, complainant has not described the commodities in question in sufficient detail with regard to methods of production or manufacture or their transportation characteristics to permit determination of whether violations have occurred.—Middlewest Motor Freight Bureau v. Beaver Transport, 325 I.C.C. 175 (179).

Affiant was unavailable for cross-examination on matters stated in his verified statement; over defendant's objection, witness who adopted the statement, and who was acquainted with matters contained therein, was substituted as a witness for cross-examination in lieu of affiant.—Blue Line, Inc. v. Short Line of Connecticut, Inc., 88 M.C.C. 201 (206).

Statements in petitioner's exceptions that its terminal facility at Kearny, N.J., was con-

structed with private funds and is subject to heavy real estate taxes, in contrast with situation at Newark pier area, and that eastern railroads are in dire need of increased revenues, are beyond scope of proceeding on petition for restoration of commercial zone exemption as to traffic to and from the Kearny terminal, and are not considered.—New York, N.Y., Commercial Zone, 88 M.C.C. 336 (337)*.

Though examiner took official notice of fact that authorized carriers make one-way leases of equipment with drivers, testimony concerning amount of control exerted over drivers by regulated carriers was properly excluded as not material to determination of whether respondent shipper's utilization of leased equipment for one-way movements was private or unauthorized for-hire carriage.—Center America Corp.—Investigation of Operations, 88 M.C.C. 740 (744).

51. Application of principles of res judicata and stare decisis.—[Vols. 13-19].—The commission is not bound by stare decisis and inconsistency in itself is not necessarily unreasonable. Thus, in determining that certain commodities could not be transported under plaintiff's "prefabricated houses and buildings" authority, and ordering it to cease and desist from transporting those commodities, the commission was not bound by any prior administrative rulings; in the prior cases, plaintiff's certificate was not specifically in issue.—Whitehouse Trucking, Inc. v. United States, 261 F. Supp. 9 (11)*.

Interpretation and analysis of prior commission decisions are not determinative of whether parts may be shipped separately under authority to transport "farm machinery and parts thereof." The commission is not bound by a rule of stare decisis and inconsistency of its holding with prior holdings does not make its decision arbitrary.—Ace Lines, Inc. v. United States, 239 F. Supp. 804 (806)*.

Failure of the joint board and the commission, in determining plaintiff's application seeking extension authority over Garden State Parkway in Nutley and Clifton, N.J., to question its assertion of authority to operate over the Parkway in East Orange and Bloomfield under its "grandfather" certificate does not bind the commission. Neither that fact nor fact that the commission was made aware of plaintiff's intention to operate over the Parkway through those four points to Highway 3 justifies inference that the issue of its rights over the Parkway in East Orange and Bloomfield was determined on its merits. It would unduly burden the commission to require it to question every possible assertion of authority in connection with a certificate application so as to avoid application of the doctrines of res judicata, collateral estoppel, or direct estoppel. Moreover, those doctrines may not be raised against the United States or its alter ego the commission in review of decision that plaintiff's outstanding certificates did not authorize operation over the Parkway in performing service between Orange and New York City.—DeCamp Bus Lines v. United States, 224 F. Supp. 196 (206)*.

The court is not concerned with any inconsistency of the commission's findings in case under review with those in prior cases; each case must be decided in light of its own facts. The commission, created by Congress and appointed by law to interpret its own certificates, should be free to draw from its experience to accomplish this end with the minimum interference allowed by law. In the exercise of its expertise, it should not be bound by its prior findings in similar cases; its prior views are not stare decisis. See 41 F. Supp. 439 and 197 F. Supp. 591.—Id., pp. 206-7.
